6882. I find that the number of cattle which were imported into London in 1876 was 147,536, which gives about 2,840 head weekly; I think it has been stated by a witness here that the quantity of American meat which comes into the London market is about 200 or 250 tons weekly; and that, multiplied by three, would give about 600 or 700 carcases; so that if that be true, the proportion is about 700 dead carcases to 2,840 live animals. Do you not think that the stoppage of that large quantity of live animals would very seriously affect the meat supply of the country?—Certainly not, because the meat can be as easily sent dead as alive from the Continent. I know that there is a great trade in dead meat from most of the ports across the Channel to London. I can go into the London market, and ask the salesmen where the meat comes from, and one lot comes from Cherbourg, another from Havre, or from this or the other port on the other side of the Channel. If the foreign cattle trade is prohibited, we shall have a trade in dead meat; that always comes, and I hope that it will increase ultimately.

6883. Do you not think that it would take some time to increase it?—Not a bit.

6884. Have you heard the evidence of those who export live animals from the Continent?—Yes, and I have contrasted it with the evidence of those who send the dead meat, and they neutralise each other

6885. Can you tell me what quantity of dead meat comes from the Continent weekly?—I cannot give you the figures, because I have not prepared myself with them, but I know that they are before you.

Mr. *King Harman.*

6886. You say that you would place Ireland in the same category as England with regard to the removal of cattle; I suppose you would put the two countries strictly upon an equality, and impose the same restrictions upon the import of English calves into Ireland, as you would impose upon the importation of Irish stores into England?—Decidedly; I think that with equal treatment, the two countries would be on the same footing.

6887. Are you aware that there is a considerable import from Wiltshire and Cheshire of English calves into Ireland?—Yes.

Mr. *Assheton.*

6888. Were you farming at the time that the rinderpest was all over the country some 12 years ago?—Yes, I was.

6889. Do you remember whether the farmers at that time complained at all about the restrictions which were put upon the movement of cattle?—When the rinderpest first came, there was a great panic; we had no Cattle Diseases Act, and most arbitrary measures were adopted. For instance, the movement of cattle from one farm to another was absolutely prohibited when there was no cattle plague within very many miles; and the results were very injurious. The

Mr. *Stratton.*

22 June 1877.

Mr. *Stratton.*

22 June 1877.

Mr. *Assheton*—continued.

regulations were such as were not by any means justifiable, and were not by any means necessary.

6890. Did the farmers complain?—They did in such cases.

6891. Do you know whether one source of inconvenience at that time was the fact that the regulations were so various in neighbouring places?—Yes, that was the case. Each county did as it thought proper.

6892. At one time, I think, each county and each borough was its own local authority?—Yes, and a great deal of dissatisfaction arose on account of that great diversity of order. The movement of cattle was at first absolutely prohibited. I had two farms at the extreme corner of the county of Wilts, and I had a lot of beasts on one farm in one corner of the county which I was not allowed to move anywhere; but after a time licenses were granted for the movement of cattle, and then after that there was no more complaint.

Mr. *W. E. Forster.*

6893. I think I understood you to say that the prohibition of the live animals coming in this spring, in consequence of cattle plague, has had but little effect upon the price of meat?—Yes.

6894. Are you not aware that that prohibition only extended to a very small proportion of the animals that are imported?—It was extended to Germany and Holland, I think, to begin with.

6895. If you turn to the Table XVII. of the last Privy Council Report for 1876, you will find that the total number of cattle imported from everywhere, except from America, was about 274,000?—Yes.

6896. The import of cattle from Russia has been stopped for a very long time, and the cattle from Germany, from France, and from Belgium are also stopped; I think you will observe that the cattle from Belgium are under 7,000, and the cattle from France are under 5,000?—Yes.

6897. The cattle from Germany are about 70,000?—Yes.

6898. I suppose you are aware that by far the largest proportion of the cattle from Germany come from Schleswig-Holstein, after this time of the year?—Yes.

6899. Therefore, if those figures are correct, the prohibition of the impórt of live cattle will have affected only a small proportion of the imports?—I was under the impression that at that time the supply of foreign stock into London was very much curtailed by the Orders in Council.

6900. But looking at those figures you will see that the countries from which the imports come are those countries the imports from which, with the exception of Germany, bear but a small proportion to the total import; and that the German import is known not to come in until later in the year?—I was not aware of that.

6901. Are you not aware that several witnesses, both the exporters from Schleswig-Holstein and the salesmen and others who receive the cattle, have told us that the largest amount of that import comes in after this season?—I was not aware of that.

6902 I understand you still to adhere to the regulations that were suggested to the Privy Council by the Chamber of Agriculture in 1876?—Yes.

6903. Those regulations are, shortly, that all foreign fat animals should be slaughtered at the port of landing, that foreign store animals should be quarantined, and that the regulations with regard to home animals should be made much more stringent as to foot-and-mouth disease and pleuro-pneumonia?—Yes.

Mr. *W. E. Forster*—continued.

6904. Therefore your Chamber has never committed itself to asking for the slaughter of animals at the port of embarkation?—I think that, since that has been issued, we have passed a resolution in favour of slaughter at the port of embarkation, but it has never been entered in the yearly reports; we should prefer slaughter at the port of embarkation.

6905. But, however, you, with your experience, adhere to those suggestions?—Yes, as the minimum that would be acceptable.

6906. Those recommendations having been sent to the Lord President, you received a reply, did you not, written by Mr. Wilmot on behalf of the Duke of Richmond, dated the 11th of November 1876?—Yes.

6907. Will you hand in that reply?—I will do so. (*The same was handed in,* see *Appendix.*)

6908. I see that the Report of the Central Chamber of Agriculture for 1876 states that "The Council suggests that this reply be considered at the first meeting in the new year;" was it so considered?—Yes, I have the report of that.

6909. Will you hand that in also?—Yes. We considered it on 12th February. (*The same was handed in,* see *Appendix.*)

6910. I think, I gather from what you have said, that although your Chamber would like to have the cattle slaughtered at the port of embarkation, yet the actual practical request that they make is the same that is contained in these recommendations of 1876?—That is my feeling about it.

6911. With regard to this Chamber of Agriculture we all know that it is a very important body; but can not you tell us a little of its constitution. You speak of representative members, how are they elected to it?—Each Associated Chamber sends deputies to the Council Meeting in London and it is composed of deputies from all parts.

6912. How are the Associated Chambers themselves formed?—Any members who subscribe to a Local Chamber, are supposed to form a Local Chamber, but that Chamber is only admitted into association with the Central Chamber on its paying a subscription qualifying it to send members.

6913. How many members have you in your Associated Chamber at Wiltshire?—We have 150 members in the South Wiltshire Chamber, which pays 10 *l.* a year as a contribution to the funds of the Central Chamber; and that entitles us to send three deputies; but in point of fact we send two.

6914. When you speak of the willingness of farmers to assent to very stringent regulations, of course your knowledge is mainly based upon the opinions of the members of the Chamber?—Yes.

6915. Should I be wrong in supposing that the members of the Chamber are the most public-spirited gentlemen amongst the farmers, and those who would be the most willing to submit to sacrifices; and that it is not quite clear that all the farmers in the country would be willing to submit to the regulations that members of the Chamber would be willing to submit to?—I do not

Mr. *W. E. Forster*—continued.

not think you would be right in that assumption, because in case the farmers of England objected to what was done by the Central Chamber, they would certainly send somebody to oppose those resolutions.

6916. Taking the farmers generally throughout the country, do you think that they realise to themselves what would be the meaning of the very stringent regulations that you would suggest with regard to foot-and-mouth disease?—Yes, indeed; because they have practical experience of it.

6917. I see that we had the pleasure of seeing you before our Committee in 1873?—Yes.

6918. At that time you were strongly in favour of more stringent regulations against foot-and-mouth disease; and you said that, having reduced it to a low point, you would then adopt more stringent measures and treat it as cattle plague; that is to say, you would slaughter all cattle affected with it?—Yes.

6919. Do you still hold that view?—I still think that that would be the most economical and the best mode of dealing with it.

6920. You think that the farmers would assent to that?—Certainly. Take our case now in the county of Wilts; we have only one infected farm, and in that case, I believe, it is a pig that is affected; but supposing it to be an animal worth 20 *l.*, we could not make a better outlay than by slaughtering that animal, and getting the disease out of the county altogether. In the last case we had disease brought into my immediate neighbourhood by a small farmer and dealer who bought three beasts in Bristol, and brought them into the parish of East Knoyle, and caused all those frightful losses in the Shaftesbury district, which were brought before the Duke of Richmond at the time when the regulations with reference to preventing foot-and-mouth disease were proposed. If we had clubbed together and killed those three beasts we should have made an excellent investment.

6921. I am asked by one of the members of the Committee to ask you this: Are not the proceedings of the Chamber of Agriculture fully reported in the county newspapers?—Yes.

6922. Do you think that, taking your own district, there are fewer cattle bred than there were 10 years ago?—Yes, I believe there are.

6923. And fewer sheep also?—Fewer sheep, decidedly.

6924. Then what is done with the land?—Corn is grown in preference, and some hay is sold, and straw is sold.

6925. The difference in the number of cattle that are sold for slaughter does not at all arise, does it, from there being greater demand for milch cattle?—I am speaking of the production of cattle. The cattle in our county would be very largely milch cattle.

6926. Once or twice I have heard it suggested that the diminution in the number of cattle sold for slaughter may be to some extent accounted for by the greater demand for milk; do you think that is so?—I do not think so.

6927. You think that foot-and-mouth disease is, in fact, only carried by contagion now?—I do.

6928. Has it never occurred to you, when one hears about disease being only conveyed by contagion, that there is a difficulty, upon that principle, in accounting for the first beginning of the disease?—I do not see any difficulty about it. Every kind of disease must have had an origin, but it is not a fresh spontaneous origin.

6929. You do not think that because there may be a great deal of contagion there may be certain conditions of traffic of animals, or of the atmosphere that might bring about the disease spontaneously?—I am satisfied of the contrary.

6930. Are you aware that there are a great number of persons of great practical experience who do not agree with you upon that point?—All scientific authorities, I think, concur in my view of the case, and I believe that their authority must be very much greater than that of what you call a practical man, which perhaps is another word for an ignorant man.

6931. My question was with regard to practical men?—Practical men are very ignorant of scientific principles, and because they cannot see the way in which the contagion is conveyed, they perhaps do not believe that it can be done. It is a most illogical conclusion upon their part.

6932. You do not think that animals by being put out on very damp ground in very foggy weather would be very likely to get into a condition which brought about foot-and-mouth disease?—Certainly not; I am quite satisfied about that.

Sir *George Jenkinson.*

6933. The Right honourable Gentleman, the Member for Bradford, asked you with regard to the opinions of the Central Chamber and the representatives there, and whether you considered that they fairly represented the opinions of the farmers, and whether they had any other channels of communicating those opinions; is it not a fact that you constantly meet farmers at markets and other places where farmers meet, and that you have an opportunity of learning their opinions there?—Repeatedly; I meet farmers daily and weekly; constantly.

6934. And you think that the result is that you are justified in saying that the farmers were and are prepared to submit to stringent regulations for the purpose of stamping out disease?—I hear but one opinion about it, and that is, that they are in favour of very stringent measures.

6935. Although you complained of the stringent measures which were imposed at the first outbreak of cattle plague, I think I have heard you give expression to the opinion that it did more to eradicate all other disease than anything else?—Quite so. I have often maintained that those outbreaks of rinderpest are a great benefit to the country, because the measures that are adopted to stop rinderpest stop other diseases too, and our losses are far less in times of rinderpest than when we have no rinderpest.

Mr. *W. E. Forster.*

6936. You would not agree with those who say that the present high price of meat is owing to the effect of cattle plague in 1865?—Certainly not altogether owing to that.

6937. I rather gather from what you say that things were made better by cattle plague?—During that period. Take this year, for instance. Our losses this year will be far less from cattle diseases, although we have had rinderpest than they were last year when we had not it.

Professor JOHN GAMGEE, called in; and Examined.

Professor *Gamgee.*

22 June 1877.

Chairman.

6938. YOU have been for a long time interested in the question of the diseases of cattle?—I have devoted my whole life to it.

6939. You have now, for some time, no longer been connected, I think, with any official work in regard to it?—I have never ceased to labour at the means whereby we might secure the extermination of cattle diseases.

6940. You gave very valuable evidence before the Committee that sat in 1873?—I gave evidence before that Committee.

6941. And before that Committee you expressed an opinion, I think, that foot-and-mouth disease and pleuro pneumonia were of foreign origin?—I did.

6942. I think that, before that Committee, you gave evidence also with regard to the question of prices, and you said that the restrictions which had been in force up to 1839 had lowered those prices; that they were high in 1800; but that, notwithstanding an increase of population, they went steadily down?—I did.

6943. You then believed that the home trade would increase if proper restrictions were imposed as against disease, and that more meat could be produced by the home supply in a couple of years than would be required even if you stopped the foreign import?—Quite so.

6944. Then I think you stated to the Committee that you endorsed the opinion which has been expressed by several of the witnesses before this Committee, that the restrictions which were put in force in 1865 had stamped out the disease, showing that we have the power of getting rid of the disease by proper restrictions?—We stamped out rinderpest, and nearly, if not completely, effected the extermination of foot-and-mouth disease. We were left with pleuro-pneumonia in the large dairies, and the moment the restrictions were removed we were again flooded by foot and-mouth disease, although rinderpest was kept out.

6945. I think that before that Committee you mentioned the question of dairies, and you spoke very strongly as to those dairies being liable to throw a good deal of disease into the markets?—The first observations that I ever made on cattle disease were with respect to the London dairies, which I am sorry to say continue to-day as infected as they were in 1850 and 1851.

6946. I think, going on with the summary of your evidence, you then stated that in your opinion there ought to be the least possible interference with the home trade, and that the foreign trade should be dealt with rationally, so as to foster its growth in a proper way?—Quite so.

6947. I think you stated that you would unite the whole veterinary profession in an effort to carry out these restrictions?—Quite so.

6948. And you recommended that inspection should be allowed by Act of Parliament, with the power of enforcing any regulations which might be suggested?—That was my opinion.

6949. You recommended, I think, slaughter at the ports, unless, I think you said, a more rational system could be introduced, such as was known in the Aberdeen dead-meat trade?—Quite so. Since 1873 I have become impressed with the

Chairman—continued.

fact that the rational method of dealing with the question is by the abolition of the live-stock imports under such conditions as I may afterwards explain.

6950. Your opinion was in favour of quarantining store cattle under certain regulations?—Certainly.

6951. And you foreshadowed in those days what has now taken place; that is to say, the dead-meat trade under the process of cold atmospheric influence?—I first demonstrated the method of cooling meat in 1869.

6952. You stated before the Committee of 1873 that dead meat could be brought, in your opinion, on a 14 or 15 days' voyage, but that it certainly could on a five or six days' voyage?—Yes, certainly.

6953. And that artificial cold would be the means, or ought to be the means, by which it would be brought, that artificial cold not being necessarily from the ice itself, but being produced by machinery?—Quite so.

6954. And you quoted in support of that the fact that the fish brought from the Doggerbank were treated in that way?—Yes; quite so.

6955. That being a very short and imperfect summary of your evidence on many points which have been under the consideration of this Committee, I should like to ask you whether, since the date of 1873, you have still continued to devote a good deal of attention to this subject?—I have devoted my time entirely to the subject.

6956. Have you since then come to any different conclusions from those which you expressed before that Committee beyond the one which you have just stated, viz., that you now believe that the import of cattle ought to be prohibited?—All that I have been able to learn from day to day, and from month to month, and from year to year, is simply a confirmation of that which I stated then.

6957. You have seen the dead-meat trade, which you suggested, developing itself?—I have.

6958. And you are still of opinion that slaughter at the ports should be made obligatory unless that dead-meat trade, which you consider a more reasonable one, could be adopted?—If I may be allowed to explain, I naturally desire the most absolute freedom of trade consistent with the prevention of contagious diseases. Taking all the causes of cattle mortality in this kingdom together, for one animal that dies from all those combined causes, at least three British animals are killed by the imported international cattle diseases which did not exist prior to the importation of live cattle; so that really 75 per cent. of the total mortality of cattle in this country is due to international or foreign cattle disease, and in round figures 25 per cent., or certainly not more than 30 per cent. all told, is indigenous disease, or accident destroying our stock. It is perfectly clear that in the finest meat-producing country in the world such a state of things ought not to be sanctioned.

6959. When you say that 75 per cent. is imported disease, do you mean those diseases which have been imported during the years since 1842?—Quite so. On this point there is a very interesting

Chairman—continued.

resting fact: We constantly hear cattle dealers, the "practical men" that are mentioned, state that we have a great deal more disease here than we find amongst the imported, say, the Spanish cattle. The fact is that a single animal bringing in foot-and-mouth disease, or a single disease-germ, contaminates a very large number of animals which are being bred constantly in this country, and which are found fresh and susceptible to the disease, and for that reason we have under our eyes constantly an immense evil, which would be perfectly controlled by the exclusion of the disease-germ.

6960. Are you speaking now of the diseases generally, or are you limiting your remarks to foreign cattle disease?—To the foreign cattle diseases; to the epizootics proper.

6961. Do you think that that applies to foot-and-mouth disease?—Clearly. Why do we clamour for restrictions in Ireland? We contaminate Ireland, and we naturally get back with compound interest what we give to her.

6962. But there the restrictions do not exist. I suppose you admit that foot-and-mouth disease is easily detected, and shows itself in a very short period, the incubation not being of long duration?—Yes.

6963. The restrictions that exist with regard to the foreign import do show that a disease like foot-and-mouth disease, which is not of long incubation, and which is therefore more under the control of the Veterinary Department, is detected in probably most of the cargoes in which it comes to this country?—And with what result?

6964. The result being that if the disease is detected the diseased animal is killed and the other animals with him, so that they are prevented from becoming centres of a fresh outbreak in the country?—We have heard this morning of the fœtor and stench in the Deptford Cattle Market, whence all the men that are carrying the dirt and filth of the market on their boots can contaminate the whole country. There you have an indirect means of conveying contagion of foot-and-mouth disease.

6965. Then although you appear to deal with foot-and-mouth disease by stopping it at the port, yet from the want of restrictions, you allow it to spread by the indirect methods which you have suggested?—Want of restrictions, so far as foot-and-mouth disease is concerned, scarcely perhaps meets the case. Foot-and-mouth disease differs from every other foreign epizootic in the fact of its attacking all warm-blooded animals. I have known cases where the contagious character of foot-and-mouth disease has been far more marked, and its infectiousness has been far more manifest that even the infectiousness of cattle plague. In this way: it is possible by absolutely closing the entrance to a dairy or to a farm, to exclude rinderpest; but it is probably, not possible, to exclude foot-and-mouth disease, as a rat or a mouse passing up a drain into a dairy might be the means of introducing it. I am not at all stating that which is matter of theory; I am stating what is matter of fact, that an absolutely closed place may be the seat of contamination by foot-and-mouth poison, although under similar circumstances even rinderpest might be excluded.

6966. That being so, and the disease being so wonderfully subtle, would it ever be possible,

Chairman—continued.

with the amount of foot-and-mouth disease which we possess, absolutely to get rid of it?—Most certainly; and I wish to direct your attention to this. On Sunday last I happened to go down to Ramsgate, and I opened the "Thanet Advertiser," and the first paragraph under the local intelligence was: "Foot and Mouth Disease in Kent.—This disease has apparently, we are pleased to state, been entirely stamped out, not a single case having been reported to the county authorities during last week." Now, how has it been stamped out?—It has been stamped out simply because it is a self-exterminating disease. Foot-and-mouth disease will die out. Close the ports to-morrow morning, and you will save within 12 months a great deal more meat than the total value of the animals brought in.

6967. You think that closing the ports is the proper mode for stamping out the disease?—Certainly.

6968. But would it not require very stringent regulations to deal with the disease all through our country, because, though Kent is so fortunate, many other counties are not in that lucky position?—I am not here to state that we are not to exercise the most perfect vigilance; but I wish to bring out the facts of the case. As a matter of fact, the history of the disease everywhere proves that it is very much like a fire; it burns itself out; you may have some combustible matter remaining, and on lighting that again, you may have a renewed fire; but it is not the fact, at all events after practical observations extending over a period of 20 years, that the disease lurks in a place, and lights up again by itself, and from itself, without the fresh introduction of virus in some way or other.

6969. You think that in that way the virus of foot-and-mouth disease does not continue to be contagious?—It is probably the most perishable of all the contagia, though it is the most rapid in its communication.

6970. You believe that by proper restrictions being adopted in this country, it would be stamped out; and you suggest that, as we have not the power of enforcing the regulations in other countries, we must protect ourselves against their sending it back to us by stopping their export?—Clearly. I might be allowed, perhaps, to state, with regard to foot-and-mouth disease, that these contagia have always been for 200 years carefully observed as always travelling from east to west in the lines of communication established by war or trade. We certainly would not have foot-and-mouth disease either from Canada or from America. We contaminated America with pleuro-pneumonia, and might get pleuro-pneumonia from there; but the current of the new trade is rather directed in opposition to the introduction of foot-and-mouth disease.

6971. Would the same reasons that you have given for the stoppage of the import of foreign animals on account of foot-and-mouth disease equally apply with regard to pleuro-pneumonia?—Yes; but with pleuro-pneumonia the methods of isolation and extermination to be applied to the disease are of a very positive and definite character.

6872. It can be treated more like cattle plague?—Yes; but still it does not at all necessitate the general regulations which are so damaging to trade.

6973. You mean that the same universal regu-

Professor *Gamgee.*

22 June 1877.

Chairman—continued.

lations would not be required for the purpose of stamping out pleuro-pneumonia as would be required for the purpose of dealing with the other disease?—Not under skilful management.

6974. But the danger of the introduction of the disease is greater, I suppose, in the case of pleuro-pneumonia than in the case of foot-and-mouth disease, from the fact of its lying latent in the animal for a longer period before it develops itself?—Yes. I proved in the first report which I communicated to the Government, that we have not only a latent stage, but latent cases; for I have so often seen animals apparently thriving from day to day and contaminating a dairy, having been purchased under conditions that would indicate that the disease was simply developing; and persons never saw that the animal was diseased until it was auscultated and brought under professional inspection.

6975. But from that danger, I suppose, you would lay greater stress upon the stoppage of import from abroad in consequence of the latent character of the disease?—Yes, certainly.

6976. And those restrictions would be confirmed by your wish to stamp out the cattle plague, which is equally liable to be brought over?—Clearly. The pecuniary losses by rinderpest in this and every other country where it is dealt with promptly are never equal to the pecuniary losses by foot-and-mouth disease or pleuro-pneumonia.

6977. You represent that with regard to cattle plague, however terrible it is, the losses are not so severe but that you might deal with it by proper restrictions?—Its very character compels people to stamp it out, and there is an end to the matter.

6978. And the danger of its introduction to other countries is so great to them that they would be more likely to take precautions that would render them free from it, and thus render their import here free from that disease?—Quite so, as is proved in the case of Germany, where they always protect themselves against Russian importation by establishing measures of great severity on the frontier. When first I anticipated the arrival of cattle plague from the Baltic, it was simply because Austria and Prussia and other Continental countries had such regulations on their frontiers as would practically protect us.

6979. I infer from what you have just said, that with regard to cattle plague you believe that the interest of foreign countries would tend to such regulations being established there as to make us tolerably secure from any re-introduction of it into this country; and that, if it were re-introduced, we should probably be able, with our own restrictive regulations, to stamp it out without the great loss that occurred in 1865?—Certainly.

6980. Therefore our dread, as agricultural people, of cattle plague, however terrible a disease it is, being imported from abroad is perhaps a little exaggerated?—I do not know whether the dread is exaggerated. It is certainly more properly dealt with than the other diseases.

6981. If we were dealing with cattle plague alone we might, in your opinion, by proper regulations, render ourselves tolerably secure against its introduction?—That is so, but it is not so with regard to foot-and-mouth disease; we are powerless with regard to that.

Chairman—continued.

6982. And you ground your idea that we ought to do away with the import from abroad, more upon the danger of the introduction of pleuro-pneumonia and foot-and-mouth disease, than upon the danger of the re-introduction of cattle plague?—I should say so.

6983. Your attention has naturally been directed to this American dead-meat trade?—It has. I may state that in 1865, having had rather painful experience of the difficulties in this country in securing such measures as would prevent contagion, I formed the opinion that by the conversion of the live-meat trade into a dead-meat trade, which demanded the preservation of meat, we might ultimately extinguish cattle diseases. It was that conviction that led me to devote myself, as I have done ever since, to these chemical, and physical, and engineering questions, which I may say have had some influence in bringing about the results that we have witnessed.

6984. Do you believe that those influences which are developing themselves with regard to this trade in America, as proving the possibility of bringing meat over, could be applied to the Continent?—Yes, and I believe that they might be applied to our home stock to a very large extent. The transport of live store cattle is an essential, but I wish not to be misunderstood upon this point. I believe that to save this country we must have for a period of say six months or 12 months at all events, to open the eyes of the country, if for nothing else, an absolute prohibition of live stock imports. The instant you accomplish that the whole of the Continent will do as they did in the cattle plague time, they will follow the Aberdonian plan and send you the meat dead.

6985. Can you tell the Committee the amount of import of dead meat that took place during the prohibition?—No, I have not the facts before me.

6986. From your last answer we might infer that a large trade in dead meat will come here in consequence of our stopping the live import?—As a matter of recollection, I can state that we had meat from Rotterdam and from Belgium. Discussions arose at the time as to slaughtering the animals at Mayence. Only the other day some Austrians came over with a view of seeing whether a quantity of meat might not be brought up from Vienna; and in 1865, the temporary restrictions upon the import of live animals led to considerable activity amongst men in devising means for the transport of dead meat.

6987. But even supposing that your view of it is correct, and that the foreign countries were prepared to send their dead meat here as soon as the live import was stopped, it must be some time before arrangements could be made with a view of carrying that out?—Not at all. At a cost of something like from 300 *l.* to 500 *l.*, within three weeks at any time an engineer would fit up a ship to carry dead meat.

6988. That was not quite what I meant by my question. What I meant was that the present trade being a live trade, if a dead trade had to be set up they would have to start the abattoirs and the whole system under which the slaughtering would take place there before the meat was sent over in the ship; would it not take some time before you changed the current of the trade into this fresh system?—Not if you closed the ports

Chairman—continued.

ports. Having the animals, say at Hamburg or Tonning, or elsewhere, to send across, you may rest quite assured that they will put up sheds, and slaughter them very promptly.

6989. As a matter of course that must follow, supposing that we were the only outlet for their trade; but supposing that for a time, at all events, they found Paris and Berlin better markets for the live animals than they had for the dead meat here, would it not practically drive that supply away from us for a time?—I hope it would. My own impression is that if we could return to the days when Dutch animals were being sent down to the Rhine Provinces, and the animals were not sent here alive, it would so largely contribute to the development of our meat resources that I think it would tend a great deal to our people being better fed. After a little delay the Americans would send us quite enough meat.

6990. I want to know how the gap would be bridged over between the cessation of the live, and the commencement of the dead supply?—There are 10,000,000 beeves now thriving in Texas; but, of course, from the northern portion of Illinois and Indiana, and the whole of Western America, we could obtain any quantity of meat.

6991. You believe that the want of supply to the towns could be filled by the American supply of dead meat; and therefore it turns entirely upon the question of whether the American system of shipping the meat has been brought to such a state of perfection as to enable us to rely on its being permanently brought over here in good condition?—The inference is not quite that. There is no doubt that the American supply will be sufficient for us with very slight modifications, and especially if we adopt in our own country rational means of preventing gluts, and preserving the meat; not doing as I see in London on the Pickford's vans, heaping up in mountains the quarters of beef which have been most carefully carried by the Americans to our ports, with men sleeping on the top of the meat, and with a vertical sun, when we have had days when the thermometer has been over 80 degrees in the shade, operating to injure the meat. With proper internal regulations depending upon ourselves we should soon meet, and meet I may state practically and immediately, any apparent inconvenience arising from the method that I suggest. I may state, of course, that if we have suffered as we have suffered so long, we might suffer a month longer, and give them due warning and let them prepare, if we are to look after the foreign interest more than we look after our own.

6992. In fact you really believe that the country could quite supply this demand after a given time, and that during that time the consumer would not suffer because of this new trade which has been introduced?—I am quite of that opinion.

6993. And you consider that the advantage to be gained is what you foresaw, namely, probable security to us at least, against the import of these diseases?—Certainly.

6994. Whilst you look to the restrictions which you believe ought to be in force in this country for rendering our home trade equally free from disease?—Quite so. It may strike honourable Members as singular that I should be

Chairman—continued.

be so strong upon one point. The restrictions which it is said that the farmer would dread, and would not sanction with regard to foot-and-mouth disease, are in my opinion useless. What I wish for is a trade such as there was in 1835, without a policeman at the cow's tail everywhere, and without the magistrates having to sign orders, with regard to the removal of stock from 10 o'clock in the morning until 10 o'clock at night. My belief is that we should return to the free liberty of the subject in our home cattle trade, and to a healthy stock, feeding our people as we fed them in the past.

6995. So far as your dealing with the foreign trade is concerned, you have altered your opinion a little. You stated that you were prepared to deal with the foreign trade rationally, so as to enable its growth in a proper way?—Do you think I intend to deal with it irrationally?

6996. You mean to stop it altogether now?—Except what we require in the shape of store stock. The foreign live stock trade is no red rag before my eyes. If you ask me whether we should be injured by the importation of Canadian stock alive, I should say no; I think that the Canadians are very stupid to send us the cattle alive, when they can send them so much cheaper and better dead; but, as a matter of fact, I have no objection to the transportation of a live bullock, except that it is commercially a very foolish process, and so far as the interests of our country are concerned, a most pernicious process.

6997. I gather that you would consider American and Canadian trade if it pays them, a safe trade even in live animals?—No, not from America, because the whole of the eastern towns are affected with pleuro-pneumonia since we contaminated them in 1847; but, so far as I know, Canada is healthy.

6998. That being the case, do you believe in what has been stated to the Committee as to the absolute immunity of Denmark, for instance, as a country, from pleuro-pneumonia?—Denmark has had three outbreaks of pleuro-pneumonia I think, within the past 10 or 15 years; I could not charge my memory absolutely, but it is a fact that Denmark, like many somewhat isolated countries, has been healthy. During the last century Denmark gave us cattle plague, perhaps more than any other country; because the instant a country like that is placed under favourable conditions by us, the cattle-dealers have a very keen scent for those channels through which cattle can be brought freely.

6999. But there was no introduction of live cattle at that time?—I beg your pardon. Modern history on these subjects resolves itself into this: From 1714 to 1770 we imported live cattle and cattle plague, and I may state that British authority and British science taught us clearly then how to deal with these diseases. Layard, Cullen, Mortimer and others, had sufficient power with the Government and with the king to stop imports in 1770. The cattle of the country had been so destroyed that it took 30 years to bring it up to its proper point; but as we approached the present century, the animals were absolutely healthy, and we had a progressive increase in the supply of animal food; from having a population of about 11,000,000 in 1801, we jumped to a population of something like 19,000,000 in 1840; and

Professor *Gamgee.*

22 June 1877.

Chairman—continued.

the British farmer fed our people, and prices went down from 5 *s.* 8 *d.* per stone to something like 3 *s.* 8 *d.* per stone for beef. Then we had, about 1839, first, the smuggling of Dutch cattle into Cork, which led to pleuro-pneumonia reaching Ireland, and foot-and-mouth disease came into different parts of the country owing to the free-trade movement; and since the importation of cattle, we have had exactly the same history as we had during the past century, namely, progressive development of disease, and attendant scarcity of animal food. We have, therefore, the three periods: from 1714 to 1770, disease and scarcity; from 1770 to 1840, progressive increase in the amount of animal food, and prosperity among our cattle producers; and from 1840 to the present time a devastation that I consider a disgrace to us after all our experience of the past century.

7000. We were speaking of the Denmark supply, and I understood you to say that we had imported cattle plague from Denmark?—We imported the cattle plague from Denmark about 100 years ago, not once but repeatedly, and also from the Low Countries.

7001. After you had stated to us that, on account of their being no pleuro-pneumonia or any of those diseases in Canada, you did not think that there was any necessity for stopping the import of live animals, if they thought that commercially it was profitable from that country, I then asked you whether that would not apply to Denmark, where certainly, since the beginning of this century, they have not had cattle plague, and where, although pleuro-pneumonia has broken out on three occasions, it has, according to the Danish evidence, always been limited to the farm on which it broke out, and no instance can be quoted of the introduction of the disease from that country?—The same may be said with regard to Norway, because it is beyond the centre of traffic; but the instant that you deal with any country to our east, as it might be proposed to be dealt with Denmark, that instant you would find that the German cattle trade would come straight through Denmark, and flood us with disease again.

7002. I understand you to say that, whilst you would allow the Canadian import, you think that Denmark and Sweden, happening to be to the east, ought to be prohibited, because of the possibility of their being made the means of conveying the disease to us from other countries?—Quite so.

7003. But you have said that you would not allow the import of American cattle on account of the pleuro-pneumonia, which we introduced there; would not the same thing apply to Canada as applies to Denmark, because the trader in America would naturally throw his animal into Canada as the German would throw his into Denmark?—At first sight you might think so; but the fact is that the importation from Canada is more through America than the importation from America is through Canada. It would not pay to ship animals from the eastern towns in America that are afflicted through Canada, and I think that the conditions of the trade are not such as to lead to any importation of disease through Canada. I wish it to be distinctly understood that, in order to accomplish what we want, the best thing is to begin and treat everybody alike, feed our people, and abolish live stock imports.

Chairman—continued.

7004. You would not even make the exception in favour of Canada to carry out your principle?—I simply stated that I did not wish it to be supposed that I was prejudiced. I want, so far as the lights of science and truth will go, to act up to what we require. I have no prejudice and no vested interests to affect the matter at all. All I want is to save this country, and, in fact, ultimately other countries, from the losses which have been sustained.

7005. From your science and knowledge, do you think that is the only way of securing ourselves against disease?—Yes; by grappling with it firmly.

7006. You suggest, with regard to the introduction of stores into this country, that they should be dealt with by quarantine?—I think that it would be a great hardship if a breeder in this country wanted to have some short-horn bulls, say from Kentucky, that he should not be allowed to import them. I believe that we should interfere as little as possible with the liberty of the subject where it in no way injures us.

7007. I understood you to say, with regard to the store cattle, that, for the reasons which you have given, you think that they ought not to be dealt with by prohibition, but by quarantine?—Certainly; we can only deal with them by quarantine. I have a great dislike to quarantine, as a rule. I know the great and serious objections to it. At the same time I see no other way of dealing with the matter.

7008. But that would leave a large door open, would it not, for the introduction of disease by those store animals?—It would, especially in relation to the supply of large towns with cows; and I think that if there were a little more discretion in the way which our dairymen, especially in the metropolis, conduct their business, they might probably save themselves by co-operative means; and I think you will find, through the chairman of the Metropolitan Association of Dairymen, that they would willingly submit to some means by which for a time they were either supplied entirely from our own country, or under very stringent regulations from either Holland or Oldenburg, or other places where they can get cheap cows, so as to exterminate pleuro-pneumonia. I think their co-operation has never been sought in the right way; but the way in which we have over 50 per cent. of the animals kept in our large towns dying from lung disease is a disgrace to the country.

7009. I suppose that you are quite alive to the danger that quarantine carries in its train?—Quite so. I am very sorry that we have to make any kind of deviation from the ordinary course.

7010. With quarantine you have all the difficulty of separating all the animals and so forth, and the danger of an animal becoming infected from the very fact of its being quarantined?—No doubt it is a very difficult thing.

7011. Yet you think that, notwithstanding all this danger with regard to quarantine, store cattle ought to be admitted under certain regulations?—I think that probably restrictions would be so oppressive as only to lead to import under very urgent circumstances, such as the import of animals for breeding purposes, or possibly

Chairman—continued.

sibly under some well-defined regulations for the supply of some of our large towns with milch cows.

7012. With regard to the dairies of the towns have you, since you gave your former evidence, paid much attention to them?—No, I cannot say that I have; I have been constantly gleaning what facts I could, but I have not visited the dairies to any extent.

7013. Do you feel that they are what has been described, viz., places where disease is very liable to appear, and from which it is very liable to spread?—Certainly, because all the town dairies are maintained by weekly purchases of fresh animals, especially since the spread of these diseases. In Copenhagen, perhaps, the cows are kept worse than they are in any other country. I am not stating this from my personal knowledge, but from facts that have been communicated to me. The country is beyond the reach of foot-and-mouth disease and those maladies, and the animals are always sound, proving that there is nothing in the town dairy calculated to engender those diseases, but it is the repeated and constant purchases of diseased animals. Personally, I have grown to believe that we ought to abolish town dairies and have them all in the suburbs; and, I think, the towns of England are getting alive to that.

7014. The carrying of milk from the country into towns is a trade that is very largely increasing at the present moment, is it not?—Yes. One observation that I made when I was specially working at the subject in connection with dairies was, that the poor people had certainly been supplied very much worse with milk since the importation of these diseases than they used to be; that is to say, that children in the large towns had a great deal more milk available years ago than they have had since.

7015. Is that in proportion to the population having grown in the large towns since that time?—I made some remarks specially with regard to Dublin. I know that in Dublin, through medical authorities, and through inquiries that I made amongst the people, that from 1840 to 1862, when I was making some special inquiries, the amout of milk available for the poor had greatly diminished, and the price had gone up.

7016. You attribute that to the introduction of diseases into dairies?—Yes.

7017. Do you suggest that dairies should be entirely prevented from being kept in towns, or do you think that the evil could be met by strict and proper regulations?—To a certain extent it might be met by strict and proper regulations, but I am strongly in favour of converting the town dairy system, if possible, into a suburban dairy system, and the local authorities, I hope and believe, are taking the matter up.

7018. But at the same time you think you could get the security that you desire by proper regulations?—I think so.

7019. And those regulations would be combined with your quarantining of the foreign cows?—Yes, if they were required, but they would not be required very long; our farmers would breed quite enough cows for them directly.

7020. Is there any other point that you would like to mention to the Committee in your examination-in-chief?—I should like to make a few

Chairman—continued.

remarks in connection with the dead-meat trade, as to the preservation of meat. Since 1865 I have been hard at work upon that subject, and at immense cost I have conducted an extensive series of experiments. In 1869, in America, in Texas, I first found that the preservation of fresh meat without the abstraction of animal heat was impossible, just in the same way as from olden time to the present it has been found impossible to salt meat unless it were properly set and cooled. I found that no method of meat preservation by which we require to keep the meat fresh could be successful without either abstracting the animal heat, or so elevating the temperature, as in the tinned meat process, to destroy all germs of decay. It was in Texas that I first used blowers with proper motive-power, driving the air out of the chamber, passing it over ice, cooling the meat, and performing the self-same operation that has since developed the American trade. My experiments were made known at that time, and under various patents the system has been carried on. The defect of the present system rests upon this: that as we approach 32 degrees of cold the air contains a larger amount of moisture, and almost all methods of fresh meat preservation depend more upon drying than upon temperature. In olden times and in barbarous countries people dried their meat by placing it in honey; the process of salting is purely a method of desiccation; and I found that by placing meat or vegetable products in a current of cold air you could obtain such a degree of desiccation as would practically keep the meat for many months without freezing it. My difficulty in Texas arose from the fact that ice was very dear there, and in New York meat was very dear; so that the reason that the trade has been developed lately, has been that the price of meat has come to so low a point, that where ice was not at a prohibitory price, they could obtain this cool current of air which we know to be sufficient for the transportation of meat. In the year 1873, I published a pamphlet on this fresh meat transport, which perhaps, I may be permitted to hand in, as in it there are certain facts with regard to this dry cold air process which will be explained.

7021. You quote these, I suppose, as bearing upon the present American import to show that it is in its infancy, and that it is almost certain that by proper application of the system of cold air, you will get over the difficulties which have been shown to exist as to the dampness?—Yes, they are using now say, 30 tons of ice for every 100 tons of meat to carry; and one ton and a half of coal burnt will produce those 30 tons of ice.

7022. In fact, that is only working out what you stated to the Committee of 1873, as your foreshadowing of what was coming?—Yes, no doubt.

Mr. *W. E. Forster.*

7023. I gather from your evidence that, with one exception, you take the same view now as you did in 1873; in 1873 I had the pleasure of seeing you, and I asked you whether you looked forward to a minimum of interference with the home trade and a rational interference with the foreign trade, and you replied in the affirmative; and you defined that rational interference with the foreign trade to be slaughter of fat animals at the port of landing, and quarantining of store

Professor *Gamgee.*

22 June 1877.

Mr. *W. E. Forster*—continued.

animals; I think the change that you make is, that now you would not allow any animals to be landed alive except the animals that are to go into quarantine?—Owing especially to the recent experience with regard to the way in which animals slaughtered even at Deptford can communicate cattle plague throughout the country.

7024. You adhere to the opinion that that there should be a minimum of interference with the home trade, and a rational interference with the foreign trade?—Certainly.

Mr. *W. E. Forster*—continued.

7025. In fact, your opinion is, that if we prohibited the import of live animals, foot-and-mouth disease would disappear?—Yes.

7026. You have travelled a good deal upon the Continent, I suppose?—I have.

7027. Do you believe that there is much more foot-and-mouth disease, say, in Denmark at this moment, than there is in England?—I have not been to Denmark lately.

Monday, 25th June 1877.

MEMBERS PRESENT:

Major Allen.

Mr. Murphy.
Mr. Arthur Peel.
Mr. Ritchie.
Sir Henry Selwin Ibbetson.
Mr. Torr.

SIR HENRY SELWIN IBBETSON, BART., IN THE CHAIR.

Professor JOHN GAMGEE, re-called; and further Examined.

Professor *Gamgee.*

25 June 1877.

Mr. *W. E. Forster.*

7028. I THINK my last question was whether you had been in Denmark?—I have been in Schleswig-Holstein.

7029. From your opportunity of seeing the state of the cattle in Schleswig-Holstein, and the state of the cattle in England, do you consider that there was more disease at the time when you were in Schleswig-Holstein than in England?—As to relative quantity, I am not aware whether there was or there was not. Schleswig-Holstein is more difficult to keep clear than our own islands.

7030. I am not asking you which might be kept the most clear if certain preventive measures were taken, but whether you think that at this time, or at any time within your experience, the actual relative amount of disease has been greater in Schleswig-Holstein than in England?—I have no doubt that at times the disease has been more rife in Schleswig-Holstein, and at other times it has been more rife in this country.

7031. When do you think it was more rife in Schleswig-Holstein than in England?—I cannot define any particular period. When I went to Hamburg in 1863, and first organised the international veterinary congresses, a considerable amount of disease had been raging in Schleswig-Holstein.

7032. What disease?—Pleuro-pneumonia and foot-and-mouth disease; the transit diseases or international diseases.

7033. I understand you now to propose that all importation of live cattle from the Continent to England should be prohibited, and that there should not be any great amount of restriction upon the home cattle?—If we desire free trade in meat that is an essential.

7034. Am I right in supposing that your proposal is to stop the import of live cattle into England?—Certainly.

7035. And at the same time not to have any great amount of restriction upon the home cattle?—Certainly; I wish to return to the position of and before 1839.

7036. In fact, your policy is to keep the foreign cattle out, and to let the home cattle go free?—My own impression is, that the farmers in their own interest will develop the dead meat trade at home as well as abroad, so far as it can be developed.

Mr. *W. E. Forster*—continued.

7037. That being your proposal, I wish to ask you whether you have any reason to suppose that foot-and-mouth disease and pleuro-pneumonia are more rife in the countries from which you would prohibit the import than they are in these islands; for example, do you think that those diseases are more rife in Spain and Portugal?—Certainly not; I should say that in Spain and Portugal disease is generally not so rife, and were it not for the cattle imported into Spain, Spain would be quite as healthy as our own country.

7038. Do you not think that at the present moment Spain is more healthy than our own country?—I should think it is, from its position in the extreme south-west of Europe.

7039. And yet you would stop the trade in Spanish live cattle?—Most assuredly.

7040. I understood you to state that, when the cattle plague raged in England in 1865 and 1866, the dead meat import took the place of the live cattle import?—To a certain extent it did; but there were no means of developing it to its full extent. The restrictions on trade were such as to stop everything for a time; but I understood at the time that meat was being brought in from Rotterdam and elsewhere; in fact, I was called to a case of cattle plague near Windsor, where I was informed that cattle plague had been imported by carcases direct from Rotterdam; Rotterdam at that moment being very infective.

7041. That being your opinion, I should like to know how you explain these official returns. It appears that, in 1863, the import of salted or fresh beef, that is of dead beef, was 287,000 cwt., and in 1864, it was 334,000 cwt.; whereas in 1865, 1866, and 1867, in each of which years there was cattle plague, the import was considerably less, being 244,000 cwt. in the first of those years, 232,000 cwt. in the next, and in the third, 246,000 cwt. It appears also, that in those years cattle were not prohibited; in fact, the

Professor *Gamgee.* 25 June 1877.

Mr. *W. E. Forster*—continued.

import of live cattle in 1865 was 283,000, being 50,000 more than it was in 1864; and in 1866, it was 237,000, being 6,000 more than in 1864. So that the real fact of the matter was that, instead of the dead meat taking the place of the live cattle, there were more live cattle imported, and there was less dead meat imported during those years than in the previous years. You were not aware of those returns?—I am aware in general figures of the returns. My statement amounts to this: that when from certain ports the importation of live cattle was stopped (and I suppose that nobody will doubt that the importation in 1865 or 1866 was stopped from certain parts) from those ports meat was imported, for I saw it. To what extent it was imported I am not prepared to state. But I am of opinion that if the import of live animals was stopped the foreigners would soon find their way if it only paid them, notwithstanding the inferior condition of their cattle, to send them here dead.

7042. I think you must acknowledge that if these returns are correct, there is no proof gained by the experience of those years; because taking the whole country together, as of course we must do, it was not the case that the dead meat filled up the gap caused by the stoppage of the import of live cattle?—I never pretended that it did.

7043. You made use of an expression in your evidence, which I did not quite catch, about the number of animals in London that died of pleuro-pneumonia; I understood you to say that 50 per cent. of the animals died of that disease?—I published, in 1865, very careful statistics; and I have no reason to alter the figures which I then obtained. As far back as 15 years ago, I think, I determined that, for every hundred animals that die of disease in this country, from 70 to 75 per cent. die of imported disease, of international contagion; and 25 per cent. die from all other causes put together, accidents, such as broken bones, and local injury and disease.

7044. What diseases do you include in the expression, "Imported disease or international contagion"?—The bulk of the mortality is really due to pleuro-pneumonia in connection with our large towns. The deaths from pleuro-pneumonia and foot-and-mouth disease combined, will make up 70 per cent. of the total number of deaths; and if the Veterinary Department of the Privy Council collected all the evidence that men like myself could handle on this point, I should be able to give you positive facts upon this subject.

7045. Do you imagine that any man who keeps a herd of cattle, may naturally expect that 70 per cent. of the deaths among his cattle from natural causes will be from pleuro-pneumonia or foot-and-mouth disease?—Permit me to state that when I speak of the total number of animals that die in this country, I do not refer to the loss being 70 per cent. on any single stock, although it may be so in the case of pleuro-pneumonia in a town dairy. Taking a town dairy, the least annual mortality from pleuro-pneumonia, when I last took extensive statistics on this subject, was 54½ per cent.

7046. Do you confine your statement to London?—I do not. The average mortality over the country since the importation of foreign diseases for some years was this: 5 per cent. for Scotland, 6 per cent. for England, and 7 per cent. for Ireland. For two or three years after the first importation of live animals farmers knew not what to do, and they proposed that they should have insurance companies, and try to gauge what the mortality would be. They thought that the losses would be covered by one, or two, or three per cent., but they found that that was not the case, and that the imported diseases abounded to such an extent that whatever premiums they charged they had to go into liquidation.

7047. But I think I understood you to state that you believed (and no doubt you have reasons for so believing) that 70 per cent. of the mortality among animals in Great Britain is owing to diseases of originally imported contagion, which apply mainly to pleuro-pneumonia?—Certainly.

7048. Then surely, if that is the average mortality, any man who keeps a herd must lay his account with this: that of the animals which he keeps that will die of disease, 70 per cent. will probably die of pleuro-pneumonia?—Seventy per cent. will die of pleuro-pneumonia, and in a town dairy probably more than that; and I wish to state this; that if in any town like London proper regulations were made to dissect all the animals that die of disease, you would find that I was not very far out. I think you are going to have a veterinary surgeon from Newcastle-on-Tyne, and if you will examine him upon this point, I believe that he has for some years with great zeal followed up the system of examining diseased animals, and you will find that I am not very far out.

7049. That of course would mean that, with the exception of animals intended for slaughter (which is a great exception), taking the dairy farm, you consider that the mortality is very much greater than it used to be?—The mortality since the importation of live stock is of course very much greater.

7050. Have you any facts that you could give in proof of that?—The whole history of cattle insurance institutions in this country demonstrates it. I gave the history in my report to the Privy Council in 1862, when I first determined and explained positively that the maladies destroying our stock were pure contagia. I then pointed out that after the importation of live stock those insurance companies were formed, and from the books of those insurance companies I determined what was the original estimate of the losses, and what afterwards turned out to be those losses.

7051. Such a statement as that shows your conviction that pleuro-pneumonia is exceedingly rife in Great Britain?—I think that possibly it is much less prevalent now, especially in a number of counties. The other day I was told that in Ireland they are very much better off than they were, and I am told that they are better in Cheshire than they were, because of course cattle disease legislation has done some good.

7052. Surely you cannot make the statement that you think that 70 per cent. of the mortality is owing to pleuro-pneumonia, without accompanying it with your conviction that it is very rife indeed in the island?—We have the healthiest country in the world, and the mortality ought to be very small.

7053. If we have the healthiest country in the world, I should have thought it very extraordinary that 70 per cent. of the mortality should be from pleuro-pneumonia?—The healthier the animals

Mr. *W. E. Forster*—continued.

animals the more rapidly they are destroyed by contagion very often.

7054. When you talk of contagion, do you mean pleuro-pneumonia?—Certainly; when I talk of contagion I mean pleuro-pneumonia and foot-and-mouth disease.

7055. Then, am I wrong in supposing that you think that pleuro-pneumonia is very rife in this country at this moment?—In the large towns it is very rife, but in the country districts it is possibly less rife than it has been.

7056. That being your opinion, I understand that your mode of stopping pleuro-pneumonia would be, practically, to order the animals from abroad to be killed and to let the home animals alone?—I never stated that at all; what I stated was this: that we should adopt for a time proper repressive measures; there is only one disease that I know of that is self-exterminating, and that is foot-and-mouth disease and that is a malady which causes more money loss, though not a greater loss by deaths than any other disease.

7057. But I understood you, at the beginning of your examination to-day, to state that, practically, you would not advise much restriction for the home animals?—I aim at having absolute freedom of trade in our own country; I should aim at having no restrictions at all in the long run; but that is a totally different thing from the question whether I am to cure a diseased animal or prevent a contagious disease by rational means; the first thing that is to be done is certainly to clear the country of pleuro-pneumonia by isolation and other preventive measures, but it ought not to take a skilful man six months to do it.

7058. You made allusion to the Texas cattle in your examination in chief, and you spoke of there being 10,000,000 cattle in Texas; upon what do you base that opinion?—I used that in round figures. I believe that the last time that I was in Texas, in 1869, they had between 5,000,000 and 6,000,000 beeves; they have been increasing immensely, and the area of country where the cattle rearing exists is extending very largely. I have not before me statistics from the United States to assist me, but in round figures I know that there must be certainly very close on to 10,000,000 head of cattle in Texas.

7059. Do you know what is the amount of cattle in Great Britain according to the last return?—I have a most wretched memory for numbers, but I think it is somewhere about 10,000,000. I have not the statistics before me. They have nearly three times the number in the United States, and we ought to have as many head as they have. I think that they have about 26,000,000 head of cattle in the United States.

7060. Are you aware that, according to the last return for 1876, the total number of cattle in Great Britain is under 6,000,000?—But that does not include Ireland. Of course I look upon our own three islands as one for all purposes of legislation and trade.

7060*. You do not think that it would be at all an unreasonable supposition that there are 4,000,000 more cattle in Texas than there are in Great Britain?—I do not think it at all unreasonable.

Mr. *Assheton.*

7061. I think I understood your view of the averages to be this: that on an average five per cent. of the cattle in England die of mortality?—

Mr. *Assheton*—continued.

By everything, including the foreign contagia or cattle disease. Prior to 1840 I do not believe that the average in this country would be more than 1 to 1¼ or 1½ per cent.

7062. Do you include accidents in that percentage?—Accidents and everything.

7063. Of those five cattle in a hundred which you say die from disease, I think you say that, roughly speaking, about 4, or 70 per cent., die of foreign disease?—Certainly.

7064. Then I presume you argue from that, that if by some good fortune we could be entirely rid of foreign disease we should save four beasts in 100; is that your contention?—Certainly; I think it is really trifling with the matter not to put a stop to it.

Mr. *Jacob Bright.*

7065. With regard to the mortality from lung disease, did I correctly understand that you gave us figures merely as your own opinion, or that you have actual facts which confirm that opinion?—I have facts. I had facts when I was working specially at the subject which have been confirmed repeatedly by independent inquirers.

7066. How were those facts obtained?—By house-to-house visitation, and getting the facts from the individual dairymen; and from the Metropolitan Dairy Association here I have no doubt that you will get the same facts if they have obtained the evidence.

7067. Over what area did you get those facts?—Over almost every town in the United Kingdom; mainly in London, in Edinburgh, and in Dublin.

7068. You spoke of the mortality of cattle in large towns, and I understood you to say that 50 per cent. of the cattle in the large towns died; did I understand you rightly?—I think it was 54½ per cent.

7069. What sort of cattle were those?—Cows.

7070. Milch cows?—Yes. The Lancashire communicated disease to their calves, and shipped it over to Ireland, and brought us back more pleuro-pneumonia; and they continue to do so to the present day. It was pleuro-pneumonia from Rochdale and many of those Lancashire towns that destroyed our short-horned stock in Cumberland and other districts. That mass of pleuro-pneumonia is no doubt being shipped back at the present day by the calves which are brought into those dairies.

7071. You speak of Rochdale; I suppose you know the circumstances of many of those towns?—I have been through most of the Lancashire towns; I have been a great deal in Manchester, but I do not think I was ever in Rochdale.

7072. Do you mean to say that one-half of the milch cows in Manchester die of disease?—During the greater number of years since 1842, I have very little doubt that that has been the average mortality.

7073. Year by year you think that one-half of the cows die of disease?—Year by year, unless some special provision has been made quite lately.

7074. You spoke of the total mortality of the three kingdoms, and I think you said that in England 5 per cent. of the animals die, and in Scotland 6 per cent., and in Ireland 7 per cent.?—Yes. Allow me to state that that was from insurance statistics, taking the animals over a wide area which have been insured and paid for.

Professor *Gamgee.*

25 June 1877.

Mr. *Jacob Bright*—continued.

7075. You have spoken a great deal about international disease; which of these three kingdoms is most subject to contact with international disease; England, Ireland, or Scotland?—England, certainly; but then in England a vast number of animals are slaughtered at the ports, and the conditions which favour the propagation of the disease when once it is in the country prevail differently at different seasons of the year. For example, the Ballinasloe fair may contaminate an enormous area of country, just as the Allhallows fair first propagated disease in Scotland. I proved to the Government, in 1862, that in England the contagious diseases were communicated by Scotch and Irish cattle; in Scotland by English and Irish cattle; and that in Ireland the disease was conveyed by Scotch cattle brought to Belfast, and English calves and cattle *viâ* Liverpool and other parts. So that it is a question of the distance over which the animals have to travel; the farther they travel the greater the number of centres in which they are likely to take contagion, and the greater the chances of their propagating disease.

7076. Still, you admit that Ireland has very much less connection with the Continent than England has, so far as cattle plague is concerned?—Certainly.

7077. And therefore one would suppose that the international contagion should affect Ireland very much less than it affects England?—It so happens that Ireland was first infected in the south by direct importation from Holland.

7078. But you would suppose, would you not, that continuously England should be much more infected than Ireland?—Given that you exterminate the diseases, then no doubt the difficulty of contaminating Ireland is greater. Ireland has not had cattle plague this year, and Ireland had little cattle plague in 1865-66.

7079. Then Ireland is very much less in connection with the Continent than England is, so far as the cattle trade, or so far as these international diseases, as you call them, are concerned, and yet the mortality in Ireland is something like 50 per cent. more than it is in England?—Yes, but I can explain that; for example, in the county of Meath, where a very large number of animals are purchased for the purpose of breeding, they are bought in the Dublin market; and the animals that were insured were not the animals of the mountains of Roscommon and Kerry, and elsewhere, where they were healthy, but they were animals which were in the contaminating markets, or in close contact with them. That is why in the large towns the cows are so destroyed, because week by week they are buying in fresh animals. It is interesting to know that you can divide England under three heads: the hills that are absolutely healthy, where even foot-and-mouth disease is rarely seen; the vales where they have mainly cows, and which are every now and then contaminated, but where they do not breed disease; and then the large towns, which are the pest centres.

7080. You tell us that, if we excluded foreign cattle foot-and-mouth disease would suddenly, or, as I understood you, very rapidly die out absolutely in the three kingdoms?—Certainly. You might have some cases of mediate contagion, indirect bearing of the disease; but it is so easily isolated as to open the eyes of everybody to the truth.

Mr. *Jacob Bright*—continued.

7081. Do you know the condition of things in Holland?—I was in Holland in 1862, but I have not been there since.

7082. It is not permitted to import cattle into Holland, is it?—It may not be now; and prior to the great cattle trade from east to west, established through Europe as far back as 1833, Holland was as healthy as our own island. In 1833, I believe Holland was infected, but it was specially infected when the distillers of Schiedam and the neighbourhood of Rotterdam, and other places, were feeding bullocks for our own market; and then also Friesland became infected.

7083. But how did Holland become infected if she did not import cattle?—She did import cattle when she became infected; and you will find, in some of the pigeon-holes in the Privy Council Office, my maps upon the invasion of Holland at that time.

7084. Does Holland import cattle now?—I am not personally aware of the rules, but I believe not.

7085. Is there any foot-and-mouth disease now in Holland?—I do not know; but whether or not, I should certainly stop the import of live animals; at all events, from all Continental ports, as a free trade measure.

7086. You would exclude foreign cattle, but you would not have regulations or restrictions with regard to the movement of English cattle?—I certainly would; with regard to pleuro-pneumonia, I would effectually prevent it, and I would always isolate whenever there were contagious diseases; but the necessity for such restriction would pass; we should have no such disease.

7087. With regard to foot-and-mouth disease, you would have no such restriction; it would die out suddenly of itself, you think?—You are quite right; I do not say that it would die out suddenly, but promptly.

7088. You are aware, I daresay, that men who can speak with quite as much authority as yourself have expressed quite an opposite view before this Committee?—I know that the gentlemen who you state have quite as much authority as myself in the matter have been the advocates from the very first of everything that has been contrary to that which I advise; and, if the history of my counsel and the history of their counsel be taken, I am quite willing to abide by the result.

7089. I speak of our first witness, Professor Brown?—I do not consider Professor Brown an authority on contagious cattle diseases.

7090. Did he not tell us very positively that it would be absurd to add to the restrictions on imports unless we also placed similar restrictions with regard to home cattle both in reference to foot-and-mouth disease and in reference to lung disease?—Yes, I believe he said something of the sort. I trust you will believe that I wish to be respectful to everybody; but it is a matter of vast importance as to the views that ought to prevail in this land of ours, and I believe it will be found that during 25 years I have never erred, and I challenge anybody to state one instance where, if they had followed my advice, they would not have been, at all events, four or five years in advance of what they were.

7091. You consider that we shall never be in a proper position until we absolutely exclude foreign

Mr. *Jacob Bright*—continued.

foreign live cattle?—Until then we shall never have free trade in meat and a sound development of our own meat production.

7092. You think that we shall never have free trade until we exclude all foreign trade?—I beg your pardon, until we so regulate foreign trade that it is not liable to the irregular stoppages, to the mismanagement, and to the vicious systems that have prevailed during the past 20 years.

7093. Still, if you could, you would shut out the live cattle from abroad?—I would shut out the live cattle from abroad, certainly.

7094. And you would trust to the dead meat and to the growth of English cattle?—Clearly. It is cheaper to have the dead meat, and it is safer to have the dead meat.

7095. What do you say about the dead meat in July and August?—Since I was before the Committee the other day, I have taken great care to satisfy myself upon one point; and, with the co-operation of one single railway company, (and I have no doubt that all the others would be quite as active), I could provide cold storage for the whole dead-meat trade of America within a period of from one month to six weeks.

7096. But is the dead-meat trade a successful one in the hot months?—Certainly not under existing conditions.

7097. Not anywhere?—I cannot say not anywhere, because the American meat is coming in steadily and realising exceedingly good prices in good times; but unfortunately the American consignors ship their meat over here, and the moment it is landed, all the admirable conditions that they have imposed for its transportation are abolished.

7098. Would you shut out live cattle before the dead meat had been generally and properly organised?—I would shut them out to-morrow morning.

7099. Assuming, then, that you shut them out to-morrow morning, what would be the condition of this country with regard to its meat supply for the next month or two?—We should not feel it at all; I do not believe that it would affect the price one farthing per pound; it would not bring it up to the price that it was before the importation of American dead meat. That is my belief.

7100. You do not think the exclusion of a considerable source of supply affects price at all?—Yes, provided there is not a very great facility to make good the deficiency. The telegraph will bring within 14 days four cargoes for one from New York.

7101. How is it that we do not get more now from America than we do?—I can explain it from Manchester experience. The co-operative society in Manchester that supplies the meat stores throughout Lancashire and Yorkshire, took about 300 to 350 quarters per week during the cold weather; they have been compelled to drop to something like 50 or 60 quarters per week, because the conditions under which it was landed rendered it impossible to get that meat to the hands of the working people in sound condition. If they had, as I state, cold meat stores in Manchester, and the meat trade were turned into a trade in an imperishable and not a perishable product the whole difficulty would vanish.

7102. If we had the proper conditions we should get the supply?—Any quantity.

7103. But you would shut out foreign cattle even though we have not the proper conditions?—The proper conditions would follow instantly.

Mr. *Jacob Bright*—continued.

7104. You spoke of the great prosperity of the farmer up to the year 1840, because he had no trouble as to international diseases?—As a stock raiser and meat producer he was prosperous.

7105. He was a prosperous man at that time, was he?—We had a vast number of people profitably producing meat for our markets, although the price of meat went down.

7106. I understood you to say that, as compared with the present, the farmer was then a prosperous man?—I suppose that the amount of capital that has been brought into farming during the last 30 years has completely altered the conditions of farming. I am not prepared to stand a cross-examination upon that point, but I am prepared to state this: that the farmer could afford to sell his meat progressively cheaper, notwithstanding the increase in population, from 1800 to 1840, with an occasional exception.

7107. Up to the year 1840, was he not coming to the House of Commons every few years complaining of the grievous condition in which he lived?—Certainly he was. The great advantages of free trade have naturally tended materially to diminish the chances, and if we have free trade in meat now his position would be improved.

Mr. *Mundella.*

7108. I gather from your statement that you believe that foot-and-mouth disease is generated, and exclusively generated, abroad, and not at home?—Foot-and-mouth disease belongs to a very limited group of maladies which are only known to us as propagated from the sick to the healthy, and which have invariably originated from the east for about 200 or 300 years.

7109. But you are aware that Holland has prohibited the importation of cattle for some years, and yet disease is chronic there?—All the continental states have very great difficulty in preventing what we call mediate or indirect contagion.

7110. Why should England expect to fare better than Holland in that respect?—Because we have an ocean around us; we have a barrier against all diseases provided we treat our animals rationally.

7111. You assume, then, that it is possible to exterminate disease in England, and that it would not revive if all foreign cattle were excluded?—Certainly, it would not.

7112. And you say that you would shut out foreign cattle to-morrow morning, and you believe that, in the result, meat would not be one farthing per pound dearer?—I do.

7113. You are aware of the immense importation of foreign cattle into this country?—I am.

7114. You believe that the immediate withdrawal of an enormous proportion of our supply would not affect the price of meat?—Not disastrously at all; not like the cattle diseases affect the price of meat.

7115. Is it not contrary to all experience and to all political economy to suppose that price would not be raised if you withdrew an immense supply; for instance, we have heard of 100,000 sheep being brought to market in one day, and, if you withdrew that supply, do you mean to say that in the result meat would be no dearer?—If you

Professor *Gamgee.*

25 June 1877.

Mr. *Mundella*—continued.

abolished live stock imports, those animals would come dead; it may take a month to regulate the trade, but, if you apprehend famine, my opinion is that there would be no famine in the land.

7116. But surely it is the interest of the cattle exporters from foreign countries to bring meat in the shape in which it will pay them the best, and which will secure to them the most regular market, is it not?—Their statement now is that, from the cattle of the Continent being much inferior to the American cattle, they could not stand side by side in the meat market if they brought them in dead; that is a deliberate statement made by persons who have purchased of late the right to use the patented processes as adopted in the American trade.

7117. We import a great many cattle from Tonning, for instance, which is a very small town; how do you suppose that all those cattle would be killed at the port of exportation, and that they would be brought to this market?—Just as it is done in America; the animals are brought in twos and threes and tens and twenties by the consignors and shipped across; the whole of this trade is in the hands of capitalists, and it is a very small matter for them to knock up a slaughter-house and send the meat dead; each boat only costs 200 *l.* to prepare it for the trade.

7118. That would be a withdrawal from the English market of all that is known as offal, would it not?—Not so. A great portion of the offal, if it is prepared in the same way as the meat, comes perfectly well, except the manure, and I do not suppose that you would hold out for the feculent matter.

7119. You said, did you not, that the American meat was already realising good prices in good times?—Exceedingly good prices.

7120. Are you aware that we had a witness before us last Monday who told us that the American meat, which came to market in one steamer a week or two ago realised 7 *d.* per pound the first day, 4 *d.* per pound the second day, 2 *d.* per pound the third day, and that the rest was destroyed?—That shows how important it is for us to regulate the trade properly. If that meat had been properly protected, and we had not gluts in the market, with the deterioration and slimy condition due to improper management here, that would not have occurred.

7121. You think that it is possible to continue the conditions of importation so securely that the meat will arrive here in good condition, so that it can be sent to all the distant markets of England in good condition, and distributed throughout the country without any deterioration or loss?—Certainly.

7122. And that the exporter can rely on his article coming to a regular steady market?—Certainly; and the salvation of our large towns and our large manufacturing districts rests upon the cold-meat store system.

7123. How would you propose to store large quantities of meat that have been 10, or 11, or 12, or 14 days at sea?—There is no difficulty at all; you can just put it on a truck.

7124. I will take Liverpool, for instance?—You would put it on a truck in Liverpool, and the transit to the metropolis is certainly not long enough to affect the meat one way or the other; so that you require no special management on the railway, except hanging the meat in its canvas perfectly clean, and seeing that the

Mr. *Mundella*—continued.

trucks are properly ventilated; and then that meat will be placed at once in a cool chamber and sent to the market as it is wanted, 10, or 15, or 100 quarters, or whatever quantity you choose. My belief is that we shall have in large towns like Sheffield a direct supply from America to central stores, and so into the mouths of the working men, and that we shall have meat back again at 5 *d.* and 6 *d.* per pound.

7125. It involves a certain process of distribution to get it into the mouths of the working men, does it not?—It would not be very difficult to get the working men to distribute it amongst themselves.

7126. Surely the storage of meat can be better accomplished alive than dead?—Certainly not; because, if you carry the animals alive, we know, from an experience of upwards of 30 years of the present century, and over 30 years of the past century, that the transportation of live animals entails deterioration and waste, and further that it is invariably attended by the propagation of contagious diseases.

7127. But the deterioration in the live animal is not so great as the deterioration of the dead meat, is it?—Certainly it is. Having devoted 10 or 12 years to the preservation of meat, and never having had a single cargo of beef across the Atlantic without ice in proper condition, I can state that the deterioration of the dead meat is practically nil. It is the loss of probably 2 lbs. or 3 lbs. of water from a quarter of beef by evaporation.

7128. Are you aware that cattle have been brought to this country from America in such fine condition that they have been sold alive at 50 *l.* a head?—I know; have we not sent our magnificent short-horned cattle to Australia?

7129. I was speaking of the supply of food, and not of prize animals; what deterioration can they have suffered when they fetched that price?—Very slight indeed, no doubt; but we have to take not the exceptions but the normal condition of the trade, and during eight months of the year the deterioration of live stock is infinitely greater than any possible deterioration of dead meat.

7130. But if they can find a means of bringing live stock safely to this country, surely you will admit that that is the most desirable way of bringing the cattle to this country?—I say that is the most undesirable way.

7131. Do you mean to say that the importation of live healthy cattle from America is an undesirable thing?—I mean to say that it is impossible to argue against the importation of live, healthy animals in such a channel that our cattle cannot possibly be contaminated. I believe that for the promotion of free trade, and for the proper feeding of the people here, the isolation of our own stock from all foreign stock is an essential; if you state to me that you wish to import live healthy cattle from Canada, it is impossible to adduce an argument against it, except that I think the people would be very foolish to send them alive instead of dead.

7132. You said that the danger of disease was from the east?—Yes, and not from Canada. We happen to have contaminated America by these eastern pestilences; although to the extreme west, from where the meat has come, to the best of my knowledge and belief, pleuro-pneumonia has not yet penetrated. We even took the trouble to send foot-and-mouth disease there, and

that

Mr. *Mundella*—continued.

that opened my eyes to the self-exterminating character of the malady, because it went through like a match laid to a train of gunpowder, and disappeared without any preventive measures whatever being taken.

7133. Do you know anything of the Spanish and Portuguese cattle which have been imported into this country?—I have seen a great number of them.

7134. Do they suffer deterioration from importation?—Very seriously; and very often many of them have been thrown over in the Bay of Biscay.

7135. They have been thrown over in the Bay of Biscay in a storm as dead meat would be, I suppose?—It is my opinion, and you may take it for what it is worth, that the transportation of a live bullock for slaughter across the ocean, if you can carry him dead, is a blunder.

7136. You argue on the assumption that the exclusion of all live cattle would leave England entirely free from cattle disease?– The exclusion of live stock imports would, without a single ounce of meat being brought from America, lower the price of meat in this country in five years. If our farmers had not the disease to contend with, my belief is that they could produce animals enough at lower prices to feed the whole country, and progressively to feed it.

7137. I have before me the report of the number of animals which were thrown overboard while in process of importation; and I find that, of 4,539 Spanish cattle imported into Thames Haven, only three were thrown overboard; and that from Portugal there were 4,209 imported, of which seven were thrown overboard; so that all the year round there were 31 cargoes; and 10 out of 10,000 cattle were thrown overboard in the year; do you consider that a large proportion?—That is very fortunate; but a great many of those had gone through a great deal of suffering.

Mr. *James Corry.*

7138. Do you know anything of the tinned meat trade from America?—I am personally aware that since I was in Texas they have started at Galveston the exportation of meat, and at Chicago, too, they have been tinning meat.

7139. In large quantities?—I am not an authority upon that point; I cannot tell you. Some years ago, before the means of transporting meat fresh as it is transported now were known, and before the conditions of the trade could be thoroughly brought about, I was instrumental in promoting the importation of tinned meat from South America, and very large quantities have been brought from Bopequa. The cost of tinning happens very materially to interfere with the trade as compared with the trade in fresh meat for curing, although, no doubt, it is a very important trade. We owe that, I think, to Judge Tindal's son, who introduced the Australian trade as far back as 1865, and great good he has done by it.

7140. It is used for ships' stores, is it not?—Yes.

Mr. *Wilbraham Egerton.*

7141. Do you know that the Spanish cattle arriving at Plymouth are used by contractors for the navy?—I am not aware of it personally.

7142. You do not know whether they have been tried to be kept, and whether they have improved in condition in this country after having been kept?—I should suppose that would be so from the simple fact that the Spanish cattle are working oxen, and many of them are tended most carefully all their lives, and they are accustomed to be handled; that is why they come over by ship very much better than other cattle. I have no doubt whatever that they would, with a little time, improve, though, as a rule, five or six days' journey by sea would require a fortnight or three weeks before the animals got into what a farmer would call real thriving condition again, laying on flesh well. I should suppose that the Oporto and Spanish cattle would come over better than the others.

Mr *Wilbraham Egerton*—continued.

7143. If they had anything like quarantine for a fortnight or three weeks, do you think they would lose condition?—You cannot deal with quarantine at all in connection with animals for slaughter.

7144. Are you in favour of allowing Spanish and Portuguese cattle to come alive into this country, as you said in 1873, because you think that their cattle are healthier?—Unfortunately, we have had some animals imported with foot-and-mouth disease; and my belief is that the country would benefit immensely if that could be turned into a dead-meat trade. Spain and Portugal are so far from the direct transit of the maladies from Bessarabia right through Hungary and Germany to this country, that there are many arguments in favour of Spain and Portugal being kept open; if you can deal with the trade partially, I know what it will be; the moment one country is allowed to do what another is not, then some foreign interposition occurs, and unfortunately for the British farmer, and the British stockowner, and the British meat consumer, foreign statements have had much greater weight than well founded statements made to our Government in our own country.

7145. Do you think that Holland takes sufficient precautions by its own laws to keep out cattle plague?—In the case of cattle plague I have no doubt it does, because it is such an easy thing to prevent it; but not in the case of foot-and-mouth disease and pleuro-pneumonia.

7146. Then why would you prohibit animals from Holland?—Because they have communicated disease to our cattle more than any other animals in the world.

7147. You are aware that they are now taking very stringent measures to stamp out pleuro-pneumonia?—I would trust no continental nations at all. In the case of the animals which pass through their frontier, to all appearance perfectly sound, the period of incubation may end on the German ocean, and that is sufficient to contaminate the whole of our stock; so that apparently healthy animals might cross Holland and give us disease.

7148. Would you be satisfied with slaughtering them at the port of landing?—I was satisfied; but I think you will find that even the Privy Council authorities at the present moment would declare that the foreign stock market system, in the case of cattle plague especially, has failed, and that you cannot trust to it.

7149. I am assuming that Holland takes sufficient precautions to keep out cattle plague?—You can trust nobody; you must trust yourselves.

Professor *Gamgee.*

25 June 1877.

Mr. *French.*

7150. Are you acquainted with the restrictions that are in force in Denmark with reference to these diseases?—Personally I am not; it is not a subject that is before me at the moment.

7151. Would it surprise you to hear that even the cattle trucks which take cattle out of the country are not allowed to return again?—Yes, I have no doubt of that, and I have no doubt that Denmark is normally quite as healthy as our own Sutherlandshire.

7152. Taking those regulations into consideration, do you not think that it would be safe to allow cattle to be imported from Denmark, or from countries which have such severe restrictions?—I can only judge from history. When we have allowed animals to come from Denmark during the past century we have had cattle plague conveyed by them to our shores. It was the Low Country cattle and the Danish cattle which led to the then Government abolishing the system of live stock imports, which gave us the finest stock in the world.

7153. That was in the last century?—That was in the last century.

7154. But these present restrictions in Denmark have been put in force since?—No doubt, because in the last century we were the leaders, and we always have been the leaders, in cattle plague prevention; only in the last century the scientific men had some power with the king, and the authorities; whereas, during this century, the scientific evidence has had very little weight upon the subject.

7155. Then we are much safer at present than we were in the last century as regards Denmark, are we not?—No, we are not, because we have behaved more irrationally. The moment they saw the disease they tried to prevent it. I have been actively pursuing the subject with only one object, and that was to rid this country of cattle disease, and I can state that I think there has been a tendency usually for public opinion to be in advance of legislation.

7156. Do you know what the price of meat is in New York at present?—No. When I was there that was the great difficulty that I had, for I carried out all these blowing air experiments over there, but the meat was somewhere about 30 or 35 cents per lb.; so that the export was an impossibility at that time from New York. It has been exceedingly low lately in the United States and in Montreal; no doubt it will be going up a little under the trade here, but they can produce any quantity.

7157. That means that there would be a surplus in the country after supplying New York, which they could not get rid of unless they sent it over here?—Certainly.

Mr. *Chamberlain.*

7158. Have you not said that the contagious virus from foot-and-mouth disease was extremely subtle?—It is.

7159. Can it be conveyed by offal?—Yes, it might be conveyed by offal; it might be conveyed by excreta.

7160. You would prohibit the export of hides and offal, then, I presume, as well as of live animal?—No, that would be a sort of refining of fine gold. What we are suffering from is importation of disease by means of live cattle, the communication of disease from living sick animals to living healthy animals; and if we stop that, the accidents, if I may use the expression, of the other trade are perfectly under control. Then everything that is dead is so easily disinfected. An animal that comes here in a state of incubation of foot-and-mouth disease pours forth gallons of saliva, each microscopic molecule of which is capable of contaminating nobody knows how many animals, if it finds a fit soil in which to work.

Mr. *Chamberlain*—continued.

7161. But if we are to submit to all these restrictions in order to get rid of the disease, it would seem to be very foolish to subject ourselves to the possibility of such accidents as you speak of?—If it is deemed desirable to extend them, it may be done. I should say that the country can be kept healthy, certainly free from pleuro-pneumonia, certainly free from cattle plague, and, as a general rule, quite free from foot-and-mouth disease, by abolishing the trade in live animals.

7162. We have been told that cattle plague is propagated by dead meat; do you agree in that opinion?—There are exceptional instances; for example, in Hungary I have seen cattle plague on a farm myself; hawkers have gone about selling the flesh of cattle affected with rinderpest; they have washed it in water, and thrown the water into the courtyard, and as the result of that there has been an outbreak of cattle plague.

7163. Then, in order to be perfectly safe, we must not only prohibit the import of live cattle, but also of offal, hides, and dead meat?—There are certain things in the world that are impossible.

7164. You do not answer my question. In order to be perfectly certain we should have to do that, should we not?—It might be considered an advantage from one point of view, but I think that the disadvantage to trade would, in that case, be such as to counterbalance the advantage.

7165. I am not asking you to balance the advantages, but whether, in order to be perfectly safe, it would not be necessary to prohibit the importation of offal, hides, and dead meat?—Yes.

7166. Would you exclude live sheep?—Yes; live sheep are capable of communicating foot-and-mouth disease, but not pleuro-pneumonia.

7167. We have been told by one witness that mutton cannot be successfully exported in the same way as beef; is that your experience?—My experience is that it is much more easily preserved than beef.

7168. Would you apply the same restrictions to the trade with Ireland?—Certainly not. I should look upon Ireland as an English county. I should deal uniformly with the cattle of our own three islands; but there has been a great deal of worrying of our home trade, and certainly interfering with the proper development of the foreign trade; because this scheduling of foreign countries, and these restrictions here and restrictions there, have been most prejudicial.

Mr. *Anderson.*

7169. When you speak of international contagion, what diseases do you include?—As affecting the meat supplies of this country, they are the cattle plague, the contagious pleuro-pneumonia, the lung plague, the aphthous disease, or foot-and-mouth disease, the sheep-pox, and sheep-scab. Those are the maladies that really affect our meat supply.

7170. When

Mr. *Anderson*—continued.

7170. When were those diseases imported?—At different times. Rinderpest was the cause, probably, of the severer restrictions which were imposed last century, though Mr. Headlan Greenhow and others believe (and there is reason for that belief) that pleuro-pneumonia was disseminated with cattle plague. To a certain extent we know that foot-and-mouth disease was all over the Continent.

7171. When did pleuro-pneumonia come to this country first?—The real invasion by pleuro-pneumonia of this country dates from 1842. We had its importation into the South of Ireland as far back probably as 1839, by cattle from the Hague. I am not certain that we had not some smuggling of cattle on the East coast of England into Norfolk before the free importation of live cattle.

7172. When was foot-and-mouth disease imported? — Foot-and-mouth disease was called "the epidemic." In the Royal Agricultural Society's Journal for the year 1841, you have a report by Professor Sewell, in which one or two veterinary surgeons pointed to the fact that this malady had been raging in France. We did not know the name of it. In 1840 and 1841, people were astounded by these diseases appearing; one was called the "new disease," and the other was christened "the epidemic," until the Germans reported that the one was their "Klauenseuche," and the other was their "Lungenseuche"; and it was from Germany that we learnt what the disease was. The foot-and-mouth disease came in first, and then quacks started up all over the country to cure the malady. Since it was not a malignant disease, they were very successful; but suddenly they encountered the pleuro-pneumonia, and after three or four attempts to cure it, the system of slaughtering as a means of getting salvage was adopted. When I first took up the subject, almost as a boy, I attacked the traffic in diseased animals as in its nature a vicious traffic. I was told that the diseases came from east winds or west winds, and that they might come from north wind, from cold wind, and from dry weather, and from all other causes combined; but the maladies date practically from the importation of live animals.

7173. Then your opinion is most decidedly that neither pleuro-pneumonia nor foot-and-mouth disease is generated in this country?—Certainly.

7174. And therefore that you would get quit of them be regulations?—Most assuredly.

7175. And you think that you could exterminate pleuro pneumonia in six months?—It is always a dangerous thing to prophesy unless you know beforehand what will happen, and six months may seem a very short time; but under adequate regulations, I should say that pleuro-pneumonia ought to be stamped out in these islands within six months.

7176. Supposing that the Privy Council made you a sort of cattle dictator, you could make such regulations as would do it?—I have no such desire; but I should consider myself unfit for my work if I did not exterminate the diseases within a very limited period of time.

7177. Ireland has very little communication with the Continent in live cattle, has she not?—Very little.

7178. Then how is it that foot-and-mouth disease always comes to us from Ireland?—It does

Mr. *Anderson*—continued.

not always come to us from Ireland. As much foot-and-mouth disease comes from Scotland as from Ireland; it depends entirely which way animals are moving.

7179. Some of the witnesses have told us that a great deal of it comes in at first from Ireland?—When I went to Waterford with Mr. Denny, the great pork factor, and was going over his great pork-curing establishment for the Privy Council, he said: "You see we have our pigs come here, and if the disease is brought into our market from England by any of the calves, we find the moment that one lot of pigs have got contaminated in our wooden pens, where we starve them before slaughtering, every succeeding lot for weeks after catch the disease."

7180. You said that foot-and-mouth disease was a self-exterminating disease; why does it not become self-exterminating in Ireland where they have no fresh contagion?—It does constantly every day, only we keep giving them fresh modicums of disease from England every week, which we always receive again with compound interest. If one case of cholera comes into this country it may generate a thousand cases, and then we are probably more contaminated than even the countries that send us cholera.

7181. You say that exclusion would completely stop the disease; was there not complete exclusion in the reign of George II.?—No.

7182. Was it not illegal to import animals?—I think it was in 1770, in the reign of George III., that we stopped the importation of live animals.

7183. Are you not aware that an Act was passed in the reign of George II., making it absolutely illegal to import cattle of any kind, even from Ireland?—I think it was in the reign of Charles II.

7184. Are you aware that during the operation of that Act, we had the worst outbreak of cattle disease that has been known in the country?—But it was in consequence of these outbreaks that the restrictions were imposed. I may mention that during one of the invasions the practice of inoculation started up, and I almost think that it was during the reign of George II., and afterwards during the reign of George III., the practice of inoculation was stopped, but the means which were adopted in this country, as it was thought, for the prevention of the disease, were means which favoured its propagation.

7185. Are you not aware that, before we had cattle disease in the country at all, an Act was passed in the reign of George II., not for the purpose of stopping the cattle disease, but with the avowed object of keeping up the rents in the country?—I am not personally aware of any such Act, except in reference to the Contagious Cattle Diseases. I have the whole of the Acts tabulated, and if any fact of that sort comes to my knowledge I shall be most happy to give it to you. In the reign of Charles II., an Act was passed for prohibiting imports of cattle even from Ireland. This, with regard to Ireland, was repealed by 5 Geo. III. c. 10. In the time of George II. certain temporary Cattle Plague Acts and Orders were prevalent, from 1745 to 1756; but in 1769, when the labours of Bates and Mortimer, Cullen and Layard, were fresh in men's minds, the 10th of George III. chapter 45, was passed.

7186. Have you got the preamble of the Act of George II.?—I have not.

7187. An

Professor *Gamgee.*

25 June 1877.

Mr. *Anderson*—continued.

7187. An Act was passed in the reign of George II. for prohibiting the import of cattle even from Ireland, and the preamble of that Act distinctly states that it was not for the purpose of preventing disease, but for the purpose of raising rents; so that there was complete prohibition of import of cattle at that time, and yet we had then the worst outbreak of cattle plague that was ever known?—The most distinguished Scotch physician taught us too well that that was not the case. The great Cullen, and Haller, the great physiologist, as far back as 1773, proved that it was pure contagion.

7188. Do you suppose that the outbreak of cattle disease in the time of George II. was not rinderpest?—I cannot state, but I know from the records of the last century, so far as it was possible for anybody with great care to read them, that in Ireland they repeatedly had anthrax and carbuncular fevers that were in no way allied to rinderpest.

7189. Then those are other contagious diseases than those which you have mentioned?—That is just the reason why I wish to make a remark as to the Texas cattle disease. We have an intermediate group between the contagious diseases and the non-contagious diseases. For example, it is represented in man by cholera. Cholera originates in India, and travels in the lines of communication between sick and healthy communities. The Texas cattle plague is not the cattle plague proper. The splenic fever of cattle in the Gulf of Mexico is due to the conditions of the soil and vegetation in the Gulf of Mexico; I traced it as being propagated by the excreta in the northern parts of the United States, but I could isolate it with a fence; it was from feeding on certain particular grasses. The bubonic plagues that have devastated the towns of Europe at different times have been propogated by special poisons; but they are not specific animal poisons such as operate in the epizootics.

7190. You do not know whether the cattle plague of the last century was the same as our rinderpest or not?—I happen to be the only person who has described the past outbreaks. I think they were five in number up to the last century, but we have every reason to believe, from all the symptoms that have been described, that in the last century rinderpest prevailed in this land.

7191. How do you suppose it got into the land?—It came from Denmark and the Low Countries, as has been proved by one of the greatest physicians that ever lived in this country.

7192. That must have been by the importation of hides, I suppose?—No; by the importation of animals.

Chairman.

7193. There was clearly a time when animals must have been imported freely, though not to any great extent; then, for a period, they were entirely stopped; and then again, after 1842, the prohibition was again withdrawn?—Yes.

Mr. *Anderson.*

7194. But in the last century, during the continuance of the entire prohibition, was it rinderpest that broke out then?—In the last century, wars led to the propagation of disease all over the European continent; this century it is the international cattle trade that has done it.

Mr. *Anderson*—continued.

7195. You have mentioned in your pamphlet several Acts; are you aware that there was one empowering the King to prevent the killing of cow calves?—There have been many foolish Acts of Parliament in days gone by.

7196. Are you aware that such an Act was passed on account of cattle plague being so bad that it threatened the complete extermination of our herds?—Yes, I remember that.

7197. You spoke of the Spanish live meat trade being prohibited as well as others, and you say that that would become a dead-meat trade; how would they manage about ice?—I should suppose that the Americans, who have their lakes of ice, will not continue long using ice. They are now using 10, or 20, or 30, or 50, or even 60 tons of ice per ship load, at a cost of about four dollars per ton, and they can by proper machinery, produce all that they will possibly want for about a sovereign, when crossing the Atlantic.

7198. You propose, that for the Spanish dead-meat trade and for the Continental dead-meat trade, there should be ice-machines?—Wherever they start.

7199. So as to get rid of the difficulty and the expense of ice?—Clearly.

Colonel *Kingscote.*

7200. You said that mutton was as easily carried as beef, did you not?—Yes, quite as easily.

7201. Do you say so from experience?—From my own experience. I preserved one day 18 sheep in New York, and sent nearly all of them across here. At one time I supplied them experimentally, merely for the purpose of showing what ought to be done eventually; but from London I supplied the Brazilian steamers, and they even stopped taking live sheep at Falmouth. All the meat went perfectly well.

7202. You consider that there is no difficulty about it?—No difficulty whatever.

7203. You told us that you had gone into the milk supply of London a good deal; do you know at all what is the per-centage of the whole milk supply that comes from the country?—I do not.

Sir *Arthur Peel.*

7204. Are there no diseases which are in your opinion indigenous to the 6,000,000 cattle in this country?—Certainly there are.

7205. What are they?—I found that a great many of those that were indigenous were unknown. For example, in Lanarkshire, I found a most interesting disease, fragility of bone, which was always described as occurring in Saxony, but that arises from the soil. Then we have our braxy sheep.

7206. But you think it is impossible that those three diseases, which you have styled international diseases, should have had their origin here?—It is absolutely impossible.

7207. Upon what do you ground that statement?—I ground that statement upon what I consider to be exact science and knowledge upon the subject. If a chemist or any person thought that he could produce oxygen out of ammonia, or anything of that sort, a scientific man would tell him that it was an impossibility.

7208. Without

Sir *Arthur Peel*—continued.

7208. Without going into the question of producing oxygen out of ammonia, and confining ourselves for the present to foot-and-mouth disease, you will possibly not dispute the historical statements, at any rate, of the report signed by Professor Brown? — I have always disputed many of the historical statements of their reports.

7209. Will you tell me whether you would dispute this statement: that in the year 1839, the foot-and-mouth disease broke out in this country?—Certainly; it was introduced into this country.

7210. When there was no import?—I have good reason to believe that there was smuggling of cattle into Ireland, and we had a great outbreak in Bristol. The earlier reports of the Royal Agricultural Society first directed me towards that foreign importation.

7211. It first appeared close to London, did it not?—Then in that case it is probable that it was brought in by Dutch cows in the marshes. What I discovered was this: that prior to the importation of live animals there were many tentative importations that were not heeded at all by the laws, and I believe that Mr. Clare Sewell Read has told me that he has no doubt whatever that an occasional import occurred even in Norfolk; but upon that subject he can tell you more than I can.

7212. But, as I read this history, the whole of it seems to militate against your theory that foot-and-mouth disease is an induced disease. First of all, I see it stated in this report that it originated here, and from 1853 to 1861 we have no record whatever of foot-and-mouth disease, and yet cattle were coming in?—I am not at all astonished. We have no record now of one tithe of the interesting facts that ought to be before you to convince everybody of the truth of our position.

7213. Do you think that if foot-and-mouth disease had been habitually introduced into this country from 1853 to 1861 there would be no record of it?—It was habitually introduced.

7214. And you do not agree with this history?—I do not call that history.

7215. You say that this is not history?—Certainly not. If you compare the whole of the reports of the Veterinary Department of the Privy Council with such reports as you had from the Medical Department during Mr. Simon's time, you will see the difference.

7216. You stated that the export of live beasts was a very foolish commercial enterprise, and the honourable Member for Sheffield asked you whether introducing into this country a beast which fetched 50*l.* was a foolish commercial enterprise; you said that it was an exceptional case, and that you preferred to deal with averages; do you dispute this statement of Mr. Giblett's, that the live trade with America was a good trade; that he had consignments every week; that it was an increasing trade; that out of a cargo of 180, two or three beasts at most were injured; and that the average price which the animals so consigned to him fetched was 30*l.*?—It so happens that I never have agreed with Mr. Giblett from the very first day, many years ago, that he began to discuss this matter in the papers. The history of the American trade shows that the dead-meat trade is possible under the present conditions, at all events during eight months of the year, and the live-stock trade is only possible during about three or four months, because I

Sir *Arthur Peel*—continued.

happened to be here when Mr. Giblett himself stated that the consignors would not send the cattle across in rough weather, or during the winter, autumn, or spring.

7217. But an idea has been started before this Committee that the dead meat would be very well in the winter, and that the live meat would take its place in the summer?—I can assure you most positively that the dead-meat trade will do as well in the summer as it will in the winter. I have had meat come across the Atlantic in the month of July. What we want on this side of the Atlantic is to establish the cold meat store system, and to regulate the traffic in the proper way.

Major *Allen.*

7218. Have you seen the conditions under which they keep their meat in New York in the summer months, and send it up to market?—I have seen a great deal of provisions and meat kept in cold chambers with ice over a metal roof. Within the past five or six years I know (certainly not from personal observation, for I have not been there) that in Chicago, in the process of salting in the summer, they have adopted very important improvements for having currents of cold air round their meat, and drying it and cooling it properly before they move it.

7219. I believe that the meat for the New York market comes from Chicago?—Yes, and unfortunately a great deal of it comes alive. A great deal of the meat that comes to this country gets bruised, owing to the transit over the country, which they would like to stop.

7220. Do you consider that their arrangements for keeping meat in New York are better than they are here?—Yes.

7221. You come to the conclusion that if an animal were sent over here from New York alive, he would make less money than if he were sent over dead?—Yes, as a rule. Take a thousand animals and send them dead or alive under good conditions, and the dead meat would cost less to carry, and would make more money than the live animal.

7222. Is carbonic acid a real disinfectant?—No, carbonic acid is not a disinfectant; carbonic acid merely excludes the air. It was supposed that meat would not putrefy in carbonic acid, but it does.

Mr. *Chaplin.*

7223. You said just now, in answer to the Member for Birmingham, that, in order to be perfectly safe, it would be necessary to exclude offal and hides, and dead meat as well as live cattle?—I do not object to the importation of those articles, because I think it is sufficient to be practically safe. To be absolutely safe, of course, we might have to isolate our country in such a way that we should never submit to.

7224. I suppose a human being might convey contagion?—Certainly, and a human being has conveyed foot-and-mouth disease.

7225. Then to make ourselves perfectly secure, using the term in the same sense as the Member for Birmingham did, I suppose we should have to exclude all human beings from an infected country?—I am not the advocate of any such measure.

7226. Those are extreme measures, which I presume you would not recommend?—Certainly not.

Professor *Gamgee.*

25 June 1877.

Chairman.

7227. With regard to your answer to an honourable Member just now, as to your views with respect to the introduction of foot-and-mouth disease in 1839, and what the honourable Member described as the history of the Privy Council, the two are probably not quite so wide apart as was represented, because I would call your attention to the fact that the Privy Council, in their report, say: "In the summer of 1839 foot-and-mouth disease first appeared at Stratford, in the neighbourhood of London, whence it was soon carried to the Smithfield Market. As to the manner of the introduction of the disease, nothing definite is known. Foreign cattle were not imported at the time, but it is not unlikely that some surplus ship stores might have contracted the disease at a foreign port, and on being in this country have communicated it to home stock. From 1853 to 1861, no records of the progress of foot-and-mouth disease are to be found in agricultural and veterinary journals. Probably it remained during those years in such a condition that no special attention was directed to it." Therefore, the Privy Council suggest in their report the possibility of foot-and-mouth disease having come from abroad?—Yes.

7228. As to the American live-meat trade, what, I suppose, you would represent as your view is that the dead-meat trade, if properly established, would be a possible trade all the year round, whilst the live-meat import from America can only be carried on under favourable conditions of weather, and that the expenses of bringing the dead meat are in themselves less than the expenses of bringing it alive?—Quite so. My view is that the dead-meat trade, both for home and for foreign purposes, is the best. For foreign purposes it is unquestionably best, both for the trader and for ourselves; but there are conditions in connection with the foreign trade which render live stock importers and consignors disposed not to risk the expense of adopting the dead-meat system. I think it is very well known that salesmen, like Mr. Giblett, receive twice as much for the sale of a foreign bullock as they receive for the sale of an English bullock, and they have a tax on the foreign trade which they are not at all anxious to get rid of. They charge for the sale of a foreign bullock double of what they charge for the sale of an English bullock.

Mr. *Mundella.*

7229. It is an agreement; there are two parties to the bargain; there is no tax?—They make more money out of the foreign meat alive than they would make out of the foreign meat dead.

Chairman.

7230. Do I correctly understand you to say that they are, therefore, interested in one particular trade as against the other?—I am assured that that is so.

7231. Do you speak of your own knowledge about this?—I speak of that which I have constantly known as operating. They receive, I believe, 8 *s.* to sell a foreign bullock, and 4 *s.* to sell an English one. I believe Mr. Read will explain that to you as a farmer; he knows what he pays; and that is the custom of the trade, so far as I know. I cannot vouch for it personally, for I never received such a commission; but they have a direct interest in perpetuating the live-stock trade from abroad as against the dead-meat trade.

Chairman—continued.

7232. Do you mean that there is any advantage to a man in selling the live animals, as compared with selling the animals when dead?—My own impression is that there is none as regards the dead meat.

Mr. *Mundella.*

7233. Have you any knowledge about it at all?—I have not. I wish to add this. That vested interests are entirely in favour of the live cattle trade which is in existence; and those interests would suffer, and must suffer, if the dead meat went past them to the dead meat salesman in the market; so that the persons who are selling the live cattle here are not the persons who sell the dead meat as a rule.

Chairman.

7234. One trader is naturally interested in preventing the competition of another trade?——Yes.

7235. I understood you to say that the commission which is charged on a foreign animal is double that which is charged on a home animal?—Yes: that is the rule.

7236. With regard to the examination of the honourable Member for Glasgow, the Act that he referred to, and which you have mentioned in your pamphlet, is probably correctly stated as being an Act of Charles II., for I see that there is an Act in the reign of Charles II. against the importation of cattle from Ireland and other parts beyond the seas, and fish taken by foreigners, the preamble of which is: "Whereas by an Act of this present Parliament, intituled, 'An Act for the Encouragement of Trade,' amongst other things, some provision was made for the preventing of coming in of vast numbers of cattle, whereby the rents and values of the land of this kingdom were much fallen, and like daily to fall more, to the great prejudice, detriment, and impoverishment of this kingdom; which, nevertheless, hath by experience been found to be ineffectual; and the continuance of any importation, either of the lean or fat cattle, dead or alive, hereinafter specified, not only unnecessary, but very destructive to the welfare of this kingdom." That was in the year 1666. That is probably the Act that you refer to in your pamphlet?—I presume so. I have not had the opportunity of going over it.

7237. Are you aware whether that Act remained in force until it was repealed by 5, George III., c. 10?—I am not aware.

Mr. *W. E. Forster.*

7238. Would you not admit that that Act was passed quite irrespectively of cattle plague?—Certainly; apparently so.

Mr. John Soulby, called in; and Examined.

Mr *Soulby.*

Chairman.

7239. I believe you are the Secretary of the North Riding of Yorkshire Chamber of Agriculture?—I am.

Chairman—continued.

7240. And you live at Malton in Yorkshire?—I do.

7241. Can you tell the Committee what are the

Chairman—continued.

the restrictions that have been in force in your district during the last outbreak of cattle plague?—With regard to the East Riding, the Privy Council Order prohibited the movement of any cattle from any other district into the East Riding, and provided for the movement of cattle in the East Riding by means of passes; but it was not possible to get cattle out of the East Riding at all.

7242. Could you send cattle into the East Riding?—We could not send cattle into the East Riding at all. I am not sure whether we could do so with a pass, but I think not.

7243. How did that affect the other Ridings?—It affected the other Ridings very injuriously.

7244. Were the fairs and markets prohibited in your riding?—The fairs and markets were prohibited by the Privy Council Order in the East Riding, and by an Order of the Local Authority in the North Riding; so that our markets were entirely closed, and we had no means whatever of disposing of the cattle.

7245. The North Riding at that time had no signs of disease, had it?—The North Riding has had no suspicion of cattle plague whatever.

7246. I suppose you would represent to the Committee that the restrictions which were imposed from a fear of the disease injuriously affected those districts where no disease existed?—Undoubtedly.

7247. And that your healthy cattle might have been sent into the East Riding without being prohibited?—Our healthy cattle might have been sent anywhere without being stopped, and in our view they ought to have been.

7248. Does that lead you to think that there is some disadvantage in the present system of local restrictions?—Yes, undoubtedly, The local authorities of the various counties make different orders; we unfortunately are just on the borders of the North Riding and of the East Riding, and the order applies to one part of our borough and does not apply to the other part.

7249. Did your local orders in the district which was healthy continue in force even longer than those in the infected districts?—The orders which were in force in the North Riding continued in force for more than a week after the removal of the restrictions in the infected district.

7250. And you represent that as an argument in favour of any regulations of the sort being entrusted to some central authority instead of being left to the discretion of the different localities?—The feeling is very strongly in that direction. It caused a very great amount of inconvenience, and it was represented to the magistrates in quarter sessions that there was quite sufficient time for them to have removed the inconvenience if they had thought proper to take action in the matter.

7251. You represent that if the whole of those regulations were issued by a central authority, you would have more skilful officers appointed by that central authority for carrying them out, and that the convenience of the public would be more studied by uniformity of system than by the varied arrangements which are made in time of panic?—Yes, that is precisely my view.

7252. Do you think that the farmers generally throughout your district would be ready to undertake the payment of the inspectors appointed by a central authority instead of by the local authority?—I do not see why the superintendents of the police, who are there already, should not act as inspectors for the purpose of giving passes.

7253. But supposing that a system were adopted such as I have understood you to suggest, viz, that the Privy Council, as a central authority, should have the issuing of all regulations in case of cattle plague, and in case of the other diseases, and for that purpose should have inspectors, who probably would be more skilful than many of the local inspectors, do you think that there would be any objection raised by the farmers of your district to these inspectors being paid out of the local rates, as they are now, though they would be then appointed by a central authority?—That is not exactly what I did suggest. What I suggested was, that the Privy Council should issue orders as to what was to be done, in the same way as they did in the recent case in the East Riding, and that the ordinary local authorities should see those orders of the Privy Council carried out

7254. Then I understand that you would not suggest such a transference of authority as would enable the Privy Council to appoint inspectors to see their regulations properly administered?—I was of opinion that they had sufficient authority now to appoint inspectors, and to send inspectors in case of need.

7255. You do not think that it would be necessary to give them power to appoint the inspectors throughout the country, so as to insure united action in case of an outbreak of disease?—I do not think it would.

7256. What has been the effect of the cattle plague in your country?—It has been a very great injury to the trade. Butchers who wanted cattle did not know where to find them. They went, perhaps, to those who were large farmers, and they would get their cattle there with the least trouble, and perhaps at the highest price, whilst a man with two or three fat beasts living in a remote district, hardly knew where to get a market for his stock at all, because there was no market, and hardly any open competition. Then there was a difficulty, again, that if those small men could not sell their cattle they could not meet their bills, and the tradesmen suffered in consequence, and it was a general state of injury throughout.

7257. In fact, by the introduction of the disease, the whole trade in your district has been very much injured?—It has.

7258. What would you suggest to the Committee as a means of preventing this in the future; would you restrict the import of cattle?—I would restrict the importation of live animals from any country where cattle plague has ever been known to exist.

7259. Would you do that on account of the outbreaks which have taken place this year and in 1872?—On account of the outbreaks which took place in 1872 and in 1877, which I think prove that we are unable to check the outbreak of cattle plague from time to time if we continue to import live animals from countries where cattle plague exists, or can exist.

7260. Do you mean to represent to the Committee that you will stop the whole import of cattle

Mr. *Soulby.*

25 June 1877.

Chairman—continued.

cattle from foreign countries, or that you would only stop it from such countries as did not take sufficient precautions to prevent the danger of the outbreak of the disease amongst them?—I would not stop the importation of foreign cattle from those countries from which it was practicable to bring them; but we have had experience that cattle plague has been imported twice within a very short period, and on each occasion to our own local injury, and I am here to protest that injury being repeated.

7261. If it could be shown that in the case of Denmark, for instance, as represented to this Committee, they have now for 100 years not had an outbreak of cattle plague, that pleuro-pneumonia is unknown at this time in the country, and that they go so far in taking precautions as against the import from other countries as to prevent even railway trucks from coming back that have once carried cattle into that country; would you except Denmark from the general prohibition, and allow cattle to come from a country which is so protected?—Most certainly.

7262. If it could be shown that the Spanish and Portuguese trade was equally free from disease, you do not think that restrictions should be placed upon the importation from those countries?—No; I do not think there would be any necessity for doing so.

7263. What I understand you to say, then, is that so long as the farmers whom you represent are secured against the possibility of the import of cattle plague, they have no wish to stop the import of live animals from countries that are fairly protected?—That is quite the view that I represent. We have no desire to stop the importation of meat, but only the importation of foreign diseases.

7264. I suppose that in that case you would not advocate the entire abolition of the import of cattle in favour of a dead-meat trade?—I would not advocate the abolition of the import of foreign cattle where it can be done practically with safety, but we do not want to incur any risks.

7265. And from countries where we have not those securities you would suggest that the supply of meat sent should be a dead-meat supply instead of a supply of live animals?—Certainly.

7266. With regard to admitting cattle for store purposes, do you think that it would be advisable to admit them freely from countries where the restrictions allowed of the import for slaughter?—I see no objection to their introduction where safety was assured.

7267. Either for slaughter or for store purposes, you would allow the import from any country which gave us sufficient guarantees of immunity from disease on their part?—Yes.

7268. With regard to the importation of stores from suspected countries, if I may so call them, would you prohibit them entirely?—Altogether.

7269. You would not have them under quarantine?—I would not have them at any time.

7270. Do you represent to the Committee that the farmers are quite prepared to adopt any restrictions that may be thought necessary for stamping out cattle plague, should it occur?—Yes, they are quite alive to the necessity of the most stringent regulations in that case.

7271. Your attention has probably been called to the proposal that was made some years ago for

Chairman—continued.

allowing a certain area to be taken round a district where infection had shown itself, and applying the whole of those strict regulations to that area; do you think that that would meet with the approval of the farmers?—It would meet with the approval of the Yorkshire farmers.

7272. Even although the animals might not have been in contact at all, but might be on a neighbouring farm, you think that the farmers would submit to having these strict regulations placed upon them for the purpose of stamping out the disease if it occurred again?—Yes, should the authorities think it necessary. I think they would regard it as a necessary evil.

7273. With regard to pleuro-pneumonia, are they in favour of any stronger regulations with reference to that disease?—I do not know that they are. The pleuro-pneumonia regulations are somewhat defective, in my opinion. I think that where an outbreak of pleuro-pneumonia occurs in a herd, the healthy animals that were fit for the butcher might properly be removed from the premises for immediate slaughter.

7274. Would you allow them to go into the market for the purpose of sale for slaughter?—Certainly not.

7275. What you mean by that is, that they should be removed by a butcher and taken to his slaughter-house for slaughter?—Yes.

7276. Have you at all considered what has been represented to this Committee, namely, the probability of its being necessary, with the view of stamping out pleuro-pneumonia in the country, to adopt very strict regulations generally throughout the country as to the movement of the cattle?—I have.

7277. Do you, speaking for the farmers of your district, think that they would be willing to submit to such regulations with a view of stamping out the disease, as have been pointed out to this Committee?—I do not think they would; I think they would consider the cure almost worse than the disease.

7278. Is that with regard to pleuro-pneumonia?—That is with regard to pleuro-pneumonia, because it remains in the system of the animal for such a long period of time that it would practically close the fairs and markets for a year.

7279. You think that any restrictions which, for the sake of stamping out pleuro-pneumonia, might possibly last for one year, would be considered to be so oppressive that the farmers would think that the pleuro-pneumonia would be cured at too great a cost?—Perhaps that is rather a strong way of expressing it, but I do not think that they would be at all satisfied to have their fairs and markets closed for a year.

7280. Therefore, if the stamping out of pleuro-pneumonia throughout the country necessitated regulations of such a stringent nature, you think, speaking for the farmers in your district, that they would prefer that they should not be adopted?—I think they would consider that pleuro-pneumonia might be practically exterminated without such severe measures as that.

7281. You say that it might be practically exterminated; you are aware that it is very prevalent at the present moment throughout England?—I am aware that it is prevalent.

7282. How would you consider that it might be practically exterminated with less severe measures than that?—Pleuro-pneumonia breaks out upon

Chairman—continued.

upon a farm, and the animal that is affected is killed. The fat animals ought to be sold, and sent to be slaughtered before they are affected; and stringent regulations should be made to prevent the removal from that infected farm of any of the other animals that are there.

7283. You think that by isolating every centre where the disease had broken out, and preventing the animals that had been in contact with any diseased animals leaving that centre except for the purpose of slaughter, you could stamp it out by regulations applying all these orders to a given district?—I think you would do so without the necessity of stopping markets and fairs, which is a very serious measure to take.

7284. You would like to see measures adopted with regard to infected districts without stopping the market?—Certainly.

7285. Would you make any alteration in the compensation either for cattle plague or pleuro-pneumonia from what exist at present?—No; I think they are both satisfactory. The compensation is fixed, I believe, at three-fourths of the value of the animal when healthy; but practically the farmer does not get quite that, because at the time when the inspector is called in, the animal is looking perhaps worth 3*l.* or 4*l.* less than he was before he broke down.

7286. That is the regulation as to pleuro-pneumonia; the compensation as to cattle plague is not upon the same scale, is it?—If it is not, I think it ought to be.

7287. I believe that the compensation is one-half for an animal slaughtered for cattle plague?—A farmer gets cattle plague through no fault of his own, and I think that he ought to be compensated for the disease that has been brought to him.

7288. You think that the same rule should apply to both pleuro-pneumonia and cattle plague, and that three-fourths of the value should be the compensation given?—Yes.

7289. With regard to foot-and-mouth disease, do you think that the present regulations are sufficient?—I think they are sufficient if they are properly carried out.

7290. Speaking of foot-and-mouth disease, it has been suggested that, to stamp out that disease in this country, if you were to stop the import from abroad it would, from its infectious nature, require very stringent regulations with regard to that also; do you think that the farmers would submit to stricter regulations than at present exist for the purpose of stamping out foot-and-mouth disease?—I am afraid that the Yorkshire farmers have had almost sufficient restrictions of any kind at present. They would not be disposed to submit to it, I fear.

7291. May I gather that the restrictions to which you refer, to which they have submitted, are those which have been placed upon them in consequence of the outbreak of cattle plague?—Yes.

7292. Under those restrictions, practically, the markets and fairs have been closed, and movement generally has been stopped throughout the district?—Yes.

7293. You think that any regulations that were made generally throughout the country for the purpose of stamping out foot-and-mouth disease and pleuro-pneumonia of a nature at all akin to those which have been necessary during the cattle plague outbreak would not be tolerated for any time by farmers?—I do not think they would. They would not consider them necessary; they would consider them too great an evil to be borne.

7294. Do you think that the restrictions that at present exist are sufficient, if properly carried out, for dealing with foot-and-mouth disease?—I think they are, but I do not think that they are properly carried out.

7295. You mean that the large amount of foot-and-mouth disease which exists in the country is due not so much to the want of regulation as to the want of their proper administration?—Yes.

7296. Would you adopt the same regulations that you have suggested for pleuro-pneumonia with regard to foot-and-mouth disease where it broke out; that is to say, the isolation of the spot?—Yes; I have no doubt that those regulations would be effectual if it were not that they were broken through. Supposing foot-and-mouth disease broke out on a farm where there is a considerable number of animals, and that one of the animals takes the disease, he goes through it, perhaps, in three or four days, but before the end of the time they may have it for a month, and then you want a certain time to get clear of the infection before the animal is fit to move again on the highway; so that, practically, you ought to shut the place up for a few weeks after the last animal has had it.

7297. Those are restrictions which you think the farmers would submit to in case foot and-mouth disease broke out in a district; and you would suggest that the animals should be isolated for a given time, until it was quite clear, not only that the infection had disappeared from the herd, but that any chance of its being spread had disappeared also?—Where foot-and-mouth disease had broken out, I would suggest that there should be no movement of animals off that farm until it was certified to be clear of disease.

7298. By the inspector?—By the inspector.

7299. If they were limited to that extent, you believe that those restrictions would be submitted to by the farmers?—I do.

7300. And you think, as I understand, that, if they were thoroughly carried out, they would be sufficient to get rid of the disease?—I think that they would be effectual in getting rid of it.

7301. Notwithstanding the very large amount of that disease that there is throughout the country?—A large amount of disease is carried about from market to market. Beasts are bought, and they go into a market, and they get infected, and then they are sold, and they go away to a farm. With us, farmers practically isolate their beasts at first now to see whether they take this disease or not.

7302. You represent that by isolation in every instance where the disease broke out, you would prevent the markets and fairs being the centres they now are of spreading the disease?—Yes; I do not think that we have, in Yorkshire, at present, any foot-and-mouth disease of any consequence.

7303. At the same time there is a good deal of it about the country, I suppose?—Yes.

7304. Do you attribute your having a decrease of the disease in Yorkshire to the recent cattle-plague regulations?—I should think it is very likely caused by that.

7305. Have you had it in Yorkshire to any extent?

Mr. *Soulby.*

25 June 1877.

Chairman—continued.

extent?—We have not had it to any extent for two years.

7306. Are you able to speak of the whole of Yorkshire?—I am able to speak of the North and East Ridings; we are quite on the border.

7307. You have not had foot-and-mouth disease there for two years?—I think not.

7308. Therefore the regulations have not affected the case?—Possibly not. We could not stamp it out if it was not there, you know.

7309. Have you had much pleuro-pneumonia lately in the North and East Ridings?—We have had a good deal.

7310. Though you have been tolerably free for some time, you have had pleuro-pneumonia?—We have had pleuro-pneumonia, I will not say prevalent, but there have been a good many instances of it in our neighbourhood.

7311. I suppose you would still be liable to animals being sent into the market that have been in contact with diseased animals if it became publicly known that pleuro-pneumonia had broken out?—I should think so. I have no doubt that animals are often sent into the market after the owner of them knows that he has got a disease of some sort in his herd.

7312. That rather points to a danger in the line which you have suggested; that is to say, of merely isolating particular spots where the disease was developed, for the purpose of stamping out pleuro-pneumonia?—I am speaking rather of the fat market rather than of the lean market. When a man suspects that there is something wrong, and he has 50 or 60 fat beasts tied up, he very naturally sends them to the butcher as soon as possible.

7313. Still they are liable to come in contact in the fat market with the store animals which are exposed in the same market?—Yes, they would be, no doubt.

7314. So that there is no absolute security for stamping out the disease in that way?—No. I do not regard pleuro-pneumonia as being so infectious as cattle plague and foot-and-mouth disease.

7315. But there is a greater danger, I suppose, from its lying in the animal very often for a longer period?—It will often lie in the animal, I should say, for six months: I have known it myself break out in an animal which had been isolated for four months.

7316. And that renders it excessively difficult to calculate on preventing the disease from breaking out in any particular district?—You could not.

7317. Can you speak as to the effect of foot-and-mouth disease in sheep?—It is always very injurious when it gets into a flock of sheep.

7318. You have not for some time suffered from that either, have you?—We have not, but three or four years ago we had a good deal of it. I know a case in which 300 ewes broke down at the time that the rams were put to them, and the result was that instead of nearly the whole of them being in lamb, there were only 50 of them in lamb; 250 ewes out of the flock were barren.

7319. And that was naturally a great loss to the supply of meat in the country?—Certainly,

7320. I suppose you would generally submit to the Committee that although you are not willing to submit to very strong restrictions for the purpose of eradicating these diseases; they are so fatal in their influence that farmers would be

Chairman—continued.

prepared to submit to some restrictions for the purpose of eradicating them?—Yes; they would be willing to submit to some restrictions, certainly, for the purpose of eradicating foot-and-mouth disease and pleuro-pneumonia where it was necessary, where the disease existed; but they would not like to submit to a general order closing healthy districts.

7321. To sum up your evidence, it amounts to this, does it not; that whilst the farmers would submit to restrictions where the disease had shown itself, they would not, in your opinion, submit to a general regulation for the purpose of stamping out the disease?—They would not like to do so.

7322. Whilst asking for the stoppage of foreign import, in order to prevent the introduction of disease from those countries where disease exists, you are prepared to recommend to the Committee that the import of foreign live animals from any country which can give us security as to the healthy state of its animals should be allowed?—Yes, that quite expresses my view.

Mr. *Chaplin.*

7323. Your chamber represents the East Riding, does it not?—We are on the borders of the East Riding; the river goes right through the borough; we may be said to be partly in the East Riding, and partly in the North Riding.

7324. There are a great many cattle bred in that district, I suppose?—Yes, a great number round about us, both in the North and in the East Ridings.

7325. Can you tell me what effect the fear of cattle disease and those other diseases which have been referred to has upon breeders; would they breed a greater number of cattle if they were secure from the fear of disease?—I have no doubt that they would. It deters a good many from breeding. If the healthy stock could be assured from invasion, it would certainly be an encouragement to breeding.

7326. You would advocate the stopping of all import of live cattle from countries from which there is the least risk or fear of disease?—Yes, certainly.

7327. I understand you to say that if that was done, and we got all the security from disease which you desire, you consider that there would be a very large increase in the breeding of cattle in your district?—Yes, besides leaving out altogether the loss occasioned by the loss of weight from foot-and-mouth disease, and those kind of things, there would be an increase in breeding as well.

7328. Do you think there would be a large increase?—There would be a considerable increase.

7329. Do you think the increase would be sufficient to compensate for that loss of the live cattle which you would prohibit from coming into the country?—I think that it would do more than that.

Mr. *Assheton.*

7330. Have you any knowledge of the West Riding, and of the regulations which they have had in force there?—I believe that the West Riding County Sessions passed much the same orders as the North Riding County Sessions; that is to say, they closed all the country markets and fairs, whilst the boroughs and corporations kept

Mr. *Assheton*—continued.

kept theirs open; consequently, the small towns were placed at a great disadvantage in their trade, as compared with the larger ones.

7331. Can you tell me whether the foot-and-mouth disease has been prevalent in the West Riding?—We are 20 miles off the West Riding where I reside, and I cannot say whether it has or not.

Mr. *W. E. Forster.*

7332. Was the prohibition of fairs and markets in the East Riding by the local authority, or by the central government?—In the East Riding it was by the central government.

7333. And in the North Riding by the local authority?—In the North Riding by the local authority.

Mr. *W. E. Forster*—continued.

7334. You are aware that the central department, in 1874, renewed its permissive powers to local authorities to pass stricter regulations than those in the Act of Parliament with regard to foot-and-mouth disease; did you avail yourself of that power in the North Riding?—No, we did not.

7335. Nor in the East Riding?—Nor in the East Riding.

7336. I gather from what you state that, so far as you know the feeling of the farmers, they would not be prepared to stop markets on account of foot-and-mouth disease?—Not for any considerable length of time.

7337. Or to stop the general movements of cattle?—Or to stop the general movement of cattle.

Sir CHARLES ALEXANDER WOOD, called in; and Examined.

Chairman.

7338. I BELIEVE you are the Deputy-chairman of the Great Western Railway?—I am.

7339. Have you been deputy-chairman for any length of time?—Since 1865.

7340. Before that, I think you were one of Her Majesty's Emigration Commissioners?—I was for nearly 15 years.

7341. Have you turned your attention at all to the treatment of the transit of Irish cattle?—I was for some time trustee of the estates of the late Marquis of Londonderry in the north of Ireland, and I had occasion to visit the counties of Derry and Down from time to time. I think it was in the autumn of 1864 that, being in Londonderry, I was requested by the agent, who was also the agent of Lord Templemore, and who farmed very largely in that county, to see whether it would be possible to improve the transit of the Irish stock to England, and whether any arrangements could be then made which would facilitate the marketing of the Irish stock. He told me that he had lately followed some of his own stock from Derry to Glasgow, and that he considered that the animals had deteriorated in condition after their shipment at Derry, and prior to their sale to the butchers in Glasgow, to the extent of about 2*l.* per head. I had been familiar with the practice, which then existed in the north of Ireland, that pigs, instead of being sold alive and shipped alive to Great Britain, were killed where they were fed and shipped in carcases; and it occurred to me then that, if the same practice could be pursued with other descriptions of live stock, it probably would get over the difficulty of which Mr. Colquhoun complained.

7342. Did you visit any parts of Ireland for the purpose of investigating that idea?—Yes; from Derry I went to Belfast, and I there inspected the wharves and the mode of shipment of the live stock; I went then to Dundalk, which is one of the largest places of export in the north of Ireland; and from thence I went south to almost all the ports, including Waterford. I did not visit Cork in that year.

7343. Did you inspect the different lines of steamers to satisfy yourself as to the mode in which the transit was conducted?—The mode of shipment, I think, was pretty much the same at that time at all the ports. All the cattle were shipped,

Chairman—continued.

not in cattle steamers, but in steamers which carried passengers as well as cattle. That, to a certain extent, influences the mode of shipment, because the cattle cannot be shipped until the hold in which the cargo is carried has been closed; and, inasmuch as passenger steamers sail at fixed times, the time left for the shipment of live stock is necessarily brief. I found that cattle were not collected in any depôts or places convenient for the accommodation of cattle prior to shipment, but they were all standing at the open wharves, and were driven hastily on board so soon as the holds were closed and the time for shipment was announced. That necessarily hurries and frightens the cattle, and that appeared to me a bad arrangement.

7344. Do you think, from the arrangement that you saw, that there was any great probability of diseases being engendered from the treatment that the cattle had to go through?—I am speaking of some years ago, and since then, no doubt, improvements may have been effected; but when I returned to England, I communicated with persons in the trade to ascertain whether at that time any injury was experienced from the mode in which the Irish cattle reached their hands. At that time I believe the Irish horned cattle were chiefly fat cattle, and that a very limited number of stores reached England. The late Mr. Slater, a well-known West-end butcher, who had probably at that day the largest and best trade at the West-end, was my informant; and his description to me of the Irish ox at that time was this: that no better animal to look at came to hand, but that by treatment in transit it was so bruised that he had ceased to buy Irish cattle. I pursued my inquiries further at that time, and a salesman at Southall Market, who sold Irish cattle largely, told me this fact: that if the cattle missed one market, and remained on hand, and were not sold until the next, they were very frequently lame, and he could not assign any cause for it. Putting these circumstances together, in communication with the present Lord Bessborough, and his brother on the Great Western Board, Mr. Frederick Ponsonby, and the late Marquis of Lansdowne, the late Colonel Villiers Stuart, and Lord Lismore, we met frequently from time to time, I think, for two or three years afterwards, to see whether it would not be pos-

Sir *C. A. Wood.* 25 June 1877.

Chairman—continued.

sible to form a company to introduce the killing of fat stock in Ireland, and sending that stock to London as carcases instead of as live animals. The difficulties of changing the course of trade were great, and although we met and had frequent intercourse with some leading salesmen in this town, at that time disease had not shown itself to such an extent as to make it probable that there would be a general movement in favour of meat as against live animals, and nothing came of it at that time.

7345. Did you visit Cork afterwards?—I visited Cork two or three years afterwards. With regard to Waterford, I am frequently there. The Great Western Railway Company has a line of daily steamers between Waterford and Milford, and since that period I have also crossed, by different lines, with cattle.

7346. I understood you to say that you had visited Cork on the first occasion?—I did not.

7347. Subsequently, had they created wharves and depôts at Cork for the purpose of the trade to this country?—In consequence of the great outbreak of foot-and-mouth disease which took place four or five or six years ago, I more particularly at that time looked at the state of the importations *viâ* Bristol and *viâ* the port with which I am more particularly connected, viz., Milford. The animals that were consigned through those ports came exclusively from Waterford and from Cork. I ascertained the arrangements; and my belief is that disease impregnated the lay fields into which the cattle are collected prior to exportation, less at Cork than at Waterford, in the spring; and when the store cattle came in large numbers, those fields became impregnated with disease until the autumn; and it appears to me that this is one chief cause of the spread of that disease which has done so much mischief in this country. The animals are purchased up-country by dealers, they are brought into the lay fields, and there they remain sometimes a night before they are embarked, and after that they are brought to to the open wharves and are then shipped. Of course, if disease exists before shipping, the vessels in which the animals are carried are likely to be infected, more particularly if they are vessels that carry passengers as well, in consequence of the great difficulty of disinfecting them.

7348. I understand you to say that you think the mixing of the cattle and passenger traffic is injurious to the proper carriage of animals?—In consequence of the state of things arising at Milford and at Bristol, I made it my business to visit several of the ports to which foreign cattle are imported.

7349. Was that recently?—It was about four years ago.

7350. What ports did you visit?—I went to Harwich, I went to Odam's Wharf in London, to Deptford, and I have since been to Southampton and Portsmouth. Some of the vessels that I saw, though not exclusively, were vessels which carried only cattle; and I saw the cattle taken out of those vessels, and they seemed to me to land in perfectly healthy and good condition. My own impression is that if animals are properly carried, with proper ventilation, proper space, and proper cleanliness, there is no reason why they should not be carried any distance by water. In fact, my theory is, whether right or wrong, that the laws which affect the

Chairman—continued.

carriage by sea of bipeds and of quadrupeds are very much the same. To conduct an emigration on a large scale, nothing is more necessary than to have a suitable depôt where proper arrangements can be made preparatory to the voyage. I believe that the same thing is necessary with reference to stock. Instead of having a lay field, I should have a waterside depôt, which can be properly cleansed and disinfected, where the animals could be received, inspected, refreshed, and embarked cool. That is a matter of great importance, because if animals are brought a long distance by road or rail before embarkation, and in a state of great heat and exhaustion, and are placed hurriedly on boardship, and if it should afterwards come on to blow, and the vessel's hatches had to be closed, of course from the bad gases which are generated, the animals must suffer to a degree that necessitates the engendering of disease, and that disease, when once engendered, must be continued. I also think that it is very difficult to construct a vessel to carry well both passengers and cattle, and, although I have inspected several, I have never yet been able to see a good cattle boat so constructed that it carries passengers and cattle comfortably and healthily. The cleansing of a cattle-boat (when carrying passengers) is excessively difficult. If cattle are not berthed above the waterline, water cannot be used, and I do not see how it is possible to cleanse a cattle-boat properly without the use of water. Some of the best boats for carrying cattle and passengers are the boats of the London and North Western Company, and great expense has been incurred on those vessels, and great care has been used in cleansing them. Captain Dent, their naval inspector, in his wisdom (and I think rightly), did not use water for a long time, but only scraped the lower decks; but he has been obliged to use water. The necessity of using water in the lower decks, of course, makes those decks very damp, and the heat of the animals generates bad air, and great mischief ensues.

7351. Then, do you think that a regulation which would make the carrying of cattle separate from that of passengers, so that animals were brought over in ships specially fitted for them, would improve the trade?—That is my impression. I have long felt that the first great improvement in the transit of stock between Ireland and England would be to get the animals collected before embarkation in a licensed depôt, and then, having had them properly inspected there, to convey them across in boats licensed for the purpose of the transit of cattle. That change is one which, I think, must be carefully made, and not immediately; and time should be given to persons to introduce that change; and stockowners will find that advantages will ensue from their animals being carried in a better manner. They will give a preference to the special cattle-boats. I cannot better illustrate my meaning than by stating what occurred with reference to the changes in the law as applicable to the transit of passengers by sea. When I was first apppointed an Emigration Commissioner in 1843, the advantages which were then insured to the emigrants were something like one pound of breadstuff a-day, one quart of water, and a small space to lie upon; but by inquiries by Parliamentary Committees, like the present Committee, that sat upon the working of the Passengers Act, recommendations were made, and changes

Chairman—continued.

changes of the law took place, and now the whole of the carrying trade of passengers is, I believe, conducted as efficiently as it is possible for it to be. My notion would be that an inquiry like the present would lead to recommendations being made as to a change in the law with regard to the transit of animals.

7352. I suppose that it would be necessary to enforce a rigid inspection, both of the depôts where the animals were stored and of the vessels themselves?—I think that the more rigid the inspection the better, but it must be in England as well as in Ireland. The better the service is performed the better it is for all interested. The live stock-boat rates, Ireland to England, are comparatively high (*vide Appendix*).

7353. And the service would be remunerative from the better condition in which the animals would be brought over?—That is my opinion. Formerly the trade in cattle from Ireland was comparatively small; but now it is very large, and increasing, and I think it must be highly remunerative.

7354. And, carried as they are at present, the cattle are not shipped in the best way for bringing them over, and that increases materially the discomfort of the passengers who are bound to be brought over with them?—The companionship at sea of live stock, particularly pigs, of course is very inconvenient; but I do not suppose that you would desire me to go into that point, as this inquiry is specially with reference to the treatment of cattle. With reference to the treatment of the cattle only, my conviction is that the better the animal is treated the better it is for the breeder and for the buyer and consumer on this side. There is now a want of confidence in those cattle that come from Ireland, and I believe that that want of confidence must affect the price. Therefore the Irish would be themselves desirous that the arrangements should be the best that could possibly be made. I know, as a fact, that there are many Irish breeders who come over themselves with their cattle, and they have found it necessary in order to see that they get proper treatment.

7355. Have you, in these inquiries, turned your attention at all to the possibility of creating a dead-meat trade, or of bringing over provisions as dead meat instead of as live animals from Ireland?—Yes, in connection with a matter which perhaps the Committee will permit me to mention. During the sitting of the Committee, of which the Right honourable Member for Bradford, I think, was Chairman, I represented to Sir Stafford Northcote that I thought that most of the disease entered the country, not so much from abroad as from the bad treatment of the Irish stock, and he mentioned that matter to the Duke of Buckingham. I did not hear what passed, but, in the autumn of 1875, I again reminded Sir Stafford Northcote of my opinion, and he told me that he recollected the circumstance perfectly, and that he should be much obliged to me if I would communicate my views to the Privy Council. I did so; I saw Mr. Peel, and I also saw the Duke of Richmond; and, in consequence of the communications which then passed, I under took to go to Ireland to see whether any arrangements could be made to improve at the two ports with which I am connected, viz., Waterford and Cork, the preparations for the voyage; and I also undertook to produce a scheme by which I thought the general arrange-

Chairman—continued.

Sir *C. A. Wood.* 25 June 1877.

ments for the transit of stock between England and Ireland could be safely carried out. First of all, I communicated with the Cork Steamship Company, and they readily came into the arrangement. Their depôt was a very good one; some improvements which I suggested were carried out, and, I think, the arrangements, so far as I know, of the Cork Steamship Company were, and are, exceedingly good. At Waterford I was in this difficulty: the trade of Waterford is a trade to the extent of 45,000 or 46,000 head of cattle in the year besides sheep and pigs; the cattle are all embarked, with the exception of those that are carried by the Great Western Railway, and which form only about one-tenth of the whole, from an open wharf, on the southern side of the river; it would have been impossible therefore for me to have arranged anything on the south side, but I did make provisional arrangements for the acquisition of a site for a depôt on the north side. I have had plans formed of those depôts both for Cork and for Waterford, and I also made arrangements for providing a depôt for the port of Bristol. The arrangements at Milford, I believe, are sufficiently good. Those that were to be made at Bristol contemplated the formation of a large depôt at Portishead, and the reason why Portishead was selected was this: that by the extension of a wharf at Portishead the cattle-boats might come alongside at any time of the tide. From inquires which I made I learnt that the cattle became injuriously affected almost as soon as the vessels came to an anchor in King's Roads. As long as the vessels bringing the cattle were pursuing their voyage the cattle remained tolerably healthy; but immediately they stopped to wait for the tide, or to get into the Avon, they then became, from want of air, very much injured; and, it was on that account, that Portishead was selected. If it is the desire of the Committee to see those plans they are here in the room, and they can be shown.

7356. I understand that this is a scheme that was submitted to the Privy Council?—It is.

7357. And the object of that scheme was to endeavour to develop this trade?—It was.

7358. Under that scheme has anything yet been done?—Nothing has been done. It was submitted as the best that I could design; it contemplated the formation of a depôt, and the arrangements which would be necessary on both sides.

7359. Under that scheme, with proper inspection and proper regulations, you believe that a large trade might be carried on between Ireland and this country?—I think so; and with less risk of disease than at present.

7360. Has your attention been directed to the possibility of dead meat being imported?—It has. The depôts are so arranged as to provide for the separation of the healthy and unhealthy, and animals in contact with the latter.

7361. Will you state to the Committee the circumstances under which your attention was directed to that subject?—A change of trade so great as that of carrying meat by carcase is one that involves many changes, particularly to a railway company; but the one with which I am particularly connected owns one-half of the underground of Smithfield Market, and it has always looked as the trade extended in that direction, to make these arrangements perfect. I believe that there is not the slightest difficulty in

Sir C. A Wood.

25 June 1877.

Chairman—continued.

delivering any quantity of meat through this market.

7362. Do you believe that even during the hot weather a dead-meat trade could be carried by the railway companies, and distributed by the railway companies?—Certainly, by vans which are fitted for that purpose.

7363. We have had evidence before the Committee of the possibility of bringing over dead meat to this country in cool chambers as is done with the American supply; but the difficulty which has been suggested has always been, that when it did arrive here it had to be distributed amongst the small towns of the country, and that it was subject to atmospheric influence as soon as it left the steamer, and that consequently it deteriorated very much; has your attention been called to that?—Yes; in 1871 I employed a person who is the manager of the Piston Freezing Company, in London (Mr. Ash) to design, and he did patent, a cooled van. I believe Mr. Ash to be the inventor of the cold-air process by which meat is preserved. The patent for which Mr. Lake, the American, is registered, was only taken out in January of the present year. Here is Mr. Ash's Patent, dated 5th May 1871, of a cooled van (*producing a drawing*). That has been tried, and it answers; there have since been improvements made upon that with regard to small vehicles, by which meat can be brought from Deptford, for instance.

7364. Your attention has been called to the carrying of the dead meat from Deptford Market, with a view of bringing it under better conditions into the Smithfield Market or into the country markets?—Yes, we have a vehicle now being constructed for that purpose. There is a very large meat trade from the West of England, and some of it is conveyed to London on the broad gauge; the communication between Paddington and Smithfield is on the narrow gauge, and consequently, when this meat is brought to Paddington, it has to be transferred into delivering waggons; and the result is not quite successful. It comes up from the West of England suspended in meat vans; it has then to be taken out at Paddington, and it is put into vehicles and carted into the City, which is not a good arrangement. To get over that, it has occurred to us recently, that vehicles might be made, which could be put on broad gauge trucks in the West of England; they will be brought to Paddington, and then from Paddington they can be horsed to the Metropolitan Meat Market.

7365. And you believe that it will be quite possible to carry out a system, by which vans may take the meat from the steamers, be placed upon the railroad, and then be taken by road afterwards to any town or depôt where the meat is wanted?—I think so, without any difficulty.

7366. Maintaining, by the process which you have described as applied to this van, the cool atmosphere in which the meat has been brought across?—Yes; I consider Mr. Ash's process to have been extremely valuable with reference to getting over the great difficulty of admitting air and excluding dust. This he effects by the use of wool.

7367. Do you not want in the van the ice which seems to be required in some of the processes?—There is no difficulty in getting ice anywhere, and I think that it is essential to have ice. The cold air is forced through ice. The van

Chairman—continued.

that we are now making is a road vehicle, and the air will pass into that vehicle through ice. But it is only for a very short time in the year that ice will be required. We have been supplying for several years Merthyr Tydfil, in South Wales, with merino sheep imported regularly every week to Deptford. These merino sheep formerly were carried alive, but since the restrictions they are conveyed in carcase, and until lately there has been no difficulty at all. In this very hot weather it is possible that there may have been difficulty, but that is for a very short time in the year.

7368. I understand you to say that this van is not in working order yet?—It is not finished yet, but we are very confident that it will work satisfactorily in the hottest weather.

7369. You are not speaking of the sheep having been carried to Merthyr Tydfil under those favourable circumstances, are you?—No; the carcases have been carried in ordinary trucks.

7370. Have they been packed in any particular way, so as to prevent the carriage being injurious to them?—I am not quite sure how that is.

7371. But there has, up to the recent hot weather, been a constant carriage of dead meat from Deptford into Merthyr Tydfil?—Yes, with a view to its consumption in that locality.

7372. With regard to the carriage of dead meat, has it been attended with any loss to the trade from the sheep having been killed at Deptford?—No; I have not heard of any. When I looked into this matter some years ago I learned that meat killed in Scotland at a higher latitude will keep two days longer than meat which is killed in London; I then thought that if that was sound for Aberdeen beef it must apply to Ireland, because there was the intermediate operation of the sea-passage.

7373. As to the carriage of dead meat, how are the carcases got from Deptford to the Great Western Railway at present, because I understand you to say that your vans are not yet running?—They are not. We have a contractor who delivers at Smithfield all our meat from Paddington which comes up by the broad gauge, and the same person brings it from Deptford to us.

7374. Therefore the animals, after being slaughtered at Deptford, are carried in carts until they perform their journey down into Wales?—That is so. There is no physical connection at present with any railway at Deptford.

7375. Therefore you say that you have delivered without any considerable loss, for some little time, this dead meat after it has gone through not only the railway journey, but also the journey by cart between Deptford and your stations?—Yes; but we do not consider that that is a perfect arrangement.

7376. You would represent that under the probability of the continuance of such a trade, vans, such as you have described, might be adopted, which would render it a certainty?—We believe so. One truck filled with fat cattle contains eight animals; that is 32 quarters; and this vehicle that is being constructed is being made to hold 32 quarters. As regards other changes, we are rather waiting to see what is the result of this Committee; we hope to get some information from it.

7377. Still I understand you to say that you have yourself been experimenting in this direction for some time?—For a long time.

7378. And

Chairman—continued.

7378. And you see no reason from the results of those experiments to doubt the possibility, not only of carrying meat properly frem Ireland, but of carrying the dead meat which has been brought into this country in a cool atmosphere throughout the country and distributing it to the various towns?—I see no reason to doubt it. I was one of the committee, with some members of the Corporation, which constructed the Meat Market, and I believe the market capable of great extension, and that the arches upon which it is built are capable of being converted into cold stores or larders.

7379. In fact this system of cooling the air applied to permanent depôts or stores would carry out the cool air process generally, so that you might keep for a long period the meat that was sent over dead either from Ireland or from the Continent?—From anywhere.

7380. You have heard, no doubt, of the practical possibility of making ice artificially during a period of the year when you were not so well able to get natural ice?—Stores of ice may exist everywhere. At Waterford, for instance, the importation of ice is a regular trade. I heard Mr. Denny's name mentioned here by one of the witnesses this morning; they kill 300 bacon pigs a day through the hot summer, and that business is facilitated by the use of ice to cool the buildings.

7381. That is a trade which is going on now?—Yes, to a very great extent. It is a very profitable trade. There was formerly, I believe, a very large meat trade at Cork, but it paid the Irish better, I believe, to send stores, than to send fat cattle, and that trade has for a time ceased. I am not at all sure that from the South of Ireland there will even be a very large exportation of fat animals, because the trade of the South of Ireland is so highly remunerative for breeding, and they do breed, beautiful store cattle. I imagine that there is no part of the United Kingdom in which there are finer store cattle to be met with than in the South of Ireland, and I think that it pays them better to send over stores than to send fat cattle.

7382. With regard to store cattle, you suggest that regulations should be made for inspection at the ports, and for their transit in properly constructed steamers?—Yes, there should be regulations for inspection at the port, and for their transit in proper steamers.

7383. And you think that it would be quite possible to carry the dead meat in the way that you have described?—Certainly. Now fish is a more perishable article than meat; and here are the arrangements by which the mackerel trade is carried on, which is a trade which pays between 22,000 *l.* and 25,000 *l.* a year in railway charges. That mackerel traffic is quite a new trade.

7384. Is it brought by railroad?—It is all brought by railroad from Milford.

7385. From whence?—From Kinsale, chiefly; the system is this: in the month of March there collect about Kinsale fishermen from all parts, upwards of 200 sail of fishing boats; and there are steamers which are sent from the Mersey, and those steamers lie at Kinsale, and the fish are brought in there iced, and they are sent off to Milford. On arriving at Milford the whole is distributed over the country, not to England only, but even to the Continent; and, according to the demand of that day, so is the number of boxes sent. I believe that the same system would apply to meat. I have here the arrangements and rates.

Chairman—continued.

7386. That applies to fresh mackerel?—Yes, that applies to fresh mackerel.

7387. And, by making the requisite arrangements, they send the amount that is required for the market?—Yes, to all these places according to these rates.

7388. Will you hand in that paper?—Yes. (*The same was handed in.*)

7389. That would show the feasibility of a similar trade in dead meat being established?—Yes. That is quite a new trade. In 1876 there were 91,352 boxes, weighing 8,758 tons, and the transit charges for those were 22,290 *l.* This year it has increased; between the 28th of March and the 20th of June there were brought to Milford 95,812 boxes, which weighed 9,253 tons, and the total charge for which was 25,261 *l.*; so that it is a very large trade.

7390. Are those boxes carried in vans prepared for them?—Yes; they are open vans, but rather high-sided; and it is a very nice operation, in a short time, to get the boxes all properly distributed, because the buyers will want so many boxes to go to one place, and so many to another.

7391. They have to be like letters sorted out at your stations?—Exactly.

7392. You give that evidence to show that the trade already exists with regard to a very perishable article, namely, fish, and that therefore under the conditions which you have suggested it would be quite possible to carry out that trade in dead meat, distributing it as you do fish, to different parts of England along the lines of railroad?—Yes, I think the interior of the country may be supplied from great centres, such as Bristol, Birmingham, and Liverpool, in addition to all metropolitan markets. The cattle would come to the same ports where these meat places would be.

7393. Is there anything else which you would wish to put in in your examination in chief?—I should like to put in the plan of the depôt which I submitted last year to the Privy Council. This plan shows the depôt at Waterford and the depôt at Portishead (*producing a Plan and describing it to the Committee*).

7394. There you have, I see, not only sheds for slaughtering the cattle, but quarantine sheds?—Yes.

7395. That paper which you have in your hand explains fully, does it not, the whole operation of dealing with the cattle on their embarkation and arrival?—It does.

7396. Will you hand that in?—Yes (*the same was handed in,* see *Appendix*).

Mr. *W. E. Forster.*

7397. This plan that you suggest is not in operation anywhere, is it?—The Cork Steam Ship Company partly adopted the suggestion, and so far it is in operation there. Sir John Arnott, the chairman, agreed that it was a sound system, and some improvements were made in their depôt, and their depôt I consider to be an extremely good one.

7398. Have you lately been to Ireland?—I was there about a month ago.

7399. I suppose you would say that in Cork the arrangements are a good deal improved?—I think so.

7400. Do you think that they are improved at Waterford?

Sir *C. A. Wood.*

25 June 1877.

Mr. *W. E. Forster*—continued.

Waterford?—I have reason to know from a communication with Mr. Moon, the chairman of the London and North Western Railway, that great improvements have been made by that Company in Dublin.

7401. Do you think that the arrangements are improved at Waterford?—I am afraid not.

7402. With regard to the treatment of the animals, has it come before you that the animals are hardly treated in getting them into the vessels?—Yes, the usage of the animals is very bad; I cannot use words that would convey what I really do feel about the treatment of the animals.

7403. Do you allude to the treatment of the animals by the drovers before they are embarked?—In the act of embarkation; and also on this side, to get them into the railway trucks, when they are, as is too often the case, exhausted.

7404. I suppose they use cruelty in forcing them on board?—Yes, in forcing them on board.

7405. I think I heard you state that you had seen great cruelty with regard to pigs?—With regard to pigs especially. At Cork, at the premises of the Cork Steam Ship Company, more care is observed; but at Waterford, I have seen great cruelty. I have seen the men engaged in forcing them on board applying their sticks to those tender parts of the animal which would not injure the flesh, such as the eye and the mouth.

7406. You are probably aware that in consequence of the report of the Select Committee of 1873, Government inspectors were ordered to go to the ports of landing of the Irish cattle, and to ascertain whether they had been properly treated on the voyage as regards food, water, &c.?—There are inspectors now. There is an inspector at Milford, and the work is very well done. There are inspectors at the Irish ports, but I do not think it possible for an inspector to make any proper inspection of the animals at an open wharf.

7407. Do you think that that inspection has done anything towards diminishing the cruelty?—The cruelty is almost inherent in the system. If I might make a suggestion with regard to this, I think it it would certainly be a good arrangement as far as the protection of the animals was concerned, if all these men were licensed. In the passenger trade the emigrant runners are now all licensed.

7408. You mean that the drovers should be licensed?—I think that the drovers' men should be licensed by the local authorities. It is a means of getting hold of a man, and, of course, if he commits an act of brutality his license may be forfeited.

7409. In England, as you are aware from your connection with the Great Western Railway, there are regulations with regard to the transit of cattle, and the inspectors from the Veterinary Department go over England to see how those regulations are carried out; are you aware whether there is anything similar to that in Ireland?—I do not think that there are travelling inspectors in Ireland; I believe that in Ireland the inspectors are local. But in England they are under this difficulty: the inspectors can regulate the loading pens, but between the loading pens and the water's edge there are intervals over which they have no control.

7410. You know that it is not many years since the regulations were made in England for furnishing every railway station with water; I suppose that has had a good effect, has it not?—Yes.

7411. Returning to the question of disease, I gather that you are not at all surprised to find that animals arrive with foot-and-mouth disease from Ireland?—No, not at all.

7412. And until these improvements, which you suggest, are made, you fully expect that that disease will continue?—I lived for 12 years in a county adjoining the county of Monmouth, where disease existed to a great extent in the county of Brecon, which also is a breeding county, and I foretold what would happen; and I believe that those two counties have suffered very much from foot-and-mouth disease brought *viâ* Newport and Milford.

7413. You are aware, I suppose, that in consequence very much of the regulations passed by the Privy Council, the cattle ships from the Continent are forced to comply with certain rules with regard to the mode in which the cattle are shipped and taken care of?—Yes.

7414. Does the same thing exist with regard to Ireland?—No.

7415. You come before us with information derived from different sources, from having studied passenger ships and the arrangements with regard to emigration, and from having given very careful attention to the Irish cattle trade, and having to some extent inspected the mode of carrying on the Continental trade; comparing the Continental cattle trade, especially into the port of London, with the Irish cattle trade to the Western parts of England, is there the same care taken to prevent disease with the Irish trade as there is with the Continental trade?—I think not, decidedly.

7416. Nor the same care for the treatment of the animals?—Certainly not.

7417. Have you seen anything of the animals that arrive at Portsmouth from Spain and Portugal?—Yes, I have seen a cargo at Portsmouth in excellent condition.

7418. We are informed that great care is taken in the transit of those animals?—Yes; I saw last year a cargo just landed, and they could not be in a better state.

7419. When you come to disinfecting, do you think that there is as much endeavour made to disinfect the Irish ships from the disease as there is to disinfect the Continental ships?—That I am unable to say.

7420. I understand you to say that you think that more care ought to be taken with regard to the Irish ships?—Yes, I certainly think that there ought to be more care taken.

7421. Am I right in considering that the greatest danger from infection is, that they get thoroughly infected before they leave Ireland?—Yes; in the lay fields or open wharves.

7422. And therefore the suggestion which you have made is, that there should be greater care taken with regard to the ship before it left the port?—I think so, but more particularly of the animals before shipment.

7423. You are aware, I suppose, that foot-and-mouth disease develops rather quickly?—I have read the evidence to that effect.

7424. There is this difference between foot-and-mouth disease and pleuro-pneumonia; that pleuro-pneumonia may lie for a long time in an animal

Mr. *W. E. Forster*—continued.

animal, and foot-and-mouth disease will manifest itself more quickly?—Yes, so I understand.

7425. That would lead us to think, would it not, that proper regulations with regard to the inspection before they leave Ireland would be a very considerable security with regard to foot-and-mouth disease?—And also inspection after arrival at the waterside in England.

7426. Your saying that there ought to be inspection on landing in England, rather points to your limiting the number of ports to which Irish cattle could come, does is not?—I think that the trade has limited the number of ports. For instance, the South of Ireland sends to Liverpool for some of the Northern markets, and it sends to Bristol for the Thursday's market at Bristol, and it sends to Milford for Newport, and for the Gloucester Market. All those markets are on particular days. The first market in England towards Ireland is Newport on the Wednesday; the Bristol Market is on Thursday, and there is at Gloucester on Saturday a special Irish Market, there being on Monday an English Market for English stock. I think what has been done at Gloucester might be well followed elsewhere, especially at Bristol.

7427. You spoke of your connection with the Great Western and the Great Western ships; do those Great Western ships carry cattle?—The Great Western daily ships, tentatively, do not carry cattle. We have three vessels which run daily between Waterford and Milford and Milford and Waterford, making six voyages a week each way. Those voyages are performed with perfect regularity, with as much regularity as the voyages between Holyhead and Kingstown, and my board tentatively has for twelve months been carrying no cattle in those boats. They are vessels of high speed. I believe that that arrangement is still tentative, but the difficulty, of course, is to obtain for these vessels a sufficient cargo to make that description of traffic remunerative. It is hoped that it will be supplemented by perishables, such as fish, meat, poultry, and fresh butter.

7428. Have your company thought it worth while to start cattle steamers?—Yes; we have two cattle-boats that carry nothing else but cattle.

7429. Where do they come to?—They run between Milford and Waterford, and those vessels, I believe, will pay. The London and North Western Company have two vessels lately constructed; they are fine vessels, the "Rose" and the "Shamrock," which make passages now between the North Wall and Holyhead, carrying only first and second class passengers and no cattle.

7430. With regard to the condition of the cattle before they leave Ireland, is the length of the journey that they generally have before they get to the port of embarkation within your knowledge?—That will vary according to the position. The cattle that come to the port of Waterford are brought long distances by railway. The communication with the port of Waterford may easily be seen extending up to the extreme west. Our connections go as far as Tuam, and all through the intervening country.

7431. Has your company anything to do with those railways?—Up to Tuam it has. (*The Witness described the Map to the Committee.*)

7432. What is generally done with the beast between the time of his being taken out of the railway car and his being put on board the steamer?—Taken into lay fields; those that come in from up-country generally come into the lay fields.

7433. I gather that, if we want to stop foot-and-mouth disease in England, the mere prohibition of live animals coming from the Continent, without doing something with regard to this Irish trade, would be of no use whatever?—Not the least, in my opinion.

7434. Returning to the dead-meat market at Deptford, would it not be an immense convenience for distributing the dead meat throughout England and throughout the metropolis if there was a railroad from the Deptford Market competing with the Underground Railroad?—There is a railroad very near it, the East London, which is worked by the London, Brighton, and South Coast Railway Company; and that railway either has, or, I believe, is to have, a connection which might enable it to work on to the Metropolitan Meat Market.

7435. What would be the length of railroad that would be required to put the Deptford Market upon the railway system?—The East London goes under the Thames; it is the old Thames Tunnel which is converted into a railroad, and is worked by the Brighton Company, and it goes within, I think, half a mile of the Deptford Market. This is a plan of the Metropolitan Meat Market (*producing a Plan and describing it to the Committee*). There are six lifts, 10 feet square, so that they will take a whole side of meat. This market is capable of enormous extension, because each of these arches contains 600 feet of area; and the meat may be worked either from above and downwards, or it need not go into the market at all, because the Great Western Company pay market dues, and, therefore, meat which came in by rail might immediately pass out again by this circular road, without being sent up by the lifts.

7436. I have heard it stated by those who are conversant with the trade, that it is natural to expect that there would be less care for the comfort of the animal and less care to prevent the ill-treatment of the animal in the case of store cattle than in the case of fat cattle, because it is said that the store cattle may recover, whereas the fat beast does not sell for so much if it is ill-used; is that true, according to your experience?—Certainly.

7437. Therefore if we look at our duty in reference to our treatment of the animals, greater care is required with regard to this store cattle trade than would be required with regard to the fat cattle?—I think so. My impression as I have already stated, is that the disease is spread in consequence of the large introduction of store cattle. When the cattle came formerly they were killed, and you heard no more of them. Now they go through the country; the bulk of the cattle that we bring *viâ* Bristol and Reading goes to Kent, some goes to Shrewsbury, some to the east, to Norfolk; others that are carried by the Waterford Steam-ship Company are taken to Liverpool, and from Liverpool to various northern markets.

7438. In fact there would be a very considerable store cattle trade between places so remote as the counties of Galway and Norfolk?—Certainly. There is a very large sheep trade out of Clare.

Sir *C. A. Wood.*

25 June 1877.

Sir *C. A. Wood.*

25 June 1877.

Mr. *W. E. Forster*—continued.

7439. And that is a trade that no increase of the dead-meat traffic will be likely to stop?—Not the least in the world.

7440. And therefore the dead-meat import would not stop the danger of disease from that trade, unless care be taken to prevent it?—There is great alarm in Ireland at the present time about the American meat, and the effect upon the price of Irish meat. I own myself that I do not share that apprehension. My belief is, that the effect of the introduction of American meat, will be to lead to the introduction of carrying the meat from Ireland, instead of the live animals, and that the breeders and feeders of Ireland will get the full value of their animals which they have never hitherto enjoyed. In consequence of the bad treatment, the necessarily bad treatment in transit of the live fat animals, the Irish proprietor has never obtained the full value of his animal.

7441. It is of course easier to carry the store animal than to carry the fat animal?—Certainly. I believe it difficult to carry perfectly by rail and by ship a fat animal. For instance, supposing you have eight fat animals wedged in a railway-truck, you may send from 15 to 20, or a less number, trucks of those to the London Market from Milford Haven; there will be occasions when the trucks must be shunted to allow the passenger-trains to pass, and every shunting causes a pressure upon the prime parts of the animal, and consequently that pressure to a certain extent bruises the fat animal. If a shunt takes place and the weight of eight animals in a truck is brought together, it necessarily compresses the animal at the part that is most valuable.

7442. I think that we may rather gather from your evidence, that although the Irish trade still wants improvement, yet you are of opinion that there have been considerable improvements within the last ten years?—Decidedly so, very considerable. I think that as much has been done as could reasonably be expected; but still, not all that is required with reference to safety.

Mr. *French*.

7443. You mentioned that you went to inspect these ports in Ireland; in what year was that?—I first made an inspection in the autumn of 1864; I went again in 1866, and I have been backwards and forwards from Ireland every year since.

7444. Have you gone round to the ports since then?—No, I have not. I have been to Dublin and Belfast since, and also to Waterford and Cork repeatedly.

7445. At those ports which you have gone to latterly, have you found a very great improvement since that time?—I have stated that there has been an improvement. The London and North Western premises are now exceedingly good. The City of Cork Company's premises at the North Wall are very good. At Waterford it is an open wharf, and therefore there are no premises except a small depôt which the Great Western Company use.

7446. It is in contemplation at the present time in Waterford, is it not, to build sheds similar to those at Cork?—I am not aware I think that to carry on a large trade in live animals, the only way of getting rid of the layfields, which I consider to be the great propagators of disease, is to work through a depôt at the water-side,

Mr. *French*—continued.

which can be properly cleansed, and where there can be separation.

7447. Did I correctly understand you to say that the drovers of Waterford were licensed?—No; I wish they were. I think that the licensing of drovers would be a great improvement.

7448. Are you aware of any place where they are licensed?—In London they are, and ought to be so everywhere.

7449. You say that the Great Western Company have two ships engaged solely in the cattle trade with Waterford?—Yes, the "Malakhoff," and the "Vulture." They are used exclusively for cattle.

7450. Will you describe those ships?—They are fitted for cattle. The "Vulture," has this advantage; that is to say, the animals are shipped above the water-line. I believe that if you put animals down in the hold of a vessel it is very difficult to cleanse the vessel properly.

7451. If you put the cattle above the water-line, you must have the hold empty, must you not?—That, of course, is a difficulty, but still the trade is so large, and the continental trade being conducted by many vessels which carry only cattle in a different way, I think that the Irish is a trade that would pay to do well, and I believe that the best way to do it is to use these cattle-boats backwards and forwards. But you cannot do that unless there are depôts.

7452. Could you tell the Committee what steps are taken with regard to disinfecting these boats on disembarking a cargo of cattle?—The Privy Council have laid down certain regulations about the introduction of water, and then lime whitening afterwards.

7453. You think that the introduction of water to vessels where cattle were stowed below the water-line, would be impracticable?—It would be impossible to put a quantity of water between the decks of a vessel without making them damp; and if you put in the animals afterwards, where there is heat, it draws out vapours, and all that is prejudicial to the health of the cattle.

7454. Have you gone much on the farms in Ireland?—I know Tipperary and Kilkenny, and all the best grazing parts; they are the finest in the United Kingdom, I believe,

7455. Have you been there lately?—Yes, I was there about a month ago.

7456. Is it a fact that Ireland is now free from foot-and-mouth disease?—The stock looked very healthy when I was there, as they generally do. I believe that there are no stock healthier than the Irish cattle.

7457. Do you know whether there was any foot-and-mouth disease in the country last year?—I was not there long enough to make a personal inspection.

7458. Did you see any of it at the ports?—I did not hear of any. The cattle trade had hardly commenced when I was there last.

7459. Do you think that Ireland is more liable to foot-and-mouth disease than England?—Certainly not; as I have already stated, I believe they are very healthy stock.

7460. I understood you to say a few minutes ago that you thought that most of the foot-and-mouth disease along the west coast of England came from Ireland?—My answer was with reference to the treatment of the animals in transit. How it comes I cannot say; whether it is in the boats

Mr. *French*—continued.

boats, and remains there, I do not know; but such is the fact.

7461. Do you think that the Privy Council regulations are, as a rule, strictly carried out, with regard to disinfecting those boats?—It is very difficult for me to say. I hardly know who has the control of the boats. I cannot answer that question. I can only speak as to the results.

7462. Do you not think that if those boats were made much better than they are, and made solely for the purpose of the transit of cattle, there would be very little foot-and-mouth disease?—I do not believe that there would be the slightest difficulty in moving cattle; cattle may be moved with perfect safety.

7463. You think that if there were certain improvements in the present mode of shipping transit, there would be very little danger of foot-and-mouth disease being introduced into England from Ireland?—There would be no difficulty with proper regulations.

7464. With regard to fat animals, you say, that every shifting of the waggons on the lines, creates a bruising of the animals; is not that more or less the fault of the railway companies?—No, I do not think that it would be possible to avoid that. The trucks are made with proper spring buffers, and everything is done that can be done to ease cattle trains by bringing them up slowly; but still in the transit those collisions will sometimes occur.

7465. Are all the cattle waggons on the railways in the United Kingdom provided with spring buffers?—I believe so; they get them as good as they can possibly be.

Sir *George Jenkinson.*

7466. I think you spoke of the cattle traffic chiefly from Waterford to Bristol; is there not also a considerable traffic between Cork and Bristol?—Yes, very large indeed; but I do not see so much of that.

7467. Are they chiefly store cattle, or fat cattle?—I think stores chiefly.

7468. And there are separate vessels for cattle on that line that you have spoken of between the North Wall and Holyhead?—No, they are for cattle and passengers also.

7469. You think that it would be one of the main improvements in the transit of cattle if you were to have the passengers and cattle in separate boats?—That is my opinion. We are not here, I suppose, to consider the comfort of passengers, but I have travelled in the cattle-boats, and a pig at sea is a bad companion.

7470. I think that you have expressed an opinion which I have heard expressed before, viz., that although stock may be very healthy in Ireland when brought for embarkation they contract disease *in transitu* on board?—That is my impression; I do not know how otherwise they get it.

Colonel *Kingscote.*

7471. I conclude that as a means of earning a dividend for your railway, you would sooner carry live stock than you would carry deat meat?—Carrying by boat and railway we would rather carry dead meat; in fact, the rate, of course, is so very much better. Take, for instance, eight cattle carried from Waterford to London; the rate for the eight animals alive would be 6 *l.*; the rate for those eight animals in carcases would come to something like 11 *l.* 10 *s.*; and of course we should prefer carrying the meat at the higher rate.

Colonel *Kingscote*—continued.

7472. You did not finish a sentence in answer to an honourable Member, about the market at Gloucester. I think you said that what was done at Gloucester about Irish cattle you would like to see in operation at other markets; what is done at Gloucester?—At Gloucester the Saturday's market is now given up exclusively to Irish cattle. The stock on Saturday is the surplus stock not sold at Bristol on the Thursday previous, and such additional stock as comes *viâ* Milford.

7473. What is the difference between the two?—I do not see why arrangements should not be made with the railway companies to send from market to market. Supposing that the depôt system were carried out, and that on landing the rate was made through from Waterford to Gloucester, from Gloucester to Banbury, and from Banbury to other places, I do not see why a system might not be adopted by which you could not take the animals through from market to market when they would not be mixed up with the cattle of the country, and I think that that perhaps would give additional confidence. What you want with regard to the Irish stock is confidence.

7474. You said that you lived in Breconshire for some time, did you not?—Yes; for 12 years.

7475. I have before me a return from the chief-constable of Monmouthshire, in which he says that in the year 1876 there were 2,114 holdings in the county of Monmouth that were infected with foot-and-mouth disease out of 4,681; what do you think is the source of that disease?—In the adjoining county, Breconshire, where I resided, it was very much the same. We believed that it came from Newport.

7476. By cattle from Ireland?—Yes, passed up through the country.

7477. As regards the cattle that came over in your boats, I believe you charge 1 *s.* insurance, do you not, for every head of stock that comes over?—Yes, there is an insurance fund now; they do pay insurance.

7478. If in the year 1876 one man who imported 1,500 head of cattle was paid by the company over 100 *l.* for cattle lost, do you think that it would be a large proportion?—Very few valuable cattle run up to that amount of money.

7479. If those were common stock, you do not believe that that is an exaggeration?—I do not think that it would be.

7480. Do you think it would be an exaggeration if the same person said that from injury to cattle, for which he receives nothing from the company, he had certainly lost 400 *l.* or 500 *l.* from the animals being so knocked about that he had had to turn them out to get them well again before he could put them into the market?—That shows that there must be something wrong; that is a large sum. I suppose you allude to a man of the name of Stratton. He is a large buyer, and he buys valuable stock. I do not know that it would be an exaggeration, but good animals are, no doubt, injured in coming over, even when every care is taken.

Sir *C. A. Wood.*

25 June 1877.

Sir *C. A. Wood.*

25 June 1877.

Mr. *Arthur Peel.*

7481. Are there any boats engaged in the cattle traffic between Ireland and this country independent of the railway companies?—Yes. There is the Dundalk Company, who are very large carriers, and Burns and M'Iver; and then south, there is the Waterford Steamship Company, the Cork Steamship Company, the City of Dublin Steamship Company, and another company, the name of which I forget at present.

7482. All the cattle boats, unless I am misinformed, that come to Holyhead are the property of the London and North Western Railway Company?—All that come to Holyhead are the property of the London and North Western Railway Company; they are very fine boats. The Lancashire and Yorkshire boats are also very large and powerful boats. I think the "Alexander Dugdale" is the finest boat I have seen.

7483. The railway companies have not got the traffic under their own control, and we cannot look to them for full and entire control of the traffic at the port of departure?—No.

7484. What proportion of the cattle come by the railway boats?—The London and North Western Company carry the bulk of the Dublin cattle, but I am hardly prepared to state the proportion.

7485. Is there any means of getting at it?—Yes. I have no doubt that we could get it if the Committee desire it. The City of Cork Company bring all the cattle from Cork; and the Waterford Steamship Company the greater part from Waterford. The proportion of the Great Western is very small; of the 45,000 or 46,000 a year, of cattle. But of the pigs we carry half, though not so many of the sheep. The number last year, at Waterford, of pigs were 75,891, and of sheep, 62,949. We carry perhaps one-tenth.

Mr. *Arthur Peel*—continued.

Major *Allen.*

7486. Is the dead-meat trade from Cornwall an increasing trade?—Yes; I am not sure whether it has extended so much into Cornwall, but the dead meat is becoming a staple trade, with special local arrangements, like any other trade. At, for instance, Barnstaple, there is a large abattoir, and the farmers, instead of sending their beasts into the market send them into the Barnstaple abattoir, where they are killed, and the railway company takes possession of them, and they are sent to the Metropolitan Market; and it is so at Taunton and other large towns.

7487. I understand that at Lostwithiel and St. Austell the trade is very much increasing, and I know myself that at Lostwithiel there is a small population; the argument has been that the live animals should be imported because they can dispose of the offal; now, at Lostwithiel, where there is a small population, that could not be done?—The butcher always likes the live animal; the fifth quarter is never accounted for.

Wednesday, 27th June 1877.

MEMBERS PRESENT:

Major Allen.
Mr. Anderson.
Mr. Jacob Bright.
Mr. Chamberlain.
Mr. Chaplin.
Mr. Dease.
Mr. Wilbraham Egerton.
Mr. Elliot.
Mr. W. E. Forster.
Mr. John Holms.
Mr. King-Harman.
Colonel Kingscote.
Mr. M'Lagan.
Mr. Mundella.
Mr. Norwood.
Mr. Pease.
Mr. Arthur Peel.
Sir Henry Selwin Ibbetson.
Mr. Torr.

SIR HENRY SELWIN IBBETSON, BART., IN THE CHAIR.

Mr. THOMAS JOHN LUYA, called in; and Examined.

Chairman.

7488. I BELIEVE you are Chief Inspector of Meat under the Corporation of Liverpool?—I am.

7489. Have you been inspector of meat under the corporation for some time?—I have, for about four and a half years.

7490. Previously to that had you any knowledge of the cattle trade?—Yes; I was a butcher for about 20 years before that, on my own account, and a cattle-dealer.

7491. Therefore you, of course, have a practical knowledge both of the live and dead trade in cattle?—Yes.

7492. Are you the only inspector at the present moment?—No; there are three others, besides myself, under me.

7493. Are they all appointed by the corporation?—Yes.

7494. What amount of cattle come under your notice during a week, for instance?—About 1,500 a week, taking the borough of Liverpool altogether.

7495. Does that represent the amount that is slaughtered and consumed in Liverpool?—There are about 1,000, I think, slaughtered in Liverpool, as near as I can possibly tell.

7496. Those are slaughtered and consumed in the town itself?—Yes.

7497. Are those cattle only, or does that number include sheep?—It does not include sheep.

7498. The cattle market at Liverpool is the Stanley Market, is it not?—It is.

7499. Is that market within the boundaries of the borough?—It is in West Derby; it is out of the boundaries of Liverpool.

7500. Is it within the jurisdiction of the county magistrates or of the borough magistrates?—Of the county magistrates.

7501. Are they principally Irish animals that come into Liverpool, or do you have Scotch and foreign animals?—We have Portuguese, Spanish, Irish, and Scotch.

7502. What proportion do those animals bear to the total supply that comes to the Liverpool Cattle Market?—I have no means of ascertaining that.

Chairman—continued.

7503. But you state that cattle arrive in large numbers from Ireland, Scotland, Spain, Portugal, and America?—Yes.

7504. From your inspection have you had opportunities of seeing those different races of cattle?—I have.

7505. With regard to the Spanish and Portuguese cattle, can you speak as to the condition in which they arrive at the market?—Yes.

7506. In what condition do they arrive?—They generally arrive in a very healthy condition.

7507. And you have not had to condemn or to certify many of those cattle as suffering from disease?—No. When the cattle are landed in Liverpool, they are inspected by the Government inspector, Mr. Moore, and if they are diseased, he draws my attention to it, and they are slaughtered in the borough of Liverpool; if they are free from disease he allows them to go to the Liverpool Cattle Market.

7508. Have you seen amongst those animals much pleuro-pneumonia, or foot-and-mouth disease?—I never saw any case of pleuro-pneumonia at all in the Spanish cattle; I have seen two or three cases of foot-and-mouth disease amongst them.

7509. Has that occurred recently, or do you mean during the whole time that you have been inspector?—In the whole time that I have been inspector, I daresay there have been six or seven cases where there have been a few cattle on board the boats that have been affected with foot-and-mouth disease, and they have been stopped by Mr. Moore, and they have been slaughtered in the borough of Liverpool under our inspection.

7510. But of course, under the order, the whole cargo of animals has been slaughtered at the port?—Yes.

7511. Then, in your judgment, these Spanish and Portuguese animals are, as a race, a healthy race?—They are.

7512. Do

Mr. *Luya.*

27 June 1877.

Chairman—continued.

7512. Do you consider them more healthy than the other cattle that you have seen?—I do consider them more healthy than the Irish cattle.

7513. But, comparing them with our English herds, are they quite as healthy?—They are quite as healthy.

7514. Does that apply to the American animals?—It does; the American animals that we have had lately in Liverpool have been very healthy and very fine cattle.

7515. Has the American live cattle trade been long in existence?—It has only been in existence a few months.

7516. And that has been during a time when the passage has been tolerably easy, I suppose?—Yes.

7517. Have you had any experience of cattle coming from America being injured in condition by the voyage?—Yes; we have had some cases where a few have been injured by the voyage, but not many.

7518. During the four and a half years that you have been inspector, it has only been for the last few months, I understand, that the American trade in live animals has been carried on?—Yes; there have been a few odd cases, but not to any extent. We have had about 1,300 in May this year, and we have had about 300 a week since, I think.

7519. So that the trade has, practically, only existed during the last two months?—Practically so.

7520. And during that time they have had fairly fine weather, and therefore, probably, you have not seen the effect of a rough passage upon the animals?—We have not.

7521. I suppose that, from the length of the passage, that enters very largely into the question of the condition in which they would arrive?—I have seen cattle arrive from America in better condition than they arrive in from Ireland; I saw some, last Saturday, arrive in Liverpool, and I never saw cattle arrive in such splendid condition in my life.

7522. To what do you attribute that?—To the care that is taken of them on board the boats, and the accommodation they have.

7523. In consequence of the long voyage that they have to face, greater care is taken of them than would be taken of them on a short passage?—Yes.

7524. Can you describe to the Committee what happens with regard to the examination of those animals from all foreign ports upon their arrival at Liverpool?—When they arrive at Liverpool they are landed on the quay; they are examined by the inspector appointed by the Government, and then they undergo a second examination after an interval of 12 hours.

7525. Are there two examinations?—Yes, one twelve hours after the other.

7526. And it is only after the second examination that they are pronounced free from disease?—Yes.

7527. By whom are the examinations conducted?—They are both made by the Government inspector.

7528. When does your own examination of them take place?—My own examination does not come on until the Government inspector certifies that they are unhealthy or diseased.

7529. You would not be brought in to examine them except in cases where disease appeared?—Only in cases where disease appeared.

Chairman—continued.

7530. Have you any power of going on board ship to examine them before they come into the market?—I think we have now, but we never do; we leave it all to the Government inspector.

7531. It is not a power that is much exercised?—No, it is not.

7532. You trust to the Government inspector at the port to certify as to the condition of the animals?—Yes.

7533. Can you state what the average values of the animals are which come from Ireland, America, and Spain?—The average value of the Irish cattle it is almost impossible to give, because we have such a different class of meat coming from Ireland. The Spanish cattle are a very average lot, and so are the American cattle.

7534. Do they average high prices?—The American cattle have averaged very high prices indeed; I think about 30 *l.* apiece, on an average.

7535. Can you give the average weight of the American animals?—I should average them myself at about 44 score, that is 880 pounds; that is about the average.

7536. How much would that be reduced by the offal?—About 1¼ *d.* per pound represents the offal; that is, the hide, and the small offal, and the fat.

7537. You say that this is the average; do they vary very much?—No, they do not vary very much; they may be a few pounds over, or a few pounds under, but, as near as I can tell, they are worth about that amount in the present state of the market.

7538. Would you represent to this Committee that naturally this market is of great importance?—I think that the Stanley Market is of great importance.

7539. It supplies, naturally, a much wider area than the town itself?—It does.

7540. It supplies a good many towns, I suppose?—Yes, to the Potteries, and as far as Sheffield, Nottingham, Manchester, Wolverhampton, and Birmingham.

7541. And they are now constantly very much dependent for their supplies on the Liverpool Market?—Very much, but not entirely, because the Salford Market has grown very much lately so that they do not depend so much as they formerly did upon the Liverpool Market.

7542. I suppose that, in your opinion, any interference with the Liverpool Market would affect those towns very considerably?—Yes, I think so.

7543. We have had it stated here, in connection with another branch of the inquiry, that the Liverpool people were very particular as to the quality of their meat, and that the demand of these large towns was for meat of very high quality; is that so?—It is so; they are very particular in Liverpool.

7544. It is stated that whenever the cargoes do not reach that high quality, they have to be sent to London, from the fact of their not finding a sale in Liverpool; is that so?—Yes. The fact is this, that what they cannot sell in Liverpool they send up to London.

7545. But is that on account of the quality being inferior, or on account of a glut existing in the market?—Either on account of the glut, or on account of the quality; either cause would act in the same way. What they cannot sell in Liverpool they send right up to the metropolis.

7546. You

Chairman—continued.

7546. You have spoken of this live trade into Liverpool as a necessity for the towns in Lancashire and Yorkshire, and as being a very considerable trade; has there been any dead-meat trade at all established between Ireland and Liverpool?—Formerly there was a very large trade, but it was in cattle that either would not pass the veterinary surgeon's inspection, or else the cattle themselves were not calculated to stand the voyage across the Channel.

7547. Did they come over at that time as a dead-meat trade?—It was made a dead-meat trade.

7548. Did it find a market?—It did at that time.

7549. So that they were not so particular in Liverpool at that time as they are at present?—No, but I can explain it to you. At the time I was appointed I asked the corporation at Liverpool to allow me to prosecute anybody sending diseased meat to Liverpool. I got permission, and we followed it out, and it has almost stopped the trade between Liverpool and Ireland.

7550. In consequence of the restrictions you have brought the condition of the meat which is sold in Liverpool up to the highest quality?—Yes.

7551. Do you see any of the meat that is consigned through to other places?—We do sometimes.

7552. Can you as easily detect disease in the dead meat as you can in the live animals?—No, not so easily.

7553. I suppose it is possible to detect disease in the dead meat?—It is possible in bad cases of pleuro-pneumonia, or bad cases of rinderpest to detect it in the dead meat; but it is not so easy to detect it in the dead meat as in the live animals.

7554. But, in an ordinary case of an animal being affected by disease, it is not so easy to detect it in the meat as in the live animal?—It is not so easy.

7555. It has been stated that rinderpest, that is to say, cattle plague, can be as easily conveyed by dead meat as by living animals; have you had any experience of that?—No, I should not like to say that.

7556. You cannot speak from personal knowledge upon the point?—No. I have heard both ways, but of my own knowledge I do not know.

7557. Do you think that a dead-meat trade having been possible in the past for meat that was not in particularly good condition, it would be possible now to establish a dead-meat trade instead of a live-meat trade with Ireland?—I do not think so.

7558. Can you give any reasons to the Committee for that belief?—If a dead-meat trade were established between Ireland and Liverpool I do not think that they could possibly supply Liverpool with the same amount of stock from Ireland dead that they do alive, and I do not think that they could get it here in the same condition as they get it in alive.

7559. They would have the same supply of animals, and the question is whether they could send it to market in as good a condition if they sent it dead, as they can now by sending it over alive?—I do not believe that they could.

7560. I suppose you admit that the journey not being a very long one, if they could establish

Chairman—continued.

the trade, the dead meat would probably arrive in good condition?—Yes; but anybody that knows anything about the butchering trade will understand that the less meat is handled the better after it has been slaughtered; and, of course, putting it on boats and bringing it from the boats again, must have a great tendency to deteriorate the value of the meat.

7561. You have had some experience, I suppose, at Liverpool, of this new American dead-meat trade?—I have.

7562. One of the principal incidents of the trade is the fact of the meat being subject, as you say, to being often handled before it comes to the market?—It is.

7563. And you have stated to the Committee that that deteriorates the condition of the meat?—Yes, it does.

7564. Having had, as you say, some experience of this American meat, have you seen the condition in which that meat has arrived at Liverpool?—I have.

7565. Do you consider that that meat, having now been imported for a period of some months, is very much depreciated by its being constantly handled?—I think it is.

7566. Have you seen that in the cargoes that have come over?—I have.

7567. Do you wish the Committee to understand that the cargoes coming over are, in your opinion, deteriorated in consequence of the process by which the meat is sent over dead?—Yes, I think so.

7568. Have you had to inspect the dead meat for the purpose of condemning it or otherwise?—I have.

5569. Has there been much condemned in Liverpool?—No, there has not been much condemned.

7570. I suppose you admit that the trade is a very increasing one, and has been growing steadily for many months?—No; it is going backwards sadly.

7571. At Liverpool?—Yes.

7572. Then where would you represent that the trade goes to, because the figures prove that up to the end of April this year the amount of dead meat sent from America into England was larger than the amount which was sent in the whole of last year, 1876, and that it has risen up to something like 6,000,000 lbs. in the last month, showing a steady increase all through?—All I can say is that the trade in American meat in Liverpool has sadly fallen off. There were many shops opened at first; I think that there were eight shops opened at first that sold American meat exclusively, and I think that four of those are closed now. A great number of shops were opened in the lower districts in Liverpool for the sale of American meat, such as greengrocers' and grocers' shops, and they have almost all, to a man, left off selling it. There has been one shop opened recently, and that has closed. But I have made inquiry myself from parties in the trade, and they tell me that the trade is sadly falling off.

7573. Do you mean that you have made inquiries of those people who have been themselves selling American dead meat?—Yes.

7574. And yet the amount that is coming into this country increases?—Yes, but it does not stop in Liverpool; it goes through.

7575. Has that been with a view to its being

Mr. *Luya.*

27 June 1877.

Chairman—continued.

supplied to the large towns in Lancashire and Yorkshire?—It has gone down to Sheffield, Manchester, Birmingham, Wolverhampton, and London, and all those places; but the Liverpool trade has fallen off considerably.

7576. Do those towns still continue to buy from the importer who brings it into Liverpool?—I do not think they do. Formerly a great many gentlemen came down to buy the meat, but I think that they have left off doing so.

7577. How do you account for the surplus amount, which clearly must be very great; where does that go to?—It must go to the interior of the country, or to the metropolis.

7578. Though your own personal experience at Liverpool is that the trade there is diminishing, the fact exists that the supply has been steadily increasing; how do you account for that?—I cannot account for that at all; it has been decreasing at Liverpool, without a doubt.

7579. Do you attribute that to the fact of its not coming over in such good condition, or to a prejudice against the meat?—I attribute it partly to prejudice and partly to the repulsive look which it has at times, particularly the rougher part of the meat; that is to say, the briskets and the shoulder pieces have a very repulsive look; the choice pieces often look very nice, but the other parts do not, and very often it is sour, and people who have had it two or three times take a dislike to it.

7580. We have had it in evidence from a gentleman whom I daresay you know, Mr. Giblett, and also from Mr. Link, both of whom come from Liverpool, that many cargoes have arrived in perfect condition, and that it competed fairly with the other meat in the market; and we have also had it in evidence from a London butcher that to his knowledge the American meat was being distributed in London as English meat, and that no complaint arose with regard to it; all those things point to the fact, do they not, that a very large proportion of the supply comes over in good condition?—Yes; a large protion of it certainly does come over in good condition.

7581. That being the case, have you ascertained the fact of the conditions under which that large proportion comes over, and do you not think that when it comes over in bad condition, that may arise from its not being properly prepared, and packed, and stored, as the good meat is?—I do not know.

7582. It has been suggested that is a mere question of speculation, and that in attempting to start a new trade as cheaply as possible, they work it down to the lowest point, and at last they go too far and bring over bad cargoes; would you agree in that view?—There is a good deal in that; but I have seen carcases of beef in the same boat, some of which have been in good condition and others in very middling condition.

7583. Was that meat brought over under conditions which pointed to any failure in the atmospheric influence under which it was brought over, even for a part of the voyage?—I think that it was more attributable to its not having been put on board the boat at first in good condition.

7584. Do you mean that it had not been properly prepared before it came?—It was not properly prepared before it came.

Chairman—continued.

7585. But you admit that a large proportion does arrive in good order?—In very fair order.

7586. Are you able to speak as to whether that was the case last year with regard to some cargoes that arrived in the hot weather?—Some of it arrived in very nice condition, and some arrived in very bad condition.

7587. Still, there were cargoes brought over during the hot weather of last summer in very good condition?—Yes, in very good condition.

7588. Does not that rather point to the fact that it is possible, under certain well-regulated conditions of trade, to bring the meat over in good order?—Yes; it points that way, certainly.

7589. Supposing that the trade was so established and found its level so completely as that those conditions were carried out with regard to all the cargoes, and that all of it came over in that condition in which you admit that much of it has arrived, do you believe that people would then get over this prejudice which the bad meat has produced, and that they would return to the purchasing of it as they did in the first days of its arrival?—No; I do not think that they would; because the taste of the meat is actually different from that of the Irish fat cattle and from that of the Scotch fat cattle.

7590. Do you speak of that from personal experience?—I do. I have tried it, and other people have done the same.

7591. Was the meat that you tasted brought over in good order?—In fair order. I have tasted it in two or three different ways.

7592. That of which the remembrance has remained on your palate is probably what has arrived in bad condition?—No; when it is hot it is very nice, but when it is cold it is a little insipid. I attribute that to the action of the cold air, and to the re-action of the air when it is brought outside the cold chamber.

7593. You think that when it is brought out of the chilled atmosphere in which it was carried over, the exposure to the external air brings out the dampness which has been described, and which takes away the flavour?—It does.

7594. Supposing that the conditions were altered, as they probably would be under a successful trade, and that the meat was kept in the atmosphere in which it came over until it was wanted; do you think that that deterioration would take place?—You cannot keep meat until it is wanted, because you have to expose it in a butcher's shop until it is sold.

7595. We have had evidence before this Committee from butchers that the trade is gradually introducing into London what has been established in America, viz., cool chambers in butchers' shops, in which meat is kept during the hot weather until it is wanted for their customers; under those conditions, would not this meat be kept fresh until it was wanted for actual consumption?—They are trying that now in Liverpool.

7596. Will you kindly explain to the Committee what they are doing there?—That is in the Compton House Stores in Basnett-street.

7597. They have established stores in which the same temperature is maintained as the temperature in which the meat is brought over in the steamers?—Yes; they have a large chamber in the cellars of the building, and in this chamber the cold air is sent through in a sort of refrige-

rator

Chairman—continued.

rator by the same process as is used on board ship, and they keep the meat there until it is wanted. There is a large chamber where the meat is hung, and there is a chamber adjoining that where ice is put, and cold air is blown continually through the meat.

7598. Is the temperature kept down to the same 34 degrees?—They keep it down as low as possible, and as near to the temperature in which it has been brought over as possible.

7599. Has that been established for some time, or is it only just started?—It has only been established, I think, 10 days.

7600. Can you speak to any cargoes having been treated in that way?—Yes; I have seen meat treated in that way.

7601. Have you seen meat brought from the chamber in the steamer, and placed at once in this newly-created cool store?—Yes.

7602. Has that meat been affected at all by the change?—When they have brought it out of this chamber, and exposed it in the air the reaction is very rapid, and the meat becomes damp and clammy, and it is very repulsive looking.

7603. But it has taken some days to come over in the steamer from America; then you state that it has been transferred from the steamer to this chamber; has it been detained in that chamber for any length of time afterwards?—For two or three days.

7604. When it has been brought out of the chamber has the condition of the meat been deteriorated, or has the deterioration taken place after it has been exposed to the atmosphere?—After it has been exposed to the atmosphere.

7605. They have been able to keep it, until it was exposed, in the same way as it was brought over?—Yes.

7606. That points, does it not, to the fact that you would be able to maintain the meat in a condition in which you could put it upon the market, and in which it would remain on the market for a day at least, without deterioration taking place?—I do not think it would.

7607. Do you think that the meat deteriorates so rapidly after it is exposed?—Yes; the first time. After being in the cold air, and then being exposed again to the warm air afterwards, the reaction has a great effect upon the meat.

7608. Have you condemned much of this American meat since it came over?—Not much.

7609. Have those portions of it which you have condemned been condemned recently in the hot weather, or has it been spread over the whole time?—It is spread through the whole time.

7610. Where it is properly prepared and properly brought over the external temperature does not make any particular difference?—No; the meat is sweet when it comes here.

7611. I suppose you have not followed those cargoes which have been sent from Liverpool to London?—I have inquired about them.

7612. Can you speak from your own knowledge upon the subject?—I do not speak of my own knowledge as to those cargoes.

7613. Can you, from your own knowledge, tell the Committee the price at which this American meat has been sold in Liverpool?—It has been sold as high as 6½ *d.* per pound, and as low as 4 *d.* per pound.

7614. I suppose it would not be possible for live Irish animals to compete at all with the American meat if that price was maintained?—It would not.

Chairman—continued.

7615. The price of the American meat, you say, has not sunk below 4 *d.* per pound in Liverpool?—Not to my knowledge. I know from my own knowledge that it has fetched that price.

7616. Can you speak at all as to what has been the effect on the trade in Liverpool since the cattle plague restrictions of last January came into force, prohibiting the import from many countries abroad?—I think it has had a tendency to raise the price of meat in Liverpool.

7617. Has that been the case notwithstanding the supply of dead meat which has come in from America?—Yes, notwithstanding that. If we had not had that meat, we should have had meat very much dearer.

7618. But notwithstanding that, the price has risen since the restrictions have been enforced, preventing the import of cattle?—Yes.

7619. I suppose that that principally affects Liverpool by stopping foreign sheep?—It affects Liverpool very much there.

7620. I gather that you are not very much dependent upon the German cattle proper?—No, we are not; it is the sheep that we are dependent upon.

7621. And you say that the price of mutton has risen in consequence of these restrictions?—Yes, I do.

7622. Are you able to speak to a point which was stated by another witness to this Committee, viz., as to the preference which there seems to be in the manufacturing districts for the small sheep from abroad?—No; I can speak for Liverpool.

7623. Can you state what amount of sheep were brought through to Liverpool, before the restrictions were imposed?—I cannot.

7624. Are you able to speak as to whether, since the restrictions have been imposed, any attempt has been made to bring carcases to Liverpool?—Yes, they bring carcases now to Liverpool from Deptford and other places; they bring large quantities; as many as 2,000 sheep a week have arrived in Liverpool dead.

7625. Does that travel down in good condition?—Generally in good condition, or fair condition.

7626. It comes in such condition as to find a ready market?—Yes, it finds a market, and sometimes a ready market.

7627. Since the restrictions have been imposed, have you been dependent on that supply, or did you bring dead meat from Deptford previously to that?—A portion of it was brought from Deptford previously to that, but we have since depended entirely upon that market for our dead supply.

7628. And you find that you cannot substitute the live sheep from the English market for those foreign sheep?—No; the foreign sheep are small sheep, and they suit the poor class of people on account of their being small joints and there not being so much fat.

7629. Would you represent to the Committee, then, that the restrictions which have forced you into the Deptford Market are injurious?—Yes.

7630. You would rather have the live animal brought through, than have the carcase from Deptford?—Yes, decidedly.

Mr. *Luya.*

27 June 1877.

Chairman—continued.

7631. But you are dependent upon these sheep to such an extent that, if their import were stopped, either dead or alive, it would be a serious loss to the manufacturing towns?—Yes, it would be a serious loss to Liverpool.

7632. Supposing that all foreign imports were treated as imports from scheduled countries, you would then have to set up a slaughter-house at Liverpool for those animals; would that meet your requirements in Liverpool?—It would meet the requirements in Liverpool.

7633. But you do not think that it would satisfy the towns around, which supply themselves from the Liverpool market?—No, they would sooner have the sheep alive, if possible.

7634. Then I gather from your evidence, that you wish the Committee to understand, that you think that the import into Liverpool from most of the countries is a healthy import; that the inspection in Liverpool is sufficiently strict to guard you against the importation of disease from those countries; and that the town and manufacturing populations surrounding Liverpool, are very much dependent upon this import of live cattle; and that they are particularly dependent upon the foreign sheep which are brought through from the London market?—Yes, that is the fact.

7635. Is there any other point that you wish to put before the Committee in your examination in chief?—I think not.

Mr. *Arthur Peel.*

7636. You said, did you not, that you never saw a case of pleuro-pneumonia amongst Spanish or Portuguese cattle?—I did say so.

7637. I do not think that the Chairman asked you whether you had seen any amongst American cattle; have you seen pleuro-pneumonia amongst them?—I have not seen it amongst the American cattle.

7638. Have you seen it among any imported cattle?—No, not among imported cattle, except from Ireland; we have seen it from Ireland.

7639. What position do you hold as regards the Government inspectors; I understand you to say, that you are not called in until the Government inspector has reported a case of disease?—That is the fact.

7640. Is that for the purpose of enabling you to carry out the regulations of the local authorities?—Yes, that is so.

7641. Have you been on board these Irish boats that have come to Liverpool?—I have, several times.

7642. Can you speak as to the condition of those boats that carry cattle, as regards their cleanliness and the general arrangements for the comfort of the animals?—They are very often overcrowded; that is the only particular thing that I can say about them. They are very good boats, and they are well adapted for the purpose.

7643. Are the cattle carried on deck or below?—Both on deck and below.

7644. Have you ever seen the hatches opened?—Yes, I have been down.

7645. Have you seen anything objectionable?—It has been very hot down there.

7646. But you have never seen the animals suffering?—No; I have never seen the animals suffering, except there has been a lame beast or something of that kind.

7647. Have you seen the animals come out of

Mr. *Arthur Peel*—continued.

those boats with disease upon them?—Yes, I have.

7648. With foot-and-mouth disease?—Yes, with foot-and-mouth disease.

7649. With pleuro-pneumonia?—I would rather not say that; I have seen them with pleuro-pneumonia; I cannot speak as to that.

7650. Can you give any reason why the American live cattle trade to Liverpool has only sprung up within the last few months?—I cannot give any reason why it has not.

7651. Did it not exist at all before that?—It did in a small proportion, but not to the same extent that it does now.

7652. But it has suddenly sprung up to 1,300 in one month?—That was gradually going on. We had a few cattle by different boats before, but not many. It sprung up in about two months very much indeed.

7653. Since it has sprung up, what effect do you think that the dead-meat importation from America has had upon the price of the live cattle?—It would go against the dead meat, and be in favour of the live cattle. The people would give more per pound for the live cattle than they would for the dead meat.

7654. You stated, I think, the average weight of the American beasts; are you able to speak of the price per pound that the live cattle fetched?—Yes; about 8*d.* to 8¼*d.* per pound, slaughtered in Liverpool.

7655. Was that at the same time that the American dead meat was fetching from 4*d.* to 6*d.* per pound?—Yes; 7¾*d.* to 8¼*d.* per pound was about the price of the live meat, and the price of the dead meat was about 4*d.* to 6*d.* per pound at the same time.

7656. Then do you think that the live-cattle trade is driving the dead-meat trade out?—I think it is.

7657. When you were talking of the price of the live American beast, you said that the offal represented 1¼*d.* per pound; do you mean to say that is the price of offal per pound?—No; if the beast is bought at 8*d.* per pound the carcase would lie at 7*d.* per pound.

7658. What would be the weight of offal in each beast?—The hide would be about 93 lbs., and the fat about 75 lbs., and then you would have the tripe. I could not give you the total weight without reckoning it up, but I could tell you the weight of any portion of it.

7659. You say that one reason why the meat kept in the refrigerating stores that are now being set up in Liverpool deteriorates, is on account of its being handled so much; I suppose that the moving from the boats to these refrigerators entails a double handling?—It does.

7660. Do you think, therefore, that that will prove a success?—I do not think that it will, because the less you handle meat after it is slaughtered the better.

Colonel *Kingscote.*

7661. I want to understand a little more clearly what are your powers or your orders from the corporation of Liverpool as to inspecting the animals which are landed; you say that the Government inspector goes on board the vessels; but is it part of your duty to go on board the vessels?—It is not.

7662. When does your duty begin?—When the

Colonel *Kingscote*—continued.

the Government inspector declares the animals to be affected with any contagious disease.

7663. You have to wait until he declares the animals to be affected with contagious disease before you put yourself into action?—Yes; that is so.

7664. And then you step in and take it off his hands?—I step in and take it off his hands then, acting under the local authority.

7665. Supposing that anybody is fined for having diseased animals in the town of Liverpool, do you, as inspector, get half the fine?—No; we get nothing.

7666. You are paid by salary by the corporation?—By salary.

7667. And you have no actual power to go on board a vessel and see for yourself whether there is disease there?—It is a power that we never exercise, because we should clash with the Government inspector.

7668. Is it your business to go about the town to try and seek out disease, or do you wait until somebody tells you of it?—It is our duty to go about the town, but it is not our duty to go on board of the boats at the docks; that is the Government inspector's duty. If we find any disease in the dairy that they did not report to us, then we should prosecute them for having a diseased beast on their premises.

7669. Then you have had nothing to do with cattle that are in the docks themselves, wherever they come from, whether they come from Ireland or from anywhere else?—No, not until they are reported upon by the Government inspector.

7670. What boats come to Liverpool with Irish cattle?—A great many.

7671. Do they come daily?—Yes, daily.

7672. Are they steamers or sailing vessels?—They are very large steamers.

Mr. *Pease.*

7673. Have you had many cargoes of South American cattle into Liverpool?—Not many.

7674. In what condition have those animals arrived?—The South American animals have been in very moderate condition.

7675. Have they had any disease amongst them?—I think not.

7676. You mean that they came in moderate condition considering the length of the voyage?—Yes, considering the length of the voyage.

7677. Do you think that that trade is likely to increase?—No, I think not.

Mr. *Elliot.*

7678. You said that some of the animals that were landed at Liverpool from America had suffered by the journey; do you know that some have been thrown overboard and lost entirely?—Yes, I have heard that many have been thrown overboard, but not a great many.

7679. Therefore there must have been a certain amount of loss through that?—Yes, a certain amount of loss. It is just the same with Irish cattle; we have sometimes had a great number of Irish cattle smothered on board of the Irish boats.

7680. You said that you considered that proper precautions were taken on board the American boats for the carriage of live cattle; can you tell the Committee what those precautions are, as compared with the precautions which are taken on board the Irish boats?—The extra precautions

Mr. *Elliot*—continued.

which are taken on the American boats are that they do not overcrowd them so much as they do on board the Irish boats.

7681. And the boats are larger, and there is not so much oscillation?—Just so.

7682. I think you said that what they cannot sell in Liverpool they send to London; did you refer to dead meat?—Yes.

7683. Therefore the meat must wait in Liverpool for a certain time to try for a market before it is sent to London?—I do not think that it is kept very long. The salesmen know directly what meat they can do with in Liverpool, and they send the surplus to London.

7684. But you say that it loses condition quickly?—Yes.

7685. And, therefore, it comes to London in inferior condition?—Yes, in very middling condition sometimes.

7686. You said that the trade in American meat at Liverpool has gone back very much lately; have you any statistics as to the quantity which is imported into Liverpool?—I have not; I speak from simple observation. I know the shops where American beef is sold, and we go round every day, and we know very well what trade they do.

7587. Is it not the case that, in order to save time, the meat is sent direct to other places instead of stopping at Liverpool, and may not that account for the apparent falling off of the trade in Liverpool?—No, it is because they cannot sell it in Liverpool.

Mr. *Dease.*

7688. You say that the trade has gone back in Liverpool; is that caused by the season of the year?—No, I do not think it is that; I think it is more from the repulsive look of some parts of the meat. The American meat is very nice looking meat if it has been killed in Liverpool, but when it has been killed and sent from the boats, it has a very repulsive look, particularly the rougher parts of the meat.

7689. As small quantities have been coming over lately, do you think that the decrease is owing to the season, or to there not being a good sale?—I think it is owing to there not being a good sale in Liverpool. We should be very glad if the American meat would come; we want it very badly.

Mr. *M'Lagan.*

7690. Is there any other dead meat imported into Liverpool than American dead meat?—There is dead meat brought from Deptford; the dead sheep that I was talking about.

7691. Is there none sent from Scotland?—Very little indeed.

7692. With the exception of that from Deptford and from America, has no dead meat been sent to Liverpool?—Yes, we have seen meat sent from Ireland.

7963. What is the condition of the Scotch beef when it comes to Liverpool?—Some of it has come in very middling condition, but we have had very little of it.

7694. You used the expression, with regard to American dead meat, that it is very repulsive looking?—Some parts of it look very repulsive; it looks like beef that has been smothered, or not properly bled; the blood has not been properly drawn from it.

Mr. *Luya.*

27 June 1877.

Mr. *M'Lagan*—continued.

7695. Then of course it would become putrid much sooner than if it were properly bled?—Yes. The American meat is not smothered meat, but it has that appearance from being put in a refrigerator, and being handled so very much.

7696. It has a repulsive appearance on that account?—It has a repulsive appearance from being handled.

7697. And that is the case even with the best American beef that comes to Liverpool?—Generally speaking, yes.

7698. Perhaps you are not aware that some of the second class stuff that you send up from Liverpool is used in the best houses in London, although you say it is repulsive looking?—I am not aware of that.

7699. You are not aware that it has been given in evidence that it is used in the best West End houses?—I could not contradict it, but I am not aware of it.

7700. You are not a veterinary surgeon, I suppose?—I am not.

7701. You know the distinctive characters and symptoms of the different diseases of rinderpest, pleuro-pneumonia, and foot-and-mouth disease?—Yes, from experience.

7702. Do you think that you would not be liable to make a mistake between rinderpest and typhoid fever?—No, I do not think I should make a mistake there.

7703. Have you heard that some serious mistakes have been made by veterinary surgeons?—I have.

7704. But you have sufficient experience and skill not to make such mistakes?—I do not think I should make a mistake there.

Mr. *Torr.*

7705. Are you an inspector of live animals or of dead meat?—I am inspector of dead meat.

7706. Is that your special appointment?—That is my special appointment, as a meat inspector under the corporation of Liverpool.

7707. Have you given special attention to this American meat?—I have given special attention to it.

7708. Is it true, or not, that there is a general prejudice against the American meat?—It is true that there is a general prejudice against it, but I know that the majority of people in Liverpool would be very anxious to see large quantities of it come, and in fact it has been a great blessing to the people of Liverpool that it has come.

7709. There is no wish to discourage the import of American meat?—No; there is every desire to encourage it.

7710. From your own observation, do you not think that there are appliances by which this meat might be brought in more perfect condition than it has hitherto been brought in?—I do not think so, and I will tell you my reason: When meat is killed the less it is handled, and the less it is knocked about the better; it loses its gloss, it loses its appearance, and it never gets so firm after being knocked about as when it is hung up, and allowed to get properly cold after it has been slaughtered.

7711. We are told that the American meat is not much handled; that it is killed, then passed through a refrigerator on the other side reduced to a low temperature, then put in these cases on board ship, and never meddled with until it is

Mr. *Torr*—continued.

taken out on its arrival in Liverpool; is that the case?—I believe it is the case; but the very fact of moving it from on board the boats in Liverpool to the shops where it is sold again entails a certain amount of handling, which deteriorates the meat, and makes the meat not look so nice as meat which is actually slaughtered in Liverpool.

7712. It is not so inviting?—No, it is not.

7713. It has been stated before this Committee that a great deal depends upon the condition in which it is shipped; do you agree with that?—A great deal must depend upon it.

7714. And having passed through a refrigerator is an essential point?—I do not know whether it is an essential point or not if the meat was landed in Liverpool in perfectly fresh order. The less access the air has to it the better.

7715. Have you yourself been present on board those steamers, the Inman boats or the other boats, when the compartment has been opened?—I have.

7716. Does the air in the compartment appear cold to you?—Very cold.

7717. Up to that point what appearance does the meat present?—If you remove the cloths then it has not the same nice appearance as the meat that is killed in Liverpool.

7718. Do you think that there is anything in what butchers term the cutting, that is to say the dressing, of the meat; is it well killed and cut?—It is very well dressed indeed.

7719. Then you attribute the difference in the appearance entirely to the length of time that it has been killed?—Yes, and to the handling of the meat.

7720. And to the exposure to the cold unnatural atmosphere?—Yes.

7721. But, in your judgment, is it a trade that will decrease or increase?—In my opinion, though I am very sorry to say so, I think it will decrease. If they can import live cattle it is sure to drive the dead meat out of the market.

7722. But do you not think that in summer time, when the sea is more still, they might send the cattle over alive, and that in winter time they might send the meat over dead?—I do not think that there is anything to stop their sending over live cattle all the year round.

7723. Then you think that the live cattle trade with America will increase?—I do.

7724. And that the dead cattle trade will diminish?—I think so in my own judgment.

7725. Where are these live cattle chiefly shipped from?—From Chicago.

7726. But from what port in America?—I believe it is from New York. I do not know, indeed, where it comes from.

7727. By what line do they come?—By the Allan line.

7728. That is a Canadian line?—Yes; and by the Dominion line.

7729. The Dominion line is a Canadian line?—Yes. There is a boat called the "Memphis," which arrived on Saturday. I was on board of her.

7730. Do you know, of your own knowledge, whether any of the New York lines, the Inman line or the Cunard line, have brought live animals?—I do not know of my own knowledge.

7731. Then do you say that this increase in the American live cattle trade has really taken place

Mr. *Torr*—continued.

place within the last two months, just coincidently with the setting-in of summer?—Yes.

7732. And, at the same time, the dead-meat supply has diminished?—The dead-meat supply in Liverpool has diminished.

7733. But you would probably feel that if the dead meat could, by any improved process, be brought to the market in a better state, the prejudice against it would pass off?—Yes, I think it would pass off.

7734. You say that the price of the American dead meat is from 4 *d.* to 6 *d.* per pound?—That has been the price of American dead meat.

7735. And the price of live American meat has been from 7 *d.* to 8 *d.* per pound?—Yes.

7736. Then you say that the offal is 1¼ *d.* per pound; would that be deducted from the 8 *d.*?—Yes; that would be deducted from the 8¼ *d.*

7737. Then it brings the dead meat and the live meat to within about ¼ *d.* per pound?—No. I think I stated that the live cattle were worth 8½ *d.* per pound; and if you take 1¼ *d.* per pound for the offal from that, it leaves 7¼ *d.* per pound; that is for the carcase.

7738. But you mean that 1¼ *d.* on the offal is a reduction on the live price which you quoted?—Yes, from 8½ *d.* per pound.

7739. Do you know whether, in bringing those animals across, many deaths have occurred?—Lately, I believe, there have been very few. I have made inquiries, and I believe that there are very few. There was one, I think, on board the "Memphis."

Colonel *Kingscote.*

7740. Out of how many?—I think there were nearly 200 on Saturday. I made inquiries on board the boat, and they told me that there had been only one death on board.

Mr. *Torr.*

7741. Are those cattle brought in separate stalls?—In the "Memphis," I think, there were three or four in one compartment.

7742. But you said that they were not bruised, I think?—No, I did not say so.

7743. Do you not think that, unless they were put in stalls (as, for instance, is done on the railways), the stalls being well wadded on either side, they would be apt to bruise very much?—They would; but what I saw on Saturday seemed to have come in very good condition, and on all the other American boats from which I have seen cattle landed the cattle have been in very good condition.

7744. But that has been in fine weather?—They have had fine weather.

7745. Have you seen any case in which live cattle have been landed from one of these American boats, in which you have understood that they have had bad weather on the passage?—I have heard it said that they have had moderately bad weather, but not very bad weather.

7746. Do you think that in the depth of winter, when, you know, the Atlantic voyage is a very severe one, they would not have many casualties and much damage to fat cattle?—No; I think that with the increased experience in the bringing of live cattle, they would be able to bring them perfectly safe in winter-time.

Mr. *W. E. Forster.*

7747. What are your duties as inspector of

Mr. *W. E. Forster*—continued.

dead meat at Liverpool?—We come under the local authority. We come in after the Government inspectors have declared any disease to exist in cattle, but we have power to visit shipping and lairs in the borough of Liverpool.

7748. It is the business of the Government inspectors to inform you of cases of foot-and-mouth disease and pleuro-pneumonia in imported cattle, is it not?—Yes.

7749. Have you had many cases in which foreign cattle have been imported with foot-and-mouth disease?—Not many.

7750. When was the last case that you had?—I think it is about six months ago, as nearly as I can recollect.

7751. Where did they come from?—They came from Oporto.

7752. How many animals were there?—About 200, I think.

7753. How many were affected with the disease?—I think three or four.

7754. What was done with the others?—They were all slaughtered in the borough of Liverpool.

7755. Have you had any cases of pleuro-pneumonia?—No, not one; I have never seen one in foreign beasts.

7756. As regards the Irish import, have you had any cases of foot-and-mouth disease amongst those cattle?—Yes, frequently.

7757. Coming pretty constantly through the year?—Yes, coming more or less through the year.

7758. Supposing that there are some animals in an Irish cargo that are affected, what is done with the rest?—If a cargo of cattle comes from Ireland in which there is one beast affected with foot-and-mouth disease the Government inspector allows the others to go after a certain interval, but the one that is affected is slaughtered in the borough of Liverpool.

7759. There is this difference, is there not, between Oporto cattle and Irish cattle: that if there is one animal affected in a cargo of Oporto cattle all the others are slaughtered, whether they are affected or not; and if there is one animal affected in a cargo of Irish cattle that one animal is slaughtered, and the rest are allowed to go off to market after a certain interval?—Yes, that is the difference.

7760. Have you had any cases of pleuro-pneumonia from Ireland?—Yes, in animals which have not been stopped by the veterinary surgeon, but in which we found it after the beasts had been brought down to Liverpool and slaughtered.

7761. How long ago is it since you had a case?—I should think about six months, as nearly as I can tell. There were some beasts slaughtered at the abattoir at Liverpool which were suffering from pleuro-pneumonia.

7762. Then merely stopping the foreign import into Liverpool would have no effect upon the spread of foot-and-mouth disease and pleuro-pneumonia?—No, I do not think it would.

7763. Liverpool is not a scheduled port, is it?—No.

7764. No cattle can arrive there from Germany?—No, they cannot.

Mr. *Anderson.*

7765. You have been on board the vessels by which the Irish live cattle come into Liverpool?—Yes.

7766. And

Mr. *Luya.*

27 June 1877.

Mr. *Anderson*—continued.

7766. And you have been on board the vessels by which the American live cattle come to Liverpool?—Yes.

7767. Are the fittings of the two classes of vessels the same?—They are something similar.

7768. Are there bulkheads, or pens, or what?—There are bulkheads and pens in some boats. There are pens for the sheep, and the cattle are tied in rows, and certain divisions are made between them; not between every two beasts, but between certain numbers.

Mr. *Anderson*—continued.

7769. Are those strong bulkheads, that would not break away in rough weather?—Yes.

7770. Is that the case both on the Irish vessels and on the American vessels?—Both on the Irish vessels and on the American vessels.

Mr. WILLIAM WALKER, called in; and Examined.

Mr. *Walker.*

Chairman.

7771. I BELIEVE you are connected with the Leeds Butchers' Association?—I am.

7772. And as such you speak naturally the feeling of that body in Leeds?—Yes.

7773. I suppose that is a representative association, fairly representing the trade of the inland towns in that district?—Yes.

7774. Do you deal largely in foreign cattle in Leeds?—I have not dealt largely in them this last year at all; in fact, I have had none this last year.

7775. Do you mean the whole of the last 12 months, or only since the restrictions have been imposed with regard to cattle plague?—It is in the last 12 months.

7776. Has it been the habit of the trade in Leeds not to deal in the foreign import during that time?—There has been so little of that class landed in Hull that it has not been worth while going to fetch it, I think.

7777. Even before the recent restrictions were imposed, the trade had fallen off?—Yes.

7778. That trade from Hull, I suppose, is a trade in the cattle principally from Denmark and from Schleswig-Holstein?—Yes.

7779. Can you tell the Committee what the conditions of that trade were some time back; was it a large trade that had fallen off, or has it always been a small trade?—It was a very large trade indeed up to about 12 months ago, or rather more than that; but with the restrictions, and various other things, it has fallen off entirely.

7780. You say that that has been from the restrictions; do you mean that within the last 12 months additional restrictions have been put on as regards the port of Hull?—I do not know whether there were fresh restrictions, but the restrictions appeared to be so heavy upon them that the parties from the other side would not send the cattle; because, if there was one animal affected in the cargo, the whole cargo was compelled to be slaughtered at the port of landing.

7781. Do you know how long those restrictions have been applied to the port of Hull?—It is about 12 months since I was there, and so I cannot say.

7782. You do not know under what conditions the import into Hull took place previously to that time?—Not exactly.

7783. You do not know whether those conditions were the same then as were in force during the first six months of the year of which you have just been speaking; that is to say, the last six months of last year?—I think that they were pretty similar.

7784. But really the altered state of things has arisen since the restrictions were imposed in January?—Seemingly so.

Chairman—continued.

7785. But you represent to the Committee that the trade from abroad had fallen off previously to that?—Yes.

7786. And that I suppose was in consequence of Hull being a port at which the animals from scheduled countries are slaughtered?—Yes.

7787. But before those restrictions were imposed, the animals from unscheduled countries would come freely into the port of Hull, and be distributed from there?—If they were passed by the Government inspector in Hull, they were allowed then to be sold and sent inland. For instance, I generally used to go and buy them alive, if I could, to bring them away to my own place to kill; but if I could not buy them to come away alive, I then had to bring them to kill there; and with the inconvenience and the cost it fell to very nearly nothing. Parties began to send less cattle to Hull, and I think sent them to other places; for instance, to Newcastle. The trade seems to have left Hull entirely, and to have gone to Newcastle.

7788. I do not quite realise what you want to convey to the Committee, because I understood that Hull, up to January of this year, when the prohibition of import took place, was a port into which animals from Denmark and Schleswig could come free for circulation, and any animal coming from a scheduled country would come there to be slaughtered at the port; and it is only since January of this year that the alterations in the restrictions had taken place; but yet you say that, although the circulation of animals was allowed previously to that time, the trade had fallen off?—I do not know from what cause it has fallen off, save and except it be from this, that many of the parties have sent their cattle elsewhere, where they could move them away better than we can from Hull.

7789. What I suppose you will represent is, that you think that the cattle coming from countries where no infection existed should be allowed to circulate freely through the country for the benefit of the inland towns?—Yes.

7790. In your dealing with the trade in Hull, do you find great deterioration in the meat slaughtered at the port, as compared with the meat of the cattle that you could take away and slaughter in your own town?—I do.

7791. Can you speak as to how that affected the animal?—It would affect it to the extent of from $\frac{1}{4}$ *d.* to $\frac{1}{2}$ *d.* per pound.

7792. It made a difference of from a $\frac{1}{4}$ *d.* to a $\frac{1}{2}$ *d.* per pound whether you could take the animal alive to Leeds or whether you had to take it there as a slaughtered beast?—Yes.

7793. That is with regard to your supply through the port of Hull. Are you dependent in Leeds at all on Irish cattle?—Yes; after leaving

leaving off buying foreign cattle last year, I turned my attention to the Irish cattle, and I have generally filled my hands with the Irish cattle, finding that by doing so I could kill them at my own home, and that I could make more of them.

7794. I suppose that you would also represent to the Committee that you would not be able to keep that trade up if it was a dead-meat trade from Ireland instead of a trade in live cattle?—We should not.

7795. Have you a large trade in offal in Leeds?—We make a very fair price of our offals in Leeds.

7796. Are there many people there who are dependent upon the offal?—The smaller offals come in for the poorer classes of the people, and they are very well disposed of as a rule; it is very well cleared up.

7797. When the live trade diminished and you were obliged to buy the animals to slaughter at Hull, how did you meet the demand for offal in your town; could you bring the offal from Hull?—If I bought a beast in Hull to kill in Hull I then had the offal to bring to Leeds, which deteriorated it a great deal in value.

7798. You mean that the mere fact of the carriage of the offal from Hull to Leeds reduced its value?—Yes.

7799. And you represent that a certain portion of the inhabitants of your town depend largely upon the supply of offal?—I do.

7800. Do you believe that the offal of an animal which was slaughtered abroad could be brought over in sufficiently good condition to compete with the offal of an animal which is killed in this country?—I do not think it could.

7801. With regard to these two trades as supplying Leeds, can you tell the Committee whether there is any difference between the cost of carrying the live animals and the cost of carrying the dead meat?—I could get a wagon load of cattle brought from Hull to Leeds for about 28 *s.*, I think.

7802. What number of cattle would a wagon load represent?—Eight cattle. If I had those eight beasts to slaughter in Hull they would stand me in something like 15 *s.* a head for carriage and slaughtering.

7803. The carriage of the meat and the slaughter, would come to 15 *s.* a head?—It would come to all that. Then the deterioration in the value of the article would be another 4 *d.* per stone at least. If I buy eight beasts in Hull to kill in Hull, in the first place I should have to give two men half-a-crown to dress the beast; that is to say, to slaughter it and dress it; then I should have to give to the man holding the premises where the cattle were slaughtered, in goods and money, something like six or seven shillings a-piece very likely; I give him half-a-crown in money, and I give him the tripes, and the feet, and the manifolds, and the maw, and the blood, and the small entrails, and the manure, which is altogether worth to him, six or seven shillings, no doubt. The carriage is 1 *s.* per hundred weight, and the carriage of the offal is less, but not much. Altogether it costs about 15 *s.* or 16 *s.* per beast for killing in Hull and carriage to Leeds.

7804. Therefore the cost of bringing eight live animals from Hull to Leeds would be 28 *s.*; whereas if you killed them in Hull and brought them dead to Leeds, they would cost you something like 15 *s.* per head?—Yes.

7805. Have you had anything to do lately with this American dead meat?—I have not.

7806. Has it been imported at all into Leeds?—There is an agency in Leeds, but I have never bought any, either of them or of anybody else. A few have come to Leeds; in the first place some came, but now last week, I think, they had none. Up to last week, I think, they had a few.

7807. Have you any dead meat imported into Leeds from the Continent?—No.

7808. You have had no dead meat at all there, excepting what you got from Hull at the time you speak of?—Up to the time of the American beef coming.

7809. And you are not able to speak of the condition in which that American meat has come over?—I have seen it when it has been landed at Leeds from the railroad.

7810. That is after it has been moved from the steamer, and has travelled some hours on the railroad?—Yes, from Liverpool to Leeds.

7811. When you saw it, was it in good condition?—Some of it was in very fair condition, and some of it was only in moderate condition.

7812. Was that which arrived in fair condition, meat that would compete in the market with the other meat which you have had to dispose of?—When it first came to Leeds, it was run after by the people.

7813. That was on account of its price, I imagine?—Yes, but now it is not run after at all.

7814. Do you think that is because it is deteriorated in condition, or because the people only went after it when it was a novelty, and that they have got tired of it now?—I think that a great deal of it was bought merely from its novelty.

7815. But there is nothing in the meat, as I understand you, which, if it was sold at a price of that sort, would render it unlikely to become a marketable commodity, if it arrived in fair condition?—Not so much so. It seemed to be partly the meat and partly the novelty, I think, which caused its sale at first.

7816. In your opinion, the dead-meat trade, even if the meat came over in good condition, would not supply your wants in Leeds?—I believe it would not. Yorkshiremen seem to like to see their meat fresh and nice.

7817. And you represent that dead meat coming over, under those conditions, does not possess the freshness of the meat that is killed at home?—It does not.

7818. I think that at Leeds there are considerable dairies in the town?—Yes, there are many, but they are not particularly large; the largest of the dairies are outside the town.

7819. Are you able to speak at all as to the condition of those dairies, and as to whether disease has been produced from them?—Not particularly so, but I think that some of them require better drainage, better ventilation, and greater cleanliness.

7820. Has it come within your knowledge that beasts affected with disease have got into the market from those dairies?—No, I think not.

7821. Of course the advantage, if any, of this dead-meat trade with America has been in the low price at which the meat can be bought?—Yes, I think so.

Mr. *Walker*.

27 June 1877.

Chairman—continued.

7822. Do you believe that, at its present price, it would continue to compete in the market with English meat?—The people do not seem to run after it so much as they did; that is all I can say.

7823. And you represent that you believe that the price will fall?—Yes, I think it will.

7824. And, therefore, that it will not become a paying concern?—I do not think it will.

7825. I suppose what you would represent is, that the feeling of the butchers in Leeds, and in those central towns generally, would be that from their knowledge of the trade they think that inland towns are very much dependent upon the continuance of a live cattle trade; and that, therefore, they would urge that from all countries from which cattle could be imported free from disease they should be allowed to circulate freely through the country?—Yes, they would.

7826. And that you would represent in the interest of the general food supply of the public?—Yes.

Mr. *W. E. Forster*.

7827. In the way of your trade, I suppose you are likely to hear of animals that are found to be affected with pleuro-pneumonia in Leeds?—We have very little indeed.

7828. How many cases have you heard of late?—I have heard of only three cases; one in 1874, one in 1875, and one in 1876.

7829. Those are all that you have heard of in Leeds and its neighbourhood?—Yes.

7830. You have been in the trade for some time, I suppose?—Yes; for 30 years.

7831. Prices have risen very much since you have been in the trade, have they not?—Yes; they have very much.

7832. Do you remember what the price of beef was per pound at Leeds when you first went into the trade?—Yes; it was about from 4½ *d.* to 5 *d.* per pound.

7833. And what is it now?—From about 7½ *d.* to 8 *d.* per pound. That is for the carcase. In odd instances we are selling them at 8¼ *d.* per pound.

7834. To what do you mainly attribute this rise in the price of meat?—The population is greater. The stock may be more, but I do not know exactly; but the population is greater, and seems to demand more meat.

7835. Taking one year with another, and not taking a time of special depression of trade, is it not the case that, generally speaking, the working classes are able to buy more meat than they formerly were?—Yes, they are, but not at present.

7836. At the present time trade is bad in Leeds, I suppose?—It is.

7837. And yet the price has not much fallen?—Not particularly so.

7838. Do you get dead meat down from London?—We have had it, but it is very seldom.

7839. Does it come from the Deptford Market when it comes?—The parties that bought it in London bought it in the Metropolitan Market, I think.

7840. You do not know whether the dead meat that comes to you is foreign meat or home meat?—I think that it would be foreign meat.

7841. Is it American meat?—No; I think it was before the American meat came; it is some time since.

Mr. *W. E. Forster*—continued.

7842. Do any live foreign animals come to you from London?—No, I think not.

7843. Do all your live animals come from Hull?—No; they come from Newcastle now. There may be a few from Hull, but not many.

7844. Supposing that no live foreign animals were allowed to come to Leeds, what effect would it have upon your market?—It would have a great effect; it would make meat a good deal dearer.

Mr. *M'Lagan*.

7845. Do you remember when foreign cattle were first brought to Leeds?—I think that I bought foreign cattle just after I commenced butchering, about 30 years ago.

7846. And since the importation of foreign cattle the price has steadily risen, has it not?—Yes.

7847. After the importation of dead meat from America did the price fall or rise?—It seemed to have a tendency in the trade generally to fall perhaps about ¼ *d.* per pound on our trade at home.

7848. But it is a fact that, contemporaneously with the importation of foreign cattle, the price of beef rose?—Yes.

7849. I think you stated that it rose from 4½ *d.* per pound to 7¾ *d.* per pound?—Yes.

7850. I think you stated that that arose in some measure from the increased consumption of butchers' meat by the people?—Yes.

7851. Do you think that it arose from no other cause?—I am not aware of any other cause.

7852. Of course you remember that about 1865 there were a great many deaths amongst cattle in the country from rinderpest?—Yes.

7853. That would reduce the number of cattle very much, would it not?—There is no doubt that it would.

7854. Was there not a considerable rise in the price of beef about that time?—After that time there was.

7855. And therefore, though you have had an importation of live stock, owing to the importation of diseases into the country by live stock, there has been a reduced number of cattle, and the price of meat has risen?—I do not exactly know that.

7856. I think you said that after 1865 there was a considerable rise in the price of beef?—So there was, but I do not know that it is a fact that the cattle from the Continent brought disease.

7857. How was rinderpest brought into this country?—I cannot tell.

7858. Have you never heard that it came from the Continent?—I have heard people say so, but I do not know that it did.

7859. You do not know anything about the importation of these diseases, viz., rinderpest, pleuro-pneumonia, and foot-and-mouth disease; and you are not prepared to speak on the question?—I do not know anything about it.

7860. You do not know whether they originated in this country, or whether they come from the Continent?—I do not know at all.

7861. But there is no doubt of this fact, that the effect of the importation of dead meat from America was to reduce the price of beef in Leeds?—It did reduce it for a short time.

7862. It did so until it was taken out of the market again?—Yes.

7863. And

Mr. *M'Lagan*—continued.

7863. And if it had continued to be imported into Leeds in sufficient quantities, there is no reason why the price of meat should have risen again?—They have been importing it right away, at least it has been brought to Leeds right up to last week.

7864. But it has come in reduced quantities?—Yes; it has come in reduced quantities, and that is a proof to me that the people will not have it, because, in case they had wanted it, the parties would have brought a similar quantity every week; but they have not wanted it.

7865. Have the people ceased to buy it?—They have ceased to buy it in a great measure.

7866. What was done with it then?—They have to do the best they can with it; they have to make anything they can of it, especially the rougher cuts of it. A bit of choice prime meat might perhaps be sold at a moderate price, but the rough meat could be made nothing of, to a great extent.

7867. Did that American beef come from Liverpool?—It did.

7868. How long did it take to bring that beef from Liverpool to Leeds?—I should think it would be loaded at Liverpool towards seven or eight o'clock in the evening, and it would be in the shambles at Leeds the next morning; I do not know how long it takes to come, but not long.

7869. It was just carried, I suppose, like any ordinary merchandise; there was no protection from the hot blasts of air, or from anything else?—I suppose so.

7870. There were no precautions whatever taken to keep it in a cool place?—No; I should think that it would be put in waggons, and brought as all other meat is.

7871. You do not know whether it was exposed for sale in the Liverpool market first?—I do not.

7872. You do not know whether it came direct from the ship to Leeds?—I do not know, but I believe it came from the ship direct.

7873. Do you not think that it would have come in better condition if there had been proper precautions taken during the journey for its transport, such as having well-ventilated cars?—I do not know; I should think that a waggon travelling on a railway would be as good a protection as anything, because the air would get about it as well in that way as any way, especially coming at the speed at which they would come.

7874. Then I gather from your evidence that we need not look to the importation of dead meat from America for a reduction of the price of butchers' meat for the people?—No, I believe not.

Mr. *Dease.*

7875. Have you ever seen dead meat brought into Leeds from Scotland, or from any other part of the United Kingdom?—No, not often, except during the rinderpest; some carcases were then brought from Scotland, but only a few.

7876. Was the meat which was thus brought in an inferior condition to meat killed in Leeds, or was it in as good condition?—It was not in as good condition, though it was not in very inferior condition; but there is a wonderful difference between the transit of beef for something like a couple of hundred miles, and the transit of beef for a journey of eight or 10 days over the sea, and then two or three days' delay after it has got into this country, and then a journey inland.

Mr. *Dease*—continued.

7877. That is in reference to the American meat?—Yes.

7878. When the American meat is brought in, you say that it is in an inferior condition to other meat carried from any part of the United Kingdom?—I do.

7879. But it has been stated in evidence that when it is taken out of the refrigerator it is in excellent condition?—That I cannot say anything about; but when it is taken and travels inland, especially in the hot weather, it will always be very much affected by it.

7880. All meat?—Yes, all meat.

Mr. *Elliot.*

7881. You are aware that there was an immense loss of cattle in 1865?—Yes, I believe there was.

7882. And after that the price rose?—Yes.

7883. But you do not think that the loss materially affected the price; is that your evidence?—It did not affect the price very much, I think.

7884. And therefore you do not think that the loss in one year of some hundreds of thousands of animals can materially affect the price of meat in this country?—It seems to have been made up by beasts from other countries.

Mr. *King Harman.*

7885. I think you told an honourable Member that the Leeds butchers do not frequent the London market for the purpose of buying foreign cattle alive?—They do not.

7886. Do the butchers from the large towns of Yorkshire in the neighbourhood of Leeds frequent the London market for the purpose of buying foreign cattle alive?—They come to Leeds, and the cattle that are shown in Leeds are chiefly Irish beasts, or beasts from the north.

7887. I do not mean at the present moment, when there are restrictions upon the foreign cattle; but before there were restrictions, did the Yorkshire butchers, as a rule, go to London to purchase foreign cattle?—They did not.

7888. You gave one or two reasons for the rise in the price of beef; I suppose that butchering was a very good trade when the prices were low, was it not?—Well, just moderate.

7889. But it is a good trade now, is it not?—I dispute that; I do not say so.

7890. You do not think so?—I do not think so.

7891. Still people go on following it for 30 or 40 years?—No doubt.

7892. And they do not die very poor?—They do not die very rich, I think.

7893. But whether the price of meat is high, or whether it is low, they do pretty much the same, do they not?—No; when the price of meat is low the butcher does the best, as a rule; that is to say, when it is not over low, but at a moderate price, when he can afford to sell a nice joint at 6 *d.* or 8 *d.* per pound.

7894. If this American meat came in, would the butchers do as well?—I do not know I am sure. Some of them might, but I do not think the retail men would. They do not seem to have done very well with it hitherto.

Mr. *Walker*.

27 June 1877.

Mr. *King-Harman*—continued.

7895. Would the butchers in large trade make as much on American meat as they do at present on foreign cattle that they bring over and slaughter?—They would not.

Mr. *Norwood*.

7896. Do you happen to know what has been the number of foreign animals imported into Hull during the last few years?—I do not.

7897. In your opinion, the import into Hull of foreign cattle, especially from the Continent, has fallen off very much during the last year?—It has I believe.

7898. I have statistics before me, from which it appears that the import of foreign cattle in 1876 was greater than it was in 1872, 1873, and 1874. There were no less than 49,000 head of foreign animals imported into Hull in 1876; does not that rather make you change your view as to a falling off?—I was speaking of the present time.

7899. The Chairman has told you that restrictions were put upon the movement of cattle in the beginning of January, when the plague broke out, and, of course, it was natural that from that period there should have been a falling off in the trade; and you were alluding to that period when you gave your evidence just now?—Yes; since then.

7900. You were not speaking of the past 12 months, but of the six months which have intervened between the beginning of January and the present time?—I was speaking of the six months from January until now, no doubt. I gave up going to Hull a little before this time last year, so that I cannot speak positively; but I believe that it is much less now than it ever was.

7901. If last year 23,000 cattle came into Hull, they could not be consumed in Hull; they went to the West Riding, I suppose?—No, they did not; a great part of them came to London.

7902. From Hull?—From Hull. They were slaughtered in Hull, and sent away by men in Hull as dead meat to London, and to Sheffield, and to Barnsley, and to Manchester, and to Liverpool, and to various places; but Leeds seemed not to be wishful to buy it dead.

7903. If the restrictions were taken off and free importation was again allowed into Hull, I suppose that the Leeds people would have no reason not to go to Hull in that case?—They would go to buy it at Hull alive if they could bring it inland to slaughter at their own place.

7904. Have you seen any of the American live cattle that have been landed lately in Hull?—I did not see them when they were landed; I saw them when they came to Leeds.

7905. What sort of condition were they in?—Very fair indeed. I should say that they came in very excellent condition. I saw last Friday one of the same cattle that were landed in Hull, and it looked well, and it had been landed for a week.

7906. There was a cargo brought by Mr. Wilson's vessel, the "Othello," of New York; did you hear anything about its general condition?—I did not, but I believe I can say that these were part of the cargo.

7907. And they were really fine?—They were very nice.

7908. You would be sorry to see that trade stopped?—I have the greatest wish for them to come alive from all countries except where the plague exists.

Mr. *Norwood*—continued.

7909. You do not wish to be the means of importing plague into this country; but so long as there is no immediate danger of that, you wish to have as much foreign cattle as you can get alive?—Decidedly so.

Mr. *Pease*.

7910. You say that this time last year you gave up buying foreign cattle in Hull?—Yes.

7911. Has your own trade fallen off?—No, my own trade has not fallen off; I then took up the Irish trade.

7912. Have you been purchasing Irish fat cattle?—From last June until December I have purchased Irish fat cattle every week.

7913. Where do you purchase them?—In Leeds.

7914. Are they brought in by the dealers?—Yes.

7915. The quality of those cattle has very much improved of late years, I suppose?—Some of them are of very good quality indeed.

7916. Did you see any disease among those cattle?—I did not.

7917. No foot-and-mouth disease?—No foot-and-mouth disease.

7818. You say that you have been 30 years in Leeds as a butcher; are you well acquainted with the district about Leeds; have you bought extensively of farmers?—Pretty fairly.

7919. Do you know the Wetherby and Borrodale districts?—I do.

7920. Have the stocks held by farmers decreased or increased in your time?—I should think that they have increased.

7921. That is your general impression?—It is.

7922. And you think that they have not been so much alarmed by the prevalence of these diseases as to be prevented from keeping large stocks of store cattle?—Some of them may have been, but, as a general rule, I believe they have not.

7923. Have you ever gone to Hartlepool?—Never.

7924. In your excursions to Hull, have you seen many foreign beasts landed and going inland for the purpose of being fed or finished in England?—Not so many.

7925. But you think that some of them do?—Some of them perhaps do.

7926. Are they bought by farmers and graziers?—Yes; they were chiefly in-calvers.

7927. Not fat beasts?—No, they were chiefly in-calvers.

7928. Do you think that many of those in-calvers have gone into the West Riding, into the dairies?—Some of them have.

7929. Would you say that they were principally left in the neighbourhood of Hull?—Yes.

Colonel *Kingscote*.

7930. You say that during an experience of 30 years as a butcher, the price of meat has increased very considerably?—It has.

7931. Do you think that the consumption per head of the population is more or less?—I should think that they buy more per head.

Mr. JAMES ODAMS, called in; and Examined.

Chairman.

7932. I BELIEVE you have been deputed by the Central Chamber of Agriculture to give evidence before this Committee?—I have.

7933. I think that you gave evidence before the Committee of 1873?—I did.

7934. And before that Committee you were examined at some length upon the import of foreign animals into this country, and as to their slaughter at the port of landing?—I was.

7935. Have you considered the question since the time you gave evidence then?—I have considered it, and I am still of opinion that slaughter at the port of debarkation is the right thing.

7936. You have always advocated, and you now advocate, that the foreign trade should be only permitted with the restriction of slaughter at the port of embarkation?—I think that all animals coming in the holds of vessels should be slaughtered at the port of debarkation.

7937. Is that on account of the difficulties which you see in the inspection of vessels at the ports, and the consequent liability to disease being carried into the country if the animals are allowed to circulate through it?—I believe that disease is developed, I will not say generated, in the holds of vessels; and I think that all animals which come in the holds of vessels are not fit to mix, and never ought to mix, with the English stock, or to travel through the country.

7938. You think that the inspection at the ports would not be sufficient to guard you against the spread of disease?—Since 1865, we have had inspection, disinfection, and deoderization; and we have also sent cattle to various ports, for instance, to Harwich and to Deptford, and also to the Metropolitan Market; and I think that the last case of the "Castor" coming in is sufficient proof that inspection is not at all safe.

7939. You think that that would still be the case, even if you saw a probability of greater restrictions being adopted abroad in order to prevent a recurrence of what happened in the case of the "Castor"?—I scarcely see what additional restrictions they can put on abroad. In Germany, I am told that immediately a case of cattle plague breaks out, the soldiers are called out and a cordon is put around; we have had cordons around London during the time the cattle plague was here, but I think if you remember that notwithstanding that we had a cordon of a strong body of police, calves and other things were moved out of the circuits in mourning coaches and hearses; and, in the recent cordon which has been established around London, I can tell you that there are men who are called blockade runners, who have taken bullocks through the cordon, and taken them into the country.

7940. What you represent is that where a cordon is drawn round a town, as it has been around London, merely by a line of inspectors, it is impossible to prevent the smuggling of animals taking place?—I fancy so.

7941. Has your attention been called to what was put before us in evidence by the witnesses from abroad; that the intention of the foreigner, in Germany especially, is to draw a zone around his frontier, and to oblige all animals to pass that zone on foot so as to enable, as they describe it, a proper inspection to take place?—I have not very great faith in inspection; I have seen it for many years. With regard to what you alluded to in respect to the German cattle, I may perhaps mention to you a circumstance which occurred in the recent outbreak of cattle plague, whereupon Professor Brown, I believe, telegraphed to Newcastle. You have had a gentleman from Denmark here, and I think he stated also that there was little or no foot-and-mouth disease there.

Chairman—continued.

7942. The gentleman from Denmark represented that there had not been, but with one exception, a case of the introduction of foot-and-mouth disease from that country here, and that was this year; I think seven beasts were affected?—Yes; that was on the day that a telegram arrived stating that the "Castor's" cargo contained animals affected with rinderpest. The same telegram also conveyed the intelligence that some cattle were gone to Hull. The authorities at the Privy Council telegraphed to Newcastle to use additional precautions, as there was some fear that they might have got to Newcastle. That telegram was sent; and upon a re-inspection of those cattle at Newcastle, several of them were found to be affected with foot-and-mouth disease. Several of the animals that had recently been inspected were sent into the market as free from disease, and upon reinspection, they were found to be affected with foot-and-mouth disease. Those were Danish cattle. The market was closed.

7943. That was the cargo which has been spoken of as coming from Denmark?—Yes.

7944. Your faith in inspection is no greater than it was when you gave your evidence before?—No; it is very much shaken.

7945. It is on that ground chiefly, as I understand you, that you would urge the slaughter of animals at the port of debarkation?—It is.

7946. Have you considered the question with regard to the Danish and Spanish trades?—All cattle that come in the holds of vessels, where disease is to my mind developed, should be slaughtered on landing.

7947. Can you give the Committee any information with regard to the decrease of the home stock in this country?—I have the agritural returns published by the official authorities, and it appears from them that the stock in England has considerably decreased. The number of cattle in Great Britain in 1876 was 2¼ per cent. less than it was in 1875.

Mr. *Pease.*

7948. Can you give us the number?—I have not the number of cattle; they are in the Returns.

Chairman.

7949. You have made those calculations on the Agricultural Returns?—I have. They were 4½ per cent. less in 1870 than in 1874.

7950. To what do you attribute that decrease?—As it principally occurs amongst young cattle, it must be very evident that our producing powers are diminishing; that we are not producing the quantity of stock that we did.

7951. And that the land is being turned to arable purposes instead of to the breeding of stock?—

Mr. *Odams.*

27 June 1877.

Chairman—continued.

stock?—I will not say that; I do not know whether we have more land under plough now than we had five or six years ago; but the farmers do not keep the number of stock per acre that they did, I think.

7952. They do not place a sufficiency of stock on the land, or so much as the land would carry?—No.

7953. And the breeding has, in your opinion, from these Returns, fallen off in the last two years 4½ per cent.?—Yes, according to these Returns it has.

7954. To what do you attribute that?—To the apprehension of these diseases; there is not the same security for breeding that there used to be.

7955. Do you put that dread down entirely to the importation of disease from abroad?—No, not altogether. I think we have a great many diseases for which we are in some measure responsible at home.

7956. I suppose you refer to pleuro-pneumonia and foot-and-mouth disease?—I do.

7957. As representing the farmers, do you think that, looking to those diseases as being developed to a great extent in this country, the farmers would be willing or anxious to submit to restrictions for the purpose of getting rid of these diseases?—I may say that I mix with a vast number of farmers from all parts of England, and I am quite sure of this, that any reasonable restrictions, or almost any restrictions, that might be imposed, they would gladly submit to rather than have these diseases, I may say, weekly distributed amongst them by foreign cattle.

7958. It has been represented by several witnesses that, although the farmers might be willing to submit to certain additional regulations, the strict regulations which, as Professor Brown suggested, would be necessary for stamping out foot-and-mouth disease and pleuro-pneumonia, would be resisted as being worse than the continuance of the disease; that is not your opinion?—I am sorry to say that I differ from Professor Brown entirely. From all the information that I can gather from respectable farmers, they tell me that they would bear any restrictions so long as they did not have these diseases brought amongst them by foreign animals.

7959. As representing the Chamber of Agriculture, you think that that would be submitted to?—I do.

7960. The Chamber of Agriculture is a representative body, representing the farmers generally throughout the country, is it not?—Yes; it consists of some 48 chambers, I think, from different parts of the country.

7961. It is the centre of the different local Chambers of Agriculture?—Yes.

7962–3. And the representatives of those local chambers express the opinion which you, on behalf of the central chamber, represent here to-day?—I do not know that I, perhaps, do not go a little beyond them. I have always advocated slaughter at the port of debarkation; they are not quite united, and some of them think that there should be slaughter at the port of embarkation.

7964. But, as regards restrictions on the home trade, you speak as representing a very large number of local associations of farmers, and you tell the Committee that you believe that the farmers generally throughout the country are willing to submit to strict regulations for the purpose of getting rid of these diseases?—To strict regulations they would willingly submit.

Chairman—continued.

7965. I think you have been long acquainted with the Deptford Market and the Metropolitan Market?—I have.

7966. It has been stated that there is a great difference in the prices at the Deptford Market as compared with the prices in the Metropolitan Market; can you give any information to the Committee upon that point?—I cannot say that I am read up at the moment with regard to those differences; I have not visited either of the markets lately; but I cannot for a moment conceive that there can be any great difference of prices between two markets in such close proximity.

7967. It has been represented here that the difference in price arose from this: that in the Deptford Market there was a restricted trade and no competition, the trade being in the hands of a few people, and that, therefore, the prices ruled low, there being a combination of those people; whereas in the large market of Islington, where you have a greater trade, there was no such combination possible, and you got a fair price; that is not your opinion?—Deptford labours under a disadvantage inasmuch as there is no railway communication to it; and, therefore, I think that Deptford is at a great disadvantage for supplying districts in the interior of the country. The price which animals fetched when I had a wharf on the river-side was often much greater than the price which they fetched at the Metropolitan Market; and I believe that if you put Deptford upon fair terms with the Metropolitan Market, and let them know when animals are coming, they would have a better chance. The fact of it is, that the trade is so disorganised that it depends upon the ships coming, whether they hold a market or not, there is no regular market-day appointed, and the consequence is, that you neither get a regular supply nor an ordinary demand; you do not get the small buyers, and people of that class down.

7968. The market is held upon the same day as the other market, is it not?—I believe it is, but it is held in the afternoon.

7969. Your opinion is, that if the whole foreign trade were forced into the slaughter market, it would become a certain trade, and that you might by proper regulations increase competition at Deptford, so as to do away with the disadvantage under which the Deptford Market is said to labour?—No doubt. If the corporation will find that accommodation which the trade requires, I have not the slightest doubt that there would be little or no fluctuations between it and the Metropolitan Market.

7970. The present complaints as to prices arise from the uncertainty rather than from the fact of the slaughter?—Quite so. I think it must be palpable that in two markets that are so nearly connected there cannot be a difference of anything like 4 *s.* or 5 *s.* per head in the sheep.

7971. I remember your speaking before the Committee of 1873 as to the slaughter of animals at your own wharf, and as to the large trade which was then done with the manufacturing towns of the north from that wharf in the carcases of animals slaughtered there; that related principally to sheep; did it not?—To sheep principally. I do not remember that there were many bullocks slaughtered for the north.

Chairman—continued.

7972. At that time you stated that carcases were taken freely from London by butchers for sale in Birmingham and Manchester, and other towns?—They were.

7973. Have you any experience whether such a trade as that has continued at all with regard to the Deptford Market?—I believe that certain quantities go to the markets in the manufacturing towns; but, as I said before, they must go at a disadvantage if you have no connecting rail.

7974. Then it is the present circumstances and conditions of the market which lead to its not being so much used as it otherwise would be?—Quite so. I may state, with regard to that, that when that market was established we had an assurance that there should be a railway communication, and accordingly the English producers have suffered themselves to be taxed double toll in the Metropolitan Market at Islington.

7975. Can you give the Committee any idea as to the comparative cost of the transit of live and dead meat?—I have some information upon that point, though not so much as I could wish, because the great carrying railways, the Great Western, the London and North-Western, the Midland, and the Great Northern, have what they term competing points; they run into competing stations, and, therefore, they have a rate which regulates the whole of them. We have no competing rate. These railway terminals are open to all, and they have an arranged rate. In analysing them I find that the cost of the transit of dead meat compared with that of live animals is certainly, I think, in favour of dead meat; but they combine the use of hampers, cloths, and collecting and delivering, which scarcely enables one to judge fairly between the live rate and what we may call the dead rate.

7976. So that it is not any certain figure?—It is not any certain figure. I have also some evidence with regard to freights for foreign meat, and I find that the advantage gained by the foreign meat over the live cattle is something considerable. For instance, the freight of a live bullock from Hamburg to London is 20 *s.*, the four quarters of the animal are 2 *s.* 6 *d.* per quarter, which shows the advantage that a meat trade would be to this country compared, with the live cattle trade, when you look at the difference that it would make in the freight.

7977. Do you believe that it is possible to set up a dead-meat trade from those countries?—I believe that commercial enterprise and science will very shortly develop a meat trade throughout the country.

7978. And that would do away, again, with the Deptford Market?—They are like ourselves, creatures of circumstances; I think the fact of your getting meat here cheaper will be the important consideration.

7979. Have you had much experience of the transit of animals to Deptford as to whether they are brought over in good condition?—I have not lately.

7980. You cannot speak as to whether the animal which is carried alive is deteriorated in value?—I think there can be no question about the deterioration of all animals on board steamers; it must of necessity be so.

7981. From the treatment on board, and from the condition in which they are brought over?—Yes; I am not going to say that there are not

Chairman—continued.

improvements; I believe vessels are much better ventilated than they were a few years ago; but that inhumanity and bad treatment exists there can be no doubt.

7982. That deterioration, of course, strengthens your argument that a dead-meat trade will be a better trade than a live-meat trade?—As I say, commercial enterprise will prove that.

7983. I suppose that if it is so much better a trade, it will practically, by its own weight, drive the other trade away, without taking the more stringent step of stopping it for the purpose of encouraging the dead-meat trade; if it is a trade which commercially must be so much better, it will not want any legislation to encourage it, and it ought to find its own level?—I think so.

7984. That brings in a question which was mentioned in the Committee of 1873, on which I think you gave evidence, and that is the question of the necessity of a supply of offal for the town; if you slaughter on the other side should we be able to get the offal?—With regard to the offal, I would first call the attention of the Committee to how the Americans use their offal. That (*producing a bottle*) is a sample of the offal of pigs from America; there is nothing noxious or particularly offensive in it; it is what they call azotine.

Mr. *M'Lagan.*

7985. Is it used for manure?—It is not used for manure, and I do not know that I should be quite justified in telling you what it is principally used for, not that it signifies to me.

Chairman.

7986. If this dead-meat trade is established as you suggest, how are we to get the offal, on which it is represented that our poor people depend so much for food?—Offal will travel as well as meat if it is brought under proper conditions; and, to convince you of that, I may say that on Saturday last I drove from where I reside in the country, some ten miles, to see the widow of a very large slaughterman, who has been in her place some 50 years; she is now in her 78th year, and I elicited from her how she sent offal to London.

7987. What distance is that?—It is 40 miles from London. I have here her husband's book, of where he used to buy the cattle, and the prices which he used to pay in those days, a quarter of century ago. But I was particular in asking her how she packed her meat and her offal, and for more than 40 years she has sent to market upwards of 200 sheep and pigs a week, never less, with all that pertains to them; and in no case, winter or summer, has she ever lost a shilling by the offal or meat, arriving in bad condition.

7988. That is very much in confirmation of the evidence which you gave in 1873, as to the fact that you had sent offal from your wharf through butchers to Manchester and other towns in the same vans that have carried the meat, and that they have never made any complaint of its not arriving in good order?—That was sent in a very rough state; it was merely put down at the bottom of a truck. This lady (for I may tell you that the slaughterman, of whom I have been speaking, retired with a very large fortune) superintended the whole of the packing; and the offal from this place, Clavering, was put into flats, with a layer of straw between each portion of the meat, and they never had any loss.

 7989. That

Mr. *Odams.*

27 June 1877.

Chairman—continued.

7989. That you represent as a trade which has been going on for a great many years?—Yes; I make that statement from what she told me and from the books which she produced to me, and which I have now before me.

7990. And you say that that has been going on with success during that period?—Yes.

7991. Proving that, at all events for that distance of 40 miles, the carriage of offal has been accomplished?—It has been delivered in London perfectly fresh; and I may tell you that it comes up by road and not by rail.

7992. Can you state the time that that would take?—It would take quite eight hours.

7993. Can you speak with regard to the cool storage of meat?—I do not know that I have any practical experience; I go more from what is represented to me; but I see no reason why cold storage should not be provided in our large towns, and why those cold chambers which bring the meat across the Atlantic should not be very much used in populous districts.

7994. You mean that a proper system of cold storage, such as is carried out with regard to American meat, might be established?—Yes. It could be done on land with very much less expense.

7995. And you might in that way bring this offal with a certainty for longer distances than 40 miles?—No doubt. A gentleman connected with the London Cool Storage gave me a plan of his building; in fact I went over them the other morning, and I was pleased to see they were so extensive.

7996. Do you refer to Cannon-street Stores?—Yes; I have here a ground plan of them, and they are very extensive.

7997. That is where the American meat has been sold now for some little time, is it not?—It is.

7998. And by a system of these cool chambers you believe that the dead meat might be kept for a sufficient time in this country to meet the wants of the consumers?—Yes.

7999. I suppose that by means of the same system of cool chambers the dead meat might be carried from the slaughter ports, and distributed through the towns of the country?—Yes, there is waterside communication with the Thames and a railway close adjoining, I believe.

8000. So that that there would be no difficulty even in hot weather in towns in the north having to go to Deptford or Hull for a dead-meat supply?—Not the slightest. I might also add, while speaking of these cool chambers, that there are two vessels now one of which, the "Frigorific," has just come from Monte Video and is expected at Lisbon within a few days; she has taken out a large quantity of meat there, and she is returning with some fresh dead meat to this country.

8001. I understand that that is an experiment which is being made to test the distance which dead meat can be carried?—It can hardly be called an experiment, I think, because it has gone past that; she took out some meat, which arrived in good condition. The cargo of the "Frigorific" comprises 250 head of cattle and 800 sheep. After leaving Campantra she sailed for Buenos Ayres, and then to Monte Video, where she took on board 60 carcases of bullocks, and sailed from there on the 1st of June. She arrived at Rio de Janeiro on the 7th of June, and left there on the 8th for Pernambuco, Lisbon, and Havre. Intelligence is daily expected of her from Lisbon. Up to the time of her leaving Rio de Janeiro all the apparatus had worked with perfect success; the meat on board was in first rate condition, the refrigerators had worked perfectly, and the extreme variation in the room during the whole time had been limited to one degree, viz., from 32° to 33° Fahrenheit. The machinery is found to be perfect, and has answered the expectation of those in charge.

Chairman—continued.

8002. The only thing with regard to that vessel is, that she has started from Monte Video and has touched at Rio de Janeiro, and that during those seven days the cargo remained in good condition, and she is daily expected after a conconsiderable voyage?—Yes, that is all the information with regard to her; but with regard to the other vessel, this is Mr. Mort's patent; it is another patent, I believe. This cargo is now on the passage by the ship "Northam," from Sydney, and comprises the carcases of 500 bullocks and 500 sheep; she has not arrived.

8003. All the evidence with regard to those two ships is, that the experiment has been made with a view of testing the length of journey which these chambers would enable meat to be brought?—Yes; I have very little doubt that it will be a success if they can keep the refrigerator in working order.

8004. I gather that your own opinion is that the dead-meat trade is a trade which will eventually succeed in consequence of this apparatus?—Quite so.

8005. You have had a good deal of experience, I believe, of the London cowsheds?—The London cowsheds, I think, are admitted by almost everybody to be in what you would call a very unsatisfactory condition. I think that perhaps it would be exceedingly hard upon persons who have an interest in cowsheds and who have got a living by them for a number of years, to have them taken entirely away from them; but I think that if they are allowed to remain, it should be under some very stringent sanitary regulations.

8006. If you stopped the import of cattle from abroad, and obliged them all to be slaughtered at the ports, there would be no danger, at all events, of disease coming to the dairies from that source?—There would not.

8007. And therefore, in your opinion, regulations would be all that would be wanted to deal with those places?—I think so; I think we could deal with them.

8008. At present they have been the means of spreading the disease, from the importation of pleuro-pneumonia through Dutch cows?—They have.

8009. Then I may gather that what you would represent to the Committee is, that the alarm on account of the import of these foreign diseases has reduced the breeding of stock in this country; and that if that alarm was done away with, in your opinion, the farmers would turn their attention more to the supply of that article of food?—It would restore confidence to them.

8010. And it would restore, therefore, the supply, which was formerly much larger than it is at present?—Yes.

8011. And you think that the way to inspire that confidence would be to prevent the import of disease from abroad by ordering the slaughter at the

Chairman—continued.

the port of debarkation of all animals from those countries?—Yes.

8012. Irrespectively of the regulations in the countries?—Yes; let them take all the precaution that is possible.

8013. Would you slaughter the animals which come alive from America?—Yes, I would, and I will tell you why I would do it. I think it is now three weeks back that a cargo of some 170 Canadian bullocks (I do not know the name of the vessel in which they came) arrived at Southampton; on their arrival there, the inspector found something the matter with one of them. The purchasers were there, wishing to purchase the animals; but before they could do so, the inspector felt himself hardly justified in passing them, and he telegraphed to the Privy Council in London. I think it was Mr. Cope who went down; Mr. Cope, on his arrival, examined those animals, and he found that one of them was suffering from inflammation of the lungs. I think it requires a very clever man indeed to tell where inflammation of the lungs ends, and where pleuro-pneumonia begins; and therefore I say that all these animals, which must of necessity undergo privations on board ship, never ought to be disseminated among our own stock.

8014. On account of the danger of pleuro-pneumonia coming from America; although the returns have not shown that any cattle have arrived with disease from that country, you consider that those animals should be slaughtered at the port?—I am not aware that there is any pleuro-pneumonia or foot-and-mouth disease in America, but I say that those animals, if they have to undergo these privations, develop diseases of which we know nothing.

8015. And, in consequence of that, you would include what are supposed to be healthy stock in the general restrictions?—I would, from every country; all fat stock.

8016. And you think that the difficulties which have been suggested, of slaughtering foreign animals at the ports, would be got over by the adoption of these methods, and by the fact that the trade, when it is once certain, would be a better trade than it is now with the fluctuations?—No doubt. Since 1865 we have had nothing but confusion and disorder throughout the trade. I have seen the markets at Smithfield vary from 3 *d.* to 4 *d.* per stone on many market-days; but if any of you look at your butchers' books, you will not find that your prices have varied much; but we have had a steady dearness in the price of meat ever since 1865. That I attribute to the utter confusion that the trade has been in during the time that this legislation has been going on.

8017. And you suggest that the remedy for that confusion is to treat the home stock and the foreign stock separately, and to slaughter the foreign stock at the port of debarkation?—That is the remedy that I would suggest.

8018. Is there anything that you would like to say with reference to the importation of Irish cattle?—I think that here, with all due submission to the gentlemen present, who have to legislate for future generations, I might be permitted to say this, that these diseases require active legislation. I am quite sure that we have all of us gone too fast; we have treated these animals not as animals of flesh and blood like our own, but we have treated them worse than we treat our merchandise. Go where you will, you will find that even if a lot of straw is being carried, it is covered up, but an animal is sent to undergo all the variations of this variable climate on its passage without any protection. The whole thing wants reorganising.

Chairman—continued.

8019. You represent that a great deal of the disease which comes in from Ireland might be obviated by better arrangements for the import?—There is no doubt of it. The whole question wants due consideration by the Legislature.

8020. Do you refer to the transit of animals on the railroad after being landed here?—I do. I say that the railroads offer a premium for the inhuman treatment of animals, and I will show you why, because they give you a rate per truck irrespective of the number in it. We know that there are some that come jammed in trucks almost like herrings in a barrel very frequently, and that is one reason why I think some active measures should be taken with regard to that.

8021. You state that they are jammed in trucks; I suppose that there is a certain advantage in that, inasmuch as they do not get knocked about then so much from the jolting and shunting on the railway?—There ought to be a proper distance between them; but the manner in which they come is, I think, simply a digrace to the times we live in, and an outrage upon humanity.

8022. And you represent that that ought to form the subject of any new legislation?—Quite so. I have here a letter from the station-master where I reside at Stortford. On the 21st of March last I came to the station, and I heard a tremendous moaning and bleating, and when I got alongside the platform there were two trucks of calves, animals certainly not six weeks old; one of them was one of the closed trucks below; the other was what you would term a trelliswork truck, or a truck open at the sides. Those animals were going on to Braintree; it was a most bleak morning, hail and sleet, with the wind in the east. They were going a distance of some 18 miles. They had been there the whole of the night with neither bit or drop, and not a bit of straw for them to lie upon.

8023. But the regulations of the Privy Council are such, are they not, that a thing of that sort might come under the notice of the inspector?—The regulations have not been carried out; I do not know what they may be.

8024. You mean that the staff may not be sufficient to carry out the regulations for the proper transit of those animals, although the regulations exist?—Just so. In speaking of this cruelty to animals, I think, as there are many Irish gentlemen on the Committee, I should very much like to be informed how it is that their calves at six months old are not worth as much as ours are at six weeks. It is really what I call neglect and starvation that brings on disease.

8025. I understand you to represent, generally, that you consider that a good many of the evils of these diseases are generated by the mode of transit to which the animals are subjected?—Yes. In the year 1873 I published a little pamphlet upon the cruelties to animals.

Mr. *Arthur Peel.*

8026. When you say that you have always advocated slaughter at the port, you stated, in 1873, that you thought it should be done under certain

Mr. *Odams.*

27 June 1877.

Mr. *Arthur Peel*—continued.

certain conditions; and you mean that to apply to the boats, and the arrangements on board the boats, for the convenience of the beasts?—I stated it, because I thought that those animals, after undergoing what they have done on board those boats, should be slaughtered.

8027. But do you think that they ought to be slaughtered, for fear of their introducing foreign diseases into this country?—Unquestionably.

8028. Are you not of opinion that pleuro-pneumonia and foot-and-mouth disease especially are generated in this country?—Not especially in this country, but I do not dispute that they are generated in this country.

8029. You do not look upon them as international diseases?—No; you must be aware of the number of cargoes that have been condemned, and the animals that have been slaughtered; but we do know that Holland is, I may say, the home for pleuro-pneumonia; and of the Dutch cows, I will not tell you what percentage, but a very large percentage, have pleuro-pneumonia.

8030. But if the foreign live trade was put upon a proper footing, then you would not scruple to admit them?—You cannot put it upon a proper footing so long as you compel the animals to inhale the noxious gases which they must inhale in coming across the Channel; it is contrary to all sanitary science, otherwise we must be spending our money very badly in draining our towns to keep these gases out.

8031. Then you would have them carried on deck?—I would have store cattle carried on deck, but all animals for slaughter should be carried as best they could.

Mr. *Chamberlain.*

8032. You have explained to the Committee why the price at Deptford Market is lower than at Islington Market; are you aware that in the case of sheep, the cost of getting them to Deptford is very considerably more than the cost of getting them to Islington: for instance, I understand that the cost of sending sheep from Antwerp is 1 *s.* 6 *d.* per head to London, and to Deptford 2 *s.* 8 *d.*; from Bremen to London, 1 *s.* 6 *d.*, and to Deptford, 3 *s.* 6 *d.*, being a difference of nearly 200 per cent.; do you know that?—I can carcely conceive how that can be if they come by vessel.

8033. I understand that you would not have Irish cattle slaughtered at the port of debarkation?—Not Irish store cattle, but Irish cattle for consumption I certainly would.

8034. You would treat them exactly as foreign cattle?—Certainly.

8035. Did I correctly understand you to say that there had been a decrease in the stock of sheep in this country, owing to the fear of these diseases?—I cannot tell you altogether what it has arisen from, but there is the fact before us, that we have this decrease in the quantity of sheep.

8036. And you attribute it to the presence of disease?—I attribute it in a great measure to the want of confidence which breeders have, and their consequently not keeping up their stock.

8037. I think you have some interest in the "Chamber of Agriculture Journal and Farmers' Chronicle"?—I have.

8038. You do not agree, I suppose, with a letter which appeared in that journal on the 25th of June 1877, in which a correspondent said that the decrease in the breeding of sheep was caused more by the farmers being short of money, owing to bad seasons and heavy expenses, than to any other cause?—That may be one of the reasons; there is a shortness of money amongst the farmers, no doubt.

Mr. *Chamberlain*—continued.

8039. Your correspondent did not seem to attribute it to the presence of disease?—I am inclined to think that it is partially attributable to that. In looking over this slaughterman's book, I see that 25 years ago, upon many of the farms where he had bought his cattle, he used to get a certain number of calves as well as sheep; and now I know for a fact that there are scarcely any calves bred in that neighbourhood, showing that all these things have tended to prevent farmers going in with that spirit that they used to do to stock their farms, they have lost so much.

Mr. *Jacob Bright.*

8040. I think you said that you would shut out live cattle from America?—I would.

8041. Do you take the view that if you shut out live cattle altogether we should never have any of these cattle diseases in this country?—No, I am not so sanguine as to think that we should not.

8042. You would slaughter the sheep and cattle at the port of debarkation?—All cattle coming for food.

8043. You would admit them to this country?—Certainly.

8044. Then you do not take the view that the cattle diseases that have been so much spoken of before this Committee never could arise in this country?—Oh, no; I do not think you can get perfect immunity from disease.

8045. You think that those diseases may exist in this country, or be created in this country, though we have no connection with the Continent?—My conviction is, that more than three-fourths of the diseases to which cattle are subject are preventible diseases, by humane and proper treatment of the animals.

8046. You spoke of the constant rise in the price of meat since the year 1865, and I think you said that you thought it arose from the confusion caused by legislation?—Yes, in a great measure.

8047. Has there not been a great advance of wages since 1865, and are there not a great many more people able to consume meat now than there were?—Yes.

8048. Do you not think that that may be a considerable cause of this advance in price?—Unquestionably that has a great tendency to it, as well, but you have also increased importation from different parts.

8049. Has not the price increased on the Continent of Europe in many countries in proportion to the increase in England?—I have no doubt that it has.

8050. Would you suppose that that increase has been owing to any confusion of legislation?—I am unable to give you any opinion with regard to the internal regulations of other countries as to their meat supply. I do not profess to know anything about it.

8051. Are you aware that in Switzerland the price of meat during a moderate period of time has doubled?—I should not be at all surprised at it.

8052. So

Mr. *M'Lagan.*

8052. So far as I understand your evidence, it is this: that you do not at all object to the present restrictions upon the importation of foreign cattle provided that the cattle are slaughtered at the port of debarkation?—No.

8053. You would not have live cattle imported into this country from such places as Schleswig-Holstein without being slaughtered at the port of debarkation?—Certainly not.

8054. Then you would have no dairy cows brought into this country?—I think that you probably might receive dairy cows, provided they were isolated at dairies alongside where they were landed, and not allowed to go into the interior, if it were a vital question.

8055. As regards grazing cattle, would you not have them imported?—No; I think no country sends us anything like grazing cattle adapted for our requirements in any such quantity as to make it worth while for us to run the risk. The Danes send us some which, I believe, go to Scotland, but they are not a large quantity, and if they, the same as Irish stores, could come on deck, and never inhale these gases, I do not know that there would be any great objection to receiving them. I am not at all an advocate for stopping one ounce of food from the people of this country in any way; but disease I am dead against.

8056. You think that, by the proper application of science and skill; you would be able to carry dead meat not only from abroad to this country, but from certain parts of this country to other parts?—Unquestionably.

8057. And without any deterioration in the quality of the meat?—Yes.

Mr. *W. E. Forster.*

8058. You have paid attention to this question of the treatment of cattle and the diseases of cattle for many years, have you not?—I have.

8059. How far are you practically conversant with the treatment of cattle at present?—I farm a little. I graze some 30 or 40 bullocks a year, and feed 200 or 300 sheep.

8060. At one time, I believe, you used to have a wharf at which cattle were landed?—Yes.

8061. Have you that wharf now?—No.

8062. I do not know whether you are in trade at all except as a farmer; if you are, does your trade bring you into contact with cattle in any way?—No.

8063. In what way would it do so?—The way that it brought me into contact with them was that I happened to have an unoccupied piece of land some years ago alongside the Thames, with a frontage to the Thames, which I offered to the Corporation of London, as, perhaps, you may remember.

8064. I understand you to say that that wharf, which was so well known by your name, no longer belongs to you?—The wharf that was known by my name as Odams' Wharf, is now used by the agents of the Peruvian Government for manipulating guano.

8065. Is there anything in your trade with regard to manure, or any other portion of your trade, that brings you into special contact with farmers or cattle-dealers?—With farmers, but not specially with cattle-dealers or butchers.

8066. In what way does it bring you into contact with farmers?—When I tell you that I manufacture some 40,000 to 50,000 tons of

Mr. *W. E. Forster*—continued.

manure, you may readily imagine that I come into immediate contact with farmers.

8067. Is any of that manure manufactured from the offal of cattle in any way?—None, excepting that we have dry blood which we use; but the blood is used first of all for chemical purposes, and then we get the residuum, which contains ammonia.

8068. Does that dry blood come from slaughter-houses?—Some comes from slaughter-houses from all parts of the world. I had a sample this morning which came from Portugal.

8069. Where are your works?—Adjoining the Victoria Docks, and very near to where the place of landing the cattle was.

8070. How far are they from Deptford?—Across the water I should think it is a mile and a half to two miles.

8071. I understood you to say at the beginning of your examination that you had very little confidence in inspection, and that your opinion was confirmed by the last import of cattle plague by the "Castor"?—Yes.

8072. I understand that it is very much on account of your disbelief in the efficacy of inspection that you think that all animals should be slaughtered at the port of debarkation?—Yes.

8073. Was it not the case that the animals that came in the "Castor" were by law obliged to be slaughtered at the port of debarkation?—They were, but unfortunately a great deal of time was lost in the slaughter, and not only that, but I believe the law would not allow Professor Brown to take that course which should have been taken, viz., to have seized the vessel, and condemned everything belonging to it; but the cattle were landed at Deptford, and the vessel was moored down to Horselydown.

8074. Still the fact remains, does it not, that if all the live animals that were imported from abroad were ordered to be slaughtered at the port of debarkation, you would be merely putting other live animals in the same position as the cargo of the "Castor" were in?—You cannot by any legislation, I think, as I have already stated, get perfect immunity from disease; you must take a certain amount of risk. In the case of the "Castor" this risk was perhaps considerably augmented by the fact that Professor Brown did not go down to see that the cattle plague existed before the orders were given out for slaughtering the cattle. And then it is doubtful to my mind whether we got that cattle plague that went to Deptford from the cattle. It is much more likely, in my opinion, that the vessel going away from her moorings, and having potatoes and hops and other merchandise on board, and people having perfect egress and ingress to that vessel, contagion might occur in that way.

8075. That suggestion of yours points to another precaution besides slaughtering at the port of debarkation; what would be your suggestion to prevent a similar occurrence?—These cattle vessels, I believe, are disinfected and thoroughly well washed down on their discharge, and hitherto it has been tolerably safe, I think.

8076. Do you not think that it is rather an encouraging fact, so far as cattle plague is concerned, that both this year and 1872 it has been stamped out so quickly?—It certainly reflects some degree of credit; I must give the Privy Council the credit of doing what they could on this outbreak; but there is nothing encouraging

in

Mr. *Odams.*

27 June 1877.

Mr. *Odams.*

27 June 1877.

Mr. *W. E. Forster*—continued.

in stamping it out; the great thing is to prevent it from coming here.

8077. Does it not give some reason to hope that, so far as cattle plague is concerned, what with guarding against its coming here, and what with our measures for stamping it out, there is not that danger of a great spread of cattle plague that there was?—By repeated reverses and by repeated warnings we do get a little more clever.

8078. You were referring to the case of some Danish cattle as illustrating the probability that there was some danger of foot-and-mouth disease from Danish cattle; I think I understood you to say that those were some cattle that were upon the first inspection thought to be free from disease, and upon the second inspection were found to have foot-and-mouth disease?—That was the report.

8079. At what time was the first inspection?—I do not know. I am not at all connected with the cattle trade. I only received this information, I believe, from the authorities at Newcastle. I do not know what time elapsed.

8080. You do not know where the cattle were placed between the first inspection and the second?—I do not.

8081. Nor do you know whether there had been any foot-and-mouth disease lurking about the place in which they were kept?—I do not; and I am inclined to think that it would puzzle anybody to know. The subtlety and insidiousness of these diseases are past all comprehension.

8082. But I suppose you would admit that if at the first inspection no foot-and-mouth disease was found, and if two or three days afterwards it was found that there was foot-and-mouth disease, it would be quite possible that the disease might have been given to the animal after they were landed?—It is quite possible that the disease might have been given to the animals after they were landed, and it is also possible that it may have been in a state of incubation.

8083. You gave us some return with regard to the number of cattle in 1876 as compared with the number in 1875, and I think you stated that there was a diminution in the number of cattle in Great Britain in 1876, as compared with 1875; but, I suppose, you are aware that there is an increase as compared with 1872?—There is an increase in pigs, I think, but I have not got the returns.

8084. From the return in the Agricultural Statistics (p. 118) it appears, does it not, that the number of cattle in 1876 was 5,846,302?—Yes; that is so.

8085. That is a decrease as compared with 1875, when the number was 6,012,824?—Yes.

8086. And also a decrease as compared with 1874, when the number was 6,125,491?—Yes.

8087. But it shows an increase as compared with 1872, when the number was 5,624,994?—Yes, it is a slight increase.

8088. Therefore as one has to judge by longer times than one year, it would appear to me that this fluctuation from 1875 to 1876, is no very great proof of diminution of production?—I do not know that there is very much in the way of reliable data when the animals are so few in number; still we ought to be constantly increasing.

8089. Upon what ground would you expect the increase?—Upon all the principles of progression which we hope for in agriculture.

8090. You expect cattle to increase in number like men and women?—I expect them to increase and multiply.

8091. You would expect the same rule to apply as regards the increase of the number of cattle, as applies in the case of the increase of population?—Quite so.

8092. Does your farming experience enable you to give the Committee any information with regard to anything about the probabilities of the food for these cattle being under such conditions as would be likely to cause an increase or a decrease in the last few years; a good many of the cattle are fed upon imported food, are they not?—Of course they are, to a certain extent; linseed is the principal foreign artificial food which we give cattle in my locality.

8093. I am asking in absolute ignorance myself as to the fact; but has the price of linseed varied much during the last five years?—It has varied. It rose very rapidly upon the outbreak of the war, but it is resuming its natural price now.

8094. Was the price in 1876 a high price?—It has been a high price. I am not a linseed dealer, and therefore I cannot give you the exact data, but I should think that it has varied 7 *s.* or 8 *s.* a quarter during the last six months.

8095. You have probably heard or read the evidence which has been given before this Committee, as to the comparison between the Deptford Market and the Islington Market; I should like to ask you a question or two with regard to the statement so very strongly made by the importers, as to the disadvantage of selling at the Deptford Market rather than at Islington; do you think it is an incorrect statement that, generally speaking, an animal would fetch more at the Islington Market than it would on the same day at the Deptford Market?—I cannot think for one moment with the present state of communication, that there can be anything like the variation which some gentlemen have stated with so short a distance between one market and the other.

8096. When you had your own wharf open, was there much doubt as to whether animals should come to that wharf, or not?—No; the buyers got very well reconciled to it, and the animals made after a little time as much as or more than they would have made at the Islington Market.

8097. I am afraid you did not catch my question. Was there a doubt with regard to the arrangements of the Privy Council Office, as to whether the cattle must or must not come to your wharf; was the importer into this country or the exporter from the Continent, in a state of uncertainty as to whether his cargo was obliged to be landed at your wharf or not?—There was no uncertainty after a time.

8098. Then the disadvantage of uncertainty which some persons think now applies to Deptford, did not apply to your wharf?—There is an equal certainty during the time that the restrictions have lasted of late, that those animals must go to Deptford; the consequence is that they are about upon a par.

8099. It has been stated by some persons that one of the reasons why the Deptford Market is at a disadvantage compared with the Islington Market

Mr. *W. E. Forster*—continued.

Market, is that nobody is quite certain as to whether the cattle must go there or not; they have been certain, it is true, for the last two or three months, but it is said, generally speaking, they are not certain, and that therefore the buyers have not accustomed themselves to come to the Deptford Market; can you throw any light upon that matter?—There is no doubt that it is so. A man would not go to the market unless he knew that the animals he wanted were there. There was a great sacrifice which the importers sustained in having these animals sent to Harwich at one time, if you remember. It is not every butcher who can run down so far from his business as to Harwich, to buy a quantity of sheep.

8100. Are any landed still at Thames Haven?—I do not know whether there are or not, but if so, they are very few indeed.

8101. You stated that when the Deptford Market was opened there was a sort of assurance given that a railway would be made; will you tell us a little about that assurance; by whom was it given?—By the Corporation. I do not know that it was absolutely made a stipulation, but that is the information which I have gathered.

8102. That would make a very considerable difference, you think?—It would make a very great difference to the consumers in the Midland districts, unquestionably.

8103. One reason why the Deptford Market is said to be a disadvantageous place as compared with Islington is this: that the butchers who frequent the Deptford Market are in a smaller way of trade, and are unable to take the animals off and keep them for a short time at their own slaughter-houses, and take their own time for killing them; and that unless a man is in a sufficiently large way of trade to have his own slaughter-house at Deptford; he is, in fact, ununable to buy the cattle there; and that consequently there is the disadvantage of the purchase being in a number of small hands, so that they may manage to get the meat at rather a lower price. What have you to say upon that point?—I believe that it is to a certain extent a monopoly at Deptford. The large buyers are the principal men that go down there. In the first place there is the very heavy rent which the corporation charge; and I may say, in passing, that they also charge an enormous rate for landing, viz., 5 *s.* per bullock, which, to my mind, is a serious tax upon meat, which must eventually fall upon the consumer; and more accommodation is wanted by the general body of butchers at Deptford.

8104. Am I to understand from you that the corporation make a heavier charge for landing at Deptford than is made at the other wharves?—I do not know whether it is heavier or not, but where they have got the whole monopoly they might give a little share of it to the public.

8105. But does the corporation so treat the animals that are landed at Deptford that there is any higher charge upon them than there would be at any of the other wharves?—They are not landed at any other wharves now. I may tell you that, before this restriction took place I charged at my wharf the same as they are now charging; but those were temporary erections; they have now a permanent market, and I say that 5 *s.* per head for landing cattle is, to my mind, a very exorbitant price.

Mr. *W. E. Forster*—continued.

Mr. *Odams.*

27 June 1877.

8106. Take six months ago, when the Dutch cattle were unscheduled and might have come to any wharf in London: was there at that moment a higher charge upon the cattle that came to Deptford than there was upon the foreign cattle that came to those other wharves?—I think I shall be right in stating that the landing and the freight of cattle from Thames Haven to London was about 4 *s.* 10 *d.*; so that they conveyed them some 40 miles of railway for the same money.

8107. Does that railroad belong to the corporation?—No.

8108. Who paid the railway charge?—The wharfingers.

8109. It has been stated before this Committee that the salesman charges a higher commission upon the sale of a foreign animal than he does upon the sale of an English animal; do you know anything about that?—I think he does. It has been always an uniform charge of 5 *s.*, I think, upon foreign animals; salesmen charge 4 *s.*, and it appears rather an excessive charge when you consider that those foreign animals are not worth more than two-thirds of what the English animals are.

8110. The statement made to us was, that they charged 8 *s.* upon the foreign animals and 4 *s.* upon the home animals?—Then it must include the clearing charges and some other charges; but I am not capable of giving you any reliable information as to the charges.

8111. In 1873 I gathered from one or two of the answers that you gave, that you were of opinion that pleuro-pneumonia (you were speaking with regard to Dutch cattle, but I suppose it would apply to all cattle) was brought on from the climate and from constant exposure to moist earth at the place of grazing; is that still your opinion?—Yes, that is my opinion; and lung disease in Ireland too.

8112. Then you are one of those gentlemen who do not consider that pleuro-pneumonia is entirely owing to contagion, but you think that it may be, to some extent, spontaneous?—I do not know about its being spontaneous; I think it is brought in, as I have already stated, from cattle grazing in low marshy districts, and inhaling the miasma from the earth.

8113. I mean spontaneous as compared with its being infectious from other animals?—Quite so.

8114. I think you made the same remark with regard to foot-and-mouth disease: that you thought it might be brought on by bad treatment, or by bad conditions of living?—I do think so.

8115. If you are right, the mere stoppage of all foreign import, or the slaughter of all foreign animals at the port of landing, will not entirely free the country from disease?—No; I think that the diseases which we have may continue to a certain extent, but we shall be reducing the risk to a minimum.

8116. Have you often inspected cargoes of Irish cattle that have arrived?—I have seen them at the Bristol Market.

8117. I suppose that they do not come in any better condition than the cattle from the Continent?—I believe the boats have a little more room and a little better ventilation, and the passage not being so long, the cattle do not, generally speaking, arrive in such bad condition.

8118. Where do they come from generally to Harwich?—From Rotterdam to Harwich.

 8119. Is

Mr. *Odams.*

27 June 1877.

Mr. *W. E. Forster*—continued.

8119. Is the passage from Rotterdam to Harwich longer than the passage from Waterford or Cork to Bristol?—It is about the same, I should think; but I can scarcely give you the distances at the moment.

8120. But I understand you to say that you would have the same restrictions and regulations with regard to the Irish import as you would have with regard to the continental import?—Yes, as regards Irish fat stock.

8121. A good many animals come into London by railroad, do they not?—Yes, Irish stock do.

8122. Do they not often come in with disease? I have no doubt that they do.

8123. What would you do with regard to those animals?—All fat stock from Ireland I would have slaughtered at the port of debarkation.

8124. With regard to animals coming up, say, from Aberdeen, or from some part of Scotland by railroad, what would you do?—Those animals are, generally speaking, very healthy, and there is no reason why they should not come into our metropolitan market, and there be sold.

8125. Taking the average of the cargoes that come from the Peninsula, and that are landed at Southampton, would you not say that 20 or 30 cattle coming from the Peninsula will, generally speaking, be in fully as healthy a state as 20 or 30 cattle coming from Ireland, or coming up by railway from Scotland into the Islington Market? They may be, but I have seen cattle from the Peninsula with foot-and-mouth disease as bad as I have ever seen any foreign cattle.

8126. And I suppose you have seen home cattle as bad?—I have never seen home cattle so bad as I have seen cattle from Oporto; I think those were the worst cases.

8127. When was that?—I think that that was in 1871 or 1872.

8128. Did you go down on purpose to look at them?—I did. We had information from Oporto that two or three had foot-and-mouth disease; when they arrived there were some 30 of them; and on the following morning, I think, the whole lot fell with it.

8129. That was a specially bad case, and you went down to look at it?—I was specially interested in having a look at it, because it came on so violently.

8130. I hope that you are not of opinion that the suffering by railroad has not been to some extent diminished of late?—I do not think it has. I believe that the present regulation with regard to the cleansing of trucks has done some amount of good; but I say now that the whole system wants re-organizing. It is a violation of Nature's laws, and so long as you violate them so long will you have dear meat.

8131. You are aware, are you not, that the present Government have carried out the recommendation of the Committee of 1873 in appointing inspectors to see how far the railroads comply with the regulations?—Yes, that is as far as the sanitary regulations go.

8132. But it also applies to regulations with regard to treatment, especially with regard to

Mr. *W. E. Forster*—continued.

overcrowding, as to the trucks being provided with spring buffers, and not carrying sheep freshly shorn, and many other regulations of that kind?—Not covering them up is what I complain of.

8133. Have you made it your business, or have you taken sufficient interest in the matter to try to find out whether things are any better than they were?—They are very much better as regards the state of the trucks. Throughout England, wherever I go, I notice a very re-remarkable improvement with regard to the cleansing of trucks; but the adaptation of trucks for carrying animal is not what it should be.

8134. You are aware that some years ago we issued a regulation that there should be a watering-place at every station; do you think that that has been carried out?—I do not think that it has. I still think that cattle are conveyed in trucks without food and water for many more hours than they ought to be.

8135. Do you think that it is that they do not give them water, or that there is not the water for them to get?—There is not the water for them to get, at many stations.

8136. With regard to the private slaughter-houses in London, do you think that they are diminished in number?—I am unable to say what relative proportion they bear now to what they did a few years ago.

8137. Then I gather that your recommendation is, that all foreign fat animals should be killed at the port of landing?—Yes.

8138. Do you recommend that the store animals should be quarantined?—No.

8139. What would you do with the store animals?—I say that store animals come in so small a number that there might be the usual quarantine of 12 hours, but that they should be compelled to come on the decks of the vessels.

8140. And you would put the Irish cattle under the same regulations as the foreign cattle?—The Irish store cattle I would put under the same regulations as store cattle from any other country; but the Irish fat cattle should be slaughtered at the port of debarkation.

8141. You would put them in the same position as the continental cattle?—In the same position.

Chairman.

8142. With reference to the question of watering, a statement has been put into my hands that since the Privy Council made the regulation they have enforced it at all the principal stations, in fact at all the stations where cattle are likely to pass; are you aware of that?—They run by them and the cattle do not get the water.

8143. Do you state from your own personal knowledge that there are such stations?—I cannot point out to you any station now.

8144. It would be useful to the Privy Council if you would inform them upon that point, if you could do so?—I have not acted as a detective, or gone about the country to discover that.

Friday, 29th June 1877.

MEMBERS PRESENT:

Major Allen.
Mr. Anderson.
Mr. Assheton.
Mr. Jacob Bright.
Mr. Cameron of Lochiel.
Mr. James Corry.
Mr. Chamberlain.
Mr. Dease.
Mr. Wilbraham Egerton.
Mr. Elliot.
Mr. French.
Mr. King Harman.
Sir Rainald Knightley.
Colonel Kingscote.
Mr. M'Lagan.
Mr. Murphy.
Mr. Norwood.
Mr. Pease.
Mr. Arthur Peel.
Sir Henry Selwin Ibbetson.

SIR HENRY SELWIN IBBETSON, BART., IN THE CHAIR.

Mr. JAMES HOWARD, called in; and Examined.

Mr. *Howard.*
29 June 1877.

Chairman.

8145. I BELIEVE you represent before this Committee the Central Farmers' Club, London?—I was selected by the Committee to give evidence.

8146. And you farm your own property in Bedfordshire, I believe?—I do.

8147. You are a Magistrate for that county, I think?—Yes.

8148. Have you now, for many years, taken an active part on the Executive Committee of the Farmers' Club with regard to the three diseases which are referred to this Committee?—Yes, I have taken a leading part on that Committee, and in other ways also I have taken great interest in the subject of cattle disease.

8149. Your attention, in fact, has long been directed to the question which we are considering?—Yes; I may say ever since the year 1857, when I made a tour of the Continent, and then saw the very great danger that this country was in.

8150. You mean from inspecting herds abroad?—Yes; and from intercourse with distinguished agriculturists in various countries of Europe, especially in Austria in 1857.

8151. And then you entered into the question of the import of diseases from those countries to England?—I took a more keen interest in the matter after that period.

8152. In your own experience as a farmer, have you had any losses from those complaints in your herds?—I have experienced many losses, more especially from foot-and-mouth disease and from pleuro-pneumonia; I have never had an attack of rinderpest. In one summer I lost 40 head of cattle from pleuro-pneumonia, and I have had constant losses from foot-and-mouth disease and pleuro-pneumonia; such losses as would have crippled many an ordinary tenant farmer.

8153. Have you been able to trace to its source the introduction of those diseases into your herds?—They have generally originated from cattle which have been bought at fairs.

8154. Have you been able, when those outbreaks took place, to trace them, in fact, to any particular beasts coming from fairs, or from abroad, or otherwise?—We have not bought from abroad; we have generally bought from fairs in the neighbourhood, and we generally have been able to trace the outbreak to that cause; at all events, we have attributed it to that, and I think with good grounds.

8155. In fact, the disease has come to you from the markets and fairs around?—Yes.

8156. Have those complaints been general in your county as well as in your own herd?—Yes; in one year we had, in the small county of Bedford, 38,000 animals attacked with contagious diseases.

8157. In what year was that?—I think it was some four or five years ago; I forget the particular year.

8158. Was it in 1872 or 1873?—I think it was in 1872.

8159. One thousand eight hundred and seventy-two was the time when the last outbreak of cattle plague occurred in this country?—Yes; I could not charge my memory exactly; but I know that it was four or five years ago. At the lowest estimate it would entail a loss of 60,000*l.* upon the county.

8160. I think you stated that you had no experience of cattle plague itself; but that pleuro-pneumonia and foot-and-mouth disease were what you had suffered from?—I have had no individual experience of rinderpest, but I have seen cases in various parts of the world.

8161. Were the losses of which you have just spoken as occurring in your county, losses from pleuro-pneumonia and foot-and-mouth disease?—From pleuro-pneumonia and foot-and-mouth disease principally.

8162. Cattle plague, I believe, did not reach Bedfordshire in 1872?—No, we adopted very stringent measures in our county at once.

8163. Neither in 1872 nor this year have you had outbreaks of cattle plague?—Rinderpest broke out, I think, in 1865.

Mr. *Howard.*

29 June 1877.

Chairman—continued.

8164. But you were speaking just now of great losses which were incurred in the county of Bedford about five years ago, which would be about the date of the last outbreak of cattle plague, when it was brought to Hull, I think; you had no cattle plague then, but those heavy losses which you have described, arose entirely from foot-and-mouth disease or pleuro-pneumonia?—Quite so.

8165. Have you those diseases to any extent, at present in the county?—There is not a single case of contagious disease in any cattle in the county at the present time.

8166. Can you give the Committee any idea as to how those complaints were stamped out in your county, after they prevailed to that extent?—There is no question that they were stamped out by the very stringent regulations which were adopted.

8167. I suppose that all your fairs and markets were prohibited during the time of that outbreak?—Yes.

8168. And the places were made infected places?—Yes, they were declared infected places, and no cattle were allowed to be unloaded at any railway station within the county. Of course they could pass through by railway, the Act settled that.

8169. Can you state how long it was before those restrictions effected the stamping out of the disease, and were therefore relaxed?—We have never got rid of foot-and-mouth disease and pleuro-pneumonia until the present year, when the Cattle Plague Regulations were put in force; but the same effect was produced, I think, in the year 1865, at the former outbreak of cattle disease.

8170. But, confining yourself to the outbreak of 1872, in which you have described the great extent of those two maladies in your county, and also the strict regulations which were adopted for the purpose of stamping out the disease, you say that they did not really stamp it out until still more stringent regulations came in force in the recent outbreak?—Certainly.

8171. Have those regulations diminished the disease in your county?—Very considerably.

8172. Although it was still continuing in certain parts of Bedfordshire, it did not exist by any means to the same extent that it existed in 1872?—No; I had an interview with our chief constable on Monday last, and he told me that during the seven years that he had been in office, he had never been able, until the last month, to report a clean bill of health.

8173. And that, you represent to the Committee, arises from the fact that the restrictions which were enforced when the cattle plague broke out in January last had been so severe as to effect the stamping out of the other diseases?—Yes.

8174. I understand you to say that you can speak also with regard to the outbreak of cattle plague in 1865?—When the cattle plague regulations were then put in force they had the same effect, and then the county was cleared of contagious disease in the same way.

8175. Did it remain clear for any length of time?—No, we soon had the foot-and-mouth disease.

8176. You reimported the disease, as you would say, into your county?—It was reintroduced, at all events.

Chairman—continued.

8177. Are you able to speak as to the amount of stock which is bred in your county now as compared with the amount that used to be bred there in former times?—That is a very difficult matter to ascertain, and one can only speak generally upon a question of that sort, but there is no doubt that these contagious diseases do very much diminish the breeding capabilities of the country, for, as I have no doubt it has been pointed out to the Committee before, they produce, in the first place, abortion, they produce barrenness, and they produce loss of milk, and, of course, besides that, they reduce the number of mothers throughout the country. I believe that but for the Contagious Diseases (Animals) Act 1869, although it has its deficiencies, the breeding capability of the country would have been much more seriously affected than it is at present.

8178. You think that the Act of 1869 has, to a certain extent, protected the herds?—Notwithstanding its defects it has done an immense deal of good. It is a subject which I pressed the Duke of Marlborough to deal with when he was in office in 1866; I pressed it upon him to deal with these attacks of pleuro-pneumonia and foot-and-mouth disease, which are far more insidious than cattle plague. There is no doubt that disease is a very important factor or element in the production and price of meat.

8179. I understand you to say that you believe that the supply to the consumer has been very much diminished in consequence, not only of the losses by disease, but of the smaller amount of cattle that have been kept for fear of those diseases?—These diseases, as every member of the Committee must see, are deterrent; farmers who have suffered serious losses are naturally deterred from keeping on with the system which entails upon them such very serious losses, and many have adopted the plan of buying in their store stock instead of breeding. That has been done to a very considerable extent. Many farmers who used to breed and rear cattle have abandoned that practice for the comparatively safer plan of buying in their store stock.

8180. The risk, in fact, is less; they have the cattle for a shorter time upon their farms, and therefore the risk is diminished of this disease breaking out before they can get the cattle into the market?—Yes; and not only that, but the danger and loss are much greater with milch kine than with neat stock. They prefer to buy store stock instead of breeding, and, of course, that has diminished the stock of the country. Of course, the change has been a very good thing for Ireland; Ireland has reaped a rich harvest in consequence.

8181. I understand you to represent that it has diminished the productive power of the country, because it has diminished the number of farms on which the breeding of cattle has been carried out?—Very seriously. Then many farmers have preferred the production of mutton and wool to beef, because of the lesser risks which are incurred, and the prices of mutton and of wool have been more remumerative than the prices of beef.

8182. Do I correctly understand you to say that the number of sheep kept on farms has risen, whilst the number of cattle has diminished?—No, I do not say that, because other causes have been in operation. For instance, owing to the

Chairman—continued.

the high price of mutton, many farmers have been tempted to sell the ewe lambs and even their ewes, believing that at certain periods they would never be worth so much money. I will give you an instance: I was vexed with my own bailiff two or three years ago for selling my ewe lambs without my knowledge, and when I asked him why he had done so, his reply was, "Sir, they will never be worth so much money," forgetting the ulterior consequences of that course. Upon inquiry, I find that it has often been the case, owing to the very high price of mutton and lamb, farmers have been tempted to sell their ewes and ewe lambs, and I attribute the decrease that has taken place very much to the operation of that cause. Still, I think, relatively, the production of mutton and of beef has not gone on in the same proportions, and that mutton has been produced in larger proportions than beef.

8183. From the causes which you have described as affecting the breeding of cattle?—From that amongst other causes. Notwithstanding the present condition of the trade, there is no question that from 10,000,000 to 11,000,000 of home-produced sheep were slaughtered last year.

8184. Do you believe that the feeding capabilities of the country would enable farmers, if they felt that security existed, to increase the number of cattle on their farms?—Do you mean security of capital?

8185. I mean security against disease and the consequent losses, which have deterred them from breeding?—Certainly; if too there were greater security against disease, the herds of the country would naturally increase.

8186. And you think that the grazing capacity and feeding capacity in the country would allow of a larger number of animals being produced?—There is no doubt that a larger number of stock could be produced; but the live stock of the country cannot be produced at pleasure, as some previous witnesses seemed to imagine. As many members of the Committee know, I have not only a farm, but I have a factory, and I find that the production of a farm cannot be extended in the same way as you can extend the production of a factory. The agency of mothers is indispensable in bringing animals into the world, and they cannot be indefinitely increased. I can build a fresh wing to my factory, but if I want to increase the number of animals upon my farm, independently of the question of capital, it is a slow process.

8187. It takes time, in fact, to establish a greater breeding capability in the country than at present exists?—Clearly; I think that must be obvious.

8188. I daresay you have had your attention directed to what was stated to this Committee by Professor Brown, viz., that although farmers were fully alive to these diseases being brought into their herds, yet he thought that the restrictions that would be absolutely necessary in his opinion to stamp out the disease would be so intolerable, that the farmers of the country would never put up with them. Is that your opinion, speaking on behalf of the Farmers' Club?—On the contrary, I believe that if they could be assured against the re-introduction of disease, they would submit to more stringent regulations. I may say that the trouble throughout the

Chairman—continued.

country has not been with the farmers; they have conformed to the regulations adopted by the various counties and local authorities, and I think that to a very great extent they have cheerfully acquiesced. The trouble has been with dealers and salesmen and middle men generally.

Mr. *Howard.* 29 June 1877.

8189. Even if restrictions were imposed generally throughout England, and the fairs and markets were all stopped, with a view of stamping out pleuro-pneumonia and foot-and-mouth disease, you believe that the farmers throughout England would, with the object of stamping out the disease, put up for a considerable time with such restrictions?—I do; but I would add that of course there is a conviction in the minds of farmers that after having obeyed all these regulations and complied with all these restrictions, the disease will be again re-introduced, or re-imported as you said just now; and of course they are impatient under restrictions which harass but do not give them the needful protection against the reintroduction of the disease.

8190. That implies the opinion, then, that supposing we could stamp it out in this country, the only chance of its re-introduction would be by its being brought from abroad?—That is my opinion; in respect of contagious diseases I believe in the germ theory.

8191. You do not think that there is any probability, either from bad treatment or from feeding animals in unhealthy situations, of pleuro-pneumonia or lung complaint being produced spontaneously?—I do not, and I think the experience of the past warrants us in coming to that conclusion. When I was a boy the cattle used to be driven up by road from Leicestershire and Derbyshire and through Bedfordshire. That mode of transit, one would imagine, was far more likely to produce disease than travelling in a railway truck. These droves of animals used to come up dusty and hot and footsore, and I have seen many of the bullocks drop from exhaustion; but we never had foot-and-mouth disease in those days. Farmers bought their cattle at a fair, and never thought of putting them in quarantine; but now no prudent man never thinks of buying cattle without putting them in quarantine.

8192. Would you supplement that by stating what time you are speaking of?—I am speaking of the time when I was a boy; from 1830 to 1840.

8193. That was during the time when no foreign animals were imported?—Yes. Again, I think we are warranted by the silence of the old veterinary authors upon either foot-and-mouth disease or pleuro-pneumonia in the assumption that they have been introduced into this country from abroad.

8194. One of the severest outbreaks of foot-and-mouth disease, I think, was before the import of foreign animals was allowed?—Yes; but there is no proof that it was generated in this country.

8195. You believe that even then it was brought in, as has been suggested, either by ships' stores, or in some way of that kind?—I think that the evidence points in that direction, because these diseases are known to have existed on the Continent, and they did not exist in England, except very occasional outbreaks indeed.

8196. In your opinion, as a practical farmer, the

Mr. *Howard.*

29 June 1877.

Chairman—continued.

the mere fact of the climate or the influence of particular pasturage would not in itself generate pleuro-pneumonia in this country?—I do not think so at all. I hold to the general principle in contagious diseases, that it is spread by germs, and by germs only; and that the different germs possess a greater or a less amount of vitality.

8197. That being your belief, supposing the foreign import of animals to be prohibited, and the security which you anticipate thus obtained, do you believe that the farmers would be quite prepared to submit to any restrictions which they were told and which they felt could stamp out the home diseases?—If they were so assured I have no doubt that they would submit to any such restrictions.

8198. We had a witness before us at our last meeting, Mr. Soulby, who represented the Chamber of Agriculture in Yorkshire, and who stated that, with regard to Yorkshire farmers, he did not believe that they would be prepared to submit to the restrictions for a year with a view of stamping out the disease; but, as I understand, you are not of that opinion?—In the first place, I do not think that a year, or half a year, would be necessary; I think that a much shorter time would be sufficient. I have not read the evidence, but I should suppose Mr. Soulby meant that the farmers would not submit to such restrictions if they believed that the disease would soon afterwards be re-imported.

8199. The witness was examined as to whether, if the foreign trade were stopped, the farmers in Yorkshire would submit to these regulations, and he said that they had already had enough of regulations under the restriction of the present year, and that he did not believe that they would be willing to put up with the stoppage of all fairs and market for a year, or with restrictions for anything like that time, and with a view of stamping out the home complaints; you do not concur in that view?—I can only state my own opinion; I have a very extensive acquaintance with farmers in various parts of England, and keep up, on public questions, a very voluminous correspondence with them, and I have come to an exactly opposite conclusion; further, I know there is a very general opinion existing in the minds of farmers that these regulations are of no use, so long as the certainty of the re-introduction of disease exists. That is why the restrictions are harassing, as they do not provide the necessary security.

8200. Should the stopping of foreign import, in your judgment, apply to cattle coming from all foreign countries, or would you make a distinction in the case of such countries as Denmark and Spain and Portugal, from which these complaints have not been introduced?—That depends upon another question, viz., whether all the animals coming from abroad are to be sold at one or at separate markets. I think that the whole question hinges upon that. So long as foreign cattle are mixed up with English cattle, I would continue the system of scheduling countries.

8201. Should there be separate markets for the foreign as against the home stock, then you think that the countries that could give us fair security that they had a clean bill of health, and could show us that their regulations were as strict or stricter than our own, might send their cattle here for slaughter?—Yes, for slaughter at the

Chairman—continued.

port of debarkation; that is to say, fat cattle; we are speaking of fat cattle.

8202. We are speaking of fat cattle from Denmark, Schleswig-Holstein, and Spain and Portugal, from which countries animals come in large numbers, and in which countries the evidence before this Committee has shown that for very many years they have not had cattle plague, nor yet pleuro-pneumonia or foot-and-mouth disease, to any amount?—I would not impose any restrictions which would diminish the supply of meat to the people, but such as were imperative; I state that as a general principle; nor do think that there is any desire upon the part of the farmers of England so to restrict trade; they have cheerfully accepted the principles of free trade; there is no question about that.

8203. All their anxiety is to be protected against countries which cannot give that security from these diseases which they have a right to expect?—Clearly.

8204. Has your attention been called to a subject which we have before us at considerable length, viz., the dead meat trade?—Of course I have taken an interest in the subject, and I was very glad to see that the difficulty of transporting meat across the Atlantic had been to a great extent overcome.

8205. If those conditions, which are said to be possible, can be carried out, and the meat can be successfully brought such distances, do you believe that a dead meat trade will eventually take the place of the live trade in animals?—I think that the tendency seems to be towards the establishment of dead meat traffic as against live meat traffic. Of course very much depends upon the ultimate success of this American dead meat trade, but it appears to me that, with extended experience, there is no reason to doubt its ultimate success.

8206. The conditions in which the meat has been brought over here in perfect order, even in the hottest weather, if universally carried out would, you think, make the trade a success?—Clearly, and I think other countries in their own interests would follow the example of the Americans.

8207. You believe that foreign countries from which the import of live animals was prohibited, would supply us with dead meat instead of live stock?—I did not understand that the question of prohibition had arisen.

8208. We were talking of the introduction of the American dead meat, and you stated that the dead meat trade, in your opinion, could be established with other foreign countries; supposing that your original suggestion were adopted, that countries from which we had not absolute security against the introduction of disease, if cattle have to be imported alive, were treated as scheduled countries, do you think that a dead-meat trade would take the place of the live import?—I think from both classes of country, if I may use that term, both from scheduled and unscheduled countries, it will eventually be proved that it will pay the producer better to send the meat dead than alive.

8209. Have you had any experience of the dead meat trade from the Continent?—No, I have no practical acquaintance with the subject; but of course very much will depend upon the means employed in this country for storing the meat when we get it; and, at the very commencement

of

Chairman—continued.

of the importation of dead meat, I called public attention to the necessity of fitting up stores with the same appliances that they have on board ship, or similar appliances; I think the loss alone of flesh on a voyage which has been attested to by witnesses before a previous Committee will compel producers to adopt the dead-meat trade when it can be done cheaply and safely.

8210. You mean that as the freight is, I suppose to a certain extent less on the dead meat than on the live animal, and as the animals deteriorate in condition when sent over alive, you think that eventually the dead-meat trade will be the more remunerative?—I could not speak as to the deterioration, but I should imagine that the shaking about and discomfort on board-ship very much lowers the condition of the animals. I may mention that I sent home from Algeria this winter five Arab horses; and, although I sent a man to attend to them and feed them, they came home in a very reduced condition, although they had a fine passage. Judging from that, I should imagine that a bullock would deteriorate.

8211. Have you ever considered, with regard to this question, the regulations for the home trade which are in your opinion necessary?—I have. I may say that last year I prepared a paper for the London Farmers' Club (which I represent here) upon the question of the regulations for both home and foreign stock, and upon the comparative supply of the home and foreign production; and, with your permission, I will hand it in. (*The Witness handed in a Paper.*)

8212. What were the regulations that you suggested should be put in force, as compared with the present restrictions?—Of course the obvious one of uniformity in the regulations issued by the different local authorities; that the Orders in Council should be imperative, and apply to the whole kingdom.

8213. You would take away from the local authorities the power of making their sanitary regulations for each district, and you would make it a central order emanating from the Privy Council?—Certainly; and I would, further, put the carrying out of the orders of the Council and the administration of the Act into the hands of the police.

8214. Would you make the police, then, as a rule, the inspectors?—I would.

8215. Would those inspectors be responsible to the local authority, or to the central authority?—They would be responsible to the local authority, that is to say, to the courts of quarter sessions in counties, and to the town councils in boroughs. I may say that in our county we had separate local authorities corresponding to the petty sessional divisions, and they were a comparative failure. We put that business into the hands of the police, and that has worked extremely well.

8216. Through the whole county?—Yes. I may say that I did not at all agree with the evidence of Professor Brown as to an army of veterinary inspectors being needed; I do not think it at all necessary.

8217. You do not think that veterinary and scientific knowledge is necessary for an inspector dealing with these regulations?—If it is put into the hands of the police, with power to call in any veterinary surgeon appointed by the local authority, I think that is sufficient; but I would supplement the police in this way: in each petty sessional division I would have a number of farmers nominated by the magistrates in petty sessions, and those members so nominated in the petty sessional division should be appointed by the court of quarter sessions as members of the executive committee. To those members the police should be instructed to apply for assistance and support, and, in cases of difficulty, for advice.

8218. How would you deal with the boroughs?—In the same way. The police, of course, are under Watch Committees in boroughs.

8219. Would you entirely entrust to the police, then, the decision as to whether the animals were affected or not?—I have said, on the contrary, that they should be assisted by veterinary surgeons appointed by the court of quarter sessions.

8220. Then I understood you to say that it should be at the option of the police to call them in?—Clearly.

8221. Then the police would practically, in the first instance, be themselves the judges as to whether there was disease or no disease?—Yes; but if they were men of sense they would not act upon their own authority. If they knew that it was their duty to call in to their assistance unpaid local officers or veterinary surgeons, they would do so. We have never found any difficulty on that score in our own county.

8222. I understood you to say that you were anxious that the regulations throughout the country should be uniform?—Yes.

8223. And that they should be under the Privy Council as the central authority?—Yes.

8224. But you would limit the power of the central authority to the mere issuing of regulations, whilst you would leave to the police in those localities the carrying of them out; is that your proposal?—Yes; except in the case of a serious outbreak, in which case I would empower the chief constable of the county or borough at once to summon the assistance of the Privy Council officers.

8225. At present the localities work very often through the police; through the police they call in a veterinary surgeon, and between them they certify as to the disease; and in very many instances the regulations were carried out quite differently in the different localities; with the view of obtaining that uniformity which you describe as being necessary, would you strengthen the hands of the Privy Council, by enabling them to see that those regulations were really carried out?—I would not call in the officers of the Privy Council, except in cases of great necessity.

8226. You do not doubt that under those circumstances the uniformity which you think desirable would be obtained?—When I spoke of uniformity, I had reference more particularly to county authorities. The regulations of adjacent counties are very different; they puzzle the policeman, they puzzle the public, and I may say that they very often puzzle the magistrates. That was the idea in my mind about uniformity. When a county is in a normal condition, I would not call in the aid of the Privy Council; but if there should be an abnormal condition in any district, then I think the head of the police, without going to any local authority (because there is a loss of time in doing that, as we have seen in Middlesex), should at once communicate with the Privy Council.

Mr. *Howard.*

29 June 1877.

Chairman—continued.

8227. And you would leave the local jurisdiction and the local authority as it is at present, only that you would give them one uniform code of rules for the whole country?—I would. I should like to see the police in the counties and boroughs made one force; but we must speak of existing conditions.

8228. Under existing conditions you think that, if these uniform orders were made imperative, sufficient uniformity in the different districts would be really attained?—Yes. Of course I should like the Act of Parliament to be altered, and the word "shall" introduced, instead of the word "may"; I should like the law to be imperative, and apply to the three kingdoms.

8229. Have you considered the question of compensation with regard to these regulations; do you see any reason for altering the system as at present in force?—I do. I think, when healthy animals are killed in the interest of the public, full compensation should be paid by the public. It is a public matter, and the loss should not fall upon the private owner.

8229.* I understand that you would leave the compensation for a diseased animal that was slaughtered as it is at present, but that animals slaughtered for public protection, as having been in contact with diseased animals, should be compensated for in full?—Certainly; I think that three-fourths of the value is a fair amount of compensation when an animal is diseased; but when a whole herd is slaughtered, clearly in the interests of the public, I think that the loss should not fall upon the private owner.

8230. I suppose you would allow the sale for consumption of the animals that had been brought into contact?—Certainly.

8231. And that would be in diminution of the full cost to the county or to the locality?—Clearly. I think that every inducement should be given to farmers to declare the existence of disease. There is no doubt that there is a good deal of disease concealed, and the Committee will see the reason: a man's credit is often at stake; he has a rent-day approaching; and if he were to go and declare the first outbreak of disease, he probably could not meet his rent, because he could not move an animal; and there are many other reasons.

8232. The inducement is very great, in your opinion, as soon as an animal on a farm sickens, to say: "Well, I will get rid of all these other animals; they are all right now"?—Yes; and I think that the State should not contribute an additional reason to these causes.

8233. And you think that if the inducement were held out of compensation to the full value for the animals which were slaughtered for having been in contact with a diseased animal, the farmer's interest would lead him to declare the outbreak at once?—It would take away the excuse for concealing the fact of an outbreak, and of course the tendency would be in the direction which you have mentioned.

8234. And you do not see any danger in getting a number of unhealthy animals that were not really diseased thrown upon the rates of the county or district?—I think that with very stringent regulations there would be very little disease, therefore very little loss; it is from lax administration and lax regulations that the cost to the county or the cost to the country is incurred.

8235. And you would still leave the carrying out of these regulations in the hands of the same

Chairman—continued.

people who are now supposed to be carrying them out with some laxity?—Yes, for the present. I would not introduce the principle of centralisation until I was compelled to do so.

8236. You think that the uniformity which you admit is necessary could be attained without it?—Yes, with the Act of Parliament being made imperative.

8237. Would you in any way alter the existing state of things with regard to cattle-dealers, so as to obtain a greater command or check over them?—I would. I would have them licensed; they give more trouble in the matter than all the rest of the community put together.

8238. By licensing the cattle-dealers, you think that you would have a check upon them, and that the authorities of the locality would be able, by having the power of withdrawing their license, to keep them under some restraint?—Yes. If they knew that the magistrates had the power of revoking their licenses, they would think twice before they ran the blockade, which they have no hesitation in doing now.

8239. And that, you believe, would be one of the regulations which would assist you very much in stamping out the disease?—I think so. My experience as a magistrate is that we have had no trouble with farmers; all our trouble has been with cattle-dealers and salesmen.

8240. Would you extend that system of licensing to drovers as well as to dealers?—There is a difficulty about that. I would extend it to drovers from public markets; but to say that a farmer should employ a professional drover to drive his cattle to market I think would be rather an undue interference; but I can see no objection to the employment of licensed drovers from fairs and markets.

8241. You think that drovers attached to the fairs, and not labourers on individual farms, should be licensed like the dealers?—Yes. There is a set of men now, who go about to the different fairs and markets, who are always to be found to pick up a job, and I would have those fellows licensed.

8242. In your opinion, a drover plying for hire ought to be licensed?—Certainly. I may say that the opinion is a very general one as to the licensing of cattle-dealers, and more particularly of cattle dealers than of drovers. The Royal Agricultural Society, as Colonel Kingscote will remember, recommended the licensing of cattle-dealers, and stated their reasons for it, some five years ago.

8243. Turning now to the other part of the question, viz., the importation of cattle from Ireland, would you adopt any different system with regard to the cattle from that country from that which we adopt with regard to our home trade?—Not so long as Ireland, and I would include any other of the British Isles, is free from disease.

8244. You think that any regulations or restrictions that were adopted at home should apply to Ireland as well as to England?—Yes, clearly.

8245. And that, under those circumstances, no restrictions fettering the Irish trade would be necessary?—Of course this Irish difficulty, like many others, is a very serious one. I am quite a disciple of Mr. Delahunty, in favour of equal laws for both countries; and seeing that the Irish have the power, which power they exercise,

of

Chairman—continued.

of closing their ports against English cattle, I do not see how they can complain if we close the English ports against their cattle. I would have no restrictions whatever so long as Ireland could present a clean bill of health; but everyone who knows anything of the Irish trade knows that the Acts of Parliament and the Orders of Council have been carried out in a very lax manner in Ireland. Magistrates have fined dealers and others, who, if they did not set the law at defiance, did not obey the law, a mere nominal sum. That was given in evidence before the Royal Agricultural Society, who sent a Commissioner to inquire. I would not impose any restrictions so long as contagious disease did not exist in Ireland.

8246. I suppose you admit that the supply from Ireland is one that is absolutely necessary for the English market?—Clearly; I think that if the duty of clearing the country from contagious disease was thrown upon Ireland itself, they would very soon stamp it out; there could be no more difficulty in stamping it out in Ireland than in England.

8247. But you would propose for Ireland regulations similar to those which you propose for England, and you recommend that the Privy Council, and the officers who represent the Privy Council there, should have the same power as the Privy Council have here, for the purpose of obtaining uniformity in the different districts; and that the police should have the same power for carrying out the restrictions in the localities?—Clearly; I would make the law and practice uniform.

8248. And you think that the same restrictions which we impose here with regard to foreign imports should apply equally to Ireland?—Yes, certainly.

8249. And thus, having brought both parts of the kingdom under the same regulations, you think that cattle might be passed freely as between the two countries?—Quite freely. I would do so not only in the public interest, but in the interest of Ireland itself. We get foot-and-mouth diseases regularly from Ireland, and in consequence there is a suspicion attaching to Irish cattle which lowers their price very considerably. If a man goes into a fair and knows that they are Irish beasts recently imported they are worth so much less money. I remember pointing out in the House of Commons more than once, that Irish beasts were reduced in value from 1 *l.* to 2 *l.* per head, from the suspicion which attached to them of disease lurking in their systems.

8250. And therefore, until those regulations were adopted, you think that, should disease break out in Ireland precautions would have to be taken against it?—Of course I would do nothing in a hurry. Ireland must have due notice before any fresh regulations were imposed.

8251. Those are your recommendations with regard to Ireland, and with regard to the foreign cattle your recommendation is that they should be slaughtered at the port when they came from all countries which could give us a clean bill of health, but you would prohibit them from other countries?—Yes. I think that the country would not submit to the slaughter of cattle at the ports of embarkation, though I have no doubt that that would be the safer plan, because there would be less to fear of conveying the disease by the animals themselves, and there would be less

Chairman—continued.

to fear of conveying it by means of hay, straw, and manure, and by persons going on board those ships in our own ports. But, as I say, I do not think that the country is quite ripe for such a step as slaughter on the ports of embarkation. I am clearly of opinion, however, that in the interests of the community it would be very desirable, so long as these diseases exist upon the Continent, to slaughter all fat animals at the port of debarkation.

8252. With regard to store animals, would you admit them from abroad?—Yes; but I do not think that that is so important a question, but I should have them quarantined.

8253. The number of store animals that we import is not very large, I think?—No, not from foreign countries; we have no official account of the number, I am clearly of opinion, that it would be in the interest of the community, that the fat animals should be slaughtered, because it would not reduce the meat supply. The surplus meat of the world, like the surplus corn, is sure to find its way to England, so long as England is the best market; and whether you adopt one plan or the other, slaughter at the ports of embarcation or debarcation, it will not make any sensible difference in the supply.

8254. And you do not think that the slaughtering at the port will, as has been stated by other witnesses, so diminish the profit as to drive the trade away into other capitals?—Whenever the markets of other capitals are better than the English markets, the surplus meat will go there, as was the case during the continuance of the Franco-German war. The only time in which the foreign supplies were diverted from the English market was during that period. Then the foreign supplies, owing to the great rise in the price of meat, and owing to the increased demand, went there; but, so long as the English market is the best market, the produce of the world will come here, as is the case with all other commodities. They find their way to the best market.

8255. And you believe that the fact of the animals having to be slaughtered at the port will not diminish the profits to such an extent as to drive the trade away from us?—I do not think so.

8256. I understand you to say that, with regard to the store cattle that come in, you would quarantine them?—Yes.

8257. Quarantining has its disadvantages, as I suppose you admit?—Yes; it would be attended with expense, but the animals would be worth more money.

8258. Would you, in any way, mark such animals on their coming in?—I would mark all animals that were intended to be mixed with English cattle.

8259. Would you mark them and quarantine them for a given time, before they were allowed to circulate freely?—If the quarantine was of sufficient duration, I see no necessity for marking them.

8260. Have you formed any opinion as to what quarantine would be necessary, looking to the fact that it is stated in the scientific evidence, that pleuro-pneumonia, one of the diseases which we are afraid of, lies dormant for so many months in the animal, before it develops itself?—I know that pleuro-pneumonia does lie dormant. I had three attacks in succession in one field, and

Mr. *Howard.*

29 June 1877.

Chairman—continued.

in different lots of cattle, and my suspicions were aroused, in consequence of their all taking place in one field, that the germs of this particular disease have great vitality. The steps which I took were these: I took all the cattle out of that field, and I did not put any more in until the following spring; I had the gates painted and the hedges brushed, and I have never had a single outbreak of pleuro-pneumonia in that field since. That is some eight or nine years ago.

8261. Previously to that you had recurrences of it?—I had three outbreaks.

8262. Was the interval between them of any length?—Yes, weeks or months. Pleuro-pneumonia is very difficult to deal with.

8263. Does not the fact of pleuro-pneumonia remaining so long before it develops itself, rather make the quarantining of store animals a difficulty? — The number of store animals from foreign countries is very small, and therefore I do not think it would be so difficult; but anything is better than running the risk of contagion.

8264. It has been represented to the Committee that a large number of the store animals are cows which are brought for the dairies?—Yes; Dutch cows.

8265. In those cases the quarantine would not guarantee you against introducing pleuro-pneumonia into your dairy stock, would it?—It would not be an absolute guarantee; but I think that after an animal had been in quarantine for some two months, it would be a guarantee.

8266. You would make the quarantine as long as two months?—I would in the case of milch cows; but only a very limited number come. There is no insuperable difficulty in providing quarantine grounds for a very much larger number than comes to this country.

8267. Would not the cost of quarantining them increase the difficulty?—They would be enhanced in value; that must be put on the *per contra* side of the account. After an animal had been in quarantine, a man would give more money for her than if there was a risk of the germs of disease being in her.

8268. You do not think that the risk of introducing diseases, and the difficulties of quarantining are so great, as to make it advisable to prohibit the introduction of store animals from those countries? — "Prohibition" is an ugly word, and the doctrines of free trade are against it.

8269. But you propose to prohibit fat animals?—I do not propose to do that; We say, "We want all the meat you can send us, only you must kill it at certain ports." That is a very different thing from prohibition.

8270. You would not allow the introduction of animals from foreign countries unless they could give you a clean bill of health, and then they must be slaughtered?—Yes.

8271. But still, with regard to the introduction of store animals, you think that those restrictions need not be severely carried out, but that, with a certain quarantine, they might be allowed to come into the country?—Yes. I at once admit the difficulty of the subject, but I think the advantages are so great that the difficulties ought to be surmounted; and I believe that the difficulties are not insuperable.

8272. And you would make it one of the conditions that they should not be sent into the

Chairman—continued.

home market for sale?— Certainly, until they were quarantined.

8273. Is there any other point that you wish to put before the Committee in your examination-in-chief?—There is a question about the markets. I advocate all foreign cattle being sold at one market, whether from scheduled or unscheduled countries.

8274. I understood you to say that you would separate the home market from the foreign market?—Yes; but I do not think that I stated my reasons. My main reason is this: that, speaking generally, any market to be successful must have a regular supply; it must not be intermittent. If a market is over-stocked one week, and the buyers go down the next week, and there are no beasts to sell, they will not go to such markets. Then I think that the markets should be easily accessible, which Deptford is not.

8275. You represent that if an Order were passed which obliged the slaughter of all animals at the port, and their sale at a particular market, it would cause a steadier trade than the present system, which renders it uncertain whether a cargo, when it comes over, will go to one market or the other?—Clearly. The uncertainty is vexatious to the foreigner; whereas, if they were all landed at one waterside market, the uncertainty would cease, the supply would be more regular, and of course the buyers would be induced to attend that market regularly.

8276. The great difficulty that has been suggested with regard to there being a paucity of buyers at Deptford arises in your opinion, principally from the uncertainty of that market?—Yes, and from the position of it. It is not accessible, and a market ought to be.

2877. The railroad that has been so long talked of ought, you think, to be completed?—Yes. I do not see the Right honourable Gentleman, the Member for Bradford, Mr. Forster, present; the unsuitability of the Deptford Market was pressed upon his attention when Vice President of the Council by myself and others, but I believe that great pressure was put upon the Right honourable Gentleman by the Corporation of London, and he could not have his own way.

8278. However, the Deptford Market exists, and you represent that additional facility should be given to the Deptford Market if it continues?—Clearly; and that steps should be taken, at all events, not to drive the supplies to other places. Of course, I would consult the convenience of buyers as far as possible; but seeing that they are after all, but "dividers," not producers, that is of small account.

Mr. *Wilbraham Egerton.*

8279. I think that you are in favour of putting the same, or very nearly the same, restrictions upon animals coming from Ireland as upon animals coming from abroad, so long as there is disease in Ireland?—In case of contagious diseases existing in Ireland, I would treat her as a scheduled country.

8280. Is it not a fact that a great many store stock come from Ireland into this country?—Yes.

8281. Would you altogether stop the importation of store stock into this country from Ireland?—Certainly. I think it would very shortly work its own cure, because the Irish people would then

Mr. *Wilbraham Egerton*—continued.

then take vigorous measures to stamp out these diseases.

8282. With regard to fat-stock markets, do you think that in no case in any of the large towns should an arrival go into a fat market, and go out again to be sold as a store animal, which is very frequently done, I believe, in markets in large towns; for instance, in case of an Irish animal going into a market, if it is not sold as a fat animal it is bought, perhaps, as a store animal?—I do not think that such a regulation is necessary, except when the country is in an abnormal condition, when there is a great amount of disease about; in that case it might be necessary.

8283. Your reply would apply to all the markets in the country as well as to those in London?—Yes. I think that when disease exists, your regulations, if you are going to stamp it out, cannot well be too strict.

8284. For instance, when foot-and-mouth disease is prevalent, you think that it is undesirable that any animal should go, say, into the Manchester Market, or into the Liverpool Market, and run the risk of being in contact with those animals which may be subject to foot-and-mouth disease, or which may have the seeds of foot-and-mouth disease in them, and that it should then be taken out again and sold to the farmers of the country for other purposes?—I think that it is highly dangerous and highly injudicious and injurious to the interests of the public. When disease exists, the cheapest way is to take the most vigorous means of stamping it out.

8285. Is it your opinion that the best way of stopping disease is to take it when it first breaks out, and to use vigorous measures then?—Clearly.

8286. And you think that after the disease had got a certain head it is almost impossible to stop it?—The more centres of contagion there are, of course the greater the difficulties.

8287. I did not quite understand your recommendation with regard to the regulations and orders in counties and boroughs; supposing that there is a difference of opinion between the authority in a county and the authority in a borough, how would you reconcile that difference? You cannot interfere. It is very unfortunate that there should be a separate jurisdiction.

8288. But you are arguing in favour of one uniform authority?—So far as the Privy Council is concerned, I think that their orders should be imperative.

8289. But is it your opinion, then, that directly a disease of any kind breaks out, whether foot-and-mouth disease or cattle plague, the Privy Council should have the power of reconciling the difference between the two authorities where they are conflicting?—Their Order in Council should be binding, I think, upon both boroughs and counties.

8290. You think that it should be compulsory, in fact, and not permissive?—Certainly.

Mr. *M'Lagan.*

8291. You did not exactly say whether or not you consider that drovers should be licensed?—I said that drovers from fairs and markets should be licensed, but I would not tie up a farmer and say, "You shall have a professional drover to drive your cattle to market;" that I think would be intolerable.

8292. Would it not be attended with con-

Mr. *M'Lagan*—continued.

siderable inconvenience to a farmer if he had to employ a public drover, even from a market; for instance, he sends cattle into the market with his own man, and it would be more convenient for him to send any cattle that he might buy in the market home again with the same man?—I did not say that a farmer should be compelled to employ a licensed drover; that, I think, would also be intolerable; what I suggested was, that men who make a trade of going from fair to fair and market to market should be licensed.

8293. You would not compel anyone buying cattle in a public market to send his cattle home by a licensed drover?—Clearly not; I should rather take my own man if I had him there.

8294. As regards the importation of lean stock, I see great practical difficulty as to quarantine?—So do I.

8295. Perhaps you could clear up the difficulties a little?—In the paper which I have handed in, I have set forth in some measure the difficulties, but the great difficulty would be in respect of Ireland, and probably the Channel Islands. But I would throw the work of stamping out disease in Ireland upon Ireland itself.

8296. I am speaking of the importation of lean stock from all countries, from Ireland as well as from other countries?—I mean lean stock generally. I think if it were once said, "Now then, so long as contagious diseases exist in Ireland, your cattle shall go into quarantine," they would very soon adopt the most vigorous measures for stamping it out; but so long as the expense falls upon England, they will not take the most vigorous measures; and we have seen in this recent outbreak how very easy it is to stamp out foot-and-mouth disease and pleuro-pneumonia.

8297. Your evidence tends to this: that we ought to have uniformity of regulations as much as possible?—Certainly.

8298. As Ireland is a part of the United Kingdom, do you not think that the regulations for cattle there should be under the Privy Council in England as well as the regulations in this country, and not under the Privy Council in Dublin?—I said so in answer to the Chairman. I would not take away the power which is now vested in the Privy Council of Ireland to shut their ports against English cattle.

8299. Then you would have a double authority?—I would not take away from Ireland the power which she has in that respect; she has it now, and exercises it.

8300. But why should you give Ireland more power than Orkney or Shetland in shutting her ports; it is part of the United Kingdom?—It is; but it is a more populous country, and Ireland is rather more difficult, as you are no doubt aware, to satisfy.

8301. Are you aware that very stringent regulations existed in Ireland during the prevalence of the rinderpest?—Yes.

8302. And are you aware of the results of those restrictions at that time, not only in Ireland, but in regard to the Irish cattle imported into this country?—Not practically.

8303. You do not know what was the effect at that time upon the dairy cows in Dublin and the neighbourhood?—I do not. I know that in some parts of Ireland they have never had foot-and-mouth disease, and these are the parts of Ireland in which the farmers are exporters and

Mr. *Howard.*

29 June 1877.

Mr. *M'Lagan*—continued.

not importers. They send their cattle away from some of those remote parts of Ireland, but they never bring any back again, and they have been entirely free, and that has been the case in other countries as well.

8304. Are you aware that there are certain parts in the Highlands of Scotland where they have had no foot-and-mouth disease, and no pleuro-pneumonia?—Yes, I had that in my mind, but these are exporting districts too.

8305. Therefore you would be inclined to argue from that that those diseases are really imported from abroad?—It does not quite touch that question, but it shows that the diseases follow the line of traffic, as a rule.

8306. It has been stated in evidence that it would be impossible to introduce the dead-meat trade from the Continent, on account of the kind of cattle that would be slaughtered on the Continent and sent over here; as you have paid a great deal of attention to that subject, both as regards the quality of cattle and the slaughter of cattle, perhaps you will give the Committee your opinion upon that point?—I know it is stated that Continental meat is leaner; they would probably feed it better, and perhaps improve the breed, by the introduction of our own cattle; but I really do not think that there is any reason why they should not send such animals as I have seen in Belgium, Holland, Germany and other countries in the form of dead meat. I think that the difficulty has been magnified. Of course, good thick meat would be likely to present fewer difficulties than thin stuff.

8307. What, in your opinion, would be the effect of the importation of large quantities of dead meat into this country, not only from America but from other parts?—It would reduce the price, to begin with.

8308. Would it have the effect of preventing the importation of live stock?—Clearly, if they send the animal in a dead form it cannot come alive.

8309. Do you think that the consumers of this country would be as well off if such a system were pursued?—I should think that, if the cost of transit and other charges would thereby be reduced, it would be a very considerable benefit to the community.

8310. And the agricultural interest would also be much benefited by there being less disease?—Clearly, if there be any truth in the statement that these diseases are introduced from abroad, of which I have very little doubt in my own mind.

8311. Then the encouragement of the importation of dead meat into this country would have a beneficial effect upon the agriculture of the Continent, inasmuch as it would compel the farmers there to improve their stock?—I do not quite know what you mean by "encouragement"; you do not mean encouragement by legislative measures?

8312. Perhaps I should have said that it would have the effect of developing the dead-meat trade?—Yes.

8313. It would induce the farmers on the Continent to improve their stock, so that they might compete with the American dead meat that is sent into this country?—They are already doing so. In the matter of pigs, some Members of the Committee know that I am rather celebrated for my herd of pigs. I have sent a very large number to the Continent lately for breeding purposes, because they have found it necessary, in order to meet the requirements of our own bacon market. The dealers in London will not buy the continental bacon, or they will not give so good a price. The same thing holds good of Ireland. I have also sent a large number to Ireland to improve their breeds for the same reason.

Mr. *M'Lagan*—continued.

8314. How would you treat the dairy cows that are now imported into this country?—I admit, of course, that there is some difficulty as to them; but I say that they would be enhanced in value by being placed in quarantine.

8315. It was stated by a previous witness that he would allow these cows to come into isolated dairies near the ports of debarkation; what would be your view of that?—That is such exceptional legislation that it does not commend itself to my mind.

Mr. *Jacob Bright.*

8316. You say that you would compel the slaughter of all fat cattle at the ports of entry?—Yes.

8317. And you think that we should get quite as much meat in that way as we do with the freedom that we have now?—I do. I see no reason why it should be diminished.

8318. I suppose that a foreign country would rather not be scheduled?—They are much afraid of being scheduled.

8319. Then it would look as if being scheduled diminishes the profits of their trade?—That is owing to the regulations on this side, and not from the principle of scheduling. We send their cattle to a very inconvenient and very expensive market; the Deptford Market I am speaking of particularly.

8320. I suppose that scheduled countries may send their cattle to various ports in the country?—Yes; but the bulk comes to London, and I know that they are afraid of the Deptford Market. I have had communications to that effect from the Commissioner of Agriculture in Hanover just lately.

8321. So far as we have had experience, to schedule a country is to compel it to resort to a mode of trade which diminishes the profits, is it not?—In my evidence in chief, I stated that I would send all cattle, from whatever country in Europe they came, to one market, except for the purpose of store stock. There would be no necessity then to schedule countries.

8322. You propose that all fat cattle should be slaughtered at the port of entry, do you not?—Yes; for instance, at the port of London, where they principally come to. The bulk of the foreign fat cattle comes to the London market.

8323. So far the necessity of slaughtering cattle at the port of entry has been to diminish the profit upon the cattle, has it not?—I do not know that of my own knowledge. I should imagine that that would be the case, not from the fact of the country being scheduled, but from the imperfect market which we have provided for the metropolis. I think that that has had far more to do with it than the fact of the country being scheduled.

8324. You are probably aware that in the interior of this country, say in Lancashire, Yorkshire, and in Staffordshire, those who represent the people at all on this question are afraid of its being made compulsory to slaughter animals at the

Mr. *Jacob Bright*—continued.

the port of entry?—I should imagine that it is a very natural fear, but I think it is a very groundless one.

8325. Still you must admit that it is a fear that exists?—You would know more about that than myself.

8326. If you slaughter your cattle at Hull, or any other port that supplies these large populations in the interior, is it not likely that there would be some difficulty in getting the meat to the homes of the people in as good a state as it would be if cattle were brought alive into the interior of the country?—I think that if cattle can be sent from Texas, and killed probably in New York or in some other part of America, and then sent over here, there ought to be no difficulty in getting dead meat from Hull.

8327. I am not speaking of what may be, or of what might be, or what it is at present; we have no plan at present in operation that would overcome certain difficulties, have we?—I do not know to what difficulties you particularly refer.

8328. In hot weather, if you slaughtered cattle in Hull for the supply of Manchester, Sheffield, or even York, do you not think that there would be some difficulty in the people getting the same kind of supplies as they do now?—There might be; and, therefore, I would not introduce changes quickly. I would give time before the effects of those changes were felt. I would leave that to natural causes; all that will come right.

8329. You admit that unless people were to adopt some different method from that which they have adopted, in fact, unless they were to make safeguards against the difficulties to which I have referred, there would probably be an outcry that the meat was not good, and so on?—I do not admit that, although I am not prepared to deny it; it might be so.

8330. You have got the county of Bedford in a very healthy state, you said?—Yes, and most other counties of England are so now.

8331. That is to say, you have got most of the counties of England in a very healthy state, although you have this comparatively free import of cattle from abroad?—Yes, but they are not allowed to come near our healthy cattle; that is the reason why we are free from disease. Those cattle come but they are slaughtered. There has been no movement of the cattle.

8332. From a certain number of countries there is free importation, is there not?—Yes, but movement is not permitted, and therefore there is no chance of conveying disease.

8333. You think that if those cattle could have free access to this country you would have disease again?—We have every reason to come to that conclusion reasoning from the past. We have nothing else to guide us.

8334. You said that the fear of disease did much to deter farmers from enterprise in their business, did you not?—No doubt it naturally deters men from embarking in the same business, and it also cripples their means.

8335. Have you not known farmers who, in spite of all this, if they had capital and anything like energy, could produce a vast amount of meat?—Some farms in England produce three times what others do.

8336. In spite of this fear of diseases?—Yes. Of course they are not the only reasons for a smaller supply of animal food being raised than could be raised.

8337. You think that, besides the fear of disease, there are other influential reasons which deter the farmers from producing a large amount of meat?—There are very grave reasons.

8338. What sort of reasons?—I may explain, briefly, that the production of meat is a slow process, and it is a means mainly to an end of raising a farm in condition. Every member will know, whether he is engaged in agriculture or not, what condition means. The more meat a farmer produces the higher he raises his farm in condition; and seeing that the great bulk of the country have not had, nor do they have now, security of capital, that has a very great influence in diminishing the supply of meat. Of course the want of security brings in another question which is a cognate one, namely, social position. If a man has not security he has not independence, and if he has not independence he has not social position; and the tendency of that is to drive men of spirit and men of capital out of farming. In my time I have known a vast amount of capital repelled from agriculture. Of course the game laws, to a certain extent, interfere with the production of meat.

8339. The fear of disease is one of several very influential causes of the absence of enterprise on the part of the farmers?—Yes.

Mr. *French.*

8340. With regard to the importation of cattle from Ireland, you say that you are in favour of stopping the importation altogether whenever disease exists there?—I said whenever contagious diseases exist there.

8341. By that you mean foot-and-mouth disease, I suppose?—Yes.

8342. Are you acquainted with the mode of farming in Ireland?—Yes.

8343. You have been over there?—Yes, many times.

8344. Do you know that a good deal of the raising of stock is carried on by small farmers, who put their cattle out to graze with neighbouring farmers when they are yearlings?—Yes, I do.

8345. And they leave them there for half a year or so?—Yes.

8346. Do you not think that the imposition of these restrictions would greatly interfere with the raising of those cattle?—No.

8347. How would you manage when the time for which they were put out to graze with a large farmer came to an end, in the case of foot-and-mouth disease breaking out, say, on a neighbouring farm?—I have said nothing with regard to regulating the internal conditions of farming in Ireland.

8348. I understood you to say that you would place Ireland under the same restrictions as you recommend for England?—Certainly. There are lots of small farmers in England who turn out their cattle in the same way. I am perfectly aware that there is a larger proportion of small farmers in Ireland, but there is no difference of principle.

8349. Then you would leave those cattle with the large farmers when the time was up in case disease broke out anywhere in the district?—I would not leave them with the large farmer?

Mr. *Howard.*

29 June 1877.

Mr. *French*—continued.

I should not interfere in any way by legislation.

8350. I understood you to say that you were not in favour of the restrictions which were re-recommended by Professor Brown?—I did not refer to Professor Brown; I gave my own notions as to what the restrictions should be. But if I understood your question it amounted to this: whether I would throw the trade into the hands of the large farmer, and prevent the small farmer from carrying on his business, I say I would not.

8351. What I wish to know is whether those restrictions would have such an effect as to prevent the large farmers taking in those cattle by forcing them to keep them after the time?—That is a matter of detail which I really could not enter into.

8352. You say that you would be in favour of putting the carrying out of these restrictions in the hands of the Privy Council of England, and taking it out of the hands of the Privy Council in Dublin?—I did not quite say that; I said that I would retain the power of prohibition in the hands of the Privy Council in Dublin. I would have the law and regulations for both countries uniform.

8353. But the regulations at present are in the hands of the Privy Council in Dublin?—In my opinion it is very immaterial in whose hands the power is so long as the country is freed from disease.

8354. The country is at present virtually free from disease, I believe?—I am glad to hear it.

8355. You have not heard that before?—No; I was not aware that it was free from disease; I have often heard it asserted before.

8356. Do you think that England is free from foot-and-mouth disease at present?—Tolerably free.

8357. Do you attribute that to the regulations imposed in consequence of the cattle plague?—Undoubtedly.

8358. Then how do you account for the fact, that Ireland is tolerably free where those regulations are not in force?—I do not know the circumstances, and until I know all the circumstances I could not form an opinion.

8359. It is a fact, I believe, and it has been acknowledged by other witnesses, that Ireland is at present very free from foot-and-mouth disease?—I do not know the facts or circumstances, and therefore I could not venture to express an opinion as to that.

8360. Did you hear it stated that most of the foot-and-mouth disease imported by Irish cattle was caused, not by the disease existing in the country itself, but by the disease being contracted on the journey?—I have heard that opinion expressed, but I do not for a moment believe in it, because it is contrary to the generally received opinion amongst scientific men of the present day that contagious diseases can only be communicated by germs.

8361. But, as I understand, the germs are in the boats?—Very likely. Then you must disinfect the boats.

8362. It is the fault of the local authorities here, as well as of those on the other side, that the boats are not kept in proper condition?—They are probably both in fault, but I do not know it.

Mr. *Anderson.*

8363. Do you think it impossible to keep contagious diseases out of a country altogether by stopping importation?—Impossible is a wide word, but I should try it; I think that it is desirable.

8364. How do you account for the fact of an outbreak of cattle disease occurring in the last century, when there was a complete absence of all importation, or where, at any rate, importation was quite illegal?—Of course there are many means of conveying cattle diseases, otherwise than by the animals themselves.

8365. Then you aim at something else besides merely keeping out animals?—I believe there was only one outbreak of cattle plague in the last century, and we were free for a hundred years.

8366. That outbreak was a very bad one, was it not?—Not worse than it would be at the present day, but for the regulations which exist and the superior knowledge which has been gained.

8367. And that outbreak took place, notwithstanding the fact that all importations were illegal?—But the blockade was very often run; it is well known that Dutch cattle were run in; they were smuggled. Looking to the fact that the running in of cattle was well known in the last century, it is possible that disease might have been communicated in that way.

8368. And that running in might continue if you prohibited importation now, might it not?—Clearly.

8369. Would not an absolute prohibition of importation have a tendency to cause the running in of cattle?—Of course all restrictions lead to smuggling, but at the present day I do not think there is any practical danger of that.

8370. Therefore the tendency of restrictions would be to cause cattle to be smuggled in?—I would point out that the restrictions proposed are not prohibitions.

8371. Then you do not propose to prohibit?—Clearly not; I am too much of a free-trader.

8372. You merely propose restrictions?—Certainly.

Mr. *Pease.*

8373. How long a quarantine would you institute?—I have stated already that I would have a quarantine of two months.

8374. During those two months, in whose care would the animals be?—In the hands of officials.

8375. And therefore the Government of the country would become responsible for everything that happened, whether they were underfed or overfed?—That would depend upon the terms of the contract or arrangement.

8376. Do you not think that there would be a difficulty in giving satisfaction if beasts were lodged with Government authorities for two months?—Yes; they would, however, know what risks they had to incur before they sent them, and I have no doubt that it might lead to difficulty and trouble. I said at the outset that the question of quarantine is surrounded with very grave difficulties, but I do not think that those difficulties are insuperable.

8377. Still you would apply that very difficult system of quarantine and slaughter at the port to all animals coming in, although they might have

come

Mr. *Pease*—continued.

come from a country which, so far as we could ascertain, was free from disease?—Yes; because it is very difficult, in spite of information, to detect an outbreak of disease in foreign countries. I have travelled extensively in Europe, and I have been told by Belgian, Dutch, German, and Austrian farmers, that they are subject to get these diseases by unprincipled dealers and others bringing animals from Poland and Russia; and, seeing that that difficulty exists, I think that those restrictions are wise.

8378. You think that no system of inspection at home and abroad would obviate the difficulty even in the case of such countries?—Experience shows that inspection is not to be relied upon. You will perceive the difficulty of the case at once. A number of boats laden with cattle and sheep arrive at a port; of course dispatch is imperative, and the inspection of those animals must necessarily be very brief, and very imperfect.

8379. Do you propose the same system of quarantine with regard to Irish cattle which come in for grazing purposes?—I stated that I had no doubt that the Irish people would take the readiest and the most vigorous means of stamping out contagious diseases if quarantine were imposed; and that there is no difficulty in stamping out disease, we have found by recent and former experience.

8380. And you think that it would be compatible with the interest of the English farmer, who, in many parts, very largely depends upon the Irish cattle, and with the interests of the Irish farmer, who raises them for grazing?—Yes, I think that it would be compatible with the interests of the whole community, and particularly with those of the Irish farmer, whose beasts are depreciated, say, from 1 *l.* to 2 *l.* a head, from the suspicion which lurks in the minds of buyers. Irish cattle are continually palmed off as English-bred cattle by dealers, who know that they are not worth so much money. My own bailiff bought a lot, and he told me that they were Lincolnshire cattle; I told him as soon as I saw them that they were Irish cattle, which they proved to be.

8381. Have you read, or did you hear, the evidence which was given by the gentleman who is the cattle inspector for the corporation of Liverpool?—I have not.

8382. He gave very strong evidence that the meat from the live cattle imported from America was of very superior quality to the American dead meat, and that it was worth 2 *d.* per pound more in the Liverpool market than the dead meat?—I cannot speak to that from my own knowledge; but having travelled through most of the States I should be of a different opinion.

8383. Is not that evidence very much opposed to your view of the importation of dead meat being preferable to the importation of live cattle?—I simply do not believe that the quality of meat is deteriorated by being kept cool for a certain time.

8384. Is not the quality of meat deteriorated by its being very much handled?—It depends upon what you mean by handling; it is not deteriorated by packing.

8385. If meat were taken out of the ship at Liverpool, put into railway trucks, taken out of the trucks again at Leeds, or Sheffield, passed through the streets to butchers' shops, and perhaps distributed from the wholesale butchers to the retail butchers; would it not be very much deteriorated by such a process as that?—It depends upon the extent to which that is carried. I do not think that simply taking it out of the hold of a vessel and sending it 200 miles by railway, and hanging it up in a butcher's shop, would cause much deterioration; at all events that is not found to be the case in my own borough, where they buy the American meat very freely, and it is spoken of very highly.

Mr. *Pease*—continued.

8386. Did you hear the evidence which was given before this Committee by a butcher from Leeds, who said that he had entirely given up buying beasts and slaughtering them at Hull, in order that he might buy Irish beasts and slaughter them at home?—That may be; but if the meat is of good quality when it is slaughtered in America it cannot be of bad quality when it is landed in England.

8387. That Leeds butcher also said that he had always taken cattle from Hull to Leeds to kill rather than slaughter them at Hull, because the meat produced a much better price?—I think economists now broadly divide society into classes, producers and dividers, and they contend that the convenience of the dividers is a very small part of economical arrangements, seeing that they do not enrich the country, and neither augment nor diminish the supply, they are not entitled to the same consideration as the producers.

Colonel *Kingscote*.

8388. You said that you had travelled in America a good deal; can you confirm what witnesses before this Committee have said, that the quantity of meat which they can supply us with from America is almost boundless?—Of course there is a limit to production in America as there is in other countries and also a limit as what can be spared for export. I have seen what I think are most exaggerated statements. There must have been a market for their surplus stock prior to the introduction of it into England. There is no question that the first effect of exporting American meat to England would be to raise the price across the Atlantic; but everyone who has been in America, and travelled over those vast prairies, knows that their powers of production are almost unlimited. Still, as I have already stated, the power of production of any country very much depends upon the number of mothers, which cannot be increased at pleasure.

8389. You told us that your own opinion, and that of most farmers, was that the very heavy loss which took place in this country was from foot-and-mouth disease and pleuro-pneumonia; do you think that it would be worth while to endeavour, by carrying out the same restrictions as are now imposed when the rinderpest is in the country, to stamp out those diseases; do you think that it would eventually be for the interest of both breeders and consumers?—I think that it would eventually be very much to the advantage of the community that we should be entirely free from contagious diseases; and I am quite a disciple of Dr. Budd Dr. Richardson, and others who have written on the subject of contagious diseases other than of animals, that when once you get rid of the germs of contagion, you dry up the source of contagion.

8390. Do you think it would be worth while for 12 months, or 18 months, or two years, to impose these restrictions with the view of getting rid

Mr. *Howard*.

29 June 1877.

Mr. *Howard.*

29 June 1877.

Colonel *Kingscote*—continued.

rid of these diseases?—I do not think that so long a time would be necessary. I think that if very vigorous measures were taken, the whole country might be free from disease in three months.

Mr. *Arthur Peel.*

8391. An honourable Member asked you just now about statements with regard to the number of cattle in America, and you said that you had seen exaggerated statements; would you call this an exaggerated statement which has been made before this Committee, that there are 10,000,000 cattle in Texas, which is 4,000,000 more than there are in the United Kingdom?—I have not been to Texas, but I have had a good deal of communication with landed proprietors and others in Texas. I grounded my observations upon this, that the surplus meat of America must have found a market before this market was opened, and therefore to say that they could send us an unlimited quantity was contrary to reason.

8392. You are the last person that one would suspect of leaning towards protection; you are a freetrader, and everybody knows it; and you do not want protection from competition?—No, and I never once heard a single farmer raise the question.

8393. All you want is protection from disease?—Yes, I have often talked the matter over, and farmers say as to this American importation of meat, "Well, there is no help for it; we must meet it;" there is no jealousy of it. I am quite sure that the impression that has been on the minds of some friends of my own who are freetraders, is entirely erroneous, that there is any desire upon the part of the agricultural community to obtain anything in the shape of protection.

8394. As to stamping out these diseases at home, dropping the question for the moment as to whether they are introduced or not, do you believe that you could stamp out foot-and-mouth disease?—Certainly; nothing would be easier.

8395. I ask you that question because we have had evidence to the contrary given us by very competent people, who have stated that it is impossible to stamp out foot-and-mouth disease?—We have what is better than opinion, facts; we have had two periods in which cattle plague regulations have been put in force in England, and in each case it has resulted in the entire stamping out of that particular disease.

8396. But that is by a machinery which was intended for the purpose of stamping out cattle plague?—But by the same machinery foot-and-mouth disease was stamped out. Your question was whether it could be stamped out.

8397. But do you think that it is a practical remedy?—Certainly.

8398. Do you think that the people would stand the machinery necessary to stamp out cattle plague for the purpose of repressing foot-and-mouth disease?—I may say that foot-and-mouth disease has entailed ten-fold the loss that rinderpest has ever done, and that farmers have very great fear of foot-and-mouth disease, especially breeders; and if those vigorous measures were put in force, and they had the assurance that the best means would be adopted for preventing the reintroduction of those diseases, I believe they would most cheerfully acquiesce. Of course it hinges upon that: whether you are going to take

Mr. *Arthur Peel*—continued.

subsequent stringent measures to prevent their reintroduction.

8399. But talking simply of the extinction of foot-and-mouth disease in this country, Professor Brown stated that the measures which are now taken, and which have been taken, were merely obstructive without being effectual?—Facts are before opinions.

8400. You do not agree with him?—Look at our own county—your county and mine; we are entirely free; we have not a single case of foot-and-mouth disease. What can be done in one county can be done in another, and that with the least inconvenience to the farming community. The dealers, as I say, and the other dividers, have had their trade and their profits interfered with by restrictions, and of course they cry out, but nobody else does; the farmers have not cried out.

8401. There again the restrictions in Bedfordfordshire were not directed against foot-and-mouth disease, but against other diseases?—Yes, of course. When rinderpest broke out in Middlesex, we thought it necessary to adopt the most stringent measures for keeping the disease out of the country, and succeeded.

8402. But would you adopt such a tremendous machinery for the extinction of a disease like foot-and-mouth disease, apart from the other two diseases?—Certainly; it is more important, though of course the other, rinderpest, is more virulent and more difficult of extinction.

8403. In stopping the importation of live cattle from abroad, of course you would do it with great precautions?—Yes, certainly.

8404. And you would not agree with Professor Gamgee, who would shut out live cattle tomorrow morning?—That would be the safer plan, as I have already stated; but of course you cannot adopt measures that are contrary to the views of the country, and therefore it is useless to talk about it.

8405. You made what seemed a very important remark, of which I should like to have some explanation, as I did not quite understand its import; you said that you would continue the scheduling of countries as long as foreign cattle mixed with home cattle?—Certainly; that applies to store stock.

8406. Does that apply to markets at the port of debarkation?—No; I would continue the scheduling of countries so long as any arrivals introduced from abroad were allowed to mix with our own cattle; but if you establish a separate market for the slaughter of animals from abroad, then, I say, there is no reason for continuing the system of scheduling countries.

8407. But I thought that you were in favour of killing all fat cattle at the port of arrival?—Yes.

8408. Therefore, how could they mix with the home cattle?—I said that so long as foreign cattle were allowed to mix with English cattle I would continue scheduling; but when they are all killed at one market, then I see no necessity for keeping it up.

8409. What I mean by scheduling is, admitting cattle, but causing them to be slaughtered at the port of arrival?—Clearly; a scheduled country is a suspected country.

8410. You went on to say that the whole question hinges upon the question of separate or united markets; I do not understand how you could

Mr. *Arthur Peel*—continued.

could have a united market if you killed all the animals at the port?—I said a separate market, and one market for all foreign cattle; and I gave my reasons, it will be remembered, for advocating that course. It would have the advantage of simplicity to begin with, and foreigners would not be left in doubt.

8411. You spoke of the time when you were a boy in 1830 or 1840, and you said that you never knew a case of foot-and-mouth disease?—I never heard of such a thing.

8412. Did you ever know a case of pleuro-pneumonia?—We used to have the old-fashioned lung disease which we have now, but that was not a contagious disease.

8413. And that lung disease never showed the symptoms which now attend pleuro-pneumonia?—No, lung disease is an entirely separate disease. That has been known for generations. I stated that old writers upon veterinary science never once alluded to either foot-and-mouth disease or pleuro-pneumonia; they give descriptions of lung disease and of foot soreness.

Major *Allen*.

8414. You say that when we had the rinderpest regulations in force, foot-and-mouth disease practically disappeared?—Yes.

8415. That is to say, in consequence of the rinderpest regulations, there was no movement of animals?—Quite so.

8416. And hence the disappearance of the disease?—Yes.

8417. And from that, you think that if we were to put these regulations in force for three months we might reasonably hope to have mastered the evil?—I think, judging by the results of similar measures in the past, you have a right to come to that conclusion.

8418. What measures would you adopt with regard to the importation of sheep dead or alive?—I should adopt the same regulations with regard to sheep as with regard to cattle, because they can convey disease as well as cattle.

8419. We hear that there is a great trade in dead carcases of sheep from the Deptford Market to Merthyr Tydfil, which would show that all towns can be supplied with dead meat?—Yes; no doubt trade can adapt itself to circumstances. The commercial element is tolerably well developed in England, and traders know they must adapt their trade to circumstances.

8420. You think that we should do something now to let the country know that they must for their own sakes be prepared to deal with the

Major *Allen*—continued.

dead meat?—I have said that I would not introduce changes hastily; because if you are going to make changes, it is better to give people plenty of time to adapt themselves to changes of circumstances, or you might derange a very important branch of business.

8421. You say that you would schedule Ireland, but that, on the other hand, you would treat Ireland as an integral part of England; supposing that they had the cattle plague in the county of Cork alone, would you stop the importation of all animals from all other counties in Ireland?—Certainly; and I do not see that the country would be safe if such were not the case; I prefer the streak of sea between us to the rail of iron over there. You would in these circumstances soon stamp it out.

8422. Supposing, as I suggest that there was foot-and-mouth disease in the county of Cork alone, you would schedule Ireland at once?—Yes, for this reason; the system adopted in England of buying Irish store stock has been a very great and incalculable advantage to Ireland; and I think that, as English farmers, we may ask from Ireland some sacrifice in return. An honourable Member laughs, but I do not ground my suggestion upon that alone; I say that in the interest of Ireland itself it is necessary that these diseases should be stamped out.

Chairman.

8423. I suppose you are aware that Ireland in the recent outbreak absolutely prohibited the import of all animals from this island?—Yes.

8424. All you represent is that, supposing that the restrictions and regulations which you suggest should be adopted, if an outbreak occurred in Ireland, this power should remain with us of prohibiting the import from Ireland, as you would leave the power with them of prohibiting the cattle going from us to that country?—Clearly. As I have already stated, I am in favour of equal laws between the two countries; and so long as they have the power to prohibit our cattle, I do not see that they can find fault with us for prohibiting theirs.

8425. And you would advocate uniformity of regulations on the ground that, by that uniformity, probably Ireland would be brought into the same healthy condition as you expect here?—Yes; and I would point out that it would be attended with the most serious inconveniences to the English farmer were the Irish store stock to have to go into quarantine: the interests of the Irish farmers and the English are so far mutual.

Mr. *Howard*.

29 June 1877.

Mr. Adam Smith, called in; and Examined.

Chairman.

8426. You represent here the Highland Agricultural Association, I believe?—I do.

8427. In that capacity you can speak of the views of that association with regard to the question which has been submitted to the consideration of this Committee?—I can.

8428. Has your Association recently passed any resolutions with regard to this subject?—They have.

8429. Will you tell the Committee what the substance of those resolutions was?—With the permission of the Committee, I will read the me-

Chairman—continued.

morial to the Privy Council which was agreed to on the 14th of February.

8430. In consequence of the outbreak of cattle plague?—Yes. The more important paragraphs of the memorial are as follows: "That your memorialists consider that the difficulty of importing dead meat has been solved by the success which has obtained in bringing in such large quantities from America. That your memorialists believe this imported meat to be more wholesome for food than the meat of fat animals imported alive and killed on arrival, they being heated and fevered in transit.

Mr. *Smith*.

Mr. *Smith.*

29 June 1877.

Chairman—continued.

transit. That your memorialists are of opinion that so long as the importation of live stock is allowed except for breeding purposes by special license, the country will never be free from such diseases as pleuro-pneumonia and foot-and-mouth disease, with the risk, as on the present occasion, of rinderpest being introduced. That your memorialists therefore humbly crave your Lordships to take into your serious consideration, now that it has been proved that dead meat can be imported from such distant countries, whether the importation of live stock, except as above stated, should not be entirely prohibited. That, should it be considered impracticable to prohibit entirely the importation of live stock, except as above stated, your memorialists are of opinion that a strict quarantine of sufficient duration, under Government superintendence, should be established at the ports of debarkation. Your memorialists would humbly impress on your Lordships the enormous losses of late years amongst home stocks from disease, which they believe would be very greatly lessened, if not entirely suppressed, were their views adopted."

8431. Those resolutions were passed by the association at the time of the last outbreak of cattle plague, and forwarded to the Privy Council?—They were.

8432. Had you at that time considered the question of the new trade which had sprung up in America in the importation of dead meat?—Yes, that was considered.

8433. Have there been large importations into Scotland?—Yes, there have been pretty considerable importations.

8434. Are you prepared to say that a dead-meat trade would be advantageous as compared with the present trade in live animals?—I think it would.

8435. You would prohibit the importation of live stock from foreign countries on the ground that the dead-meat trade having been shown to be possible, that is a safer way of introducing the meat from those countries?—Quite so.

8436. Would you include in that prohibition the introduction of store animals?—Yes, I would; I do not think there would be any security from disease if store animals were admitted.

8437. You think that the allowing of store animals to come in would really leave the door open still for the introduction of disease?—Quite so.

8438. Do you think that the introduction of store animals is wanted, or that there is a demand for store animals from foreign countries?—I think they could be done without; I think that, the diseases being lessened, more cattle would be bred in Great Britain, and it would be an advantage both to the consumer and to the producer, for the cattle to be perfectly free from disease.

8439. Are you dependent at all now in your part of Scotland upon the store animals which are imported from abroad?—No, I should say not.

8440. You do not import from Denmark, for instance?—There is some import, but I do not think that the country is quite dependent upon them.

8441. The gap left by prohibiting the introduction of store animals would, in your opinion, be very soon filled by increased production at home?—I think it would.

Chairman—continued.

8442. Are you able to say whether there has been any great decrease of stock recently in the Lothians?—There has been. In the three Lothians, from 1873 to 1876, the total decrease of sheep has been upwards of 10,000.

8443. On what original total number did that decrease occur?—On something like 406,000.

8444. In what period of time did that decrease take place?—During the four years betwixt 1873 and 1876.

8445. Has that diminution of stock arisen from losses from diseases?—I think it has, partly, at any rate.

8446. From foot-and-mouth disease?—Yes.

8447. When you say that there has been a diminution of the stock, is that of the total stock, or did you refer only to sheep?—That is of the total stock of sheep of the three Lothians.

8448. Has there been any diminution of the number of cattle in those parts?—Yes; of some 1,430 on a total of about 37,000.

8449. And that loss of cattle you would put down also to losses from either foot-and-mouth disease or pleuro-pneumonia?—Very much to those diseases.

8450. Have you had any recent outbreak of either pleuro-pneumonia or foot-and-mouth disease in your district?—During the last year there has been a considerable outbreak in East Lothian. I have the statistics for that. I could not get them from the other counties. Betwixt 1875 and 1876 there were 5,000 cattle and 140,000 sheep affected, in East Lothian alone, mostly with foot-and-mouth disease.

8451. Out of the totals which you have given us?—Yes.

8452. I suppose you would represent that that shows a great loss to the consumer, inasmuch as the animals are, of course, kept back by the disease from being brought upon the market and are taking the place of other stock that might have been brought forward?—Quite so.

8453. Have the absolute death losses from foot-and-mouth disease been severe?—Not solely death losses.

8454. You speak of the deterioration of the stock, and having to feed that stock twice?—Quite so; I have often in my practical experience heard that cattle were affected with foot-and-mouth disease; it was equivalent to a loss of 3 *l.* per head on the animals affected.

8455. Do you take that diminution of value generally as an average over all your stock, including the dairy stock and fat animals, or does it apply only to the fat animals?—Over the whole of the animals.

8456. I suppose that the breeding stock are affected more seriously by it from the fact of the disease often producing abortion?—Yes; it is worse in breeding stock than in ordinary feeding stock.

8457. And those diseases, which you describe as having been prevalent lately, you attribute in a great measure to the foreign import?—Yes.

8458. You believe that, with proper regulations, you could stamp out those diseases in this country?—I believe that they could be quite stamped out. I do not believe that they belong to this country naturally.

8459. Do you think that, with the view of stamping out these diseases, the farmers in the Lothians would be prepared to submit to such additional restrictions and regulations as have been

Chairman—continued.

been described by other witnesses to this Committee?—I think that, in the prohibition of live stock from abroad, they would be quite agreeable. I am also a member of the Farmers' Club, in East Lothian, and they passed a resolution lately, wishing to encourage the importation of dead meat, and to prohibit the importation of live stock, and they would be quite agreeable to any restrictions so as to prevent disease.

8460. They would submit to any restriction which had for its object the stamping out of the disease, if they were secured against what they believe to be the source of its reintroduction into this country?—Quite so.

8461. Do you represent, then, to the Committee that, in the interest not only of the farmer but of the consumer this would be a gain to the community?—I think it would be for the benefit of the consumer as well as of the producer.

8462. By increasing the home stock and giving such security to farmers as would encourage them in increasing the breeding power of the country, and thus placing a larger supply ultimately upon the market?—Quite so.

8463. Do you believe that the foreign trade which you suggest should be restricted in this way would come to us through the channel of a dead-meat trade?—I think it would. I think that the American dead-meat trade is only in its infancy.

8464. But with regard to the foreign supply which you say you would prevent coming here alive, do you believe that if you prevented the live animals coming from the Continent, say from Denmark, they would come as dead meat?—I think they would.

8465. Or would you have them over here to be slaughtered at the port of debarkation?—I think it would be better and more secure to have them as dead meat.

8466. I think I understood you to say that you have a good trade in animals with Denmark at present?—Yes.

8467. They come to Leith, I believe?—Yes.

8468. Do you believe that it would be necessary to prohibit their import, looking to the fact that Denmark has been represented as being, and I suppose you will admit that it is, a country where there is very little disease among their herds?—I think we should not be safe as long as we imported any foreign animals.

8469. I understand it to be your general view that they should be absolutely prohibited from the Continent on the ground of your not being able to get sufficient security, as you believe, against the introduction of disease from those parts?—Quite so.

8470. And you think that that would be made up to the consumer in this country by an increased home production?—I do.

8471. Supplemented by the dead-meat trade which you foresee from America?—Yes.

8472. You have spoken of the regulations which you think that the farmers would submit to; would you let those regulations remain as they are at present, under the jurisdiction of the local authority, or would you make them uniform, emanating from a central authority?—I would agree with their being made uniform from the central authority or the Privy Council. I think that there is a great deal of disease in our country at present from the restrictions not being uniform, and not being strictly enforced by the local authorities.

Chairman—continued.

8473. You represent to the Committee that there is great disadvantage in the localities having the power of making those regulations, from the fact that there is a want of uniformity between them; because where you have strict regulations in one county you may have very lax ones in the next?—Yes.

8474. Do you think that the farmer would be prepared to submit to regulations made by a central authority such as the Privy Council?—Certainly.

8475. How would you deal with the question of inspection for the carrying out of such regulations; should there be officers appointed by the central authority to see that the regulations were enforced, or would you leave the appointment of the inspectors, as was suggested by the last witness, to the locality?—No; I think that the officers should be appointed by a central board.

8476. You think that, the central authority having to make the regulations, they should appoint their own officers to carry them out?—Quite so.

8477. From what fund do you suggest that the cost of this inspection should be defrayed?—The country should pay, I think, for what they are reaping a benefit from.

8478. You would make it an Imperial charge?—Yes, I would make it an Imperial tax.

8479. On the ground that the country would benefit by the increased security to be given, and the consequent increased supply of food produced?—Quite so.

8480. Would you make the restrictions which you have described against the foreign import, apply equally to sheep and to cattle?—I am not so sure as to sheep. I think that it will be safer, but there is certainly not the same risk with sheep as with cattle.

8481. There being a much smaller risk, you think it might be possible to import sheep?—It might be if you could make sure that they were imported from a country where there was no disease, and that they had not been in contact with diseased cattle.

8482. Under proper regulations, would you be prepared to admit foreign sheep?—Yes.

8483. Would you admit them to be circulated freely throughout the country, or would you have them slaughtered at the port?—I think that it would be better to slaughter them at the port.

8484. Still, supposing that they came from a country as to which we had a fairly clean bill of health, you think that they might be sent through the country?—Yes; if they are not brought over in contact with animals from diseased countries.

8485. Are they dependent at all in Scotland upon the import of foreign sheep?—They are not wholly dependent upon it; there is a large number of sheep bred in Scotland, but there is a very large import also from abroad.

8486. And those at present have circulated freely without being slaughtered?—Yes.

8487. Are they imported for feeding purposes?—No, they are imported mostly for slaughtering.

8488. I understand you, then, to say that, whilst you think the import of foreign cattle should be prohibited, that relaxation might be made with a view of meeting the demands of many of our large towns for small foreign sheep?—Yes,

Mr. *Smith.*

29 June 1877.

Chairman—continued.

—Yes, to a certain extent under proper regulations.

8489. Is there any other point which you wish to mention to the Committee in your examination in chief?—I think not.

Mr. *Arthur Peel.*

8490. Why would you slaughter all foreign cattle at the port?—For the prevention of what I think is imported disease.

8491. Would you slaughter them at the port of debarkation?—At the port of embarkation.

8492. You would not even allow them to come to this country, provided they were slaughtered at the port of arrival?—I would not.

8493. Why?—Because I think it would be the means of importing disease; it is very well known that people who go among these stock and handle them carry disease.

8494. But you would admit sheep to be slaughtered at the port of arrival?—Only under certain regulations. I would not admit sheep to be imported from a port of embarkation where foreign cattle were being slaughtered; I think that there would be risk there.

8495. But if you would admit sheep under regulations, to be slaughtered at the port of arrival, why is it not possible to have regulations which would make it perfectly safe to admit cattle, provided they were slaughtered at the port of arrival?—I think there is far more risk with cattle than with sheep.

Colonel *Kingscote.*

8496. Are you a practical farmer yourself?—I am.

8497. To a large extent?—I have farmed about 1,000 acres for the last 19 years.

Mr. *Pease.*

8498. Is it all the same farm?—In three farms.

8499. Have you held the same land for 19 years?—Yes.

8500. Can you tell us how many cattle you are carrying now?—My general rule has been to feed about 100 cattle a-year.

8501. Has your quantity materially decreased during the last five years?—I keep a flying stock, I do not breed.

8502. But you are keeping as many now as you did?—About as many.

8503. You have not been at all afraid of keeping cattle on account of the disease?—Yes, I have; I gave up breeding for that very reason. When I first began farming I bred a few.

8504. Not many, I suppose, in the Lothians?—No, but I bred, perhaps, a score or so.

8505. You are very much dependent upon the turnip crop in the Lothians?—Yes.

8506. What sort of a turnip crop had you in 1872?—The turnip crop was not so bad in 1872, though it was a bad year for other things.

8507. In 1873, 1874, and 1875, it was not an average crop, was it?—My mind does not carry me back so far as to enable me to say that it would be an average; I think it would be a very fair crop.

8508. Does not the state of the turnip crop very much influence the number of cattle carried upon the Lothians?—To a certain extent it does, but not so much, because other stuff can be got now; I think that the straw regulates the number of cattle in the Lothians more than the turnips.

Mr. *Pease*—continued.

8509. Have you had a fair amount of straw for the last two years?—Not particularly.

8510. You have not had an average harvest the last few years?—Fair.

8511. You do not think that that has influenced the decrease of stock?—I do not.

Mr. *King Harman.*

8512. How do you propose to deal with Irish store cattle?—I would put the Irish cattle under the same conditions as the cattle in England and Scotland.

8513. That is to say with regard to restrictions on bringing Irish stores into Scotland?—I would not count Irish stock as foreign stock, but I would count them as British stock. I would put them under the same regulations as England and Scotland, whatever those regulations were.

8514. Supposing that it was known that there was considerable foot-and-mouth disease in the South of Ireland, you would not prohibit the movement of stores from the North of Ireland to the port of Glasgow, for instance, would you?—No, certainly not.

Mr. *Jacob Bright.*

8515. Has the price of hay anything to do with the number of cattle kept?—Not much in the Lothians.

8516. It might have in England, might it not?—Yes; I think that there are more cattle fed on hay in England than there are in Scotland.

8517. Has not hay been exceptionally dear during the past few years?—It has.

8518. May not that have lessened the number of cattle kept?—It may have in England, but I do not think it has in Scotland. As I have already stated, we do not feed so much on hay.

8519. But you think that it may have had that effect in England?—It may have.

Mr. *M'Lagan.*

8520. You say that you have given up breeding now?—Yes.

8521. Did you give up breeding from your fear of your cattle being carried away by disease, or did you actually suffer from pleuro-pneumonia or foot-and-mouth disease in your dairy stock?—Yes, I have suffered several times both from pleuro-pneumonia and foot-and-mouth disease.

8522. And it is a fact, that cows are more apt to be attacked with those diseases than feeding cattle?—I do not know whether they are more apt to be attacked, but it is a far greater loss when they are attacked; it is almost sure to cause abortion, for instance, if it breaks out in a byre or cow-stable.

8523 Do you know whether the dairy farmers in Scotland have been obliged to alter their system on account of these diseases?—I believe they have, but I could not give you the particulars.

8524. Formerly, the dairy farmers in Scotland used to breed all the stock which they required to replenish their dairies; do they continue to do that, or do they now buy their cows, and take no calves whatever from these cows, but feed off the cows entirely?—Yes, a great many do.

8525. Do you think that the dread of the disease

Mr. *M'Lagan*—continued.

ease has anything to do with that?—There is not a doubt of it.

8526. So that if they should be attacked by the disease they have their cows half fat to bring to market at once?—Quite so.

8527. And that you suppose to be one of the causes of the reduction in the number of cattle bred in Scotland?—Certainly.

Mr. *Assheton.*

8528. I understood you to say that the number of sheep in a certain district had decreased by 10,000, and that the number of cattle had also decreased considerably; what have the farmers in that district done with the keep which they would have otherwise employed in feeding those beasts?—The people just grow anything else which might be sold. If there is a decrease in sheep, or a decrease in stock, of course there is less keep provided. The cropping goes into other crops, such as grain.

8529. I wanted to know whether more land is put under the plough?—I could not tell you from the statistics; I have not looked up that, but of course it would naturally arise that it would go elsewhere. Perhaps more hay would be sold, for instance, if there were fewer sheep kept.

8530. If there had been those 10,000 sheep, they would have eaten something or other; is it that grass has been produced and not eaten, or has the land been made to produce something else besides grass?—I think that the land will have been made to produce something else besides grass. I do not think there is much produced that is not eaten in Scotland.

8531. What would that someting else be?—It may extend over all the other crops. Without looking up the statistics I cannot tell you that.

8532. It is not that grass has been wasted, but that other crops have been produced; what is that other produce?—It would extend over all the other crops of the farm; hay and beans, for instance, and any other crops that are grown. I am speaking from practical experience; I am not giving it from any figures.

Mr. *Assheton*—continued.

Mr. *Smith.*

29 June 1877.

8533. I want to ascertain whether more land has been ploughed, than would have been ploughed if those 10,000 sheep had been alive?—Without looking up the statistics I could not tell you that. It is spread over the three counties. I could not tell you exactly the acres.

8534. I do not want the acreage, but those 10,000 sheep would have eaten something if they had been alive, and I wanted to know generally whether what has been produced instead, has been produced off meadow land or off ploughed land?—I am sorry to say that I cannot tell you.

Chairman.

8535. I suppose you are aware that the import of foreign animals into Scotland bears a very small proportion to the total amount of import into the United Kingdom?—I am.

8536. But in Scotland you are not so dependent upon the foreign stock as they are in other parts of the United Kingdom?—No, it has been estimated that only about six or seven per cent. are imported into Scotland.

Mr. *M'Lagan.*

8537. I think that at the present time other stuffs are consumed by cattle as well as turnips; I suppose you meant cake, and so on?—Yes.

8538. And if cattle are paying well you generally replenish your stalls with a good many more cattle, and you buy more of those extraneous stuffs to help your turnip crops?—Certainly.

8539. So that you may have fewer cattle, you may still not have more land under the plough, but will use less of these auxiliary feeding stuffs?—Yes, that does take place too.

8540. And it very often takes place when you have a dread of any disease coming on, you put on fewer cattle, and consume more food grown upon your own farm, and buy less extraneous food?—Yes.

8541. And that may account for your having the same breadth of turnips or grass, and the same breadth of cereal crops, and yet fewer cattle?—Quite so.

Mr. Anthony George Robinson, called in; and Examined.

Chairman.

Mr. *Robinson.*

8542. I believe you are a Steam Ship Agent?—I am.

8543. And you have been connected with that trade from some considerable time?—I have.

8544. You have been for many years a large importer of cattle from the Continent, have you not?—I have.

8545. Have those importations been from the Continent generally, or have they been confined to some particular countries?—Mainly from Spain and Portugal, and some from Holland.

8546. But you are acquainted, I think, with the whole foreign cattle trade?—Entirely so.

8547. And you have a trade also with other countries?—Yes.

8548. Can you state to the Committee at what times of the year those importations principally come into this country?—I can. Norway has a spring trade from January or February, until March or April or May, perhaps. The trade from Sweden is from January to July. From

Chairman—continued.

Denmark the trade is all the year, but principally during the first six months of the year?—Then you come to Germany, we have the trade from Schleswig-Holstein from July until November; the German cattle from Prussia proper are mainly stall-fed cattle, and they come in the spring from January to July; the South German cattle and the Austrian cattle, when they are permitted to come the same. Oldenburg produces grass-fed cattle, and those come in the autumn. Then you come to Holland, and Holland produces all the year round. Belgium is mainly a country of transit from Germany.

8549. There is not much import from Belgium proper is there?—There is not much import from Belgium proper, with the exception of a few sheep. Then you come to France, which sends us stall-fed cattle more or less all the year round, and in the summer and autumn grass-fed cattle from Normandy; it was formerly a large supply until the war; but the war denuded the country

Mr. *Robinson.*

29 June 1877.

Chairman—continued.

of cattle to such an extent that they have not got their supply of cattle up yet; and it is only in very small numbers that they come here.

8550. You attribute the diminution of the supply from that country to the fact of the supply in France in itself having been so much diminished by the war as to render it impossible that they should send food out of the country?—Yes; previously to the war in 1866, we imported 38,000 cattle from France, and in 1869 it was reduced to 21,000. The war came on in 1870, and in 1876 it was a little over 5,000; but it was reduced from 1866 to 1869 before the war from 38,000 to 21,000. Then you come to Spain, and we get from the North of Spain cattle all the year round, but none from any other part of Spain. From Portugal we get cattle all the year round.

8551. Then you have an import from France, Spain, and Portugal, and Germany all the year round?—Yes.

8552. Whilst you have your Schleswig-Holstein, Swedish, Danish, and Norwegian cattle coming at different times into the market, filling up the year between them?—Yes, the Danish cattle come all the year round, but the Swedish and Norwegian cattle come only in the spring.

8553. And Schleswig cattle come only in the autumn?—Yes.

8554. Are those cattle carried in ships kept separate for the trade, or are they brought over with other cargoes from those countries?—Schleswig-Holstein have nothing else to give us, and consequently they are brought separately, but the Swedish and Norwegian cattle are sent with general cargoes. A great many of the Danish cattle are sent in vessels exclusively devoted to the carriage of cattle. Some of the Danish supply are sent in vessels together with general cargo. The other German supply and the Dutch supply, and the French supply, with a trifling exception, and the entire of the Portuguese supply come in cargo vessels. The Spanish cattle generally come by themselves, partly by ships direct, principally by small sailing vessels to the out-ports, and what come here come in cargo vessels.

8555. In your opinion, which is the best method of dealing with the cattle trade; do they come over in better condition when they come over in separate boats than when they come with mixed cargoes?—No, I do not think that there is any difference.

8556. The same conditions for the proper carriage of the animal can be carried in both cases?—Quite so; they come rather better perhaps in the cargo boats than in those which are devoted to cattle exclusively.

8557. When the boat is exclusively used for the trade are not the conditions better than when the animals form part of the general cargoes?—No; all cattle vessels are now, under the Order of the Privy Council, obliged to be fitted in a particular way. Whether they are cargo vessels or cattle vessels they are not allowed to carry the cattle loose, or how we like, as we were allowed to in olden times.

8558. In this trade great improvement has taken place in the carriage of cattle by sea?—Yes, the vessels have improved and the mode of carrying the cattle has improved.

8559. With regard to the foreign import as at present regulated, we are dependent very much

Chairman—continued.

on inspection for protection against these diseases, which are under the consideration of the Committee, do you believe that the inspection which we have is sufficient for our protection against the importation of these diseases?—From my experience of it it is perfectly worthless. I have had cattle myself of my own import over and over again passed by the inspector and in the course of two or three days they have taken the foot-and-mouth disease (of which I am now speaking more particularly) to such an extent that we could not show them in the market, and we were obliged to sell them out of the market. Those animals had been inspected before being shipped, they had been inspected on landing, and had undergone the usual 12 hours' quarantine, or a longer time perhaps, and then they had been passed by the veterinery surgeon as sound. That has happened constantly; it is not one instance, but several instances. I have myself seen foreign cattle standing in the Metropolitan Market with incipient foot-and-mouth complaint. A neighbour of mine in Essex who had a dairy for his amusement (he is a city man), sent a special order to a salesman, a friend of his, for 20 Dutch cows for the purpose of bringing them in to calve down at a certain time; he had a herd of about 60 English cows. Those cattle were landed at Thames Haven, inspected by the inspector, put into railway trucks, taken round to Romford, and then taken direct from the railway station at Romford to his place. In the course of four or five days they began to fall, with foot-and-mouth complaint. Then it got to his own herd, and what between the loss of the milk and the loss of the cows from slipping their calves, he set down his loss at 600 *l.* at least, and gave up dairy-farming; he said he had had enough of it. He said, and I quite agree with him, that there was not in the neighbourhood or anywhere about any foot-and-mouth disease, until those cattle came.

8560. That you represent as another instance of the uselessness of relying on the inspection which at present exists?—Yes, and it is the same with regard to Irish cattle. A great deal more care is taken with regard to them than is taken with regard to the English cattle. The ships are disinfected under the orders of the Privy Council, and I have a letter from one company stating that they spend 5 *l.* or 6 *l.*, and even up to 8 *l.* a trip when they have a full cargo, in disinfecting the vessel; so that really on one vessel in a year, I expect, there is more money spent in disinfecting than there is in disinfecting the whole of London in a year. The cattle are inspected in Ireland by officers of the Privy Council before shipment at the port of embarkation, and marked by the inspector, the same as our officers here do if they inspect foreign cattle. Yet I heard Lord Fitzhardinge and his bailiff say here that he saw them landing cattle out of a vessel with foot-and-mouth complaint. As far as I have seen, I do not think that you could have a more efficient inspection there. We have all our cattle inspected abroad before shipment. The Government in Holland are under a pledge to our Government here to have the cattle inspected. I believe that the Privy Council or the Foreign Office arranged with the Dutch Government that, provided they inspect cattle, and ceased to be a transit country for cattle, and gave them notice if any disease

Chairman—continued.

disease broke out, they would not schedule Holland. That was the law before the breaking out of cattle plague. The consequence was that we were not allowed to embark cattle in Holland except by daylight, and they were immediately, previously to the shipment, inspected. In addition to that, we paid some inspectors ourselves, and I have known two inspectors pass a cargo of sheep, every sheep being put on a table and examined before they were put on board the vessel, and landed here the next day; and yet that cargo has been stopped by the Privy Council inspector on its arrival here, from its having palpable foot-and-mouth disease. Further, with regard to inspection, it is not the same in all ports. They are stricter in London than they are in the outports. I have had repeatedly to complain to the Privy Council of the course pursued in Harwich as compared with that pursued in London.

8561. You mean that it is so much less strict at Harwich?—Yes, the inspector at Harwich has passed cargoes of cattle, one in particular, before the expiration of the 12 hours, contrary to the regulations.

8562. In fact, you represent that not only is the inspection not sufficient to protect us, but that, under the present regulations, it is very unequal?—It is very unequal and irregular; and, further, it is a curious fact that in 1875 there was a great deal of foot-and-mouth disease in Holland, particularly (I am speaking of foot-and-mouth disease; with reference to cattle plague, we all know the extent of that, and where it comes from, and all about it); cargo after cargo arrived from Rotterdam in London, at Brown's Wharf, and at Thames Haven, and they were stopped one after another; the vessels left the port of Rotterdam for Harwich on the same afternoon as the vessels left there for London, bringing sheep more particularly, and sheep from the same markets, and from, I may say, the same men, and I believe out of the same fields; ship after ship arrived, and passed free at Harwich, and came up to the London market. I thought that so odd that I made some inquiries. I could not trace it, but all that I could find out was, that there was a difference between the mode of inspection at Harwich and the mode in London. The Government have been excessively particular, I think, in the men that they have selected. I never heard the slightest whisper of anything being wrong with them.

8563. Those were both Government inspectors?—They were both Government inspectors. I could not trace it, but I could only account for the thing in this way: that if they found a suspicious animal on board they stopped it, and slaughtered it, and passed the rest.

8564. You think that the regulation which applies in London, that if an animal is suspected of disease the whole of the cargo is sent for slaughter, does not apply at Harwich?—I cannot speak from my own knowledge, but I can only account for it in that way, because for two or three weeks cargo after cargo arrived at Harwich every day, five days a week, and they passed free; and then when I called the attention of the Privy Council to it in the month of August, a week or two afterwards, they began stopping them at Harwich, and they stopped them there as well as they did in London.

8565. What you represent to the Committee is, that sheep coming from what you describe as the same fields and from the same port, and sent by the same men going to two different ports, the cargoes in the one case were always stopped, and in the other case they were always allowed to go free in the market?—Yes.

8566. And you use that as an argument to show the uncertainty of results of inspection?—Yes, that is from my own knowledge as to the import of cattle.

8567. That being the case, have you considered whether you would adopt any more stringent measures, such as slaughtering at the port of embarkation?—Slaughtering at the port of embarkation, I think, would be too stringent a measure, because it would alter the trade completely; not that it could not be done, because we did it in 1866; we slaughtered them in Holland.

8568. During 1866, when the trade was prohibited, was there any large number of cattle slaughtered abroad and sent here as dead meat?—A considerable number.

8569. Are you able to speak to that of your own knowledge?—Yes; we brought as many as 3,100 or 3,200 sheep over in one ship.

8570. Was that a trade which continued for some time?—It continued throughout the year when they were obliged to be slaughtered; it commenced at the end of July, and then it went on to the end of the year.

8571. Can you give any instances of the amount that you brought over in the months of July and August, that year when the trade first began?—It was very small; in September the cargoes were 300, 560, 900, 1,070, 720, 220, 1,160, 1,040, 1,480, and 1,458.

8572. Those were slaughtered in Holland and brought as dead meat into this country?—Yes.

8573. And that occurred, as you state, at the time when our regulations, on account of the outbreak of 1865-66, had prohibited the import of live animals?—Yes.

8574. Showing, therefore, that when the prohibition took place a dead-meat trade arose at once?—Yes, it did. This is only from one part of Holland; I have not got the particulars of what came from the port of Rotterdam; this is only from North Holland. From Friesland, as they had no cattle plague there, we were allowed to bring them alive. We brought from Amsterdam, Nienw Diep, and Medenblik 45,000 sheep in 1865, and 1,900 beasts alive, mainly in the autumn. The next year when we had to slaughter them and bring them over dead, we only brought 132 beast and 39,673 sheep. Then in 1867, in January, they were still obliged to be slaughtered, we brought over 111 beasts and 844 sheep. Then the restriction was removed, and we brought 74,849 live sheep in 1867, against 39,673 dead the previous year.

8575. The trade immediately sprung up again on the restrictions being removed?—Yes; the continental cattle trade is very much in the hands of small dealers and farmers, men of very small capital, from Holland northwards; therefore if they had to slaughter them abroad, a new set of traders would have to spring up who would have to buy them, and take them to the large towns or cities, and slaughter them the same as they are doing in America, and send them over in that way.

Mr. *Robinson.*

29 June 1877.

Chairman—continued.

8576. Though the slaughter of the animals in the country was possible, as is shown by what took place in Holland, still the diminution in the supply was so considerable that you do not believe that it would be possible to establish slaughter at the port of embarkation?—No; there is now a limited import of dead meat from abroad, more particularly from Holland and Hamburg; but I have taken out the quantity from Friesland, from where the principle import is, and I see that we carried in 1874, 8,191 cwt., principally mutton; in 1875 we carried 9,951 cwt., and in 1876 only 6,873 cwt.; so that it does not increase.

8577. While those sheep were being sent dead to this country were they for the consumption of London, or were they distributed through the country?—They went in the neighbourhood of London as well.

8578. Have you sent them into the country any distance?—No, they went into the Metropolitan Market here, and there they were sold. A great many, I believe, were sold at the wharf. They were not sent into the country for sale; they were all sold in London.

8579. Not recommending a system which you think would diminish the supply; that is to say, slaughter at the port of embarkation, have you considered the other question, whether it would be necessary, in consequence of your feeling that inspection is not a security, to slaughter at the port of debarkation?—Yes, I think that the whole foreign trade would be very much better and much steadier, and the supply would be more regular, if all foreign animals were obliged to be slaughtered at the port of debarkation.

8580. Then you are in favour of slaughter at the port?—Yes.

8581. Would that be universally applied to all foreign countries?—Yes, I think so. I would apply it, because there are none of them free from disease.

8582. What would you do with regard to Denmark, for instance?—Denmark is pretty free; we had one cargo this year with foot-and-mouth disease.

8583. That is the only instance in which we have had any record of complaint against Denmark for some little time, I think?—Yes; but I understand from the evidence given here that Sweden sends over a good deal of store stock into Denmark. Now Sweden is not free from foot-and-mouth disease.

8584. The evidence that we had from the Danish witness, I think, went to show that although Sweden had done so, fresh regulations had been made recently upon that point, and that therefore Denmark had protected itself against the introduction of that disease from Sweden?—I did not understand so.

8585. Under the circumstances, seeing that they represent, and I suppose truly, that they have not had cattle plague in that country for a century, and they have had only three instances of pleuro-pneumonia, in which it was stamped out as soon as it showed itself on the farm on which it originated, and that foot-and-mouth disease had been only sent over here in one instance, would you apply the same restrictions with regard to Danish cattle as you would apply to other foreign cattle?—I think that I would make no difference with regard to Denmark. It would make practically in my opinion no difference in the supply here. The Committee have

Chairman—continued.

heard a good deal of the loss of sending cattle to Deptford for slaughter; I do not believe in it, and it is a curious fact that although most of the cattle countries are now scheduled, those that are free now to send into the country, that is to say Sweden and Denmark, and Spain and Portugal have sent us less the last six months, having the Metropolitan Market free, and not having the competition of the Dutch and the German cattle coming from Deptford, than they sent us last year.

8586. You believe that if the whole of the foreign cattle were slaughtered at the port of debarkation, it would produce so much more regularity in the trade, that the objections to the market would be considerably lessened?—Yes. The market is not what you would call a market now; for weeks there will be nothing there. Since it was opened in 1872 for weeks there was nothing there, and then perhaps there were 20, 30, or 50 beasts. Then would come a time when a cargo of sheep, from either Germany or Holland would be stopped, and they would have to go to Deptford; so that they would have to go and beg the buyers to go down and buy them.

8587. So that the paucity of buyers in the market now really arises from the uncertainty of the trade?—Yes; the trade is getting into a settled state, and there are plenty of buyers down there now.

8588. In consequence of the restrictions which have driven a greater number of cattle into that market?—Yes; I have the number of butchers that have slaughter-houses; there are 26 wholesale butchers who have slaughter-houses hired from the Corporation annually at Deptford, and the Corporation have four for the use of the public, in which any one can slaughter an animal, and they are constructing five more.

8589. It has been stated to the Committee that the small retail butcher did not find it worth his while to establish a slaughter-house there, and that practically, therefore, the trade was in the hands of those few men who had established slaughter-houses; is that so?—Yes, that is so; very few of them go down there. When Schleswig-Holstein cattle were sent to Deptford, in 1872, some did go down; but I think it would be a very good thing for London if the small slaughter-houses were done away with, for they must be very injurious to health in the case of any epidemic. They can go down there if they please, and one of those men that has a slaughter-house there actually now and then takes cattle from the Metropolitan Market to Deptford for slaughter; he does not take them to any extent, but he has done so.

8590. You represent that the uncertainty of the market really produces the evil complained of; that is to say, the want of competition, and that by making it absolutely a market for the slaughter of all animals coming from abroad, you would create a trade there which would bring the competition at once to it?—Yes. With the exception, perhaps, of Denmark, all the other counties are diseased.

8591. Does that apply to Spain and Portugal?—Yes.

8592. It has been stated before this Committee that Spain and Portugal were practically free from those diseases?—They were up to 1873. All the time I was an importer from there, which was for a great many years, I do not recollect a single

Chairman—continued

single case of disease; but in 1874 the foot-and-mouth complaint broke out in Portugal, and out of 42 cargoes imported into London and Southampton (because I include Southampton as being the port of London), 13 were stopped for foot-and-mouth complaint. In 1875, out of 58 cargoes imported, four were stopped; in 1876, out of 61 cargoes imported, 11 were stopped. In 1874, there were 29 cargoes, consisting of 5,700 animals, which passed as sound; and 13 cargoes consisting of 2,789 animals were stopped as having disease.

8593. You represent, therefore, that Spain and Portugal are not as free from those diseases as Denmark is, and therefore that those countries have not the same claim as Denmark might have to send cattle free?—No.

8594. We have not had instances of this complaint being produced from the cattle from Schleswig, have we?—We had two cargoes in 1874 or 1875 stopped for foot-and-mouth disease, but no others.

8595. The Schleswig cattle proper that are fed in that country and sent to this country are usually a perfectly healthy supply, are they not?—Yes; the only thing now is that Schleswig and Holstein are open to the entire of Germany. Previously to this the German Government passed some local regulations that stopped it, but now I understand that they have positively refused to make any special arrangements about it, and therefore the cattle can be sent in from Germany to Schleswig-Holstein. Under our Privy Council regulations, by this new order they could not export, because a man has to make a declaration that he has had them in his possession a certain time, but it does not prevent anyone sending them into Schleswig-Holstein.

8596. But Schleswig, as I understand, is a grazing country, and they feed off on the grass the animals that they get from Denmark principally, and supply us with those animals?—Yes.

8597. And, therefore, with proper precautions, the diseased German cattle need not come through the Schleswig trade?—No; but last year they had a good deal of foot-and-mouth complaint, I have understood, in Schleswig-Holstien, but the farmers are so much interested in putting a stop to it, that they have prevented it reaching us. Their cattle are inspected previously to shipment. They stop any diseased cattle from coming here.

8598. The real fact that interests us in the matter is that we have not had any of these diseases imported from Schleswig into this country?—No.

8599. That being the case, and Denmark, also, being, as you have described, free, notwithstanding that, you think that, for the benefit of the trade generally, there ought to be no distinction, and that they ought all to be slaughtered at the port of debarkation?—Yes. In 1872, when Schleswig-Holstein was scheduled, we got more cattle from there than we did in the previous year or the year after.

8600. In the year when they went to Deptford?—Yes.

8601. You mean to represent that, as showing that the restrictions which you suggest of slaughter at the port would not in any way alter the current of trade as between the two countries?—Yes; my experience of it is pretty well this: that when I have had cattle stopped, and sent to Deptford, when there was other cattle to

Chairman—continued.

sell there, there was very little difference between the value there and in the Metropolitan Market.

8602. I suppose, from your experience of carrying the dead meat which you describe, there is no difficulty in its being slaughtered at Deptford, and in supplying from Deptford the towns through the country with dead meat?—Up to the last two or three weeks there were parties from Manchester and from Birmingham, and other places, who bought very largely at Deptford, and slaughtered sheep there and took them into the country. Little or no horned cattle has gone to Deptford up to the present time except calves since the beginning of the year. The Dutch supply has not commenced yet.

8603. That is in consequence of the German supply being prohibited, and the other supplies not being in season, as I understand?—Yes. They go there, and they buy the sheep, and they slaughter them, and they have what no wholesale butcher in the town has; they have vans where they can hang the carcases up from hooks, and then they have trucks on the railways with hooks to hang them up by, and they take them down to Manchester and Birmingham, so that they are there ready for the market the first thing in the morning.

8604. You corroborate then what Sir Alexander Wood, the deputy chairman of the Great Western Railway, told us, as to the possibility of sending the sheep long distances from the Deptford Market?—Yes; it has been regularly done since the commencement of the season up to within a week or two, when the supply fell off, as it always does at this time of the year; although curiously enough more German sheep came in in the last few weeks in May and June than came last year during the same time, notwithstanding the prohibition and notwithstanding the slaughter at Deptford.

8605. Therefore it would appear that the fact of the slaughter does not diminish the supply to this country?—Not at all; it would rather increase it, I think.

8606. And you think that making it uniformly a market where those foreign animals had to be slaughtered would tend to improve the price, from the fact of a better trade being created?—A steadier market, a steadier supply, and a steadier price.

8607. I understand what your views are with regard to the import of foreign animals from abroad. Have you considered the question of what ought to be done with the stores from abroad?—With the exception of milch cows, which we get mainly from Holland, we get no store cattle.

8608. You get no number of stores of any importance?—None at all; there are cattle sent over here that are not half fat, and sometimes when they are sold very cheap when there is a depressed market some venturesome man on account of the price may buy them for stores; but as a rule no store cattle come over here except when the hay crop in Holland fails, then they hold on to the animals until they are almost starved, and then they send them here and sell them for whatever they fetch; that has only occurred two or three times since the trade opened in 1843.

8609. I believe that the store import is about 10,000?—Yes, from 8,000 to 12,000 cows.

8610. And

Mr. *Robinson.*

29 June 1877.

Chairman—continued.

8610. And of those the larger proportion you state are for the purpose of the dairies?—Yes.

8611. You state that you consider that the inspection is unsatisfactory and unsuccessful for the purpose of protecting us from foreign disease; how would you propose to deal with these store animals that come over for dairy purposes?—They are not wanted for breeding purposes, but only for milk, and the reason they are bought for milk is because a dairyman can buy three Dutch cows for what he would have to pay for two English cows; of course the three give rather more milk than two, and they grow in this country into fair animals; but the supply is so small that arrangements might be made, say, at Thames Haven and at Harwich, and down the river, to quarantine them for any given time. You might bring over a cargo of, say, 200 or 300 animals and quarantine them for three or four weeks, or whatever length of time you might think desirable, and then let them go free.

8612. You think that the trade is so limited a trade that all the dangers of quarantining, which I daresay you are as well aware of as anybody, might be got over with regard to the few animals that were wanted for that purpose?—Yes; it is only the temptation of the low price of the Dutch cows that induces many dairymen to buy them; and many of the men that buy them take care to isolate them for some time before they mix them with their own stock; so that if any of them drop with pleuro-pneumonia they kill them at once, or if they are taken with the foot-and-mouth complaint they keep them isolated until they are free from it.

8613. It has been stated to the Committee that a good deal of the possibility of disease might arise from the introduction of these animals into the dairies from the constant changes in those dairies that would ensue from sending the animal into the market the moment it became a little infected; do you think they quarantine them themselves before sending them over?—No; they are bought in the market and sent down to the vessel and embarked at once and sent over. The Dutch cattle, particularly cattle shipped from the neighbourhood of the distilleries round Schiedom, are very subject to pleuro-pneumonia.

8614. Is that from their feeding?—From their feeding, and altogether; I do not see how Holland can be free from pleuro-pneumonia; they shut up all the cattle for six months; in fact, they have them you may say in the house; because they have only to open the door from the dwelling part of the house into the stable where the cattle are; they are under the same roof, and in order to get the hay and all under cover they have the roof very low and the cattle are kept very warm. I have been in one of those places; in the month of May they exhaust their hay crop, and the moment they can they turn the cattle out into the fields, and then they have not a bit of shelter, and I wonder that more of them do not get diseased.

8615. You describe the possibility of so much disease amongst these animals, but you think that nevertheless we should be safe in admitting them for dairy purposes under quarantine?—You would want a very strict quarantine.

8616. I understood you to say that you would have a quarantine of one month?—I have no experience of pleuro-pneumonia, though I, unfortunately, have had experience of foot-and-mouth disease in a small way.

Chairman—continued.

8617. It has been stated that the time of incubation of pleuro-pneumonia is a very long one, and that one month would probably be no guarantee against the introduction of pleuro-pneumonia; is that your view?—I cannot speak as to that.

8618. You are acquainted with the Irish trade also, are you not?—Yes.

8619. Can you speak as to the carrying of that trade from Ireland?—Yes, I can speak of it from the time when we used to send the cattle over from Dublin to Liverpool in sailing vessels, in collier brigs. We slung them from off the quay from the masthead down into the hold. After that the steamers took them, and we used to have to sling them into the hold of the steamers and out of it again at Liverpool. I was engaged in that for 10 or 12 years, and I never heard of such a thing as foot-and-mouth disease or pleuro-pneumonia in that time. I have seen 2,500 pigs turned out of one vessel, and lots from the north of Ireland, and there was not a bit of foot-and-mouth disease of any sort for years.

8620. Was that under conditions as to transit, which would now perhaps not be considered so satisfactory?—They would not ship them at all now in that way. The steamers took half as long to make the voyage. If they got into Liverpool in 14 or 15 hours they considered it very quick, and if they lost their tide they had to wait in the river until the next tide, before they could get into dock to land, because as I have already stated, the cattle were obliged to be slung into and out of the hold. Now they take them across in nine or ten hours, and if they are late for the tide they go alongside the stage and walk them all out.

8621. I understand that the idea that these diseases are generated by treatment in the passage is not borne out by your experience?—I do not believe it at all.

8622. And you think that if the animals suffer from foot-and-mouth disease or pleuro-pneumonia, it must be in the system before they start rather than be developed by the passage?—Yes, and from the treatment which they get after they are landed and sold. The Irish dealers are quite alive to it, particularly now, with regard to foot-and-mouth disease, because if a farmer can guarantee that his cattle have had the foot-and-mouth disease within a reasonable time he will get a better price; a man will buy them more readily because they will stand until he gets rid of them.

8623. One witness was asked a question as to whether he was aware of a system of inoculating for the disease; is that the reason why they inoculate for the disease in order to give the guarantee?—No, there are generalty two men employed in it; one is a buyer in the country and the other attends the stock over to England, and he hands them over at Bristol or at Liverpool, or wherever it is, to salesmen there, and he goes with them. All the large dealers have fields, and they rest them wherever they possibly can; it is only when a fair is near the port that they are taken to it at once; and after all the distances that the cattle are driven in Ireland are not what they are here.

8624. There is no reason, you think, why, with proper regulations, these diseases should not

Chairman—continued.

not be got rid of in Ireland?—None whatever, I think.

8625. You do not believe, as I understand you, that there is any foundation for the assertion that the disease itself is engendered in the transit?—No; if they catch a man attempting to ship diseased animals he is prosecuted; that is not done here. Again, there is another great check; all the steamboat companies in the south of Ireland insure the cattle, and they take right good care, as far as they can, not to take any sick or diseased or lame animal on board, because they run the risk of having to pay for it; and they insure them at such an amount that it is a premium to men to have them killed on board the vessel; they insure them at a higher rate than they are worth in the market.

8626. With regard to slaughter at the port of landing, you have stated that you think that the dead-meat market at Deptford would be an improving trade if all foreign animals were obliged to be slaughtered there; you would apply that regulation to foreign animals in the defined ports through the country as well as to London?—Yes.

8627. And you think that the certainty that they must be slaughtered at the ports would produce an even trade, and therefore a paying trade, at those ports?—No doubt. I may point out the uncertainty of the trade here: a vessel starts from Rotterdam, and she has to land her cargo at Thames Haven; she arrives at Thames Haven on the Saturday evening, and they are out of quarantine on the Sunday morning, and are expected to be up at the market. The salesman goes down to the Metropolitan Market expecting to find his cattle there, and he ascertains that they are stopped at Thames Haven, and then he has to come down to me, or to others, to send a vessel down to Thames Haven to bring them up to Deptford for slaughter; so that the man that receives them does not know whether he will have them in the market, or where he will have them; and that uncertainty is a great drawback to the trade. In fact, I fancy that it has driven some men out of the trade.

8628. With regard to a point upon which you gave evidence before, and which has again been raised before this Committee, you stated that you had had experience of the carriage of dead meat from abroad during the time that the restrictions prevented the cattle from coming alive; from your experience, have you been able to supply the offal as well as the dead meat?—Yes, we brought the offal over with the dead meat.

8629. In any quantities?—Yes, in considerable quantities.

8630. In answer to a question which was put to you in 1873, you stated that you had brought over a cargo of 3,000 dead sheep, with the whole of their offals with them in the same cargo?—Yes.

8631. Have you ever had experience since of the carriage of offal?—No, the dead meat that comes over now is, generally speaking, the prime parts; we bring over no offal, mostly the hind-quarters of the sheep from Holland.

8632. Was it possible to bring that offal over in such a condition as to place it upon the market here for consumption sound?—Yes, they send offal down to Manchester or Birmingham now. Those dealers who buy the sheep at Deptford send the offal with them.

Chairman—continued.

8633. When the towns send up to purchase at the Deptford Market, do they carry down the offal as well as the carcase?—They do.

8634. And that goes down in sufficiently good order to compete with fresh-killed offal at the slaughterhouses of the town?—Yes.

8635. Do you state that from absolute experience?—Yes.

8636. Therefore there would be, in your opinion, no difficulty in meeting that great demand on the part of the large number of the population of this town for offal if the animal had to be slaughtered at Deptford?—None whatever.

8637. It could be carried, and might compete just as well as if it was slaughtered in private slaughterhouses?—Yes; the wholesale man at Whitchapel does not sell the offal as a rule; he sells a little of it, but he sells the bulk to a retailer who takes it away; if he has to take it away from Whitechapel he can just as readily take it away from Deptford.

8638. But you go further, because you say that men who purchase the dead meat for the inland towns, carry down for sale in those towns the offal of the animals which they purchase?—Yes.

8639. And that shows that the offal will bear a railway journey of a considerable distance without sustaining such injury as to prevent its being saleable?—Yes. It has been stated over and over again that if you slaughter meat at Deptford it does not fetch the same price in the market as if it were slaughtered at the private slaughterhouses. It is very hard to disprove a thing of that kind, though it seems ridiculous; but one fact is this, that none of the slaugtermen have taken the slightest precaution to provide conveyances to bring up the meat in the best condition, but they put it into waggons, and pile the carcases one on the top of the other, and bring it up from the slaughterhouse; if they lost a farthing per pound upon a bullock by the difference of slaughtering at one place or at another, I think they would take more precautions than they do now; if you see meat hung up in a shop in Paris, it has been killed at an abattoir outside, and it is as fresh and as nice looking as if it had been killed at the back of the house, because they carry it there hung up in a conveyance in which it is not packed one piece on the other.

8640. Therefore, with proper regulations, there is nothing to prevent animals being slaughtered at the port, and the carcases and the offal, or any part of them that may be required for consumption inland, being carried inland without injury?—Nothing whatever, in my opinion.

8641. That is your experience, extending over a number of years in the trade?—Yes.

8642. And you having, at the time of those restrictions being in force, largely imported this offal into the country?—Yes.

8643. Have you had any experience in the American dead-meat trade?—No; it is only since it has cropped up so much that I have gone into the question a little, and examined how it comes. It strikes me that, although we have hitherto been almost at a standstill for a supply of meat from abroad, America is going to supply the want in this country.

8644. Supposing the conditions to be carried out, of a proper means of conveying the dead meat from America, you think that the trade will be a continuous one?—It is quite clear that it

Mr. *Robinson.*

29 June 1877.

Chairman—continued.

can be done, and that it has been done. It has been stated in evidence that it can pay at 6½ *d.* per pound. From what information I have been able to gather, I fancy that there would be no loss to the man if it were sold at 4½ *d.* per pound, in consequence of the price of the live animals and the cost of conveyance. It was given in evidence here that the live animals sold for 30 *l.* apiece which, was about 5 *s.* 6 *d.* per stone of eight pounds. Then the freight on that animal is 7 *l.* 10 *s.*, and I have been informed that they cost about 16 *l.* over there. At all events, there is the fact of a Dutch cattle-dealer having gone over from here, and having made an arrangement with a Dutch steam company to bring over live cattle for him; he went across, and he brought two cargoes, which came in bad condition, because I think he lost 16 out of one lot, and he quarrelled with them. He has made an arrangement with another steam company, the Anchor Line, which runs to London, and he has gone out himself, and taken out five men with him, and he is going to ship them regularly, and I understand that he has made a profit of quite 5 *l.* apiece on them by bringing them over alive; so that if you take a profit of 5 *l.* on the animals alive, and the freight is 7 *l.* 10 *s.*, and they are sold for 30 *l.* apiece, that would reduce the cost of the animal on the other side to 17 *l.* 10 *s.* I have been told that good ones have been bought at 16 *l.* If you take 110 stone at 4½ *d.* per pound, that will be 16 *l.* 10 *s.*, and then, putting the offal down at about 4 *l.*, that would be 20 *l.* 10 *s.*, and the freight is 2 *l.* 15 *s.*, or about ¾ *d.* per pound. That leaves 17 *l.* 15 *s.* for the dead animal as against 17 *l.* 10 *s.* for the live animal, without profit, so that anything which the dead meat fetches over 4¼ *d.* per pound would be profit. I have here a memorandum of the 25th May 1877. American beef, hind-quarters, at 5 *s.* 4 *d.*, and fore-quarters, 3 *s.* 4 *d.* at Smithfield market that morning. This is, on an average, 4 *s.* 4 *d.* der stone, or 6½ *d.* per pound all round. I see by the Customs' Report, that the White Star steamers carry about 1,200 quarters every voyage, and a captain of one of the steamers told me that they have always brought it in in perfect condition. The National Company coming to London always bring the meat in in perfect condition. If it gets out of order it is owing to the ice failing, or to the machinery breaking down, or to the treatment of it after it comes out of the vessel here. Now, I understand that they are about to spend several thousands of pounds down the river to form a depôt for storing this American meat so as to send it up as it is wanted. I thought at one time that it was a mere attempt on the part of the Americans to sell patents, and I did not follow the thing. I am speaking of the dead-meat trade; the live-meat trade has been tried for two years in Glasgow to a certain extent.

8645. The live-meat trade, I suppose, is a trade which is practical and remunerative in the summer months when you are not liable to rough weather?—It is, no doubt; but they tried it, and they found when the autumn came that they lost too many of them; and, from my experience in the Oporto trade, and in the cattle trade generally, my opinion is that they will not be able to carry over those live animals late in the autumn and through the winter with safety, in consequence of the weather. I speak from experience, having had a line of steamers running to New

Chairman—continued.

York for years, and we know that they come in knocked all to pieces sometimes, and of course when the vessel has her bulwarks knocked away, and her boats carried away, the cattle must suffer.

8646. You believe that the dead-meat trade will be perfected, and that it will be found to be a so much better trade, that it will take the place of the live import?—Yes, I believe it will be a large trade.

Mr. *Assheton.*

8647. You told us just now that when the trade in live animals was entirely stopped in 1868, there was still a considerable trade in dead meat carried on to this country, but in a very much smaller degree than that which was carried on in live stock?—Yes.

8648. Do you think that if the restrictions on the live stock had gone on for some little time longer the dead meat trade would have revived so as to have approached the same pitch that the live trade had attained to?—No, I do not think it would.

8649. I understand, however, that you do not contemplate returning to killing the animals on the other side of the water, but you prefer having them brought to Deptford, and slaughtered there?—Yes.

8650. I presume, then, that the great diminution in 1866 can hardly be taken as a test of any diminution which would ensue by slaughtering all the animals at Deptford?—No, not at all, I think.

8651. Do you think that if it was suddenly made the law that all animals were to be slaughtered at Deptford, or at some other port of debarkation, there would be a great diminution in the quantity of cattle sent?—No, I do not think there would; because, taking this year for instance, Holland was scheduled in the beginning of January, and up to the end of March last year we brought 6,733 beasts from Holland; I am speaking of oxen. This year, although Holland was scheduled, we imported 6,610 into London, which shows a falling off of only 123 beasts in the first three months in the year with slaughtering at Deptford, as compared with letting them go free. The import of cattle altogether in 1876 and 1877 into London up to the end of May, including what comes into Harwich, and Southampton, and Queenbrough (because I consider that they are parts of the port of London), was 36,908 beasts. This year there were 24,781 beasts. Then I account for the difference in this way; there were 2,515 milking cows imported last year, and this year there were none imported at all; then I imported 1,666 beasts from Corunna last year, and I did not import any at all this year. Then the Oporto supply is some 400 less this year, or rather more; then there is the German supply, which is prohibited and last year we imported 6,460; so that there is a total of 35,800 now, against 36,900 when the trade was free, except that it is obliging the French and German cattle to be slaughtered at Deptford.

8652. I suppose that there are a great many butchers in London who never kill cattle at all (though it sounds rather a curious thing to say), but who buy entirely at Deptford or at other dead markets?—That number is gradually increasing. They are giving up the practice of slaughtering them; they find that they can supply themselves better at the Metropolitan Market.

8653. And

Mr. *Assheton*—continued.

8653. And that is a class of butchers, is it not, that trade in the highest class of meat?—All classes, I fancy.

8654. I presume that to those butchers it does not matter whether the cattle they buy are slaughtered at Deptford or whether they are killed in other slaughter-houses?—Not the slightest; it is only a question of cost.

Mr. *Jacob Bright.*

8655. You spoke of the dead-meat trade that we had in 1865; at that time were not the live cattle prevented from going to other countries as well as to this country, in consequence of the plague?—I am not aware.

8656. You have been a large importer of cattle yourself?—Yes, I have been in the import trade for years.

8657. You have a strong opinion in favour of killing everything at Deptford?—Yes.

8658. When you imported largely yourself, as you did, I suppose, from uncheduled countries sometimes, did you ever take your cattle to Deptford to be slaughtered?—Not unless I was compelled.

8659. You preferred other modes of disposing of them?—Yes, on account of its being a restricted market. There is another point with regard to Deptford which is a very serious one, and that is that the Government require their contractors, as a rule, to deliver live animals for Aldershot and Portsmouth, and, I think, Chatham and different places. Now the principal buyers of foreign cattle are the Government contractors; therefore if the cattle are sent to Deptford, there is one buyer, a large buyer, and a good buyer, as a rule, shut out in consequence of the Government restrictions.

8660. But, although you have so high an opinion of the importance of slaughtering at Deptford, when you yourself had the option you never went to Deptford?—No.

Mr. *Murphy.*

8661. You stated that you had a general and probably, I apprehend, a particular acquaintance with the system of the shipment of cattle at the ports in Ireland?—Yes.

8662. You have an acquaintance, I take it for granted, with the port of Cork?—Yes.

8663. You are acquainted with the system of the shipment of cattle at the port of Cork?—Yes.

8664. Are you aware that no cattle are allowed to be shipped at Cork without being previously examined, and each beast branded with the Privy Council mark, by the vetinary surgeon appointed by the Pivy Council?—Yes.

8665. Are you aware that a series of pens have been fitted up close to the water side for the purpose of examing the cattle in?—Yes.

8666. In a yard immediately attached to the place of shipment?—Yes.

8667. And that immediately on the cattle leaving those pens for shipment after examination the pens are disinfected?—Yes.

8668. That a constant supply of water is laid on on the premises?—Yes.

8669. That the lairs and the ground are thoroughly washed and swept?—Yes, they are cleaned and disinfected.

8670. That chloride of lime and whitewash are freely used?—Yes.

Mr. *Murphy*—continued.

8671. That all straw and droppings are removed, and that no fresh cattle are allowed in until this process is gone through?—Yes.

8672. That a regular staff is provided by the steam ship company for this purpose?—Yes.

8673. That the cattle are then walked into the vessels which are at the quay, which is only a distance of 60 feet from the yard?—Yes, I know it is only across the quay.

8674. Are you aware what is the nature of the fittings in the vessels under the Order of the Privy Council?—Yes.

8675. You are aware, of course, that to prevent the possibility of overcrowding, the pens are obliged to be constructed according to the dimensions given by the Privy Council for that purpose?—Yes.

8676. I believe that 15 feet by 8 is about the smallest size?—That is the largest size.

8677. They can only hold a certain number of cattle; for instance, each pen can only hold five fat beasts?—It depends upon the size of them.

8678. They will hold about eight two-year-olds and about eleven yearlings?—I think that must be wrong.

8679. Are you aware also that the ships, when they are loading, are watched by the constabulary, who are told off by the Privy Council for that purpose to see that there is no overcrowding?—Yes, the Privy Council Inspector has always two or three policemen attending on him, and these men go on board the vessel and examine her before the cattle are shipped and they look after the shipment. Then the great point of safety, in my opinion, is that the company insure the cattle, and if they kill them, they have to pay for them, and sharply, too.

8680. You are aware, I believe, or at least if you are not yourself aware, you may have heard, that the officials of the Society for the Prevention of Cruelty to Animals are very particularly vigilant in that regard, and that they have made complaints on the subject which probably were made from the very best motives, but which in their zeal they have a little over-coloured?—I am not aware of anything of that kind.

8681. Are you aware that in consequence of the regulations of the Privy Council, and the impossibility of more than a certain number of cattle being allowed to be shipped on any one vessel at Cork, it has been frequently the case that supernumerary vessels have been obliged to be put on to take the additional quantity of cattle coming for shipment?—Yes.

8682. Have you ever heard that two supernumerary vessels have been put on from Cork to Bristol on the same day?—I am not aware of more than one.

8683. With regard to insurance, I believe that the custom is this: that the cattle-dealer, after his cattle have been examined (and not allowed to go on board without being free from every disease), is allowed by the company to insure each head of cattle, either against loss by death occurring on board, or against the cattle not being landed in a proper state at the port of debarkation, and that he pays a certain percentage of insurance on the value of the beasts?—Yes, I am aware that that is so.

8684. And that, in fact, the owner of the cattle can make the company liable for any loss sustained by damage to those cattle in transit?—Yes.

Mr. *Robinson.*

29 June 1877.

Mr. *Murphy*—continued.

8685. Therefore, as you say, they for their own sakes (we will not talk about higher motives, but from selfish motives) take every possible precaution that the vessel is not over-crowded, that the cattle are delivered with safety, and that they have proper attendance, proper food, and proper ventilation?—Yes.

8686. From all the experience that you have had, can you suggest the possibility of any greater amount of preparation or precaution being taken as to the arrangement and treatment of the cattle in their transit than does take place at the port of Cork?—I do not know that they can do anything more than they do; some of the vessels go 14 knots an hour, they are well ventilated and very expensive; and if I were to be asked to construct a vessel for the conveyance of cattle, and given *carte blanche*, I do not know how I could improve upon most of the present ships which are employed in conveying cattle between Ireland and England.

8687. You are aware, are you not, that the Cork Steamship Company have had vessels expressly built for the purpose in Newcastle?—Yes, I have a general knowledge of the whole of the Irish cattle trade and the ships connected with it, both north and south.

8688. If cattle should happen to die in transit, that must necessarily occur from stress of weather and from the fatigue of the voyage?—Not necessarily, because sometimes they die without any stress of weather.

8689. The log-book is the proper place to refer to, to ascertain if a casualty has occurred, whether the weather has been bad?—Yes.

Mr. *Elliot.*

8690. Have you brought the meat in hot weather as well as in cold weather from abroad?—Not in the height of summer.

8691. Did you lose any meat by deterioration?—Sometimes it came over rather deteriorated.

8692. You did not use any ice, did you?—No, we packed them in the hold, one on the top of the other. If the weather was very damp or close, more particularly if it was wet, it suffered more.

8693. We were talking of store cattle; there is a quarantine at Harwich now, is there not?—I do not think that there is a licensed quarantine ground, but they have plenty of space for it; they have ground where, when cargoes of milch cows have arrived, and they have been stopped for foot-and-mouth disease; the owners objected to have them slaughtered, and they arranged with the Privy Council and got permission to quarantine them there, and they kept them there until they were sound.

8694. Are you not aware that there have been cattle killed at Harwich, rather than that they should be kept there for 14 days' quarantine?—Yes.

8695. You do not agree with the last witness, who said that he would recommend a two months' quarantine; you think that it would not pay?—I do not think that it would.

8696. Can you tell the Committee what the difference between the freight of live animals and dead animals is from Germany?—The dead meat from Hamburg is brought at about 2 *s.* 6 *d.* to 3 *s.* per quarter; that is from 10 *s.* to 12 *s.* a-head, and the freight of live animals is about 20 *s.* In Holland it varies from 30 *s.* per ton up to 70 *s.* per ton, so that, practically, there is not much difference.

Mr. *Elliot*—continued.

8697. You made a statement as to the American shippers, and you said that if they could get it over here at 4½ *d.* per pound, you thought they could sell it at a profit?—No, I said I thought they could sell it without loss.

8698. What could a man from Germany, sending cattle over here, afford to sell them at without loss?—I have no idea. In putting down the 4½ *d.* per pound, I am calculating a profit of 5 *l.* upon a live animal, and I am not calculating any profit upon the dead meat, that makes the difference. I have understood, first that they have sold here at a profit of 5 *l.*; then I have understood also that they have bought there at the price of 16 *l.* I have heard a witness say that he sold the cattle at 30 *l.*; so that if I take the freight off, which is 7 *l.* 10 *s.*, and the 5 *l.* for the profit, it brings it to 17 *l.* 10 *s.* as against 16 *l.*; so that it is pretty correct I think. Then valuing the animal on the other side either at 16 *l.* or 17 *l.* 10 *s.*, 4½ *d.* per pound, here will clear them.

Mr. *King Harman.*

8699. In your evidence in 1873 you spoke of the way in which the meat was brought up from Deptford, and you said, "I have seen a man sitting in a cart of meat upon the top of a calf, with his arms upon the brisket of the calf, as if he were in an arm-chair;" do you mean to tell the Committee that they go on pretty much in the same way still, and that there is no improvement?—There is no improvement.

8700. You have a good deal of knowledge of the Spanish trade, I think?—Yes.

8701. In 1873 Professor Simonds gave evidence to the effect that he believed the number of cattle in Spain was decreasing, and that in a very short time they would not have any surplus stock for exportation; do you think that that is the case now?—I think, judging from the exports that we have got from Portugal, from Oporto, it seems to be a very stationary trade, because the cattle there are only fed in pairs by the farmers in a limited district, and they are working oxen fed in pairs; there are no large herds kept.

Mr. *Norwood.*

8702. Are you aware that the importation of live cattle from New York has very greatly increased this year to Hull, Southampton, Liverpool, and London?—Yes, it has considerably.

8703. Have you seen any of those animals when they were landed?—No, I have not.

8704. Are you aware that they arrive in very good condition as a rule?—Very good.

8705. And yet, as I understand, you would prohibit those animals from coming alive?—Yes, I think so, because there was a very suspicious cargo at Southampton some little time ago; they stopped them for some days, and the Privy Council had a great consultation; they did not pass them for four or five days, I think; and in a country like America, of so large an extent as it is, and with a very varying climate, between winter and summer, I think if you treat pleuro-pneumonia as a disease, it must exist there.

8706. But the Privy Council passed the cattle that you talk about, did they not?—They did; but they set them down as having inflammation of

Mr. *Norwood*—continued.

of the lungs. I am sure I do not know what is the difference between pleuro-pneumonia and inflammation of the lungs.

8707. Do you believe that a trade in dead meat, packed in ice, is practicable from the Continent in a pecuniary point of view?—No; I think that you will have to alter the trade altogether in order to bring it to that.

8708. Would it pay pecuniarily to go through the expensive process of erecting these meat safes and getting the ice to convey meat a 24 hours' journey to England?—That would only have to be done supposing that we were driven to it; supposing that we were driven to prohibit the import of all foreign cattle alive, the people would then lay themselves out for a dead-meat trade. For three or four months in the height of the summer I think that you would have very little to bring over; then when the cold weather came, from the north of Europe you might, but certainly from the south, from Portugal and Spain, I do not see that you could have any arrangement about it, because you would have to import the ice there. I do not think any of the Spanish or Portuguese people would go into that trade; it would have to be done by English men, but I do not think that the trade would ever pay.

8709. In point of fact, it would be too expensive an operation for the near ports to enter upon that safe and ice affair?—I think that to a certain extent it would, although we must bear in mind that all through the season there is a large amount of bacon made in Hamburg; they kill the pigs in the height of summer, and cure them, and send the bacon here the same as they do in Ireland from Waterford; in the summer they send 4,000 or 5,000 bales a week.

Colonel *Kingscote.*

8710. But they bring many dead carcases of sheep over from abroad, do they not?—Not at this time of the year; it ceases practically in April, and it begins again at the end of September or at the beginning of October.

Colonel *Kingscote*—continued.

Mr. *Arthur Peel.*

8711. What do these companies which carry the Irish cattle insure the cattle against; do they insure them against death as well as injury?—Yes; death and injury.

8712. You said that they insured their cattle at a higher rate than their value in the market?—Yes, as a rule.

8713. But, taking that statement by itself, there is no motive whatever on the part of the shippers to look after the safety of the cattle, for whether they die or live they get paid?—The steam company take right good care of that; they look after them; their men on board the vessel look after them as well as the people who are with them.

8714. The best test of the treatment would be the premiums of insurance, I suppose; what are the rates?—One shilling and sixpence on an animal, up to 20 *l.*; and 2 *s.* on an animal up to 25 *l.* to Liverpool. A sheep is only 4 *d.* Those are are rather high rates, I think.

Chairman.

8715. You stated, in answer to a question that you went to the Islington Market in preference to Deptford during the time that you were importing; I understood you to say that was in consequence of what you have described as want of competition in the Deptford Market, which you believe would be altered by the system which you suggest of making it universally a foreign market?—Yes, there were no cattle there very often but what I had there.

8716. And that uncertainty was what prevented your taking your cargoes there, and forced you into the Islington Market?—Decidedly.

Monday, 2nd July 1877.

MEMBERS PRESENT:

Major Allen.	Colonel Kingscote.
Mr. Chaplin.	Sir Rainald Knightley.
Mr. Dease.	Mr. M'Lagan.
Mr. Wilbraham Egerton.	Mr. Murphy.
Mr. Elliot.	Mr. Norwood.
Mr. W. E. Forster.	Mr. Arthur Peel.
Mr. French.	Mr. Ritchie.
Mr. John Holms.	Sir Henry Selwin Ibbetson.
Mr. King-Harman.	Mr. Torr.

SIR HENRY SELWIN IBBETSON, BART., IN THE CHAIR.

Mr. JAMES MELVIN, called in; and Examined.

Mr. *Melvin.*

2 July 1877.

Chairman.

8717. I BELIEVE you are the President of the Scotch Chamber of Agriculture?—I am.

8718. Does that chamber represent a large number of the counties in Scotland?—We have 23 members on the direction, and most of them are from different counties in Scotland. We generally choose a member from each county.

8719. Therefore you, speaking for the Scotch Chamber, represent to this Committee the views of the farmers of a large number of counties of Scotland?—I believe so.

8720. You yourself, I believe, are a practical farmer to some considerable extent?—Yes; I pay 1,800 *l.* a year in rent.

8721. Is your farm principally a sheep-farm, or do you graze cattle there?—I breed Border Leicester sheep, and I fatten cattle which I purchase for fattening purposes.

8722. Do you fat off in the year any great amount of cattle?—About a hundred.

8723. I think you have been for some years engaged in the New Zealand and Australian Land Company?—I am director of that Company, and I have been so for eleven years, since it was formed.

8724. That company farm to a very large extent, do they not?—Yes; they have about 600,000 sheep; they have 2,500,000 acres of Crown lands on lease, and they have about 250,000 or 260,000 acres of purchased lands.

8725. You superintended the valuation of that property for the Company, did you not?—Yes.

8726. Have you any knowledge of the working of it, and of the shipment of the animals there?—Yes; I had the control over the selection of the live stock, under our general manager in Glasgow, Mr. Morton.

8727. Have you yourself, in your own herd, had any experience of the contagious diseases, which are referred to the consideration of this Committee?—Yes, I have had a great deal of experience of them.

8728. Have you suffered in your herds from cattle plague?—Not on the farm that I now hold, and which I have held for 38 years; but I have

Chairman—continued.

on another farm, which I formerly farmed, in Mr. M'Lagan's county, Linlithgowshire.

8729. Was it during the great outbreak of 1865-66 that you suffered?—Yes.

8730. Have you had it since that time?—No.

8731. Have you suffered from other contagious diseases in your herds?—I have suffered from pleuro-pneumonia and from foot-and-mouth disease.

8732. Have you had pleuro-pneumonia often on your farm, or have you had much experience about it?—I have had pleuro-pneumonia for nine or 10 years before the cattle plague, almost every year, less or more; but since the cattle plague I have only had one attack of it.

8733. To what do you attribute its stoppage at that particular time?—To two causes. One cause is the change, in my own opinion, as to the infectious nature of the disease. Formerly, along with a number of the Scotch farmers, we held with Professor Dick, who was our veterinary professor, that pleuro-pneumonia was not so very contagious, and we were rather easy about the buying of cattle; we did not pay so much attention to that as we have since.

8734. Then you did not connect in any way the regulations which were then in force for the suppression of cattle plague in 1865-66 with the sudden cessation of attacks of pleuro-pneumonia upon your farm?—That and from being more careful in buying.

8735. Have you had foot-and-mouth disease amongst your sheep?—During the years 1871 to 1876 I had four attacks of foot-and-mouth disease amongst my cattle and two amongst my sheep.

8736. Did you suffer any great losses from those attacks?—I consider that during the four attacks I lost about 2 *l.* per head on my cattle, to the extent of a hundred cattle.

8737. Was that from pleuro-pneumonia or from foot-and-mouth disease?—From foot-and-mouth disease, not from pleuro-pneumonia.

8738. Was that loss in consequence of cattle going off in condition, and having to be brought again into that condition?—That was so.

8739. Have

Chairman—continued.

8739. Have you any dairy stock?—Not now.

8740. Then it was simply on account of the deterioration in condition?—It was simply on account of the deterioration in the condition of the cattle, and that I put at about 2 *l.* per head.

8741. For how long did it throw your cattle back?—I should say that the deterioration in condition was equivalent to a loss of about six weeks.

8742. Has the chamber to which you belong had its attention directed to this question of the cattle diseases?—Since the year 1865, when there was an outbreak of cattle plague, they have repeatedly had the subject before the directors, and at the general meetings.

8743. Have they represented their views to the Privy Council?—Repeatedly.

8744. What has been the resolution that they have come to as the result of their consideration at the different times which you have mentioned?—I may state that the last memorial which was psesented to a certain extent embodies the views that they have eventually been led to hold. Perhaps I may be permitted to read the prayer of the memorial which was drawn up in February.

8745. That was at the time of the last outbreak?—Yes, before it was ascertained positively that the rinderpest was in London. "In conclusion, your memorialists would respectfully urge upon your Grace that, in the face of a threatened importation of the cattle plague, which, if it has not already reached this country in a cargo lately imported at Deptford, is at present extending itself into western Europe, a favourable opportunity now exists for introducing the system advocated by your memorialists, which, it is admitted on all hands, would give the highest attainable degree of security against the introduction of these contagious and infectious diseases so destructive among the flocks and herds of this country, without as your memorialists believe, unduly interfering with that freedom of trade which is now recognised by all classes of the people as essential to the true interests and prosperity of the kingdom. Wherefore, may it please your Grace to give the matter your favourable consideration, and authorise such steps to be taken as may be deemed necessary to remove the wide-spread dissatisfaction that now prevails amongst agriculturists with the present system of requiring all foreign animals imported into this country to be slaughtered at the port of debarkation, or to do otherwise in the premises as to your Grace may seem fit."

8746. That was the result, as I understand you, of several considerations of these different diseases at different periods by your chamber?—Yes.

8747. They resulted finally, from the fear of the cattle plague breaking out again in England, on your sending that memorial to the Privy Council?—They did. I may mention that I have here copies of all the different memorials which we have presented.

8748. But that really embodies the result of those previous memorials?—Precisely so.

8749. Are those views of the chamber endorsed by other associations in Scotland?—They are so. I may mention that the district association of Mid-Calder, which has part of Mid-Lothian and part of Linlithgowshire as its bounds, took up the subject, and considered it at its general meeting, and the result was the presentation of a memorial to the House of Commons by Lord Dalkeith.

Chairman—continued.

8750. Was that a memorial to the same effect as the memorial which you sent to the Privy Council; does it also recommend slaughter at the port of debarkation?—The memorial is to this effect: "Your petitioners therefore humbly pray your Honourable House to take into serious consideration under the above circumstances, whether the importation of live stock, except as stated" (for breeding purposes, under certain conditions) "should not be entirely prohibited. Should this be impracticable, your petitioners are of opinion that a strict quarantine, of sufficient duration, under Government inspection, should be established at all the ports of debarkation. The enormous losses of late years amongst home stocks, which might be greatly lessened, if not entirely suppressed, were the above views adopted, induce your petitioners to pray your Honourable House to take this important subject into careful consideration."

8751. Do you represent that it is the view of the Scottish farmers generally that the foreign cattle imported should be slaughtered at the port of debarkation?—I believe it is.

8752. There has been of late a considerable introduction of lean stock from abroad into Scotland, has there not?—The number has diminished very much in comparison with what it was 20 or 25 years ago.

8753. The introduction of lean stock has been reduced of late years instead of increased?—It is almost entirely confined now to milch cows from Denmark, and some from Holland.

8754. But the introduction of those has been supported generally for some time, has it not, by Scotch farmers?—That memorial which I have just read is a convincing proof to me that the Scotch farmers do not wish for those cows.

8755. You think that the fear of the introduction of disease has caused them to alter the views which they formerly held as to the importation of those animals from Denmark, and that they now wish that foreign cattle should only come in as fat cattle, and that they should be slaughtered at the port?—I believe so. I may mention that this memorial is from the chief persons who purchase these cows in the dairy district west of Edinburgh.

8756. Then the view which you express would not be shared by the owners of dairies in the towns?—I cannot speak as to that.

8757. Do you believe that they are largely dependent upon this importation for the supply of their dairies?—I think that they would be far better without it.

8758. Could that supply be met in any other way than by introducing those cows from Denmark?—I think that if we were clear of these infectious diseases, there would be better cattle bred and kept in the country than there are.

8759. And do you think that the want that they now feel for those cattle would be superseded by the increased breeding of stock for dairy purposes in the country itself?—I believe that it would be so in Scotland.

8760. Do you think that those dairy cows increase the danger of the spread of pleuro-pneumonia?—The Dutch cows especially do so.

8761. Do they import many Dutch cows into Scotland?

Mr. *Melvin.*

2 July 1877.

Chairman—continued.

Scotland?—There are a considerable number brought over, but I am not exactly sure as to the number.

8762. Is it within your own knowledge that there is a larger per-centage of cases of pleuro-pneumonia where those dairies exist?—Yes; from my own knowledge and from returns that I have obtained from parties in an official position, I believe that there is a much larger number of cases of pleuro-pneumonia in dairies where they get Dutch cows than there is in the other parts of the country.

8763. Do you know at all what the number of those cows kept in Edinburgh is, taking Edinburgh as one of the principal towns in which those dairies exist?—The number of licenses for stalls given out by the authorities is 1865, but the stalls are never all full. About 1,600 cows is the number, I believe, that is kept in Edinburgh within the Parliamentary bounds.

8764. Have you any returns as to other towns?—As to Leith, which adjoins Edinburgh, I have not the number licensed; but one of the magistrates gave me the number of cows, taken by counting them, at 394.

8765. Was that this year?—That was a fortnight ago.

8766. You stated, I think, that you were able to speak, from the information that you possess, as to there being a greater number of attacks of pleuro-pneumonia in those places than in the others; can you speak at all as to the number of cases that have occurred lately during any fixed period?—In the year 1875, according to the Report to the Privy Council from the Veterinary Department, there were in Edinburgh 363 cows slaughtered for being affected with pleuro-pneumonia out of the 1,600 that are kept in the town.

8767. That was in the whole year, was it?—Yes.

8768. Did that include the return for Leith?—No, not for Leith.

8769. Were there many affected in Leith?—I think there were 100 and odd in Leith.

8770. So that out of a number of nearly 2,000 cows, there were about 464 cases of pleuro-pneumonia?—Yes.

8771. Have you any facts with regard to Glasgow, where they also have these dairies?—In Glasgow, from the facts furnished by Professor McCall, there are 2,000 cows kept; and about 115 was the number of cases of pleuro-pneumonia that was compensated for by the local authority.

8772. There the number are very much less?—Very much less.

8773. Have you any way of accounting for that; do the Glasgow dairies draw their supplies equally from the foreign import?—The Glasgow dairies draw their supply from a healthy district of country, that is Lanarkshire and Argyleshire, to which there is no importation of stock.

8774. Therefore you would quote those figures as showing that in Glasgow, where they draw their supply from the inland counties, the dairies were not so severely attacked as in Leith and Edinburgh, where the foreign dairy cows are principally landed?—Precisely so.

8775. Can you give the Committee any idea of the length of time that it takes to bring the animals from Holland into Edinburgh?—Three years ago I went over to see the chemical agricultural stations in Germany, and I returned by Rotterdam. At Rotterdam there was a cow market being held, which I looked through, and in the steamer in which I sailed there were 40 or 50 cows which had been bought in that market, and which were put on board the steamer and landed in Leith within 36 hours from the time that they were put on board the steamer.

8776. Then I suppose you would represent that as pleuro-pneumonia is a disease that is very often a long time lying dormant in the animal, the inspection is not sufficient to protect you as against the introduction of pleuro-pneumonia by those cows?—Certainly; neither for foot-and-mouth disease nor for pleuro-pneumonia.

8777. Do you believe that these diseases are imported diseases, or do you consider that there is any possibility of their breaking out spontaneously in Scotland?—I do not think that they belong to this country at all, but that they are foreign diseases.

8778. To your knowledge, is there much pleuro-pneumonia and foot-and-mouth disease in Scotland at the present time?—I think that there is pleuro-pneumonia in the towns.

8779. But I mean generally throughout the herds of the country?—There is very little in the country, though there are cases; a case broke out in my own neighbourhood the day before I left for here. But there is no foot-and-mouth disease, and there is very little pleuro-pneumonia generally.

8780. In your opinion might these diseases be stamped out if the source of their supply which you have described, namely, the foreign import, were put a stop to?—I think so.

8781. It has been stated to the Committee by some of the witnesses, that these diseases might be induced by the treatment of the animals on board ship, and by the hardships endured during the voyage; is that your opinion?—I do not believe it.

8782. Do you form that opinion from having had considerable experience in sending animals out long distances to the colonies?—To New Zealand. We never had a case of foot-and-mouth disease in the 5,000 sheep that we sent out to New Zealand, or of any disease at all except what they carried with them, which was scab in the cargo from the mistake of a veterinary surgeon.

8783. In those countries, I believe, at the present moment they have practically stamped out the diseases?—In New South Wales, where they have had very sharp restrictions for the last 15 years, they have got entirely quit of scab, and Victoria also is now clear.

8784. I suppose that is a country in which, from the nature of the country itself, it is very difficult to carry out regulations?—Extremely so.

8785. And yet, notwithstanding that, they have stamped out the diseases?—They have stamped out scab. I believe that out of the 24,000,000 sheep in New South Wales all the flocks are reported as "clean," and so is Victoria, so long foul.

8786. Are you yourself aware what the regulations are which have brought about this result in New South Wales?—I am sorry that I have not the whole of the Acts which the New South Wales Government have passed in regard to that; but I have one here which was passed 11 years

Chairman—continued.

years ago, which, I think, is the foundation of their success in keeping out foot-and-mouth disease and rinderpest.

8787. Are the regulations, as laid down in that Act, very strict?—Very strict.

8788. Wherever disease breaks out do they make it an infected district?—They first isolate the disease.

8789. They isolate the particular place in which it breaks out; do they take power for slaughtering as we do in this country?—Their regulations are different for different diseases. With regard to scab, they give the owner so many months (three months) to have his flock entirely cleared; if it is not cleared by that time he is heavily fined.

8790. But with regard to the other diseases which we have had more particularly before us, foot-and-mouth, pleuro-pneumonia, and cattle plague; as to those diseases, do they take power to slaughter in a defined area, or do they merely slaughter any animals attacked, and any animals that may have been brought in contact with them; in the one case the defined area is what was recommended by the Report of the Committee in 1873, and what is in force now on the Continent; and the other is in force now in our own country; that is to say, the slaughter of diseased animals and any other animals that may come in contact with them?—The law is, that they would slaughter the whole of them.

8791. Have the authorities power to slaughter any suspected animals, or are they limited only to slaughtering those that come in absolute contact with the disease?—They have power to slaughter suspected animals.

8792. In that respect they have the same power as they have on the Continent for dealing with those diseases?—Yes.

8793. And you say that those regulations, even in a country where it is excessively difficult to enforce them, have practically been so far successful as to stamp out the disease?—Yes.

8794. Would that lead you to imagine that we should be able to do the same in this country?—I may mention that they have not been able to stamp out pleuro-pneumonia, because pleuro-pneumonia is so difficult to deal with there. In many parts of New South Wales there are what they call scrubs, that is a sort of low brushwood, and the cattle break away and get into the low brushwood, and there they become half wild, or quite wild, and if pleuro-pneumonia gets into a mob of wild cattle, it is impossible, as it were, to stamp it out.

8795. Those are conditions which, not existing in this country, do not in the least prevent the possibility of stamping it out here?—Not in the slightest.

8796. Have you had any experience during your many voyages to those countries of the trade in dead meat?—My attention at that time was not particularly directed to it, but I have sailed in steamships between the different Australian ports where dead meat was carried on board the ships. For instance, I came down from Sidney to Melbourne, and there were the carcases of 50 cattle hung on hooks on the deck protected from the sun, and the meat kept perfectly well over the voyage.

8797. What was the length of the voyage?—Turning up my notes that I made at the time, I find that that particular voyage was 54 hours, but

Chairman—continued.

it was a very speedy one; very often 60 hours, or about 2½ days, is the time that they take for that voyage.

8798. During that time were any other precautions taken to preserve the meat except hanging it in the shade with a free circulation of air?—The passage of the steamship through the air created a current which kept the meat, and of course at sea there are no flies such as would destroy it on land.

8799. I suppose the meat was properly packed?—No; it was hung just as it would be in a butcher's shop, and that was the great beauty of it; the temperature was about 70 degrees even at sea.

8800. Notwithstanding the temperature, from the way in which they carried it, the meat was brought in a condition fit for the market after a voyage of that length?—Yes. My curiosity was attracted to it, and the last thing I did before I left the vessel was to lift the canvass and look at the meat, and it was quite fresh.

8801. In what year was this?—September 1866.

8802. At the time that you were superintending the sending out of animals to this farm?—At the time that I was engaged in passing between the different colonies superintending the valuations of runs for the company.

8803. Turning to another point upon which this Committee has had considerable evidence, that is to say, with regard to the present regulations in the country, do you think that any improvement could be made in the regulations which are now in force; for instance, in making them applicable by a central authority rather than by a local authority?—The great difficulty at present is the want of uniformity in the carrying out of the regulations.

8804. In your opinion, the regulations, to be effective, should be uniform?—Yes.

8805. Would you recommend that the regulations for dealing with these diseases should be centred in the Privy Council?—In the Privy Council.

8806. And that the regulations which are at present exercised by the local authority should be done away with, and that they should be made regulations of a central authority?—Or the local authorities ought to be made to conform to the instructions of the Privy Council.

8807. You think that the local authorities generally should work upon the regulations laid down by the Privy Council?—Yes.

8808. So that you might get uniformity throughout the different districts?—Precisely.

8809. Have you considered at all the point as to the way in which those regulations issued by the Privy Council should be enforced?—There is one suggestion which I would make with regard to that; I would take a lesson from the way in which the Inland Revenue conduct their business, and even from the way that the Education Department manages in Scotland. The Inland Revenue have general officers whom they send all over the different districts of the country, and who make visits of surprise, as do the inspectors of national schools in Scotland; if a national schoolmaster is thought not to be getting on very well, a visit of surprise is made by the inspector. I think that such an officer would be of great value in seeing that the regulations were properly carried out.

Mr. *Melvin.*

2 July 1877.

Chairman—continued.

8810. I understand you to say that you think those regulations, when once they were laid down by the Privy Council, should be enforced by the inspectors appointed by the locality, but that the Privy Council should ensure their being carried out uniformly and properly by having travelling inspectors, who should visit the localities at different unknown times, and see that they were properly worked?—Exactly so.

8811. And you do not think it would be necessary that the central authority should have the appointment of inspectors in all counties, but that they might work it, as the Inland Revenue do, by means of travelling inspectors?—I think so.

8812. Would you make any alteration in the rules with regard to dealing with pleuro-pneumonia?—I would decidedly do so.

8813. How would you propose to alter them?—I will state a case in point. A farm in my neighbourhood was recently let; it did not suit the farmer to graze his own grass, and he let his grass to different people this spring; a neighbouring farmer, who had pleuro-pneumonia in his stock, took one of those fields, and, after 30 days having elapsed, he sent his stock to this particular field; within other 30 days pleuro-pneumonia broke out again in this field seven or eight days ago, and three or four fresh cases occurred in that field; so that 30 days is much too short a time.

8814. You would increase the time in which the restrictions should operate in cases where pleuro-pneumonia developed itself?—Exactly.

8815. To what length would you extend it?—I should say that 90 days would be safe; about three months.

8816. During those three months would you restrict all movement from the infected district?—It depends upon how the district is defined. I should think, in regard to pleuro-pneumonia, it is not so very infectious as foot-and-mouth disease, and it would be more from the immediate locality.

8817. That would be more a question of limiting the area; but in a case of pleuro-pneumonia, you would not think it necessary to take so wide an area as in a case of foot-and-mouth disease; though in both cases, for whatever area was declared to be infected, you would for three months prohibit all movement; is that what I understand you to say?—Yes.

8818. Supposing the area was, on account of pleuro-pneumonia, declared to be an infected area, you think that restrictions as to movement for three months would be sufficient in that case; and probably in case of foot-and-mouth disease, which you believe to be more infectious, you would have a larger area dealt with in the same way?—Yes, but in a shorter space of time.

8819. For what space of time would you think that those regulations ought to apply, in case of foot-and-mouth disease?—I should think that they ought to be in force for one month.

8820. Would you enforce those regulations by penalties of any sort?—Yes; I would increase the present penalties considerably, for any infringement of the regulations, when they were laid down by the Privy Council.

8821. That being your view of the regulations to stamp out the disease do you, speaking as I understand you to say, as representing a very large number of the farmers of Scotland, believe that, with a view of getting rid of the diseases, they would be prepared to submit to such stringent regulations as that?—It would depend upon whether they are convinced or not that the diseases are not to be brought in. They would not submit to stringent regulations if the diseases were permitted, as it were, to be brought into the country.

Chairman—continued.

8822. I understand you, then, to say, that these regulations which you believe would stamp out the two diseases would only be submitted to by the farmers if they got along with them, a guarantee that the diseases would not be imported from abroad?—Exactly so.

8823. It is a combination of restrictions against foreign cattle, and restrictions on your own cattle, for the purpose of stamping out the disease, which you would recommend.

8824. Do you believe that there would be very much opposition, beyond the farmers, to restrictions of that sort affecting the trade of the country?—I think that the memorial that I have read from Mr. M'Lagan's county, and from the county in which I reside, is sufficient proof that the farmers are prepared to submit to any restrictions in order to get the disease stamped out; but I believe that the jobbers and dealers would make a great outcry about these restrictions.

8825. The outcry against the regulations would not come, you think, from the farmers, but from the salesmen and the other people, who would be seriously affected if markets and fairs were stopped?—Exactly so.

8826. Have you much sheep-scab at present in Scotland?—In different districts there is a little; it is spread over many different districts, but not to any serious extent.

8827. I suppose from what you have described as the power of getting rid of it in New South Wales, you would say that that ought not to be allowed in this country?—Clearly; I do not think that the regulations are sufficiently strict to get quit of it.

8828. And you think that the farmers would be prepared to see those regulations very much strengthened for the purpose?—Undoubtedly.

8829. And if they were so strengthed you believe that they would be as effective here as they have been in the colonies?—Equally so.

8830. Have you ever considered the question of the supply of meat to the population here from Australia and our other colonies?—Yes, along with our manager of the New Zealand Company; we have repeatedly discussed the matter.

8831. I suppose that there is a capacity for a very large supply from that country if you could get over the difficulty of transport?—There are barely 2,500,000 people in Australasia, including New Zealand; and at the present time there are 70,000,000 sheep and about 7,000,000 cattle, which gives a very large number of live stock for the population which exists in those colonies.

8832. Has there been any attempt beyond what we know of in the way of preserved meat being sent from there, to get over the difficulty of sending meat to this country?—There have been frequent attempts made, but none of them have been successful as yet. There was an attempt made about five years ago by Mr. Mort, of Sidney, which I believe gave rise to the dead-meat trade from America. He was able to carry the meat in a sound state on a ship for three weeks.

8833. But

Chairman—continued.

8833. But there has been no attempt to deal with it in the way that it is dealt with from America?—There is a vessel now on the voyage, I believe, called the "Northam". I heard by letter from Sidney that there was a vessel leaving Sidney in which the meat was sent at a very low temperature, at about freezing temperature, and that vessel, if not on her way, will very soon be on her way to this country to give the matter a fair trial.

8834. Although the experiment is going to be made, we have no experience of it at this moment?—No.

8835. When did the vessel start?—I am not sure of the day.

8836. I suppose if it was possible to overcome that difficulty, the price of the animal, the raw material, out there would render the trade a remunerative one?—Yes, unless the expenses connected with it are very large; because the price in the Colonies is very low.

8837. Have you any figures as to the amount of breeding cattle in Scotland?—I think that in England and Scotland we have higher and better breeds of cattle than they have anywhere else.

8838. At present we are restricted from sending them abroad on account of the diseases which exist in this country, are we not?—There are no cattle admitted into Australia at present, and it will be a very great loss if that is continued, not only to the breeders in this country, but to the herds in Australia.

8839. What you represent is, that if it ultimately appears that they can supply us with dead meat from that continent, another advantage that we shall gain will be the improvement of the breed of animals out there, if we free ourselves from disease here, and therefore are able to export our better class of animals to that country?—There will be a great return. The breeders in this country will be able to send their high class animals out there at a good price, and then the masses in this country will get beef and mutton from there at a moderate price.

8840. You will improve the quality of the animal by the English higher class beast being sent out?—Precisely.

8841. And that at present you are prevented from doing on account of the prevalence of disease in this country, and that is another reason for the farmers' anxiety to stamp out the diseases, and with that object to submit to regulations?—Quite so. I may mention that we sent out two years ago to New Zealand 32 sheep and 17 bulls and heifers. There were rumours of foot-and-mouth disease being rife in this country, and there was a doubt whether or not they would be admitted even to New Zealand. They were kept on board several days, and it was thought possible that they would have to be thrown overboard; but, however, they were allowed to be landed, and they were kept in quarantine for betwixt three and four months before they were permitted to be circulated to the different districts where they were going.

8842. That shows the very stringent regulations which exist in those Colonies as against pleuro-pneumonia and foot-and-mouth disease?—Yes.

Major *Allen.*

8843. I understand that the fact of this country being diseased interferes with our trade of exporting our cattle to foreign parts?—To Australia and to New Zealand it does.

Major *Allen*—continued.

8844. You do not know anything about Germany?—I do not.

8845. You say that in Glasgow the proportion of pleuro-pneumonia to the number of animals is less than in Edinburgh and in Leith, and you attributed that to the fact that they brought the animals to Glasgow from the healthy parts of Lanarkshire?—Exactly so.

8846. Do you think that from the treatment which the cows get in those sheds in the towns, they are more likely to get pleuro-pneumonia?—I think so.

8847. Would you think it a desirable thing to do away with those cow-sheds and get the people to buy their milk outside the towns?—I think it would be a harsh measure.

8848. Are you aware that it is done to a very great extent in London?—I am not aware that it is done in London; but it is done in Edinburgh and Leith by requiring better accommodation.

8849. You think that, under proper regulations, these cow-sheds in towns could be made perfectly healthy, or, at any rate, better than they are now?—Very much so.

8850. Have you ever thought whether it would be desirable to license jobbers and dealers in order that the local authority might get them, to a certain extent, under their control?—I am afraid that it would not work well in Scotland.

8851. Why?—It would put us in the hands of a class, so that we should not be able to get our cattle shifted very often when we wanted them shifted.

8852. Of course, if a farmer wanted to send his cattle to market, he would make use of his own men, and if he wanted to buy them back again, of course he would make use of his own men; but there are a certain class of dealers and jobbers in England who will buy anything and send it along a road whether it is affected with disease or not; I do not know whether that is the case in Scotland?—There are a few existing in the towns, but I do not think that that applies to the country generally.

Mr. *Arthur Peel.*

8853. Are the consumers in Scotland largely dependent upon the foreign supply at present?—I think that we produce more fat cattle than we consume, but we purchase a great many lean.

8854. You cannot give us any general idea of the extent to which they are dependent upon the foreign supply?—There are a few cattle that come from abroad, some from Spain, some from Holland, and some fairish cattle occasionally from Denmark; but, as a rule, they are an inferior class of cattle that come to Scotland.

8855. Of course, when you with your experience say that you would have all the foreign cattle slaughtered at the port, you have contemplated what the effect of that would be upon the price to the consumer, and its effect generally upon the markets of Scotland; what effect would it have?—The effect would be this: that we should breed more cattle, and we should keep better cattle, and we should keep our cattle longer, if these diseases did not come in to frighten us.

8856. But do you not think that the obligation of killing at the port would have the effect

Mr. *Melvin.*

2 July 1877.

Mr. *Arthur Peel*—continued.

of diminishing the number of cattle imported?—It might for a time, but I think it would be easily got over; I think it would arrange itself.

8857. And you would not be satisfied with any amount of quarantine?—I think that quarantine is utterly impossible. You get in half-a-dozen shipments of cattle; one animal is infected with foot-and-mouth disease, and the whole are infected, and the quarantine, except for a very few animals in separate divisions, would be an utter impossibility.

8858. Is it the case that any animals come into Scotland from abroad for store purposes except the milch cows?—Not now. I used to have Dutch heifers and Dutch cows, and some from Holstein to fatten, but we do not get them now; they do not send them.

8859. I suppose the conditions of a town are unfavourable to the health of an animal?—Not necessarily.

8860. At all events, the conditions of dairy life in towns are practically unhealthy, are they not?—They are so, from the number of diseases to which the animals are exposed.

8861. Does not the fact that pleuro-pneumonia is now existing in towns in Scotland, whilst the country is almost entirely free from it, point rather in this direction: that the towns, at all events, facilitate the production of disease, if they do not originate disease?—If you bring Dutch cows into Leith and let those Dutch cows pass the dairy doors, then they are exposed to catch the infection.

8862. But the town cows go into the country do they not?—The town cows do not go into the country; they are generally kept either indoors all the year round, or they are in little fields around the town. But those 1,600 that I alluded to just now in Edinburgh are almost entirely within the Parliamentary bounds, and they are very seldom out of their dairies.

8863. Do you think that the Edinburgh dairies could be supplied with cows in the same way as the Glasgow dairies are now supplied?—I think so.

Colonel *Kingscote.*

8864. I understand you to express a very strong opinion that if the country was freed from pleuro-pneumonia and foot-and-mouth disease, putting aside rinderpest, a very much larger number of cattle would be bred by agriculturists generally in Great Britain; is that your opinion?—I think so; I think that in our district we have facts enough to show that.

8865. With regard to Australia, you have given evidence that no stock can be imported into Australia at all. I hold in my hand a letter which I received this morning from a brother of mine who is farming in New South Wales, dated the 9th of May, in which he says that an effort is made to get the legislature out there to change the law, and to propose that any cattle being exported from this country should first of all be inspected by a highly qualified veterinary surgeon in England before they are shipped, and each shipper to pay 50 *l.* to defray the expenses of quarantine on arriving there,

8865*. Do you think that the demand in the colonies for our best pedigree cattle is so great that even with those restrictions they would come and purchase them?—I think they would. I hold in my hand an account of the cost of those cattle that we sent to New Zealand two years ago; it amounts in all to some 4,400 *l.* for 32 sheep and 17 head of cattle.

Colonel *Kingscote*—continued.

8866. Even with the high freightage and everything they are very willing to get our animals?—I think so.

8867. I know it of my own experience, but I ask you from what you know whether that is so?—I believe it to be the fact.

Mr. *Norwood.*

8868. Did I correctly understand you to state that you would make no exception in regard to the circulation of foreign cattle after they are imported?—There are cattle from Spain, but I am afraid that foot-and-mouth disease has come from Spain.

8869. Have you any knowledge of that yourself?—No because no cattle come into Leith; I have not seen it.

8870. Have you heard anything about the condition of the American cattle that have been landed this spring?—I know it is said that pleuro-pneumonia existed in one cargo that came into Southampton; I was informed so.

8871. Then you would not allow them to circulate?—No.

8872. Would you make any exception in favour of Denmark, or of Norway, and Sweden?—I think our only safety is to have slaughter at the port.

8873. And that is really the remedy which you, on behalf of the Scottish farmers, ask?—Yes.

8874. And you would be satisfied with that?—I think quite satisfied.

8875. You would not think it necessary to limit the introduction of live foreign cattle, provided that they are slaughtered on landing?—I should not, provided that there were proper regulations and conditions to prevent the spread of disease from the places where slaughtered.

Mr. *French.*

8876. Do you think it would be possible to do away with cow-sheds altogether in the large cities?—I think that it would be harsh to do so, and I think it would be a difficult matter to do so.

8877. You have heard, I suppose, that the milk of the Aylesbury Dairy Company which was mentioned here the other day, is much better than the milk from the cows that are fed in the sheds during the summer time?—That would depend upon the food upon which the cows are fed.

8878. As a rule, in the sheds, I believe, they are fed chiefly on artificial food and roots; is not that so?—Of course cows in towns are generally fed on distillery offal or brewers' grains.

Mr. *Elliot.*

8879. You said, that some of your store stock came from Denmark, did you not?—Yes, the dairy cows of inferior quality come from Denmark.

8880. Have you ever known cases of pleuro-pneumonia come from there?—I do not exactly know any case of pleuro-pneumonia, but I know that those cows are extremely susceptible of pleuro-pneumonia if they are exposed to contagion.

8881. That

Mr. *Elliot*—continued.

8881. That is when they are put into the dairies in towns?—Yes.

8882. You say that there is a great deal of pleuro-pneumonia in the towns, and you say that it would be harsh to compel the dairies to be placed outside the towns, and that the only remedy that you can suggest is stopping the importation of milch cows and isolation?—Yes.

8883. And therefore you would use nothing but Scotch bred cows in that case?—We get a great many English bred cows from Yorkshire and the northern parts of England.

8884. But would not stopping the importation have the effect of raising the price of cows and therefore of raising the price of milk?—The effect of it would be this: there are a great many well-bred cattle that are fattened in place of being kept as milch cows; heifers are fattened in place of being kept as milch cows; and the consequence is, that the really valuable animals are cleared out of the country sooner than they would be if there were a greater inducement to keep them.

8885. But they go for meat instead?—They would go for meat eventually, after they were done with for milking purposes.

8886. But they go to meat now, instead of going as milch cows?—Undoubtedly.

Mr. *M'Lagan.*

8887. Though you are not a dairy farmer yourself, I believe you live in the vicinity of a dairy district?—Yes, I live on the edge of a dairy district.

8888. And therefore you are aware of the changes which are taking place in the management of cows in that dairy district?—Yes.

8889. I daresay, in casting your thoughts back, you may remember that on all the dairy farms there the farmers used to breed a number of cattle both to supply their own dairies and to sell also at the fairs?—Yes.

8890. Are you aware whether that is the case now or not?—It is very much given up. For instance, my father had a dairy of 40 cows, and he bred 20 calves every year. My brother, who farms the same farm, buys all his cattle now. The risk of disease is so great that it prevents their continuing the same practice.

8891. But he is feeding cattle but not cows?—Not cows.

8892. Are you aware of any farmers in your neighbourhood who buy cows every year, use them for dairy purposes, fatten them off, and sell them every year?—That is now the general system.

8893. And you could easily fancy that the effect of that would be to reduce the number of cattle in the country?—Very much so.

8894. Can you give the Committee any reason for the farmers adopting that system?—It is simply that it pays better, because there is less risk.

8895. They are afraid of pleuro-pneumonia and foot-and-mouth disease?—Yes, and especially of foot-and-mouth disease.

8896. Is it not the fact that in some districts in Scotland each farm labourer formerly had a cow?—In some districts it is the case still, and it was the case in more districts formerly than it is now.

8897. But there are not so many cows kept by farm labourers?—There is a considerably less number kept.

Mr. *M'Lagan*—continued.

8898. I daresay you have heard that the cause of there not being so many kept is the great losses which the labourers suffered from the cattle dying from pleuro-pneumonia and foot-and-mouth disease?—Yes; the effect was that many of their societies became bankrupt.

8899. And therefore the effect of importing pleuro-pneumonia and foot-and-mouth disease into this country has been to compel the farm labourers to purchase milk, whereas they had it before from their own cows?—Exactly so.

8900. In those districts where the farm labourers kept cows, were not the men a great deal better in health and in stamina than they are now when they have not the advantage of that milk?—That is certainly so.

8901. So that the stamina of our labouring farm population is actually suffering from the importation of these diseases from abroad?—In many districts there is very little milk used now amongst our ploughmen and hinds.

8902. What do they use?—Tea is coming much more into use.

8903. And that certainly is not so conducive to the strength of the labourers as good porridge and milk?—Certainly not.

8904. The views that you have been advocating one would suppose to be rather those of a Protectionist, but I understand that you have been a great Free Trader all your life, and if I remember rightly, you were one of the few farmers that advocated the repeal of the Corn Laws; how can you reconcile your views at the present time with your free trade principles?—I hold that there should be no free trade in disease.

8905. And therefore you want to have the importation of good sound cattle; but you are afraid that it would be no free trade in cattle, but only free trade in disease, if you allowed the importation of live stock?—Clearly so.

Mr. *Wilbraham Egerton.*

8906. Are you aware whether condensed milk is ever used in the towns or by the agricultural labourers in Scotland?—Not at all; I have got it on board ship, but I have not seen it in the country to any extent; it is too costly.

8907. Are there any factories in Scotland for making it?—There are not in the Lothians, and I am not aware of any in Scotland.

8908. Is your objection to Dutch cows that they are so liable to pleuro-pneumonia, or is it also because they are also so liable to foot-and-mouth disease?—Both; I have no objection to Dutch cows as Dutch cows; they are good and useful animals, far better than the Danish cows; but it is to the risk that is attached of their bringing disease with them that I object.

8909. Supposing that the Dutch were to stamp out pleuro-pneumonia, and that you could have a clean bill of health from Holland as far as pleuro-pneumonia is concerned, would you be satisfied to take animals for dairy purposes from Holland, with some guarantee against foot-and-mouth disease, such as a short quarantine, either in this country or on the other side, provided that the Dutch Government could give you that assurance?—I believe that the thing is impossible, for this reason: that the ramifications of the railways on the Continent are so minute, that cows an-

Mr. *Melvin.*

2 *July* 1877.

Mr. *Melvin.*

2 July 1877.

Mr. *Wilbraham Eyerton*—continued.

and cattle may be brought from de'il knows where; so that we have no guarantee whatever.

8910. Your impression is, that there is no guarantee on the part of Holland lest animals should be imported from beyond their own border; is that your argument?—Exactly so.

8911. Is there any separation of the fat and store animals in the markets at Edinburgh?—No, all are in the same market; milch cows, fat cattle, and lean stock.

8912. Do you think it would be desirable to separate the stock intended for slaughter from those intended for dairy or store purposes?—In the meantime, we are largely dependent upon England and Ireland for our fattening stock and for store stock; much of the Lowlands of Scotland are dependent upon those two places; and we attribute part of the disease that we have had to the animals coming in contact in the market.

8913. What guarantee do you suggest, or what precautions would you take, to prevent the store animals that you buy from Ireland being affected with foot-and-mouth disease?—I think that the same laws ought to apply to England, Ireland, and Scotland; I think that there ought to be uniformity of regulations for all the three countries, and that the route by which the cattle are brought from Ireland ought to be away from the towns, and that they should not be allowed to approach the towns. For instance, the cattle coming from Belfast or from Dublin should not be allowed to touch at Glasgow, but they should be landed at the ports and brought by rail away from the towns.

8914. Then you would object to their being exposed in a number of markets successively, as they constantly are?—Not in lean stock markets.

8915. You would object to their being exposed in markets where they might come in contact with other animals which were diseased, and which were destined for immediate slaughter?—Yes.

8916. Then you are of opinion that it is desirable to separate lean stock and fat stock in the markets?—If our country was clear of disease it would not be necessary, but in the meantime it is.

Mr. *W. E. Forster.*

8917. You have a good deal of store stock from the Highlands, I suppose?—We had, but the deer forests have shut up a good many of them. I used to fatten Highland cattle from the different glens, but I do not do so at all now.

8918. Therefore you would not think it necessary to make the same restriction with regard to Highland cattle, that they should not come through the towns?—There are very few so exposed now. Disease does not come from the north, as a rule; it comes from the south and east.

Mr. *W. E. Forster*—continued.

8919. Do you think it would be necessary to keep up the restriction with regard to Irish cattle, that they should not go through the large towns?—It is only a view of my own. It would be for the benefit of the Irish dealers themselves, because we would give them a better price for their cattle if we had confidence that they were kept from catching infection by the way.

Chairman.

8920. You stated that in Glasgow the dairies were principally supplied from Lanarkshire and other districts in Scotland, whilst in Leith and in Edinburgh they come principally from Holland; can you give the comparative prices as between the Dutch cows and the Lanarkshire cows?—Three descriptions of cows come to Edinburgh. There are the Yorkshire cows and the cows from the north of England, which, perhaps, bring from 25*l.* to 30*l.*; then the Dutch cows bring about 25*l.*; but the Danish cows bring from 8*l.* to 12*l.*; then the Scotch cows, the Ayrshire cows, perhaps fetch from 15*l.* to 25*l.*; they vary more.

8921. Therefore the dairies can be supplied at as cheap a rate from the home breed as from the Dutch breed, whilst the Danish cow is a cheaper animal altogether?—Yes.

8922. Are there many cows imported from Denmark?—A good many.

8923. You stated, did you not, that you thought that the breed of cows in the country would very much increase if confidence were given by these instructions being enforced, and that you could, therefore, count on a much larger supply for dairy purposes for home stock?—I think that would be the effect.

8924. Do you think that the demand for them would overcome the demand which at present exists for heifers for fattening off?—I think that there would be more left for milk.

8925. I suppose, as a practical farmer, you would say that a heifer fattens off and goes off a farm into the market more quickly than a bullock does?—Certainly.

8926. Farmers are very fond (at least, they are in the south; I do not know whether they are in the north) of fattening heifers quickly for the market, are they not?—We cannot get them as a rule, because you pay a better price for them than we are inclined to pay.

8927. But there would be competition amongst farmers who wanted to fatten, increasing the number of breeding cows?—Exactly.

Mr. Thomas Rudkin, called in; and Examined.

Mr. *Rudkin.*

Chairman.

8928. I believe you are a member of the Common Council of the City of London?—I am.

8929. And you are Chairman of the City Lands Committee?—That is so.

8930. And you have been also a member, for some years, of the Markets Committee?—For nearly 20 years.

8931. With regard to the market at Deptford, with which the City have been recently connected, can you give the number of animals that have

Chairman—continued.

come into that market, comparing last year and this year?—I can. According to the return for the first six months of this year, there have been 6,734 cattle, 6,717 calves, 328,575 sheep, and 774 pigs.

8932. Can you compare that with the quantity that came in the same period of the year before?—I have not the figures added up for the year; the numbers are not picked out so as to enable me to give you the comparative numbers.

8933. Do

Chairman—continued.

8933. Do the figures show an increase or a decrease?—The cattle have considerably fallen off in numbers, and the sheep have enormously increased in numbers. That is owing, of course, to the restrictions which have been placed upon the import from Germany; the cattle have dropped off from Germany, and the sheep have been free from Germany. Last year they went to the cattle market, and this year they have been compelled to go to Deptford.

8934. And that accounts for the great variation which has taken place in those stocks?—Quite so

8935. The prohibition of the German cattle has made the difference in the Deptford Market?—Yes.

8936. Can you give any comparison of figures with regard to the Metropolitan Market?—Yes. At the cattle market at Islington for the same period, viz., for the first six months of the year, there were 23,620 foreign beasts, and 39,390 foreign sheep; but for 1876 there were 31,620 foreign cattle, and 343,690 foreign sheep.

8937. In that case the sheep had all gone into that market?—Yes. The tendency has been to a considerable falling off in the numbers since 1865 of English cattle and sheep into London, and a considerable increase of foreign cattle and sheep.

8938. That is to say, into the Metropolitan Market?—Not only to the Metropolitan Market, but you must include also Deptford, taking the two markets together as representing the supply into London.

8939. But the Deptford Market would not take the home supply?—No, the cattle market takes the home supply.

8940. In the Metropolitan Market, as I understand you, the English supply has steadily fallen off since 1865?—Yes.

8941. And it has been met by an increase of the foreign supply both at Deptford and in the Metropolitan Market?—Quite so.

8942. Can you tell the Committee what the condition of the Deptford Market is from a sanitary point of view?—I say that it is in a very excellent condition, in a sanitary point of view.

8943. We have heard one witness who has described it to the Committee in very strong terms; have you read the evidence?—I have read the evidence that has been given. As a matter of fact, manure is there, and it must necessarily remain for a considerable period, owing to the fact that it has to be thoroughly disinfected; but the manure is all taken away, subject to the Order of the Privy Council; and there is a certificate given with it before it is permitted to leave. There is no more manure there than would be accumulated at any market under existing circumstances.

8944. And anything that is described as offensive rises from that, if from any cause?—The stench arising from the carbolic acid that is used is really a great deal worse than the stench from the manure itself. I think we ought to discover something better than carbolic acid, which positively poisons the atmosphere, it makes it so bad that people cannot remain.

8945. Do you mean that it is bad from a sanitary point of view, or that it is merely disagreeable?—It has a disagreeable smell.

8946. And therefore when a gentleman spoke of the effluvium, and of his dislike to remain in the market, it may be accounted for by that?—It is certanly very unpleasant; I must admit that.

8947. I suppose you are able to speak officially as to the records of the cargoes that were landed with disease in the present year?—I have it here. I suppose that the Privy Council have had it also; but I can hand it in now. This is the official record of the destruction of those 39 animals.

8948. They remained on the wharf for some time before they were slaughtered, did they not?—They remained for no longer than was absolutely necessary. Perhaps it would be as well to explain the process. Under the Order in Council, it is necessary that a part of the market should be declared an infected place if cattle plague or other disease exists there. So soon as it is declared an infected place, of course nothing is permitted to leave or to enter it, certainly no person is allowed to leave it without being thoroughly disinfected. There is a digester in each of the compartments of the market; there being four compartments, there are four digesters; and in each of those four compartments the digester is sufficiently capacious to boil down or steam at one process eight carcases if they are cut up; but if they are placed in the digester whole, it would not contain more than some three, or from that to four animals at the utmost. The number that had to be destroyed of course taxed the capability of this one digester very much.

8949. I understand that only one was able to be used, because only that part of the market was described as infected?—Yes; if we had used either of the other digesters we should also have had to declare the other section of the market an infected place; and if we had done as was suggested by some practical gentlemen, that is to say, used the whole of them to destroy the carcases we should have had, under the Order in Council, the whole of the Deptford Market declared an infected place. Therefore we did the best we could, under the circumstances, to get rid of them as speedily as possible.

8950. Have the corporation considered the advisability of getting rid of them in case of an outbreak of that sort, where such difficulties arise as you describe, by any other process, such as the burial of them, as they do abroad?—It would be utterly impossible to bury them in a section of the market. If we had two or three outbreaks we should have the whole of the foundations of the market absolutely undermined. If we were to extend our sections we should have space outside the market that we might bury them in.

8951. There is a large open space there which might be used for that purpose, is there not, if it was thought advisable?—Quite so.

8952. But, up to the present time, it has been considered that those "digesters," as you call them, are sufficient for any outbreak that might arise?—It was found so before, but those 39 animals certainly taxed our powers to the utmost.

8953. And in consequence of that, for some days after they were attacked with the disease, they had to remain before they could be got rid of?—I think they had to remain for four days.

8954. I suppose that during that time every precaution was taken to prevent the spread of the

Mr. *Rudkin.*

2 July 1877.

Chairman—continued.

the disease from that section?—Yes, every precaution.

8955. With regard to the present system of regulations made by the Privy Council and the local authorities, do you consider that those are satisfactory?—I do not, most certainly. I believe that the great detriment to the trade, and certainly to the corporation, and I humbly submit to the interests of the public, is the fact that we never know which way to move; we never know from one day to another what regulations will be in force.

8956. I understand you to say that you consider that in the interests of the public and for the benefit of the corporation and of the trade, permanent regulations should be laid down guiding this market?—Certainly.

8957. You think that the present sudden changes very much destroy the utility of the market itself?—Yes, I think so.

8958. Is it your view, then, that animals coming from abroad should be slaughtered at the port?—Yes, I think so; I do not see any way out of it except that I regret to be compelled to give that opinion, but I am afraid that there is only one way to deal with it, and that is to slaughter everything that comes from abroad at the place of landing.

8959. You think that, in fact, all foreign countries should be treated as scheduled countries, and that animals from those countries should be landed at certain defined ports in England where they should be slaughtered?—Yes, I think so; and I do not think that under those circumstances there would be any real detriment either to the trade or to the consignor.

8960. It has been stated that the consignor of the animals was really prejudiced by having his animal killed at the port of debarkation, and that the result would be loss to the consumer from the fact of the trade flowing in another direction; but I understand you to represent that you believe that the certainty which would be procured by slaughtering all animals at the port, at Deptford, for instance, would bring a sufficient trade to attract the foreign cattle?—Certainly. I have read the evidence that has been given with reference to that question, and I have no hesitation in saying that the statements made cannot be borne out by the facts of the case. For instance, if there were, as Mr. Gebhardt states, from 2*l.* to 3*l.* per head difference in the price of an animal being sent to Deptford less than it would fetch if it was sent to the cattle market, I say that instead of their having a dozen buyers or 20 buyers down there they would have have 500 buyers. If the wholesale trade, the carcase butchers, were aware of the fact that there was a difference of 3*l.* per head profit to them in buying the animals at Deptford instead of buying them in the cattle market at Islington, there would be no lack of competition at Deptford.

8961. What, I suppose, Mr. Gebhardt meant was this: that under the present uncertain supply at the Deptford Market, the trade was not attracted there; that the trade was in the hands of a very few men, and therefore the prices were readily regulated by them?—I do not think that that it so. I know as a fact that they are the keenest buyers alive, and that men go there who can pay ready money, and they have to stand on one side for a man who has to take credit; and that is the proof that the salesman stands out for his price, and there is no monopoly at all in the question.

Chairman—continued.

8962. You do not think that the evidence that we have had upon that point is borne out by the facts?—Certainly not; I know to the contrary.

8963. Do you say that an additional guarantee to the sender would be given if the uncertainty which is represented to be so prejudicial was done away with?—Yes. The value of the animal at Deptford may be rather less than what it would fetch at the cattle market, but the difference is very small indeed; I do not believe that the difference in the expenses of sending the cattle to the cattle market rather than sending the cattle to Deptford.

8964. You mean that the tolls at Islington are heavy?—Quite so. The charges and expenses on an animal, if it goes to the Copenhagen Cattle Market, are so much, and if it goes to Deptford they are so much; I believe that the difference in favour of Deptford would make up for the difference of price at Deptford.

8965. Could you give the difference in prices?—It was given in evidence in 1873.

8966. And you believe that that difference would really cover the loss which is supposed to exist upon the foreign animal at Deptford?—I think so.

8967. Whilst buyers would be attracted in larger number from the greater supply?—I think so. It would give us stability, and we should have plenty of competition at once.

8968. During certain times of the year, if a large number of animals were thrown upon the Depford Market, where they must be slaughtered, could that supply of meat be carried through the country; and would not that rather injure the Deptford Market, and prevent animals coming there on account of the possibility of the meat not being circulated as freely as other animals can be?—To a certain extent that would be so; but what one has to consider is the desirability of preventing the spread of disease. There is no doubt that all these restrictions must, to a certain extent, militate against the power of getting meat about the country; but at the same time I believe it will be an immense boon to the public if we establish a dead-meat supply. The nearer the animals are slaughtered to where they are fed the better it must be for the community at large.

8969. You mean that the animal is not so much deteriorated?—Certainly; I have no hesitation in saying, that if all the animals that are slaughtered in London could be slaughtered near where they are fed, it would be a saving of at least 5 per cent. of the meat supply.

8970. Do you mean in the quality and condition of the beasts?—In absolute weight of meat, and immensely in quality. I may state this as a fact, that so much do the trade appreciate the country-killed meat, that in providing their dinner for Sunday (I am speaking of the men in the meat market) they universally pick out a bit of meat that has been slaughtered in the country, and they seldom or never touch a bit of meat that has been slaughtered in London.

8971. And, therefore, the nearer you slaughter to the place where the animal is bred the greater the amount of food, in your opinion, that you would get for the consumption of the people?—Certainly.

8972. Are you able to speak at all of the period

Chairman—continued.

period in which the cattle were slaughtered at Deptford at the time of the outbreak of the cattle plague?—Yes.

8973. At that time was there a large supply of dead-meat sent from Deptford into the country?—Yes, and a large quantity goes into the country now. Thousands of sheep are slaughtered at Deptford, and pass away to all parts of the country now.

8974. They go away to Wales by the Great Western Railway, as Sir Alexander Wood told us?—Yes, and the hind quarters come back again, and they are sold in London as Welsh mutton.

8975. In fact they perform two journeys, and after all they find their best market in London?—Yes. The possibility of fresh meat travelling is exemplified by the fact that sheep are slaughtered at Deptford, sent to Cardiff, the hind quarters there cut off, and sent to Landon again and sold as Welsh mutton, and then possibly they are sent into the country again to be consumed.

8976. I gather, then, from that experience of yours, that there is not the difficulty which, as has been described, in supplying some of our large manufacturing towns with sheep from Deptford if slaughtered there?—The only point is the question of the offals; that is the point that all the butchers make, and there is something in it so far as the offal question is concerned. But I believe that sufficient attention has not been directed to that question; what we want to do is to establish at the cattle market at Islington, and at Deptford as well, something similar to what there is in the abattoirs in Paris; you want a *triperie*, in point of fact, and the offals should be dressed there as well as they are in Paris; and then, instead of their being, as they now are, in a filthy state, they would be very beautiful food for the poor, and certainly for the rich man's table as well.

8977. In fact, there is no difficulty in dealing with the offal; it is only that a sufficient amount of trouble is not bestowed upon it?—The trade do not seem to me to have paid any attention to it at all; they slaughter the animals, and they get men to contract to take the offals away, and they let them go, and do not take any trouble with them.

8978. Are you able to speak from your own knowledge of the fact which has been stated by other witnesses, that the offal at the present moment is packed any how in carts and sent away from Deptford for marketing in other parts of the town, and that it goes through this journey and yet comes out uninjured?—The manner in which the offals are treated is not creditable to us in any shape or form.

8979. But there is not the difficulty which has been represented in dealing with the dead-meat trade as regards the offal?—I think not. I should like a deputation of the butchers to go over to Paris to see how it is done, and I think they would come back still more intelligent than they are.

8980. Prejudices might still reign supreme?—Possibly so.

8981. I understood you to say that in your opinion the public would be benefited by animals from abroad being treated as from scheduled countries and slaughtered at the port?—I think so, always taking, of course, the point of view that it is desirable to stop the spread of disease.

Chairman—continued.

8982. And from that point of view, I suppose you would say that from any country where cattle plague existed, you would prohibit the import altogether for the time, at all events?—Certainly.

8983. With regard to the Metropolitan Cattle Market, should the conditions of that market in any way alter your opinion?—Not from what they are now; I think that the cordon should be kept up, and it should be a market for fat stock.

8984. But you would not, under those circumstances, I suppose, allow store animals to be brought there?—No, certainly not; it never ought to have been permitted at all.

8985. Would you go so far as to say that the animals should not be allowed to leave the metropolitan district after they have once entered it?—I think that there is more danger in animals leaving the Metropolitan Cattle Market alive than there is in their leaving the Deptford Market alive. I believe that there is more disease amongst the English cattle that go to the cattle market than there is amongst the animals that go to Deptford. I am a farmer in the country, and I would not, under any circumstances, have an animal on my farm from the Copenhagen Cattle Market.

8986. That, I understand you to say, is from the fact that you believe that market to be infected with pleuro-pneumonia and foot-and-mouth disease?—I am afraid that it is charged with disease.

8987. But do you mean that it is charged with those two diseases, or with more?—I think with more. You can hardly tell what disease there is there; in fact, the animals are seldom or never well after you have had them a few days from the cattle market.

8988. The lairs are so infected, that animals that coming into it are almost sure to go out of it suffering from disease?—I am afraid that that is so.

8989. For that reason, you would recommend that that cattle market should always be treated as a cattle market for slaughter, and that no animals should leave it alive?—Quite so.

8990. Have you read Mr. Gebhardt's evidence?—I have.

8991. He suggested that, whilst dealing with it as a fat stock market, and allowing no animals to be taken from it for sale in any other market, he would permit of the animal being sent to other towns marked for slaughter alone; have you considered that?—I have. I know quite sufficient of the trade of jobbers, especially, and of butchers also, to know that it would not be confined to that. If you could insure it, there would be possibly not much danger, but how are you to guard against animals being placed in a railway truck and going from the cattle market, and against the same truck being used for the conveyance of store animals? There is no doubt that foot-and-mouth disease is a very dreadful disease, and that it is spread throughout the country by the transit of animals; and, therefore, there is no doubt that you would spread foot-and-mouth disease all about the country by the conveyance of those animals by railway.

8992. For these reasons, you are strengthened in your belief that those animals should never leave the market alive?—I see no necessity for it at all. The consumers in other parts of the

Mr. *Rudkin.*

2 July 1877.

Chairman—continued.

country would have the advantage of eating English meat; they could establish markets where they thought fit, and provide themselves with that meat.

8993. Under those circumstances, there would not seem to be so much reason for keeping up the distinction as between Deptford and Islington, if both were to be treated as slaughter markets?—I hardly know that I am justified in saying so, but my own individual opinion is, that in 10 years, you will only want one market for London.

8994. But assuming that your suggestion was carried out, and that it was made purely a slaughter market, every animal coming into it being of necessity killed, do you think that one market would be sufficient for the trade?—I think so; I always held that opinion, and I still hold it.

8995. Has your attention been directed to the cow-sheds of London?—Yes. Of course we who have had to do with this question of cattle plague know that we got it from the cow-sheds of London originally: I suppose it was imported from abroad, but still it got into the cow-sheds, and we could not eradicate it at all. In the early period of 1865-6-7, the cow-sheds were the great difficulties. As you have had it in evidence before, there is not more than 15 per cent. of the milk that is consumed in London that is supplied by the London cow-sheds; and I cannot see why we cannot get that 15 per cent. from the country. I may state as a fact that I myself could not get my milk as I wanted it, and I have established a dairy in the country, and I get very much better milk at half the price that I could get it for in London; and I have never the slightest difficulty in getting it perfectly sweet and fresh, and the same with regard to my cream.

8996. You see no difficulty in a trade being established outside the London district, whilst the cow-sheds as at present existing are, from our past knowledge, liable to attacks of these diseases?—If you take the cordon off you must certainly close the London cow-sheds; but if you keep the cordon on then possibly you might in the suburban districts, just outside London, where there is some grass land, permit some cow-sheds. I may say that I have never had any trouble with my cows at all for eight or nine years, but I am particularly careful where I get them from, and I quarantine them when they come on to the farm.

8997. Where is you farm?—Near Leatherhead in Surrey.

8998. What quarantine do you make them undergo?—I place them in a field by themselves for at least three weeks.

8999. Do you think that three weeks is a sufficient length of time to quarantine them for?—Yes, I have found that sufficient; I may say that I have never had pleuro-pneumonia or foot-and-mouth disease at all, but I feed my cows in the winter exactly the same as the London cow-sheds people do; I have distillery grains down, and feed them on them and oil-cake, and roots, and chaff; but in summer I turn them out to grass, and I believe that that is what they require. They want to be resuscitated; to be pulled round, as you might say.

9000. They want to live a natural life for some part of the year?—Quite so.

9001. You would do away with London cow-sheds; but would you subject even those that you

Chairman—continued.

allowed to remain in the neighbourhood of London to any inspection, or would you leave them as they are now?—I think that there should be a thorough inspection of cow-sheds throughout the country, whether they be in London or elsewhere in the agricultural districts.

9002. Do you mean that they should be inspected by the local authorities, or by the Privy Council?—By the local authorities.

9003. I suppose you have not considered the question of the alteration in our regulations as between the powers of the local authority and the central authority?—I think that it would be very much preferable if the Privy Council were the local authorities for the metropolis altogether. Let the Privy Council take the entire management of the Orders in their own hands for the metropolis. I would get rid of the Metropolitan Board of Works jurisdiction, and of the City jurisdiction, and take it entirely into your own hands.

9004. You think that you would thereby get uniformity of action, which would be more likely to lead to the extinction of disease?—Yes; I am quite sure that in the City we should not have the slightest objection to that.

9005. You think that the City would not be so jealous of its privileges upon that point?—Not at all.

9006. I suppose that your attention has been directed very much to this new American meat supply which has come in during the last year or so?—Yes.

9007. Can you speak as to the quantity of it, and the state in which it has come here?—I know nothing of the quantities, but I can speak as to the state in which it arrives; in many instances it is very beautiful. Last Monday I think I saw the finest beef from America that I ever saw in my life from anywhere, and it realized rather over 7 *d.* per pound.

9008. Did that come direct to London?—No, it came to Liverpool.

9009. How long had it been landed before it came up?—I am not aware.

9010. But it had made the journey from Liverpool out of the atmosphere in which it had been brought over in the ship?—Quite so.

9011. It arrived, you say, in very good condition, and realized a good price?—Yes, certainly.

9012. I suppose that you have also seen a good deal which has not been equally satisfactory?—Yes, we have had a great quantity seized in the City. I am authorized by the medical officer of health for the city, Dr. Saunders, to hand in a return of the quantity of American meat that has been seized since the 1st of January of this year.

9013. What is the total amount?—Forty-nine tons 6 cwt. 1 qr. 15 lbs.

9014. What is the entire weight of meat that has been condemned?—The entire weight of meat that has been condemned by the City authorities in the same period, including those 49 tons 6 cwt. 1 qr. 15 lbs, was 106 tons 14 cwt. 3 qrs. 5 lbs.

9015. That would leave about 57 tons as the amount of condemned meat of the other supply?—Yes, about 47 per cent. of the condemned meat has been American meat.

9016. Have you been able to trace the cause of that at all?—I apprehend that it arises in consequence of the imperfect manner in which it is packed.

9017. It

Chairman—continued.

9017. It arises, you think, more from the trade not having settled down into an accomplished fact than from other causes?—I believe myself it arises from the fact (of course this is only an opinion) that the animals have to travel such a long distance before they are slaughtered in America; I believe that if there is not sufficient time, say at least a week, allowed for the animals to cool down, and get free from the fever that is caused by travelling, it is utterly impossible to bring the meat sweet.

9018. Would that, in your opinion, be a difficult matter to get over?—I do not think it would; I think that experience will enable them to get over it, because they will establish lairs and proper places to keep the cattle in so as to give them sufficient time to cool down.

9019. You think that when the trade is an ascertained certainty, and is established, they will, for their own sakes, and in order to keep up the price, take all those precautions which are necessary for sending the meat over in good condition?—I know a gentleman in America who exports meat, and he had lost considerably over two or three cargoes, and at last he almost felt that he would give it up; but a personal friend asked him under such circumstances to lend him his box on board one of the vessels, and this gentleman went over to America and used his own means to fill the box; he did so, and he sent it over here, and the only cargo he sent realized 7 *d.* per lb., and he cleared 2,000 *l.* profit out of it.

9020. So that, if it were properly attended to, it is perfectly feasible to bring meat over in good condition?—The American who lent him the box said it was "like his luck."

9021. The "luck" was the consequence of certain precautions which had been taken?—Yes, quite so. The meat is not fairly attended to here. Looking at the manner in which it is brought by railway vans and thrown about, and allowed to stand in the street for a considerable time with the sun pouring on to it, it would be perfectly wonderful if it did not stink.

9022. You do not think that the condition in which this meat has very often come over to the London markets, and in which it is condemned, is at all a condition which applies to the trade if properly conducted?—I believe that we shall have large quantities of American meat in beautiful condition, and certainly the meat is as fine as one could wish to eat. I have had a considerable quantity of it myself, and in answer to some evidence given by one of the witnesses, who states that the American meat will not take salt, I may say that as a matter of fact that is not so. I have taken down, for my farm labourers, a hind quarter of American beef, and cut it out to them at the price that I have given for it, and what I have had left I have put into the salt tub, and a fortnight or three weeks afterwards the beef has come out perfectly fresh, and has taken salt perfectly.

9023. That is an experience which entirely contradicts what has been stated here?—Quite so.

9024. You also endorse, I suppose, what one gentleman told us, namely, that the American meat is capable of being supplied largely to London customers without their making complaints as to its quality or condition. A butcher gave evidence here that he believed that a large

Chairman—continued.

portion of the trade was supplying American beef for English meat, "without any questions being asked," as he said?—Certainly; we have all of us been eating American beef, and fancying that it has been Aberdeen beef.

9025. Supposing that the conditions of the trade become satisfactory, and that this meat is brought over in good condition, that will affect very much the history of our London supplies, I suppose?—Quite so. Mr. Gebhardt stated that if the American beef were to come over in large quantities, it would have the effect of stopping the supplies of live animals from Germany and from abroad. It does occur to me that that would be an immense boon, not only to this country but to the whole of Europe, because it must have the effect of reducing the price of meat generally in Europe.

9026. And if you could get a large supply on the market, the consumers would clearly be benefited?—Certainly. In reading the evidence through very carefully, it has struck me as a curious thing that all the witnesses that have been called have simply looked at their own personal view of the question, and no witness has yet been called who has taken the public interest into consideration.

9027. That is rather human, is it not?—No doubt

9028. Although it might stop a certain portion of the foreign trade if the American meat came as a permanent supply to this market, it would very much increase the amount of meat in the country, and it would not stop the entire foreign supply; and therefore the consumers would be largely benefited by the reduction in price?—As has been stated in the evidence, it is a question of a very small amount of money that would stop the supply from the Continent or from elsewhere. If they can realise in France or in any continental market 10 *s.* a bullock more than they can realise here, they will send them there.

9029. We are, therefore, always liable, as prices fluctuate, to this supply being taken from us?—Quite so.

9030. And in consequence of the American trade during the last few months, we have not suffered by the prohibition of the foreign supply?—Quite so; and it strikes one as being rather a curious argument to use that the loss on animals going to Deptford amounts to between 2 *l.* and 3 *l.* per head to the consignor, whereas it is stated by the same witness that 10 *s.* difference in the price would divert it to Paris or to any other continental market. I could not follow that argument for the life of me.

9031. Have you considered whether the dead-meat trade could be regulated so as to prevent these sudden gluts, that might drive away the supply?—I do not think that it is desirable to interfere with the gradual extinction of the live meat supply; it is very gradually taking place. As a matter of fact, although there has been, of course, within the last 10 years, an increase in the population of London, to the extent of, say, from 500,000 to 800,000, the live cattle supply has absolutely been diminishing; as shown by our returns, there has been a very considerable falling off during the last 10 years.

9032. And that you attribute to the fact that the merits of a dead meat supply are gradually becoming appreciated?—Quite so. I may say that, this morning, we have had in the Meat

Mr. *Rudkin.*

2 July 1877.

Chairman—continued.

Market at Smithfield, 60 tons of Scotch meat; and the average weight of Scotch meat during the hot months reaches from 60 tons to 70 tons per day; so that there is really no difficulty whatever in bringing meat slaughtered in Scotland to London, even in the hottest part of the year.

9033. And that is under conditions which are less favourable to the carriage of the meat than it is supposed will be put in force with regard to the American meat?—I know nothing of the process, and therefore I cannot express an opinion, I simply give the fact. As a fact, we get meat from all parts of the country, from the most extreme points of England and Wales, and even from Ireland, in the hottest months, and we get it in perfect condition; in point of fact, it is purchased in preference to town-killed meat, and eaten in preference to town-killed meat.

9034. And in the hottest weather it travels perfectly well, getting over, therefore, the difficulty that has been suggested as to the slaughter at the ports?—Certainly; there is no difficulty about that

9035. That dead-meat trade, I understand you to say, has increased rather than diminished, of late years?—The first year that the Dead-meat Market was opened, I think that the quantity of meat that came to it was 120,000 tons; I think, last year, it exceeded 175,000 tons; and that has been the quantity of meat that has been required to feed the increased population of London. It has been a dead supply, and not a live supply.

9036. Is there any other point that you would wish to mention to the Committee?—I should like to say that some eight or nine years back an application was made to me by Sir Harry Verney for assistance to establish slaughter-houses in the agricultural districts. I am myself very strongly of opinion that that would be a very desirable thing to do. I think that the home producer then would have an opportunity of testing his powers of supplying London and the large towns with animals slaughtered near the places where they are fed; and certainly it would be an immense saving to the producers, as it would also be to the consuming public, because they would have really more meat to eat.

9037. I suppose you would leave that to the general development of the trade, would you not?—I think so, much as I would the live cattle trade or the American supply.

9038. I understand that you would let the dead-meat trade fight its own way, and you believe that, from its merits, it would eventually become the trade of the country?—Quite so.

9039. Whilst, for the purpose of stopping the introduction of disease, you suggest that the cattle coming from abroad should be slaughtered at the port?—Yes.

9040. And you see no difficulties in their being so slaughtered, and being sent as carcases to supply the wants of the inland towns, where they have in the past relied upon the live animal?—Quite so. Some question was raised by one of the witnesses as to railway accommodation at Deptford. There would be no difficulty about that at all. We are within a stone's throw of the London, Brighton, and South Coast Railway at Dead Man's Dock, and that was considered when the market was established.

9041. May I ask why it has not been carried out since; has it been in consequence of the trade being a fluctuating trade?—In consequence of

Chairman—continued.

there being no certainty as to the continuance of the animals coming to Deptford.

9042. That has been the reason which has actuated the Corporation?—I apprehend that the Corporation would not do it, but a railway company would not construct a branch line into the market unless they foresaw the continuance of a permanent supply.

Mr. *W. E. Forster.*

9043. You have been for 20 years on the Markets Committee, I think?—For 19 years.

9044. The interest that you have taken in this subject, as a member of the Markets Committee, has led, I presume, to your becoming acquainted with the circumstances of the trade, as regards the importer, the seller, and the home salesman?—Yes, certainly.

9045. You have also been obliged to consider the interests of the consumers throughout the metropolis?—Quite so.

9046. Your own business has brought you a good deal into contact with the trade, has it not?—Yes, certainly. I think I know almost every man in the trade.

9047. You have been interested in an hotel in the central meat market, I believe?—Yes.

9048. And that has, of course, brought you into contact with a great many of the persons engaged in that market?—That has shown me also, beyond all controversy, that the meat trade themselves eat nothing but country-killed meat; they will not have anything else.

9049. You found that necessary in providing market dinners?—Quite so.

9050. Will you tell the Committee when the Deptford Market was opened?—In 1871, I think, it was opened.

9051. Did more animals arrive at that market last year than arrived in 1872?—Yes.

9052. Were there many more?—A few more.

9053. But the growth has not been considerable since the first year, has it?—No; but there has been a steady increase.

9054. Both in cattle and in sheep?—Yes.

9055. I am now going to ask you some questions with regard to the interest, or the supposed interest, of the Corporation in favour of one market as against another; and although I think it necessary to ask the question, as I find there is that impression, I should not wish it to be supposed that I think the Corporation is acting from interested motives. What are your charges at Deptford, say for a bullock?—Five shillings.

9056. What is it for a sheep?—Ninepence.

9057. And what is it for a calf?—One shilling and sixpence.

9058. At Islington Market, is not the charge for a bullock 6 *d.*?—Yes.

9059. And for a sheep 1½ *d.*?—Yes.

9060. And for a calf 4 *d.*?—Yes.

9061. Supposing those figures to be right, it is reckoned out that if 3,000 beasts, 20,000 sheep, and 800 calves, were regularly unloaded at Deptford instead of at Islington, the Corporation would get 1,560 *l.* at Deptford as against 192 *l.* 10 *s.* at Islington?—I have no doubt that that is correct.

9062. Besides that, a good deal of meat which is killed at Deptford goes to the Metropolitan Meat Market, does it not?—Yes.

9063. There is a toll there, is there not?—Yes.

9064. What

Mr. *W. E. Forster*—continued.

9064. What is that toll?—One farthing for 21 pounds of meat, 2 *s.* 3 *d.* per ton.

9065. So that there, again, the Corporation would gain?—Yes.

9066. I have also heard it stated that the carcase butchers pay from 50 *l.* to 80 *l.* per annum for slaughter-houses at Deptford, is that so?—Yes.

9067. Altogether, then, the assertion is that the Corporation would have an increase of income of at least 50,000 *l.* per annum if the foreign animals were all ordered to be slaughtered at Deptford?—If the present prices are kept on at Deptford they would.

9068. I should like to know the reply that you would make to the view that is expressed by these assertions?—First of all, it is true that we get an extra toll on animals that are slaughtered at Deptford and that go to the Central Meat Market; but we also get an extra toll on the cattle which are slaughtered at the Copenhagen Cattle Market that go to the Central Meat Market. A very large proportion of the animals that go to the Islington Cattle Market find their way into the Central Meat Market to be sold. Then at Deptford we are wharfingers as well as market proprietors; we provide the wharfage. When they went to Brown's Wharf, or to Thames Haven, they had to pay 2 *s.* 6 *d.* per bullock for landing at the wharf. That is included in our 5 *s.* at Deptford, independently of which the 5 *s.* includes 10 days' lairage of the animal as well as the market charges. It is a lump sum of 5 *s.* to cover all charge. If they remained at Copenhagen Cattle Market for 10 days, they would have to pay the Corporation 3 *d.* per head per night; that would be 2 *s.* 6 *d.* for the lairage. Then there would be 2 *s.* 6 *d.* wharfage at Thames Haven, and then there would be the railway charge from Thames Haven to the Cattle Market. Therefore the charge at Deptford is very much less in proportion than the charge on an animal after it leaves the vessel at Thames Haven, or at Brown's Wharf.

9069. Do you always charge the 5 *s.*, whether the animal remains for one night or for 10 nights?—Exactly the same.

9070. As you do not make a compulsory charge for lairage at Islington, but only charge by the night, why could you not do the same at Deptford?—If the whole of the foreign animals went to Deptford, and the revenue of the Corporation were to be considered excessive, that is to say, if it were larger than would recoup the Corporation, the loss that they have already incurred on the market, and the loss that accrues to them from the abstraction of the foreign animals from the Islington Cattle Market (because there is a very large falling off in the returns from the Islington Cattle Market at Islington, in consequence of the foreigners going to Deptford), if it was considered then desirable that there should be a reduction in those charges, I am quite sure that the Corporation would be prepared to listen to that. In fact, you will remember that when those charges were originally fixed, it was understood that they were simply to be for two or three years, to see how they worked.

9071. Those charges were inserted in the Act of Parliament as the maximum, but it was not contemplated that they should not be altered?—Quite so; in fact, the Corporation recognise it as the principle upon which they conduct their markets that they do not desire to realise a large revenue from their markets. They think that when they are repaid their outlay with fair interest for their money and the working expenses, the tolls should be reduced as necessity requires.

Mr. *W. E. Forster*—continued.

9072. Going back to the history of the Deptford Market, it was in consequence of the Act, which it was my duty to carry through Parliament, that the establishment of the Deptford Market was in fact made compulsory upon you; that is to say, unless you got it open within a certain time, you would have lost your monopoly of the markets in the metropolis; was not that so?—Quite so; but there is nothing very valuable in it.

9073. Still that was the fact?—Yes, that was so.

9074. But I understand that you think it unfair to compare this 5 *s.* which is charged at Deptford with the 6 *d.* which is charged at Islington, because in the 5 *s.* is included not merely the lairage for the beast while it is waiting for purchase, but also your wharfage charge for allowing it to be landed?—Quite so.

9075. I want you to give the Committee rather more distinctly your reason for saying that the importer has to pay quite as much, if not more, to get his beast to Islington than he has to pay to get it to Deptford?—I thought I had given it to you, but we will go over it again. If an animal is landed at Thames Haven, the Thames Haven Company charge 2 *s.* 6 *d.* for wharfage dues. There is the railway carriage of the animal from Thames Haven to the Cattle Market; I do not know what that is, but I think it is 1 *s.* 6 *d.*; that makes 4 *s.* Then there are the market dues at the Cattle Market, which makes 4 *s.* 6 *d.*, assuming that it remains 10 days at the Cattle Market, because it is permitted to do so at Deptford if they like; that would be 2 *s.* 6 *d.* for lairage, making 7 *s.*

9076. Assuming that it remains three days, what would that be?—That would be 9 *d.*

9077. That would bring it up to 5 *s.* 3 *d.* as against 5 *s.*?—Yes.

9078. Supposing that the beast does not come to Thames Haven, but comes to Brown's Wharf, what then?—It is the same thing.

9079. Minus the railway charge?—Yes, but it costs just the same to drive it; it has to be driven, and a drover has to be paid for it.

9080. Then I understand that your reply to this statement is this: That, in the first place, there is no present loss to the importer; and, in the second place, that if it turned out that you could reasonably be expected to make lower charges at Deptford, in consequence of a larger arrival of animals, the Corporation would be prepared to make that change?—Quite so. We were compelled to have a market at the water side in consequence of its being necessary to have a wharf to land the animals; the result was that we had to give considerably more for the land for those wharves than we could have acquired land for in other parts of London. Our three wharves cost us over 40,000 *l.*

9081. I believe that the Deptford Market has cost you a tolerable sum of money altogether?—It cost us 235,000 *l.*

9082. I think there was some set-off, was there not, in the fact that you were empowered to make higher charges at the Islington Market?—That was so.

9083. What

Mr. *Rudkin.*

2 July 1877.

Mr. *W. E. Forster*—continued.

9083. What was the change?—The change was from to 3½ *d.* to 6 *d.* on cattle, and from about 1 *d.* to 1¼ *d.* on sheep.

9084. It has been stated in the course of the evidence that the commission charged upon a foreign animal was 8 *s.*, as compared with 4 *s.* upon a home animal; are you aware whether that is so?—I know nothing of the commission.

9085. You have told the Committee that you would be in favour of ordering all the animals that come to London to be slaughtered at the port of landing, which means at Deptford; I suppose that that is an opinion at which you have arrived by the experience of the last three or four years?—Yes; I am sorry to have to include Denmark, but I am afraid that we must have one regulation.

9086. I am right, am I not, in thinking that that is an opinion based upon the experience of working the two markets side by side, and that you were not of that opinion on the first opening of the market?—No; we had not that opinion originally. We see now that the thing works without any very serious detriment or loss to any person.

9087. We have had witnesses who have gone into the detail, who say that there is a loss of between 2 *l.* and 3 *l.* per animal if sold at Deptford; might not that special loss have arisen from their being unexpectedly obliged to take the cattle to Deptford?—Yes.

9088. And, therefore, it would be unfair, would it not, to suppose that that would be a loss that would occur when it was understood throughout the trade that they were to come there?—Assuming that animals were taken to Thames Haven and landed, and that one was found to be suffering from foot-and-mouth disease, the Thames Haven Company would charge the wharfage charges on all the animals which were landed, and then there would be the expense of transshipping them and taking them up to Deptford.

9089. Not taking the positive orders that were in existence this spring in consequence of cattle plague, but taking last year, it was not unfrequently the case, I believe, that after the cargo had left the Continent, the importer, having expected to take it to Islington Market, would find that he was obliged to take it to Deptford?—Yes; there were several instances of that sort.

9090. Of course that uncertainty would have a very bad effect upon the chance of the cargo selling well?—Yes; and not only that, but it makes the salesman and the person to whom the cattle belong very cross indeed; he does not like to have the whole cargo stopped for one animal. They are under the impression that if one animal is slaughtered everything else should go free, and they do not seem to recognise the fact that the whole of their animals may be tainted.

9091. And I suppose that they are less the likely to be resigned, and the more likely to feel sore, because, if home cattle come into the Islington Market, and a good many of them are diseased, the rest do not suffer any inconvenience at all?—Quite so; but I think they are wrong in that.

9092. How long have you been of opinion that we ought to have a cordon round London?—I suggested it to Sir George Grey when he was Home Secretary in 1865, when cattle plague first broke out.

Mr. *W. E. Forster*—continued.

9093. Supposing that you were made the head officer to the Privy Council and could do as you liked, would you do both things; that is to say, order the animals to be all slaughtered at Deptford and establish a cordon, or would you only do one of them?—If you keep the cordon, I do not myself individually think that there is any necessity for the Deptford Market. I believe that the whole of the animals could be safely sent to the Copenhagen Cattle Market if you prohibited import from any country where cattle plague exists. I think that that would be a great deal better for all interests concerned; it would be certainly much better for the Corporation, and the trade would be better satisfied with it.

9094. What would then become of the Deptford Market?—I apprehend that the Corporation would have to do the same as it has done before, viz., put up with the loss.

9095. Would there not be considerable danger of smuggling through the cordon?—Not, I think, if the Privy Council were the local authorities for London, and established a cordon, and had the assistance of the police to keep it up.

9096. At the present moment is every animal that comes in branded?—The hair is cut off the tail of every animal that comes into the cattle market, but there is nothing in that. In many of the London cow-sheds they cut the hair off the tail for the purpose of keeping the animals clean.

9097. I can understand an objection being made to the continuance of a cordon in the interests of the London consumer, and that is, that anything which checks import would eventually be to his disadvantage, and that fewer animals would come in if they lost the chance of the outside market; have you considered that opinion?—Certainly; I think that the London consumer will be perfectly satisfied if you allow him to get his supply from any part that he can, and if they are live animals to have them slaughtered within the metropolitan district. I think that would be an immense boon to the metropolitan consumer, certainly.

9098. But what I mean is this: that while it is known that if more animals than are wanted come into London the surplus can find a market outside, is it not probable that there will be a larger import than if the importers know for a certainty that they cannot get a market outside?—If that were so then the price of meat in London would go down, and the English producer, who has the power either to send his things to the Copenhagen Market or keep them away, would keep them away.

9099. Still, I suppose, you would admit that it would be a restriction of trade which would not be desirable, except for the purpose of preventing disease?—Certainly everything should be free if we had no disease; this is simply a protection against disease.

9100. I understand you to say that you have great confidence in the future of the dead-meat trade, but you have no wish to give it any sort of legal protection or help?—Certainly not.

9101. What do you think would be the effect of carrying out the proposal which has been made by some persons of stopping the import of all foreign live animals into London?—I do not see the necessity for it.

9102. But what do you think would be the effect of it?—I do not think that we should get the

Mr. *W. E. Forster*—continued.

the meat from the Continent for the moment, though I think that possibly, in course of time, we should so; but it would very much interfere with the price of meat in this country, perhaps for a year or two.

9103. I suppose you would not like to be the official that had to face the consumers of London with that increase of price?—No, I do not myself think there is any practical necessity for it.

9104. With regard to the comparison between the Deptford and the Islington markets, do you object to telling me your opinion as to why it is that large importers, like those witnesses whom we have had before us, evidently think it so much to their interest to have their cattle sent to the Islington Market, instead of to the Deptford Market?—Every salesman and every person connected with the cattle trade is desirous of being perfectly free from restriction. They do not consider at all the question of rinderpest, or of foot-and-mouth disease, or of pleuro-pneumonia; the only thing that they consider, as every one in trade considers, is the best way to realise a profit. They know perfectly well that if their trade is quite free they can get a better price for their things, and get more things consigned to them, and get more commission, and more money in the year than they can when there are restrictions.

9105. You think that when Mr. Gebhardt gives evidence in that direction it is simply that he, with the natural feelings of a large tradesman, is against any kind of Government interference that he can help?—Yes, but I think that Mr. Gebhardt takes a rather more cosmopolitan view of the question than most of the cattle salesmen do; he is much more liberal in his views than most of them; but the tendency of his mind, of course, like that of every salesman's mind, is to be let alone to do as he likes.

9106. What is the distance of railway that will have to be made to put Deptford on to the railway system?—I do not think that it exceeds 300 yards.

9107. What railway company would be likely to do it?—The London, Brighton, and South Coast.

9108. Do you think that the Committee might reasonably suppose that if the Government were to order that all foreign cattle should be slaughtered at Deptford and if that order were to remain in force, we might be pretty well assured that that railway would be made?—I think there is no doubt of it. There was one little connecting link that was wanted some six or seven years ago between the Deptford Market and the meat market, independently of those 300 yards; and that little connecting link near to the Blackfriars station has been completed.

9109. Going now to the question of the American dead meat, you mentioned that last Monday you saw some meat in excellent condition which fetched 7 *d.* per pound?—Rather over 7 *d.* per pound.

9110. What was the price on the same day for good country-killed meat?—Ninepence per pound.

9111. Then that 2 *d.* would be clear profit to the butcher, would it not?—Quite so.

9112. He would make no difference in selling between one and the other?—No.

9113. And the butcher would naturally be strongly in favour of the dead-meat trade?—Yes.

Mr. *W. E. Forster*—continued.

9114. What do you think is the feeling amongst the consumers; have they still a prejudice against the American meat?—For a short time (and I cannot understand the reason why) the retail butchers of London seemed to have set their faces against American meat altogether. I can only account for it in this way: that they desired to convey an opinion to the public that they were really not supplying them with it; and it had the effect of preventing the American meat coming to London, and it was sold in the country instead.

9115. Is it not the case, that although to the Chairman and myself, who would only judge of the meat by what we saw when the joint came to table, the appearance would be good, yet to anybody who went and bought the meat at the butchers, it does not look as good as the country killed meat?—That which I saw on Monday certainly looked as fine as any home-bred Norfolk that I ever saw in my life.

9116. But sometimes it is the case, is it not, that even when it is good meat to eat it has a sort of sodden look?—Yes, that is when it is imperfectly packed; but every now and then it comes in perfect order.

9117. You made a statement to the Committee, for which I daresay there is a good deal of foundation, that the condition of the meat on arriving in England was partly owing to the long railway journey which the animals had to undergo in America before being slaughtered; but do you not look forward to the animal being slaughtered before it undergoes the railway journey in some cases?—I do

9118. For instance, why should it not be slaughtered at Chicago just as well as at New York?—Quite so. I believe it will come to that.

9119. With regard to the large increase of population in London, accompanied by no increase or if anything a decrease in the importation of live cattle into London, whether country grown or foreign, I suppose no one could state that the population of London consumes less meat per head than they used to do?—They consume a very great deal more, I think.

9120. Would you not consider, not taking one month with another, or one six months with another, according to the condition of trade, but taking five years with five years, that we have good reason to hope that the population of London consume more meat than they formerly did?—Quite so.

9121. And therefore this increase of consumption from increased population and from increased power of purchase must have been supplied by the dead-meat trade?—Exactly.

9122. Can you give the Committee any notion as to whether the relative consumption of beef and mutton has altered within the last 20 years?—I think that there is more beef and less mutton consumed, in consequence of the increased price of mutton; mutton is much more expensive than beef.

9123. With regard to the powers of the Privy Council in the metropolis, will you tell the Committee what is the present position of the local authorities; there are two local authorities in the metropolis, are there not?—Yes; the Metropolitan Board of Works are the local authority for the whole of the metropolis with the exception of the City of London and the Deptford

Mr. *Rudkin.*

2 July 1877.

Mr. *Rudkin.*

2 July 1877.

Mr. *W. E. Forster*—continued.

Market; and there the Privy Council have the power to inspect, and seize, and condemn.

9124. Is there not some degree of inconvenience from, or at any rate anomaly in, the fact that while the City is the sole market authority for the metropolis, yet that the City is only the local authority within its own borders?—It is the local authority under the third part of the last Act of Parliament for the construction of the Deptford Market, but, curiously enough, we have not the power to seize and condemn.

9125. But you are also the only authority for providing markets within the metropolis, are you not?—That is so. At the Copenhagen Cattle Market we are not the local authorities over our own market; the Metropolitan Board of Works are the local authority there.

9126. In which of the districts outside of the City is the Copenhagen Market?—In the Islington district.

9127. Taking the cattle that arrive from abroad when there is no cattle plague, do the majority of those that do not go to Deptford go to Thames Haven?—Yes; certainly the larger proportion of them.

9128. To what other places do they come?—To Brown's Wharf.

9129. Is there any other place besides Brown's Wharf and Thames Haven?—I think that they come to Blackwall, but very few come there; I think that Blackwall is closed now.

9130. I find by the last Report of the Veterinary Department of the Privy Council that, in 1876, there were many more animals, taking cattle, sheep, and swine, together, landed at Brown's Wharf than at Thames Haven?—Possibly there were more sheep landed at Brown's Wharf. There might be perhaps 100,000 sheep landed there, but there are a great many more cattle landed at Thames Haven; in fact, I think comparatively few sheep come to Thames Haven; they are almost all cattle.

9131. It appears that in 1876, there were 580,191 animals, including cattle, sheep, and swine, landed at Brown's wharf, as against 73,147 at Deptford, and 288,066 at Thames Haven; but that of the cattle there were 20,472 landed at Brown's Wharf, 21,860 landed at Deptford, and 105,204 landed at Thames Haven?—That is so.

9132. There do not seem to have been any cattle landed anywhere else than at those three places?—That is all.

9133. You mentioned, as a curious illustration of the power of conveying deat meat over England, that you felt sure that foreign sheep were slaughtered in London and went to Cardiff, and came back to London; do you say that, knowing that there has been such a case?—Yes, certainly.

9134. You can assure the Committee almost positively that, taking such a town as Leeds, for instance, it would not suffer so far as its supply from London was concerned, if it could only get dead meat from London without getting live meat from London?—Simply with the exception of the offals, and that difficulty I say can be very readily overcome, if the trade will only turn their attention to it in a practical form.

9135. With that exception, you feel sure that as much beef or mutton would arrive at Leeds from London as arrives there now?—Quite so; in fact they are now receiving large quantities; van loads after van loads go away from Deptford

Mr. *W. E. Forster*—continued

every day. The vans are so constructed that the sheep are slaughtered, and they are placed on hooks on rails in the vans; they come from the slaughter-house and they are sent straight away by rail at once.

9136. The completion of the railway communication at Deptford, would be a great help to that trade I suppose?—Certainly, it would go much more rapidly, and it would get rid of the vans. A tram would run in front of the slaughter houses, and the meat would be put in the railway trucks and taken away at once.

9137. Another reason was given, why the Islington Market was a better market than the Deptford Market, and that was this; that only the large carcase butchers could come to Deptford, because only such butchers could come as had capital enough to take a slaughter-house from you, and that therefore they had the trade to themselves without the competition of the small butchers, who drive the animals off to their own slaughter-houses, and keep them as long as they wish; what do you say to that?—That is so up to the present time to a certain extent; but if the orders were made permanent, the Corporation would be prepared at once to construct a sufficient number of slaughter-houses, to give conveniences for the smaller purchasers. But as a matter of fact now, every person who chooses to go there, can have a slaughter-house where he can slaughter one, two, three, or, say, 50 beasts, according to the number he purchases. We keep that in our own hands, so as to be able to provide it for the trade if they require it.

9138. The population immediately around Deptford may be considered to be larger than almost that of any town of the kingdom, may it not?—I do not think there is much in that. I think that almost every bit of meat which is slaughtered in Deptford goes right away to the meat market in Smithfield, or right away into the country at once.

9139. Does much meat go from the Metropolitan Cattle Market into the country?—Not nearly so much as from Deptford. It is the foreign sheep that they take away principally to the country and the manufacturing districts.

Mr. *Wilbraham Egerton.*

9140. I understand you to offer two alternatives: either a cordon round London, or else the slaughter of all foreign animals at the port of debarkation?—I go further than that; I would not allow anything to leave the metropolitan district alive that has once been in the Metropolitan Cattle Market at Islington.

9141. When you speak of a cordon round London, I understand you to mean that nothing should go alive out of a certain district around London into the country?—Quite so; that is the broad principle.

9142. Then you would allow live foreign animals, Dutch animals, or Danish animals, to come into the London market under those conditions?—Quite so, for slaughter anywhere within the metropolitan district.

9143. The alternative to that would be, that you would have all foreign animals, even Danish animals, which you admit are tolerably free from disease, slaughtered at Deptford?—Yes; I think that that would be the best in the interest of the consumers, of the trade, and of all persons concerned.

9144. Would

Mr. *Wilbraham Egerton*—continued.

9144. Would not the effect of live animals being prevented from being imported into London be to diminish the import of animals to the Deptford Market?—The price in England will always bring the foreign animals; there is no fear of that.

9145. Do you not think that the foreign trade will be rendered much more uncertain by the competition of dead meat from America, or by the importation of live animals from America during the summer?—So much the better for the English consumer.

9146. There has been a fear expressed by some witnesses that, between the two stools, so to speak, we should fall to the ground; that if we discouraged the import of foreign animals, we should not get a sufficient quantity of American dead meat to fill up the gap; is that your opinion?—That is the reason why I would not suggest any discouragement of the foreign supply. I believe that slaughtering the foreign animals at Deptford, instead of being a discouragement, would rather facilitate the trade.

9147. We have heard from Denmark that what would be equivalent to a dead-meat trade would discourage the trade from Denmark altogether?—I do not think that it would be considered equivalent to a dead-meat trade.

9148. You think that slaughtering at Deptford would satisfy the trade?—I think that they would continue to come in very large numbers, in much larger numbers than they do now, if the orders were permanent.

9149. Is offal now sent to Manchester and other large towns in the north from Deptford?—I believe there has been some small amount sent, but it was not found to be satisfactory, and they discontinued it.

9150. How would you treat the offal if animals were slaughtered, as you propose, in country slaughter-houses; that is to say, in slaughter-houses on the farms, or in the neighbourhood of farms?—There is no reason why you should not have the same process there as in any large slaughter-houses on the Continent. Where there are two, or three, or more slaughter-houses congregated together you will find a *triperie* established for the purpose. Then those offals could be sent all over the country; in fact they will keep much longer when they are once dressed than they will before. I daresay that most honourable Members have seen how beautifully the sheeps' trotters are turned out in Paris, and delicious food they are, too.

Mr. *Ritchie.*

9151. With reference to the questions which were put to you by the Right honourable gentleman, the Member for Bradford, as to how far it was the interest of the City that the cattle should be slaughtered at Deptford, I think you said that one of the reasons for the high cost of Deptford was that it included the wharfage?—Yes.

9152. Wherever the cattle were landed they would have to pay wharfage?—Quite so.

9153. But still it is the interest of the Corporation that they should receive that wharfage, is it not?—Yes; but I may say, speaking in the interests of the Corporation, and as their mouthpiece on this occasion, that I hope you will not consider our interests in any shape or form; we simply give our evidence and our views entirely on public grounds. The Corporation of London

Mr. *Ritchie*—continued.

do not consider the question of money at all in this case, and they never have done so from the commencement.

9154. With reference to the offal, are they now able to get rid of all the offal of the cattle slaughtered at Deptford?—Yes, contractors take it away, and there is no difficulty in getting rid of it.

9155. Where does it go to principally?—It goes to the principal tripe dressers and trotter shops in London.

9156. Is a great deal of it consumed in the neighbourhood of Deptford?—A considerable quantity of it would be consumed in all the poor neighbourhoods.

9157. Do you think that by slaughtering the cattle at Deptford there would be any chance of the meat being made cheap in London and dear in the country?—I think not.

9158. You spoke about Mr. Gebhardt's evidence, as being very reliable or cosmopolitan; you do not agree, I suppose, with his answer, when he is asked this question: "Supposing that all the cattle that came into the port of London were to be slaughtered at Deptford, what effect would it have upon the inland markets at the great centres of industry, such as Birmingham and Sheffield, and those places?" and he answers: "The effect would be that those places, which are now great consumers, could not get that class of meat which they require, and they would be obliged to buy the English meat, which is comparatively dearer, which makes more money; and perhaps a great many of them would go without meat, not having the cheaper food at their market"?—My answer to that is, that they do get it now. Thousands of sheep are slaughtered at Deptford, day after day, and are sent down to them.

9159. I put this question to Mr. Gebhardt: "Do they not bring dead meat up from Aberdeen?" and his answer was: "Yes, they do; but that is quite different; in Aberdeen, first of all, it is much colder, and very little comes from Aberdeen in summer." I then asked him: "It may be colder in Aberdeen, but it has to go through a warmer climate before it comes to London, has it not?" and he replied: "Yes, but I tell you very little does come from Aberdeen to London in hot weather"?—Sixty tons of meat came from Scotland to-day into the meat market.

9160. Then, so far as your experience goes, there is no foundation for the opinion which has been given here by Mr. Gebhardt?—Quite so. That meat must have left Scotland before Sunday morning. They will not allow it to be put on board the railway on Sunday, and therefore it must have been put on the railway on Saturday, and must have been in the trucks all day on Sunday.

9161. Therefore you do not anticipate any difficulty in the great centres of industry if the animals are all slaughtered at the port of embarkation?—The fact that London is now supplied from the country with 175,000 tons of meat per annum proves that meat can fairly and properly be killed in the country and brought to London to be consumed.

9162. Therefore, in your opinion, there is no risk of any such consequences as that?—There is no reason why a large number of animals might not, on the other hand, be slaughtered in London and sent into the country.

Mr. *Rudkin*

2 July 1877.

Mr. *Ritchie*—continued.

9163. You made a remark which struck me at the time, and you said that you regretted to have to give the opinion, that the only remedy was slaughter at the port of debarkation; why do you regret it?—Because I am in favour of freedom, as much as possible; but I am afraid that nothing else will do it.

9164. Have you any special reason for that?—Denmark has been mostly free from disease, according to the evidence which I have read, and it appears to be a pity to include it; but unless you have a rule that covers the whole thing, I am afraid it will not work. The Spanish cattle certainly come very full of foot-and-mouth complaint.

9165. In reference to the difficulty which small butchers would have in getting slaughter-houses at Deptford, I think you said that the Corporation were willing to put up slaughter-houses to accommodate the butchers?—We are constructing sheep slaughter-houses now. As applications are made from time to time, the Corporation provide the necessary requirements.

9166. As I understood you, the difficulty which the small butchers would have is that at present they have their slaughter-houses behind their own shops, and they have men whom they employ in other portions of their business, who are there to slaughter the animals when they have to be slaughtered; and that difficulty could not, of course, possibly be met at Deptford?—There are 5,000 butchers in London, and there are about 1,100 slaughter-houses; therefore there are 4,000 butchers who provide their customers with meat without having slaughter-houses at the back of their shops, and I cannot see why the other 1,000 cannot do the same.

9167. I suppose the slaughter-houses are principally connected with the small butchers, are they not?—No, not necessarily; they are principally connected with the retail butchers. There is no difficulty in every carcase butcher having a slaughter-house at Deptford if he thinks fit.

9168. So far as regards the men being on the spot in the shop, the small butcher would be at a disadvantage in having to slaughter at Deptford, would he not?—The foreign trade and the English trade are quite distinct; the men who deal in the foreign cattle, that is to say, the carcase butchers, do not deal in English cattle; it is almost a distinct and separate trade. There are a few men in the trade who purchase both English animals and foreign animals, and slaughter them both.

Mr. *Dease.*

9169. When you say that dead meat is sent from Deptford inland, is ice ever used for its preservation?—No.

Mr. *Norwood.*

9170. With regard to your scheme of slaughter at the port of debarkation, that would put a very great stop to the importation of foreign milch cows, would it not?—I do not see why the foreign milch cows could not be imported at some place far away from London where a quarantine should be established.

9171. Then you admit that a quarantine might meet that case?—Possibly.

9172. Then your idea of compulsory slaughter would stop short at milch cows?—Quite so, because if you attempt to keep fat animals a sufficient time to quarantine them they will lose so much in weight and in quality that it will not answer the purpose of the exporter to send them.

Mr. *Norwood*—continued.

9173. But I presume that those milch cows are of great value to the people, or they would not come; and you say you would put them under such restrictions that you would practically prohibit them without actually doing it; do you not think that it would be a misfortune if the large number of milch cows that come from Holland were peremptorily stopped from being imported?—If I am pressed home as to that, I must say, I do not think that it would be any very great misfortune; I think that there are quite sufficient milch cows in this country, very much better bred things altogether, and of good quality, that would be used if we had not the disease in the country that we have had from time to time.

9174. You think that we could supply sufficient milk from English bred cows?—I do most certainly.

9175. Can you tell me how you discover from the carcase whether a beast has been killed in the country or in London?—I could tell if I saw it hanging in the meat market.

9176. Is it easy to detect it?—Very easy; a practical man would tell you at once.

Mr. *John Holms.*

9177. You said that whilst there are 5,000 butchers in London, there were only about 1,100 slaughter-houses; has the tendency been to decrease the number of slaughter-houses?—Yes, certainly.

9178. Have you any measure of the number at all?—There were nearly double the number ten years ago that there are now.

9179. That shows that upon the whole the butchers do approve of the dead meat being brought here?—Yes, I know butchers who had slaughter-houses, and who bought animals at the Copenhagan Market alive, and slaughtered them at home; they gave it up of their own accord, and closed their slaughter-houses; and since then they have been buying dead meat, and they have been doing very much better as tradesmen than they did before.

9180. You say that in 1869–70, 120,000 tons of dead meat came; and that in 1876, 175,000 tons come from the country; from what part of the country did that come?—From all parts of the country; I should say, that there is hardly a part of England, Ireland, Scotland, or Wales that we do not get supplies from.

9181. How long will it keep in the hottest weather?—It will keep much longer than meat will if it is slaughtered in London.

9182. Have you any idea how much longer it will keep?—I will give you my own experience. Last Saturday I purchased a side of lamb, and this morning I found that some of that lamb was perfectly sweet; and that lamb had been slaughtered in Scotland on the Wednesday.

9183. Have you any experience of the time that American meat keeps after it arrives?—Yes, I have kept American meat five days in London, and after that it has been perfectly fresh.

9184. Would you say that the American meat kept as long as the home-killed meat?—If it comes into the market in such a condition as I saw on Monday, certainly it would, in my opinion,

Mr. *John Holms*—continued.

opinion, keep much longer than town-killed meat.

9185. As regards the American meat, I think you said that the butchers were rather against it at first, and also that the people had a prejudice against it; do the butchers now readily take American meat?—There is a very ready sale for American meat if it comes in anything like condition; all the butchers purchase it if they get an opportunity.

9186. I think you said that you regarded the gain in the weight of the dead meat that came from the country as at least about 5 per cent., as compared with that killed in London?—Yes, I think that a beast weighing 100 stone, which was slaughtered in London; having come by railway from Aberdeen, would lose at least five stone in weight.

9187. Then that, together with the more scientific treatment of the offal, I suppose, in your opinion, would rather give to the poorer classes a *quid pro quo* for the very cheap price at which they obtain their offal now in bad condition?—I think they can get the offals in better condition, and at a cheaper price, if they are treated properly at a slaughter house, than they can under the existing arrangements.

9188. When you speak of a cordon being placed round London, what distance do you mean?—The metropolitan district it is at present, because the Metropolitan Board of Works, who are the local authorities, have the control of it; but my view is, that that should be placed under the control of the Privy Council, and that the cordon might be larger or smaller, as the case required.

9189. You state that at present the Metropolitan Board of Works have the authority over the Copenhagen Market?—They have.

9190. But you have the full right to make your charges as you like, in the same manner as you make them at Deptford?—We have a limit under the provisions of the Act of Parliament.

9191. I think you said that disease was more prevalent at the Copenhagen Market than at the Deptford Market?—Yes, I think so.

9192. Is there as much attention paid to the disinfecting of the Copenhagen Market as there is at the Deptford Market?—Every attention is paid to it, and from time to time the lairs are scraped out, and disinfected and washed thoroughly.

9193. Then you think that the disease comes from the home animals as well as from the foreign animals?—Every farmer or stock producer, if he finds that he has an animal on his farm which has something the matter with it, he does not know what, naturally sends it to market at once; and no market is so open to him as the cattle market at Islington.

Sir *Rainald Knightley.*

9194. With regard to the American dead meat, we have heard a great deal of evidence that it presents a damp appearance on the outside; and that has been accounted for by the fact that if a cold substance is brought suddenly into a hot atmosphere, it causes condensation; what is the effect upon the American meat when it arrives on a cold day during a frost, when the atmosphere is as cold as it is in the ice chamber?—I have seen American meat in the winter time, and it has looked and eaten remarkably well; in fact

Sir *Rainald Knightley*—continued.

when it comes properly from the box that it is packed in, if it is a proper and fair importation of meat, there is nothing to show that there is anything wrong with it in any shape or form.

9195. I understand that when the weather is cold it does not present that same damp appearance which it does when the weather is very hot?—Some of it does; that which comes imperfectly packed always looks bad.

9196. But when it is properly packed it does not present that damp appearance?—It does not at any period of the year, so far as my experience goes.

Colonel *Kingscote.*

9197. You said that the quantity of live meat brought into London has fallen off, has that increased the price of meat in the country?—I think not; I think that the cattle plague has increased the price of meat in this country and throughout Europe. It practically decimated our stock in this country ten years ago, and we have never recovered from it.

Mr. *Arthur Peel.*

9198. If London was made, so to speak, the area of slaughter, and the Deptford Market abolished, and a cordon drawn round London, what would you do about admitting cattle landwards into London?—There is no reason why they should not come in, but they must not go out again.

9199. You mean that as a protection from the country?—Quite so.

9200. But what precautions would you take to guard London against disease?—There is no reason why we should not have cattle sent into London from the country if they must be slaughtered within a week.

9201. But you would not impose that restriction upon the foreign cattle that they should be slaughtered within a given time, would you?—No, certainly not; for, practically, you would not require an order for that because the trade of their own accord would slaughter the animals; they cannot afford to keep them, because they waste so much.

9202. But when this evidence is established and the animals have to be slaughtered within London, what would be going on at the other ports?—I do not see any reason why there should not be other ports established in the country, such as Hull, Liverpool, and Southampton, and other ports where there are populations; there is no reason why foreign animals should not be imported into those ports and slaughtered there.

9203. On the same conditions as in London?—On the same conditions as in London,

Major *Allen.*

9204. I understand that you are all for free trade in meat, but that you are not for free trade in disease?—That is so.

Mr. *Chaplin.*

9205. I understood you to say, in answer to the Right honourable Gentleman the Member for Bradford, that the effect of stopping the live import would be to raise the price of meat considerably to the consumer for the moment?—Yes.

9206. Do you think that that would be the case if considerable notice, say six months'

Mr. *Rudkin.*

2 July 1877.

Mr. *Chaplin*—continued.

notice, was given before such a measure was adopted?—I do not think that six months would be sufficient; I think that it should be three or four years. I think that you should give time for the producers and the breeders abroad and the trade generally to adapt themselves to the altered circumstances of the case.

9207. But do you think that it would require anything like three or four years for the dead-meat trade from America to be so considerably increased as to take the place of the live-meat trade from the Continent?—I shall be very much astonished if we find within three or four, or even within 10 years, that the dead-meat trade from America has that effect.

Chairman.

9208. With regard to the Deptford Market, Mr. Gebhardt, I think, stated in evidence that English cattle never went to the Deptford Market; is that within you knowledge?—I do not know of any English cattle having gone there, but there is no order to prevent their going; they can be taken if they like.

9209. Has it come within your knowledge that cattle are taken from Islington Market to be slaughtered at Deptford?—That I am not aware of; they have power to do it; but I am not aware that it has taken place.

9210. I suppose that since these restrictions have driven more animals for slaugher into the Deptford Market, the trade depending upon that is more centreing around the Deptford Market, is it not?—No. I think that the persons who frequent the Deptford Market, the buyers and salesmen, reside and carry on their main businesses in the same positions as they did originally.

9211. With regard to the quarantining of milch cows from Holland, do you believe that quarantining them would protect us against the introduction of pleuro-pneumonia from that country?—I would rather not express an opinion upon that subject. I have no scientific knowledge upon the subject.

9212. I suppose it would modify your opinion as to admitting them if the incubation of the disease, being, as is described, two or three months, rendered it necessary to quarantine them during that time?—If that is necessary, then I should certainly prohibit them altogether.

9213. I think I understood you to say that Spainsh cattle now come over full of foot-and-mouth disease?—I said that Spanish cattle had come full of foot-and-mouth disease. I have seen hundreds of them myself at Deptford in a fearful state of foot-and-mouth disease.

Chairman—continued.

9214. Are you aware of the returns for last year, 1876?—I have not seen them.

9215. If you will turn to Table 17 you will find that the importation from Portugal was 14,264, and from Spain 21,116; and that of those there were affected with foot-and-mouth disease 14 from Spain and 158 from Portugal; that does not show any very large amount of foot-and-mouth disease introduced from those countries in that year?—I have seen over 100 Spanish beasts at Deptford suffering with foot-and-mouth disease.

9216. During 1876?—I am not quite certain whether it was the year before, but certainly Messrs. Hope and Harrington imported two or three cargoes that were very bad indeed.

9217. This official return, if it is correct, shows that very few indeed came from Spain that were affected with the disease, and not very many from Portugal?—Possibly I may have seen those numbers; I think they came within a month of each other. The 158 might have been the lot that I saw; they certainly were in a very bad state indeed.

9218. It has been given in evidence before the Committee that, as a rule, the Spanish cattle have, not any more than the Danish cattle, been very subject to these diseases?—That has been proverbial, I believe, in reference to Spanish cattle.

9219. Still, although you wish to allow these animals to come in, you think that, for the sake of getting an uniformity of regulations and conditions which would render the market and the trade a profitable one, they should all be slaughtered at the port?—I think that that would be better, under all the circumstances.

9220. With regard to the Islington Market being closed against animals being taken out of it, no great hardship would fall upon the home trade upon that account?—No.

9221. A farmer, generally, when he sends his animal to market sends it up with a knowledge that it will not pay him to send it to another market, does he not?—Certainly he does. If it went elsewhere to be sold at all it would be taken by a jobber, which is a class of men that it would be a very desirable thing if we could get rid of altogether.

9222. If the market were inclosed, and the cordon were kept on, there would be nothing to prevent the farmer from sending his animal to the market any more than there is now?—Nothing whatever.

9223. Because he would not expect, when he sent it up, to take it away to a further market?—Certainly not.

Mr. Henry Knowles, called in; and Examined.

Mr. *Knowles.*

Mr. *Norwood.*

9224. You are a Cattle and Sheep Salesman at Hull, are you not?—Yes.

9225. And you attend here at the request of the trade, and as their representative?—Yes.

9226. You have some statistics, have you not, with regard to the foreign import?—I have.

9227. I need not trouble you to read them, because the Committee have them in another form. The importation from the Continent into Hull is chiefly from Germany and from Holland, is it not?—Yes.

Mr. *Norwood*—continued.

9228. You receive cattle also from Denmark and from Norway?—Yes, but very few at present.

9229. The reason is that the steamboat facilities are not satisfactory?—That is so.

9230. The import from Germany has been prohibited during the year, has it not?—Yes, since January.

9231. And you cannot now import horned cattle?—Only sheep.

9232. Has that been a great inconvenience to you at Hull?—Very much so.

9233. Have

Mr. *Norwood*—continued.

9233. Have you, in consequence, been compelled to go to Newcastle and to other markets to buy foreign cattle?—Yes, to make up the deficiency.

9234. Who were the chief consumers and customers for foreign cattle in Hull, previously to this year, when the trade was, comparatively speaking, open?—A great many of the butchers and buyers came from inland towns to take it away.

9235. Does a great proportion of the cattle of various kinds go into the interior?—Yes.

9236. Where to?—To Manchester, Sheffield, Wakefield, Leeds, and all those inland towns.

9237. Supposing that the state of things which the last witness alluded to were applied to the ports, that is to say, compulsory slaughter, what effect would that have upon the inland trade; would the butcher in Sheffield or Leeds be under a disadvantage in being compelled to slaughter in Hull?—He would, because when he can take them away alive he gets the offal as well, and he can kill them when he likes, and especially in the summer months.

9238. Can you give an estimate as to what you think would be a fair sum to affix to that loss, that is to say, the difference of advantage between his taking them away alive and his slaughtering them at Hull?—About 1 *l.* per head.

9239. Would not that be a serious item to the importer?—It would, very serious.

9240. Is it a sufficiently considerable loss to the importer to check the importation?—It would considerably; it must do so.

9241. Because, of course, the butchers from Sheffield, Leeds, and Bradford could not afford to pay so much by 1 *l.* per head as they would if they could take them away alive?—Quite so.

9242. With regard to the offal, that is a very important question to the other inland towns, is it not?—It is very important.

9243. There is a large consumption in Hull itself, is there not?—Very large.

9244. What do you estimate the average value of the offal at?—It would make nearly 1 *l.*

9245. What would that offal be worth if it had to be sent to Manchester from Hull; would it deteriorate or not?—Yes, it would not be worth more than one-half if it had to be taken away.

9246. I suppose that that loss would form a portion of the loss of 1 *l.* to which you alluded?—Certainly.

9247. There would be another difficulty if foreign cattle were not permitted to enter Hull alive; there would be a falling off, of course, in the import?—There must be.

9248. And there would be a practical difficulty in Hull with reference to the supply of foreign beef to ships and fishing smacks; you have a great many fishing smacks in Hull, have you not?—There are about 900 from Hull and Grimsby.

9249. They are mostly supplied with foreign beef, are they not?—They are supplied partly with English and partly with foreign beef, but they will not have anything but what is killed in Hull.

9250. Why will they not?—It will not keep. If they get beef that has been in ice and put it in salt it will not keep. Many of them have tried it, and they have had to throw it overboard, and they will not have it.

9251. You mean that the American beef would not salt?—It would not.

Mr. *Norwood*—continued.

9252. But would not beef salt which was killed on the Continent?—For salting properly it requires it to be about 12 hours killed to keep.

9253. There are from 4,000 to 5,000 men on board those smacks, are there not?—Yes, about that number; there are five to each smack, and there are 900 smacks.

9254. What does each man consume per week?—They consume 10 lbs. per man; 50 lbs. the five.

9255. I believe, so far as the Deptford Market is concerned, the import of horned cattle from Tonning is permitted?—Yes.

9256. But it is not permitted into Hull at all yet?—Not at all.

9257. And you, representing Hull, think that the same privilege might be extended to Hull?—I should think so.

9258. And you think that your arrangements at Hull would be equally protective with those at Deptford?—Yes, certainly.

9259. With regard to your arrangements at Hull, are you aware that the corporation have submitted a scheme to the Privy Council which has been approved?—Yes, for a new market.

9260. That the corporation intend giving up their present English cattle market to the foreign trade, and that they have purchased, at a cost of 50,000 *l.*, or thereabouts, a large tract of pasture about two miles off for the English market?—Yes.

9261. So that they will carry on the two trades perfectly distinctly?—Quite distinct altogether.

9262. There would be no possibility of any mixture?—Nothing at all.

9263. This proposed new foreign market is some three acres in extent, I believe?—I think it is more; it is from three to five acres.

9264. And the corporation are about constructing lairs and slaughter-houses, and all possible conveniences?—Yes; all the plans are prepared for it.

9265. You have had some American cattle into Hull lately by Wilson's steamers, have you not?—Yes.

9266. Have you seen them?—I have sold them.

9267. In what condition did they come?—They came in first class condition, and as fresh as though they came by rail or road 20 miles only.

9268. What did you sell them for?—They would average over 31 *l.* each one cargo, and others would average about 30 *l.*

9269. Did you sell some as high as 40 *l.*?—I sold some at 45 *l.* per head.

9270. And those beasts were really as fine as our own English beasts?—They were beautiful.

9271. And they came all the way from New York to Hull in admirable condition?—Beautiful.

9272. Quite lively?—Quite lively; we were obliged to have extra men for them.

9273. One nearly murdered a custom-house officer, I think?—Yes; it is wonderful how fresh they are.

9274. On the other hand, you have seen some of this American dead meat, have you not?—Yes, I have.

9275. How do they like it at Hull?—They will not have it now. I had the first importation of it myself.

9276. Is that really the case, or do the butchers in

Mr. *Knowles.*
2 July 1877.

Mr. *Knowles.*

2 July 1877.

Mr. *Norwood*—continued.

in Hull sell the American dead meat under the disguise of English meat?—No, they do not in Hull.

9277. Then they do not take in the Hull people as they do the people in London?—No, it is reduced 75 per cent. this last week: there is only one party in Hull that sells it now, the people will not buy it.

9278. You have no faith in this iced meat?—No, I have not.

9279. You believe that the importation of dead meat from the Continental ports would not be sufficient to supply the requirements?—Yes.

9280. And if live stock was prohibited you think that it would very much check the importation to Hull?—It would for a good many years.

9281. And you would like to see healthy animals from a non-infected country permitted to travel over the country?—Yes, after due inspection.

9282. But under any circumstances you desire to have the cattle imported alive to be killed at the port of debarkation?—Yes, to be killed at the port of debarkation.

9283. Have you many Dutch cows coming into Hull?—Very few lately.

9284. What was the reason of the falling off there?—I believe that they have not them to send.

9285. The majority of the cows in Hull are English, are they?—The majority of the cows in Hull are English.

9286. What is the freight on a live beast from Hamburg?—15 *s.* a head.

9287. What is it from Holland?—12 *s.* 6 *d.*

9288. Taking all the expenses, is that cheaper than bringing over the carcase?—Yes.

9289. The live animals walk on board and walk off again, and all the rest of it?—Yes, it is quite as cheap, if not cheaper.

9290. Do you know what they charge per quarter for freight for the dead meat?—I do not know.

9291. You are here from Hull to tell the Committee that the prohibition of live animals from the Continent would be a most serious injury, not simply to Hull, but to the great manufacturing towns which Hull supplies in Lancashire and Yorkshire?—Yes.

9292. You consider there is no necessity fo prohibiting them?—None at all.

9293. You think you could slaughter, if need be, all the cattle that could come?—Yes, and we want all that we can get.

Mr. *Elliot.*

9294. Where do most of your cattle come from to Hull?—From Germany and Holland.

9295. Not much from Denmark?—Very few; we had none this year from Denmark.

9296. How do you make out the difference of of 1 *l.* per head between the cost of slaughtering at Hull and the cost of slaughtering at Leeds?—The animal itself is worth 10 *s.* more alive at Leeds.

9297. Does it not deteriorate to that extent by carriage?—It would be only three hours going to Leeds alive by cattle train, and it would not deteriorate in that time.

9298. It would lose 10 *s.* worth surely in that time?—No; it could not lose any.

9299. We have had it in evidence that an

Mr. *Elliot*—continued.

animal coming from Scotland loses five stone?—I would contradict that, because I have been accustomed to the Scotch trade myself; I have sent hundreds of them from Aberdeen both dead and alive, and I have gone on the railway with them, and seen them shown in the market, and I have had them weighed alive before they started, and weighed after they landed after giving them a day's rest.

9300. Will you tell the Committee how you make out the 1 *l.* difference?—The animal is worth 10 *s.* more.

9301. That is for the offal, is it not?—No; that is the animal being alive instead of being dead. If you kill an animal in Hull and send everything to Leeds, all the offal and the carcase and everything, and send, say, the same animal alive, it will will make 10 *s.* more alive than it will make dead, and there is 10 *s.* expenses of killing and all that, which makes up the 1 *l.*

9302. He has to be killed anyhow?—But the expenses are heavier.

9303. Would you send the offal to Leeds supposing that the animal were killed at Hull?—I would send it if I could not dispose of it in Hull.

9304. Do you think that it could be carried?—It could be carried nicely for such a short distance, but it would not carry a long distance.

9305. Of course if it did not carry you would consider it a loss?—You could sell it for something.

9306. Is it a great advantage to the poor of Hull to have all this offal thrown upon them?—It is, and they feel it a great loss not to have it.

Chairman.

9307. I understood you to say that you had tried the American meat for the purpose of salting?—Yes; the smacks have tried it.

9308. Have you tried it?—Yes; I have tried it myself at home.

9309. You have tried to salt the American meat, and have failed?—Yes.

9310. If you were in the room you probably heard the last witness state that he had made the experiment, and with perfect success; but that is not your experience?—No, it is not my experience.

9311. And you say that the sailors at Hull will not use it?—They will not have a pound of it.

9312. You have spoken of "iced meat;" I suppose you mean the American meat which comes over in a cool temperature; it is not iced?—They call it iced meat.

9313. That is only a name given to it?—Yes.

9314. I wanted to know whether it was meat dealt with by a process in which it was iced, and afterwards thawed, or whether it was brought over in a chill temperature which cooled it down, but did not ice it?—Yes; but when it is exposed to the air for a certain time, even in that way, it is sure to get what they call icy, wet and damp.

9315. And that has been the condition in which you have seen the cargoes arrive?—No, not all of them.

9316. Do you think it is possible that the trade being in its infancy, occasionally cargoes get sent over not properly prepared, and that those may be

Chairman—continued.

be the cargoes which you have seen in bad condition?—I have not much experience, but I should think so, from what I have seen.

9317. I think you said that whilst the introduction of cattle was permitted from Schleswig since the 30th into London, coming from the port of Tonning, that permission has not been extended to Hull?—It has not.

9318. And that you thought that it ought fairly to be extended to that port?—It ought to be extended to that port on the same footing.

9319. You are probably aware that there has been considerable discussion as between the central authority and the port of Hull with regard to their markets?—Yes, there has.

9320. And especially with regard to the market which at present exists for the landing of foreign animals?—Yes, that is going to be done away with altogether.

9321. But, as I understand you, that has not been done up to the present time?—No, but I have been told by Mr. Leck that the corporation are going on with the new market as quickly as possible.

9322. Probably when that market is established on conditions which the Privy Council think will give security, the same facilities will be given to Hull as are given to Deptford, which is a separate market?—Yes.

9323. May not the reason of your not having the same privileges extended to you now, arise from the fact that your home market and your foreign market, although they are going to be altered, are still under the old system?—Yes, but the old system is carried out intact in every way.

9324. And that is the system which the Privy Council said was so imperfect that they objected to it?—I do not think that they could improve upon it; it is the same as at Deptford.

9325. Is it not the fact that the present foreign market in Hull is separated only by an almost imaginary line from the home market?—It is not far from the home market.

9326. And that has been the reason which has made this central authority object to the Hull market during the last few years?—But the other market can be changed at any moment, the English market.

9327. But it has not been changed, I understand?—It has not been changed yet, but they could change it in a week's time.

9328. And that is probably the reason which has led to the regulations not being identical at Hull and in London?—It can be changed and made all correct in a week's time.

9329. I understand you also to say that, with regard to the freight of the animal, it was quite as cheap to bring the live animal as the dead carcase?—Yes.

9330. In your next answer you said that you had never brought a dead carcase, and did not know the price?—I do not know the exact price.

9331. It is merely imagination on your part that that is the case; and as you wish it to be the case, you probably imagine it to be so?—No; not so. Anything that I get in that line I know is dearer than the live animals. It is the public opinion.

9332. In purchasing in the market you purchase the dead animal dearer than the live animal; but you have no personal experience of the price, and you cannot tell what is the freight of the carcase, and therefore you cannot compare it positively with the live animals which you say you do know the freight of; knowing that, and not knowing the freight of the other, how can you possibly say, as you have said, that to bring the one was equally as cheap as to bring the other?—Parties that have got them have told me so.

Chairman—continued.

Mr. *Knowles.*

2 July 1877.

Colonel *Kingscote.*

9333. The restrictions which are imposed upon the movement of cattle into and out of Hull are in consequence of the cattle plague having been imported into Hull, are they not?—Yes, from Germany.

9334. You said that these restrictions have injured the trade in Hull; have they increased the price of meat in Hull?—Yes.

9335. More than in any other place or town in the country?—I could not say that. Yes, it has for one class of meat, for the middle class of meat.

9336. Do you pay a higher price for meat at Hull than you pay in any other part of the country?—Yes, for the middling class of meat we pay higher than ever we did in Hull before

9337. Higher than it has been in Leeds, or Manchester, or London?—Yes, higher than it has been. We want that middle class of meat for contracts and for shipping.

9338. Fresh meat?—Yes, fresh meat.

9339. You say it is higher at Hull at this moment than it is in any other town in England?—Middle class beef is.

9340. Do the shippers at Hull buy the meat for their crews in a free open market, or do they contract?—The contractors engage a butcher to supply them at so much per hundred-weight, or so much per pound.

9341. For this middle-class meat?—They get good and middling too, they want a mixture.

9342. You said that the good meat was no higher, did you not?—I said that the middle-class meat was higher.

Sir *Rainald Knightley.*

9343. You said in reference to the loss of offal in the case of the beasts slaughtered in Hull, that it was a loss of one-half, as the offal would be conveyed from Hull to the towns you enumerated, Manchester, Leeds, and those places within a very few hours; how do you account for such a great deterioration in the value?—In the summer months the deterioration must be great; it would not be so much in the winter.

9344. Do you say that it loses half in being conveyed by train for two or three hours?—In summer time it would in the very hot months, but not in the winter time; it is worth more to our population, it is cheaper food to them than anything else they can get, and we have found a very great want of it.

9345. Do you really mean to tell the Committee that the loss on the offal between Sheffield and Hull would be a loss of one-half?—No; it is the difference between the live animal and the carcase that I speak of the difference between an animal going to Leeds alive, and being killed in Hull.

Mr. *Knowles.*

2 July 1877.

Sir *Rainald Knightley*—continued.

9346. Do you maintain that it is a loss of one-half?—One-half of the 10*s.* on the offal.

9347. You stated that the value of the whole offal would be 1*l.*, and that the loss would be one-half, which would be 10*s.*; you mean that the loss on the offal being conveyed from Hull to Sheffield would be one-half?—The loss on the offal and the extra expense of killing in Hull and sending it to Sheffield.

Mr. *Norwood.*

9348. Is it the case that the shippers take this foreign beef very much?—They do not take it at all; it is killed in Hull.

9349. Your chief sale for the Tonning and Hamburg beasts is to the shipping, is it not?—Yes, and some very prime ones as well.

9350. Owing to the prohibition since January you have had a great scarcity of that article, have you not?—We have had a great scarcity of that article.

9351. And you have not been able to supply the shipping in the usual manner?—We have not.

9352. And you have been obliged to go to Newcastle and other places in order to buy

Mr. *Norwood*—continued.

that class of meat to supply the ships?—Yes, I have.

9353. It is not prime good English beef, but it is good wholesome food?—It is.

9354. It is not so prime as Wilson's American beasts?—It is not so prime as Wilson's American beasts.

9355. The arrangement for the landing and slaughtering of animals from scheduled countries is precisely the same as it has been, is it not?—Precisely the same.

9356. And last year you imported something like 7,000 head of cattle from Hamburg and Tonning alone, I see by the statistics?—That would be from Bremen, not from Tonning.

9357. At any rate they were German cattle, and there is the same security now as there was then?—Yes, the very same.

9358. And you say that there is security at the present moment?—There is security at the present moment.

9359. And therefore you still think that the Privy Council might grant the boon and might permit the continuance of the old system until the new premises are opened?—Yes; under as strict regulations as you like.

Wednesday, 4th July 1877.

MEMBERS PRESENT:

Mr. Assheton.
Mr. Anderson.
Mr. Jacob Bright.
Mr. Cameron of Lochiel.
Mr. Chamberlain.
Mr. James Corry.
Mr. Dease.
Mr. Elliot.
Mr. W. E. Forster.
Sir George Jenkinson.
Mr. King Harman.
Colonel Kingscote.
Mr. M'Lagan.
Sir Rainald Knightley.
Mr. Norwood.
Mr. Pease.
Mr. Arthur Peel.
Sir Henry Selwin Ibbetson.
Mr. Torr.

SIR HENRY SELWIN IBBETSON, BART IN THE CHAIR.

Mr. EDMUND CHARLES TISDALL, called in; and Examined.

Mr. *Tisdall.*
4 July 1877.

Chairman.

9360. I BELIEVE you are the Chairman of the Committee of the Metropolitan Dairymen's Society?—I am.

9361. And you represent before this Committee to-day, the dairymen and dairy farmers of that association?—I do.

9362. Has your association considered the subject which has been referred to this Committee?—To a considerable extent.

9363. Have they met, and come to any resolution upon it?—Yes; they called a meeting, not only of their own members, but of the dairy farmers in the vicinity of London, in March last; and after very much discussion, in which it is only fair to say, that there was some difference of opinion, an unanimous resolution was come to, of which I believe you have a copy, to the effect that all live store stock and milch cows should not enter any of the ports without undergoing an efficient quarantine.

9364. Did they express any opinion as to what quarantine they thought would be required, or was it merely a general expression of opinion in favour of some quarantine, leaving it to the authorities to decide what quarantine was necessary?—They thought that not less than 14 days would be sufficient.

9365. Was that resolution come to, to protect them against the introduction of pleuro-pneumonia, as well as of other diseases?—Yes.

9366. And, in their opinion, 14 days would be sufficient to guarantee them against the introduction into their dairies of that disease by cows from abroad?—Practically, it would. We are not so fearful of pleuro-pneumonia, as we are of foot-and-mouth disease, and rinderpest.

9367. Of course, in the case of either foot-and-mouth disease or of rinderpest, a quarantine of 14 days would probably develop the disease, but, I suppose, in your experience, and from that of your association, pleuro-pneumonia takes very much longer to develop?—It may be so.

9368. And, therefore, although the quarantine would be a protection against foot-and-mouth disease and cattle plague, it would still leave you liable to the introduction of pleuro-pneumonia into your dairies?—To some extent it might; but the difference in the degree of its transmission is so great, that we should consider it a practical protection to our live stock, if we could get them quarantined for 14 days, in order to develop any disease that there might be about them.

Chairman—continued.

9369. Do you yourself farm or breed cattle?—I do. I have three dairy farms, and for many years past I have bred a considerable number of dairy cattle.

9370. In the immediate vicinity of London?—At Kensington, Horton, and Epsom.

9371. Are your dairy sheds within the metropolitan area?—Some of them are; those at Kensington only.

9372. I understand you to say that you breed cattle as well as buy in cows for milking?—I do; but I breed chiefly for milking purposes.

9373. You supply London largely, of course, from so many dairies?—I do.

9374. What number of cows do you generally keep on your farms?—From 100 to 150 cows and young stock.

9375. Is that the average number that you generally have?—Yes.

9376. With the experience which keeping that number of cows must have given you, have you had any pleuro-pneumonia amongst your cows at the dairies?—Yes; both pleuro-pneumonia and foot-and-mouth disease.

9377. Do you believe that foot-and-mouth disease has been introduced into your dairy from foreign animals?—In the first instance, yes; but lately it has not been directly introduced, because I have avoided the London markets; for the last 10 or 15 years I have almost entirely either bought in the country or bred my own stock.

9378. That would lead me to ask you how long you have been engaged in this business?—I have been engaged in it for 30 years myself, but there were three or four generations of us before.

9379. And it was before these last 14 or 15 years

Mr. *Tisdall.*

3 July 1877.

Chairman—continued.

years that your experience of the introduction of foot-and-mouth disease from foreign animals occurred?—Yes.

9380. Since you adopted the system of either breeding your own stock, or buying in from the home supply, you have not had foot-and-mouth disease in your dairy?—I have been very much freer; I go sometimes for four or five years without any instance of the complaint.

9381. Have you suffered from pleuro-pneumonia in your dairies?—Yes, considerably.

9382. Have you been able to trace the origin of pleuro-pneumonia breaking out there?—I have not been able to do so directly.

9383. Has it broken out amongst animals that have been introduced from abroad?—No, not that I could trace. I have never largely bought foreign animals.

9384. You have not bought Dutch cows?—Not often; not to a large extent.

9385. You have stated to the Committee, and I believe it is well known, that there is a great deal of pleuro-pneumonia amongst those animals?—Yes.

9386. And although they are very much sought in general as good milkers for the London dairies, there is that risk attending their introduction?—Yes.

9387. With regard to pleuro-pneumonia, is your experience of it recent, or was it prior to the 15 years in which you have taken these extra precautions?—I experienced it very much more previously to that.

9388. And by care, and either breeding your own stock or buying from areas which you knew were safe, you have avoided pleuro-pneumonia during the last few years?—Almost entirely.

9389. I understood you before to say that you would admit stores from the Continent, and let the cows for dairies come in from the Continent under a quarantine of 14 days?—Quite so.

9390. Do you think that you, with your experience of the necessity of caution in purchasing those animals, would be willing to go and purchase the cows from Holland under a quarantine of 14 days?—Personally, I would never buy a foreign cow.

9391. That is not because the foreign cow is not a very good milker, I suppose, but because of the uncertainty which exists in your mind as to its bringing into your herds these complaints?—Not only that. The English shorthorned cow is so much preferable to any foreign animal, that I believe, in the end, every prudent man would find it to his interest to keep to English-bred animals.

9392. Do you mean that the shorthorn is as good a milker as the Dutch cow?—Quite so.

9393. And being of a larger frame it is a more profitable animal?—Quite so; and for breeding purposes it is infinitely preferable.

9394. Therefore, supposing that it was found that store stock were liable to introduce disease, or that it was necessary to quarantine them for such a length of time as to make it not so much worth the while of the exporter to send them over, you do not think that we should suffer from either the prohibition or the stoppage of this store trade for dairy purposes?—To a very small extent. There is always a certain class of dairymen who will purchase the cheapest cows they can buy, and they get them from the foreign stock, even running great risks thereby; they buy them for their cheapness, in fact.

Chairman—continued.

9395. For the sake of saving a pound or two they are willing to run the risk of the introduction of disease?—Quite so.

9396. I suppose you have seen the danger of this introduction of disease, not only to the herd of the person who buys them, but to the general public, from the possibility of the disease spreading from those herds?—Quite so.

9397. Do you think that the dairymen generally would be willing to submit to any proper regulations so as to prevent the spread of disease from their dairies?—I think they would welcome them. Although they know that the effect of quarantine would be to increase the cost to some extent of the foreign animals, it would be a guarantee, to a certain extent, of their better health, and they would feel repaid for the additional cost.

9398. In fact, your association not being anxious to become the centres, or the distributors, of disease, for their own sakes, as well as for the sake of the public, would not be unprepared to see a prohibition of the introduction of these animals which are liable to disease, and they would be willing to submit to a certain amount of inspection, so as to guarantee the public that they were fairly carrying out the Order?—I believe they would.

9399. Does it appear to you that that absolute prohibition would give greater security than the original suggestion, which you placed before the Committee, of a quarantine, and allowing the animals, afterwards, to be bought in the open market?—I do not see where they would conflict.

9400. You first said that you thought your association would recommend 14 days' quarantine, and that then the animal should be able to be bought openly in the market; but you have since stated that you admit, also, that there would be considerable risk of the introduction of disease still, under those circumstances, into dairies; and, with a view of protecting both the public and the dairyman himself, you think that your association would be willing to accept the prohibition of import, with regulations guarding the public as to diseases in these dairies?—We are now under considerable regulations issued by the medical officers of health, and I presume that you only allude to the further extension of such regulations.

9401. What I meant was, that the present regulations do not allow of inspection, excepting by consent; there is no power of entry at present, and it has been represented to the Committee by one witness that, although the inspection was deemed necessary, many dairymen have refused entry to the inspector?—I have known that to be the case, because they have imagined that the inspectors would be the most likely men to introduce disease. If they believed that there would be no chance of disease being introduced into their dairies by an inspector who may have come from other dairies where the disease had been incubating, I think that there would be no objection on the part of the dairyman.

9402. If proper precautions were taken as against the disease, inspection, or power of entry to the inspector, would not, you think, be objected to by the dairymen?—Quite so.

Chairman—continued.

9403. And that inspection would ensure the public against what is suggested as a risk, that is to say, the danger of animals being infected by disease in a dairy, and the other animals in contact with them being at once sent into the market, thus spreading the germs of the disease?—Yes.

9404. Would you be in favour, if your idea of quarantine was adopted, and the store animals from abroad were still allowed to come into the country, of separating the markets of store and of fat animals?—Yes, decidedly; I think it is a most important feature that store stock and cows should be separated from the fat stock markets.

9405. I suppose that would apply generally (from your strong expression about it) to the separation between the fat and store markets, whether for foreign or home animals?—Yes, although it is more particularly directed where there is a chance of the introduction of disease; we do not think that there is the same liability to disease with home stock as there is with foreign stock.

9406. But, at the same time, looking to the fact that many people have represented, whether rightly or wrongly, that dairies in towns are the centres, the hot-beds as they have called it, of these diseases, you think the dairymen would be quite prepared to submit to any proper regulations which would clear that doubt from the public mind, and give them the security that they ask?—Quite so, to all reasonable regulations.

9407. And whilst you, on the part of the association, represent that quarantine, in your opinion, would protect you to a considerable extent from these diseases, you do not think that the trade would suffer if entire prohibition of the import of stores for dairy purposes were made the law?—If I gave an opinion upon that it must be as a personal opinion, and not as a representative.

9408. But you have already given that in evidence, because you stated that you believed that for dairy purposes the home-bred shorthorn is a more valuable animal than the Dutch or other foreign imported animal?—Quite so.

9409. And you believe also, that a foreign imported animal was not bought because he was a better animal for dairy purposes, but because he was a cheaper animal?—Quite so.

9410. And you admit that if the foreign animals are brought in, even under quarantine, there is a considerable risk of disease being introduced; and, therefore, under those circumstances, I think you stated that you thought the prohibition of the import of foreign animals would not be a serious loss or injury to the trade which you represent here?—I spoke personally then.

9411. You do not think that that is the opinion of your association?—There is a divided opinion, and it is to some extent, perhaps, complicated with what has been said about town dairies, some portion of which may be true, but some portion of which is untrue, I think, and unfair. I believe that the most prudent men do not buy foreign stock through the risk which is entailed, and their stocks are more healthy in consequence; and where that system is pursued and the cowhouses are kept according to the most approved sanitary regulation that can be enforced by the medical officers of health, the town cowhouses are as unobjectionable as a nobleman's stables; but where sometimes disease may have been introduced, as it often has, I fear, through buying these foreign stock which have been complained of, it is too often the result of poor cowkeepers having been tempted to buy those stock and put them into their places and infecting their own herds thereby; so that to a certain extent they become the very victims of the foreign breeders and salesmen who come here and complain of their dairies.

Chairman—continued.

Mr. *Tisdall.*

4 July 1877.

9412. In your opinion, as a practical man, the advantage which they suppose they derive from this attempt to get a cheaper animal really does not justify the continued risk by the import of that animal here?—I am bound to say that I do not think it does.

9413. Has the price of milk and meat risen lately?—Yes, the price of milk has risen from 20 to 25 per cent. within the last three or four years.

9414. To what do you attribute that principally?—Largely to the increased cost of cattle, and the risk of keeping them.

9415. Do you mean the risk from disease?—The risk from disease.

9416. You agree, then, with other witnesses that people have not bred animals to the same extent in consequence of that fear?—There cannot be a doubt of it.

9417. And that if they were guaranteed as they would think against a certain portion of this disease by the stoppage of the foreign import, they would return to the old system, and breed more largely?—They would; and I believe that cattle would be reduced in price.

9418. And, by breeding more largely, they would bring into the markets and into the dairies a larger number of those animals which you say are best suited to the purpose, that is to say, the English bred animal?—Quite so.

9419. With the desire that you have to prevent and get rid of these diseases would you, as a practical farmer, suggest any alteration of our existing regulations at home for the purpose of stamping out pleuro-pneumonia and foot-and-mouth disease, which are spread largely through the country?—I think it would be very wise if the authority could be centralised.

9420. Do you mean that uniformity of regulations should be effected by making the central authority the author of all the regulations, instead of leaving them to the different localities separately?—Quite so.

9421. Would you extend the power of the central authority to the inspection for those diseases throughout England, or would you leave that inspection with the local authorities?—I think that the power of inspection ought to be perfect.

9422. You think that, if the central authority are to regulate the whole of the country, they should themselves have the means of seeing that those regulations were carried out?—Yes.

9423. And that the appointment of the inspectors should rest, in the first instance, with the central government?—Exactly.

9424. You say that, as a practical farmer, you would be willing to submit to such regulations?—Quite so.

9425. Do you believe that the farmers and the keepers of dairies with whom you are acquainted would be willing to submit to stricter home regulations as to the movement of animals

Mr. *Tisdall.*

4 July 1877.

Chairman—continued.

for the purpose of stamping out these diseases?—I believe that they would submit to all reasonable regulations.

9426. Any reasonable regulation that had for its object the stamping out of the diseases, which you admit to be so serious in their effects upon the herds of the country, would, you think, be submitted to by the farmers and breeders?—Yes.

9427. Is there any other point that you would wish to put before the Committee?—I would simply say that in the report issued by the Veterinary Department of the Privy Council for the past year (pp. 29 to 31), I observe that there were something like 7,082 cases of foot-and-mouth disease detected at the ports by the inspectors. I believe that through the permissive state of the law those have been dealt with in every imaginable way; some have been slaughtered, and some have been allowed to pass into the country almost free; those that have herded with them unquestionably have passed into the country almost free; others have been dealt with, perhaps, by being put aside for awhile. But through the different systems of management, I submit that it is almost impossible for us to keep our home stocks free from disease whilst such a large number of imported animals, which are unquestionably affected with disease, constantly, monthly, come to our shores.

9428. And you represent that as an additional argument in favour of the unity of regulation, which would deal with all these different ports in the same way, and thus prevent many cargoes passing through the country which have been allowed hitherto to pass through the country?—Exactly. With regard to the question of town dairies, perhaps I may be permitted to introduce the report of the medical officer of health for the vestry of St. George's, Hanover-square, who said upon this subject: "Looking at the safety of young children during hot weather, we can but hope that a sufficient number of cows will be maintained for the present in town to give them milk sweet, newly milked, and that has not been much shaken. Spite of the outcry against London cowsheds, and the fact that some may have been kept unwholesomely, there is no doubt but that, on the whole, they contained better cows, better fed and better cared for, which gave better milk during the nine winter months than any like number of cows elsewhere. By all means let them be removed from streets and mews; but it is clear that they ought during hot weather to be within easy distance of the children for whom their milk is most essential." The editor of the "Medical Times and Gazette," in a note upon this, says: "We beg to re-echo these remarks. Do not keep cows in numbers in situations where they would be prejudicial to the neighbouring population; but let a good number be kept on the outskirts, and a few here and there in the more open parts of the city. The sagacious medical practioner will bear us out in saying that wherever children are to be reared there should be a cow within reach. If the place is too close for the cows it is not fit for the children."

9429. What distance are your other dairies from London, not speaking of the Kensington dairy?—Fourteen or 15 miles away; at Epsom.

9430. Do you find that the milk and cream that you send up from that dairy competes badly with the milk and cream that you produce and send from the Kensington dairy?—It is not so fresh, because the milk must be drawn from the cow in the country districts over night, so as to reach London in time for the morning consumption; so that that milk, before it reaches the tables or the nurseries, must be from 14 to 16 hours old.

Chairman—continued.

9431. Do you submit it to any process?—Yes, it must be cooled, or it would not keep for that time; but even then, in very hot weather, slight changes are observable.

9432. You are aware, of course, that a very large proportion of the milk consumed in London comes from considerable distances out of town?—The largest portion, I suppose, now does.

9433. The Aylesbury dairy, and many other dairies, supply a very large number of customers from great distances, do they not?—Yes.

9434. And it is said with very good milk; but what, I suppose, you would represent is, that the new fresh milk just from the cow is lighter and better suited for children than the milk that has been carried some distance?—Quite so; and it seems to have been the opinion of medical men.

9435. The medical man, from whose report you have read, as I understand you, speaks purely from London experience?—Quite so.

9436. When he represents the London cowsheds are better than the country cowsheds, he, probably, has never seen the number of cowsheds in the country to which he refers?—I believe that there is a feeling amongst medical men generally, that with invalids and young infants the newer and fresher the milk is that they consume the better.

9437. But you represent to the Committee that, with proper regulations, dairies can be equally as well kept in towns as they can be in the country?—Quite so.

9438. And that, therefore, if there is that advantageous property in the milk fresh from the cow, it can be obtained in that way without the dangers which, it has been suggested, attend cowsheds in towns?—Exactly.

Colonel *Kingscote.*

9439. Have you any idea what proportion of the milk supply of London comes from dairies within the metropolitan area?—I have no exact figures upon the subject, but I should presume that two-thirds is supplied from the country.

9440. One witness stated here that about 15 per cent. is supplied from the London dairies; and another person, who has not been examined here, has informed me that he could almost prove that it is only 5 per cent.; but you think it is a larger per-centage than either of those?—I should think it would be a larger proportion than 15 per cent. that is supplied by the London dairies. I know that we have 500 cows in our parish, the parish of Kensington. The number of cows in the different districts could be easily got, I think, by adding them from the medical officer's reports, but I have not seen a total; I should think that it would probably be from one-third to one-fourth.

9441. Are you a breeder of shorthorns?—I have, for the last 10 or 15 years, kept pure shorthorn bulls, and have crossed them with the best dairy cows. I have a few shorthorn cows pure bred.

Colonel *Kingscote*—continued.

9442. As a breeder, supposing you were desirous of importing fresh foreign blood from Jersey, or even from America; if you wished to do so, how would you provide in such cases against the introduction of disease?—By putting them into quarantine.

9443. You think that valuable high-bred stock could be dealt with by quarantine?—More easily than any other stock, because the slight additional expense which quarantine would entail would be less objected to in the case of high-priced stock; but in the case of low-priced stock quarantine is objected to on the ground that their price is increased by the extra expense incurred.

9444. The expense would be trifling, and easily borne, as compared with the cost of the animal?—Quite so.

Mr. *Anderson.*

9445. Did I correctly understand you to say that English shorthorn cows were good milkers?—Yes, I think that they are the best milkers.

9446. Are they better milkers than foreign cattle; better than Dutch cows, for instance?—They are.

9447. Are they better milkers than Scotch Ayrshire cows?—I would not say that they are better milkers than Scotch Ayrshires, but they are better feeders than Scotch Ayrshires. When I answered the Chairman I was speaking of cows as a whole; but English shorthorns are more profitable to keep than any other class of cattle.

9448. Taking both the milk and the flesh into consideration?—Exactly.

Mr. *Pease.*

9449. What would you say is about the quantity of milk that a good dairy cow would give between her calving and becoming dry?—It would vary according to the period that she was in milk; I have records here for the past 25 years of all my cows, and the quantities they have given; it would vary wonderfully, because some cows will perhaps be in milk for two years; and other cows would be in milk only until they were in calf again, and they might calve again within 10 months of the first; but I have known good shorthorn cows give as much as 24, or 25, or 26 quarts daily after calving; that is an enormous quantity, and that is not the average, or anything like it.

9450. That is an extraordinary case?—Yes.

9451. Have you known Dutch cows give as much milk as that?—Never.

9452. What were those cows fed on?—Grass, hay, grains, wurzel, and meal.

9453. At the present moment, supposing that you bought a foreign cow, where does it enter into your possession, as a rule?—At the Islington Market.

9454. In case of quarantine, where do you presume that it would enter into an Englishman's possession?—At the side of the river would be the proper place.

9455. And the buyer would then be responsible for the risk of the quarantine?—The seller, I presume, would be responsible.

9456. You say that an Englishman buying a foreign cow would lay it upon the bank of the river; if the cow goes into quarantine who takes it there?—The vendor would have it placed in quarantine in conjunction with the authorities at some place adjacent to the banks of the river.

9457. Are you going to buy the cow before it goes into quarantine or after it comes out?—After it comes out.

Mr. *Pease*—continued.

9458. Then you would not buy it upon the bank of the river, but as it comes out of quarantine?—As it came out of quarantine.

9459. Then, practically speaking, as the Government could not take the risk of the cow in quarantine, it would be at the vendor's risk?—I should have thought that the duty would have been assigned to the Veterinary Department of seeing that those animals should undergo a certain amount of quarantine.

Chairman.

9460. You think that the sender should maintain the animal until it had cleared the quarantine and was fit for the purchaser?—Quite so; certainly the vendor should do that under Government superintendence.

Mr. *Pease.*

9461. Then practically the cow, during the whole time that it was in quarantine, would be at the risk of the vendor, the importer?—Quite so.

9462. Do you not think that that would be a great bar to foreign speculation in milch cows?—I think it would perhaps check a great deal of the speculation that now goes on, but I think that the question for you is whether that speculation is not unfair to us at home; because it appears to me to be conducted now in such a way that it is almost impossible for us to buy cows without buying them diseased.

9463. I only want to see whether you have followed out the cost?—We know that it would increase the cost to some extent.

9464. I do not look at the cost as very material, but what do you estimate as the cost of keeping a cow 14 days in quarantine?—It would not probably make above 1 *l.* a head difference, clearing all expenses.

9465. Would not a cow be worth more, after 14 days' rest from the voyage?—I should think so.

9466. And that would be in deduction from the 1 *l.*?—Yes.

Mr. *Cameron of Lochiel.*

9467. You say that there would be a slight rise in the price of the animal in consequence of the quarantine?—Yes.

9468. I suppose that that rise in price would include the risk incurred, whether that risk was incurred by the sender or by the buyer?—It would.

9469. So that, practically, it would not make much difference whose risk it was, as the price would increase at any rate, and the buyer would have to give more than he would have to give if there was no quarantine?—That is so.

9470. With regard to the feeding of these Dutch cattle; I did not quite follow whether you fed the Dutch cow in the same way as you fed the shorthorns?—Pretty much the same.

9471. Is the expense of feeding a shorthorn any greater than the expense of feeding a Dutch cow?—There is no difference, practically.

9472. So that the advantage gained by the better supply of milk from the shorthorn is a clear gain?—Quite so; and it is a better quality of milk too.

Mr. *Tisdall.*

4 July 1877.

Mr. *Elliot.*

9473. We had a witness here who said that he thought that two months was absolutely necessary for an efficient quarantine; your opinion is that a fortnight would be sufficient, is it not?—I think that, for practical purposes, a fortnight would be sufficient.

9474. You could not ascertain in a fortnight, could you, whether an animal had pleuro-pneumonia?—No; I believe that, in some cases, pleuro-pneumonia might rest in an animal longer than a fortnight; but we are so much more fearful of the consequences of foot-and-mouth disease and of rinderpest than we are of the consequences of pleuro-pneumonia, and those two diseases are so much more infectious than pleuro-pneumonia, that, even if we occasionally had a case of pleuro-pneumonia slipped through the quarantine, and it did not show itself until afterwards, we should take precautions to put aside the animal so affected, and not expect the evil results that we should if it had been affected with either of the other diseases.

9475. Are you not more subject in dairies to pleuro-pneumonia than to foot-and-mouth disease and rinderpest?—Foot-and-mouth disease is far more infectious than pleuro-pneumonia, and far more destructive.

9476. Have you more cases of it?—Sometimes there are as many cases of foot-and-mouth disease as there are of pleuro-pneumonia. If one case of foot-and-mouth disease gets into a shed it is bound to go through it; but you may have single cases of pleuro-pneumonia, and it may perhaps go no further, if you take proper care.

9477. You say that the poor dairyman buys cheap foreign animals, and that that causes a risk to the rest of his cows; why does he undergo such a risk?—I suppose his poverty, if not his will, consents.

Mr. *Elliot*—continued.

9478. Is it not because he can turn his money over more quickly by buying foreign milking cows and then selling them off for meat?—It is not so much that, I think, as the temptation to get the animal, in the first instance, cheaper; in many instances they prefer buying an animal for 15*l.* or 16*l.* to buying one that might cost them 23*l.* or 24*l.*; the temptation is too great.

9479. Is it usual for those men who buy the cheap animals to sell them off after they have stopped milking?—Yes; they would frequently get those cows into pretty good condition, and sell them off.

9480. Do they get them into better condition than when they first bought them?—They do.

9481. And therefore they get double profit, the profit as a milking cow, and the profit as a fat beast?—I very much question whether if those cows were averaged they would ever make, losses and all considered, as much as they cost.

9482. The exporter would undertake the risk and expense of quarantine; but he would be amply repaid, would he not, by the purchaser having the satisfaction of getting a good sound animal?—Quite so; it would be a guarantee.

9483. Can you give us any idea of the quantity of store cattle introduced into London in a year?—I believe that the number is small; it is 8,000 or 9,000.

9484. In your opinion the quantity is so small that we could do without it without materially interfering with the milk supply of London?—Certainly, without materially interfering with it we could.

9485. Without increasing the price of milk?—Yes.

Mr. Clare Sewell Read, a Member of the House; Examined.

Mr. *Read,* M.P.

Chairman.

9486. You have been practically acquainted with farming for many years, have you not?—All my life.

9487. You appear before this Committee, we understand, not as representing any body of farmers, but expressing your own views upon the question which is submitted to it?—I was asked by the Central Chamber of Agriculture, and also by the Farmers' Club, to represent their views here, but I said that I would rather appear as an independent witness; and as the House of Commons expressed a desire that I should be one of the Committee, I thought that it would be most respectful to this Committee to say that I should be pleased to give evidence, and I think I can do that more independently as a witness than I could if I had been on the Committee and had been a sort of judge and juror.

9488. You speak naturally, with great authority as a practical farmer, in representing your views upon this question to the Committee?—I hope so.

9489. With regard to the recent outbreak of cattle plague, have you made yourself acquainted with the facts in that case?—Perhaps the Committee would allow me to recapitulate the main facts as I think they have been produced in evidence. The cattle plague broke out beyond its accustomed limits last year. No extra, certainly

Chairman—continued.

no adequate, precautions were taken to prevent its introduction into this country, but when it did come the Privy Council issued orders prohibiting the importation not only of cattle, but of dead meat, which latter prohibition, I think, was perfectly unnecessary. The "Castor" came into the Thames, and drovers and Custom House officers went on board the ship, and left her when she came to Deptford. At Deptford one bullock was so diseased with cattle plague that it died on the landing-stage, and it was not until the evening of that day that cattle plague was detected. The majority of those cattle were kept alive, some of them as long as eight days, manufacturing a sufficient quantity of cattle plague virus to poison the whole country. The vessel leaves Deptford without being disinfected; people go off and on as if nothing had happened; the vessel is not disinfected until the conclusion of four days; the cattle plague breaks out at Limehouse, and it is soon evident that the local authorities cannot cope with it; but it takes three months of deputations from Chambers of Agriculture, from the Farmers' Clubs, from Quarter Sessions, from County Committees, and from independent Members of Parliament, before the Privy Council will exercise the powers that were given them by the Act of 1869.

9490. You

Chairman—continued.

9490. You mean those powers which assumed to the Privy Council the full authority to treat the complaint?—Yes, and which they did exercise successfully, I might say, after the cattle plague had been here for three months.

9491. That hesitation, I imagine, probably arose from some little dread of interfering with the local institutions and authorities?—I think that the Privy Council are generally fearful of somebody or something.

9492. What I meant by my question was, that so long as local authorities are empowered and remain under the Act able to deal with these diseases until a malady of this kind comes to our shores, the only power of the Privy Council being to interfere with them when necessity arises, there will always be a liability, will there not, to this hesitation on the part of the central authority, from a dread of the objections that are always made to any interference with local working?—No doubt there will be that fear and that dread. In this case I consider that great necessity arose for immediate action.

9493. All this points rather to the necessity of an alteration in our existing system rather than to any very great dereliction of duty in this particular instance on the part of the central authority?—I think that, having tried the permissive powers of the Privy Council, you should go further, and have an Act making it compulsory that in all future cases of an outbreak of cattle plague, the Privy Council should at once step in, supersede the local authority, slaughter all the cattle, and pay compensation in this case out of the Consolidated Fund.

9494. But under the existing state of things, in which the authority rests with the locality, the Privy Council only stepping in and interfering with that authority when the cattle plague becomes an established fact, much of the hesitation on the part of the Privy Council, and many of the objections against the action of the Privy Council, are not so strong when they are looked at in that light, are they?—I think it was an established fact that the cattle plague had broken out in Limehouse, and it is always better to extinguish a fire when the first spark rises.

9495. You have recapitulated the history of the outbreak and the action taken, and you stated that the "Castor" was allowed to go away before she was disinfected; but that was before the Privy Council were really aware of the introduction of the disease at all, was it not?—Then that shows a fault somewhere; for if an animal is so far advanced in cattle plague that it dies on the landing place, there must have been ignorance or negligence on the part of the inspectors in not detecting it before.

9496. You think that the inspectors, both abroad and in England, are really to blame in this instance?—Yes, and the Privy Council is to blame for placing so much reliance upon inspection, which has been proved over and over again to be perfectly useless and futile.

9497. You think that the system of relying, as we do at the present moment, upon local inspection is faulty?—Either local or Governmental inspection I consider is unreliable.

9498. In case of a fresh outbreak, would you recommend that the Privy Council should assume the authority immediately on being apprised, either by telegraph or otherwise, of the outbreak?—Certainly.

Chairman—continued.

9499. Putting the powers that they have in force instantly, and setting aside the local jurisdiction?—Yes. I would also add that in this case I would have compensation paid out of the Consolidated Fund.

9500. Would you make that compensation to the full value of the animal destroyed, or would you leave it at the present rate?—I think you might give, as at present, half the value of animals that are attacked with cattle plague, but certainly the full value for all animals slaughtered that are associated with them.

9501. That is with regard to cattle plague; but, dealing with pleuro-pneumonia, we had a number of recommendations made to us by the committee of which you were a member in 1873?—Yes; there were four recommendations made by that Select Committee. The first was that we should kill all animals affected with pleuro-pneumonia; that was put in force at once. The second was that compensation should be raised from half the value to three-fourths of the loss; that was not done, I believe, until this year, and then, instead of making it compulsory upon the local authorities to do that, it was still left permissive. The third was that it should be extended to Ireland; that was not done until the passing of the Irish Act of last year, which did not come into operation, I believe, until the 14th of February of this year. The fourth was that we should have an isolation of the infected herds for two months instead of for 28 days; that has not been done at present. Then there was a fifth recommendation, which was lost by a majority of one, which suggested that all cattle coming from foreign countries where pleuro-pneumonia existed should, in the case of store stock, be subjected to a quarantine, or in the case of fat stock be killed at the port of debarkation. I may say that in the case of Holland, whence we get most of our cows, the average number of cases of pleuro-pneumonia has been from 2,000 to 6,000 a year in cattle amounting to only 1,500,000 in number, which is the whole stock of cattle of Holland. They were only subjected until last February to a 12 hours' quarantine. They have since then been sent to Deptford, and several cases of pleuro-pneumonia have been found in cargoes imported from Holland, and one only, I think last Monday week, a few days after I attended the market there.

9502. Can you state what the amount of our import of store animals from those countries is?—No; I do not think that anybody knows, because there is no division; but I should think that the quantity of foreign cows that come in for milking purposes varies from 5,000 to 10,000; it is not much more than that. I have not seen a store foreign animal in the country for some years now.

9503. And the number which are brought over principally for dairy purposes are, you represent, very liable to disease?—Certainly.

9504. Until the recent regulations with regard to cattle plague, had they any restrictions imposed upon them?—Not sufficient restrictions.

9505. Do you believe that the import of store animals for these purposes into this country is necessary?—I do not think that it is necessary, but I should not entirely prohibit it.

9506. You heard what the last witness said, I think, with regard to their use in the dairies of the town?—Yes.

Mr. *Read*, M.P.

4 July 1877.

Chairman—continued.

9507. Looking to what he stated, you would not think that, if the import of those cows was a necessity for the trade, the danger would be so great that it might be wise to stop them; but you think that they ought to be allowed to come in under certain regulations?—I think that the difficulties in the way of quarantining a few cows has been much exaggerated. I would take some port like Harwich, not anywhere near the river side here, and make that a quarantine station. I would have the cows there for 14 days, and at the expiration of 14 days, they should be branded; and the dairies to which they went should be subject to inspection for the next two months.

9508. The 14 days' quarantine would not, I presume, be a sufficient guarantee against the introduction of pleuro-pneumonia, for instance?—Certainly not; but I think it would be long enough to prevent the introduction of cattle plague and foot-and-mouth disease.

9509. You think that you could meet the difficulty of their introducing pleuro-pneumonia into the dairies by a system of inspection or supervision over the dairy of the man who bought them, until a period of two months had elapsed?—I should hope that in a few months we shall extend the period of isolation for pleuro-pneumonia from 28 days to two months, so that you would simply say that that dairy into which those foreign cows are admitted is an infected place.

9510. I suppose that the principle of the dairy herd is rather the constant flow of animals through the dairy; they are constantly buying?—Yes.

9511. Then, if they bought an animal from abroad and took it into their dairy, if that dairy had to be considered an infected place for two months afterwards, that would very much interfere with the constant purchasing of animals which are necessary for their business, would it not?—No more than it does with the farmer who wants to sell his stock, if they are to be locked up for two months as being suspected.

9512. But, practically, it would almost destroy the trade in those foreign animals if they were surrounded by all these precautions, would it not?—I do not think it would. It would get rid of a great number of suspicious animals, and perhaps of some of the cheaper ones. The better ones would come, and I believe that 1 *l.* a-head would amply pay the cost of quarantine for 14 days. Then I would observe that the dairy would be no worse off than if there had been a case of pleuro-pneumonia, and there are so many cases of pleuro-pneumonia in the dairies of London, that it would not be a very exceptional case.

9513. From your experience do you think that the Dutch cow is necessary for the supply of milk from those dairies, or that her loss can be met by the short-horn supply?—I think that you would do better to trust to the home supply; but, at the same time, there are a great many people who cannot afford to buy the short-horns, and they buy the Dutch cows.

9514. With proper precautions, you think that they might be admitted without danger?—I will not say without danger, but with great mitigation of the present danger.

9515. With regard to the question of our supplies, it has been stated in evidence before this Committee that the dead meat has been gradually

Chairman—continued.

increasing in quantity as against the live animals in the market; what is your view upon that subject?—I believe it would be safest and best to rely entirely upon a dead-meat supply, and I believe that in future, and in no very distant future, that will be the case; but, at the same time, I do not think that the country is prepared for it, and I do not think that we have facilities sufficiently developed at present to rely upon that entirely.

9516. I suppose you would represent that the dead-meat trade, which you think is the safest, and at the same time the best supply, will work its own way and become a trade, which will itself put a stop to the live import by degrees?—I think it will by degrees, and eventually.

9517. In the interval before that takes place, what would you suggest to the Committee with regard to our foreign import?—I had the honour of serving on the Cattle Plague Commission of 1865, and with the permission of this Committee, I will just refer to the names of the members of whom it was composed: Lord Spencer, Lord Cranborne, Mr. Lowe, Dr. Lyon Playfair, Mr. John Robinson Maclean (who, I think, represented Staffordshire), Dr. Bence Jones, Dr. Quain, and Dr. Parkes (all eminent medical men), Mr. Seeley and Mr. Spooner (representing the veterinary profession), and myself. We passed an unanimous resolution in our second Report, which I will read. "To restrict importation absolutely to certain ports; to cause all fat cattle to be slaughtered at those ports, and all store cattle to undergo a period of quarantine; hides and skins, not salted, to be disinfected at the ports of importation." That resolution was passed on the 5th of February 1866. I have advocated that ever since, and I advocate it most strongly now.

9518. You think that in fact all foreign animals should, for the purpose of protecting the country against these diseases, be slaughtered at the port of debarkation?—I think so.

9519. Do you include sheep and pigs in the word "cattle"?—Most entirely; sheep bring us sheep-pox, and the imports from the Continent are almost all more or less infected with scab.

9520. I suppose that the trade is a very large one in the small German sheep?—Yes.

9521. And you would require all those, as well as the cattle, to be slaughtered at the port of landing?—Most assuredly, and I also would put the American cattle there too, and the Spanish and the Danish cattle, although they may be perfectly healthy. The truth of it is, that when you come into the stream of cattle importation, however healthy your animals may be, if they cross it even, in any way, they are very likely to become diseased.

9522. I presume that you would have a separate market established for all foreign stock?—I would.

9523. It has been stated in evidence here that that would do away in a great measure with the objections which are at present raised to the Deptford and other dead meat markets, because it would put into those markets a continuous stream of supply, which would bring to it the competition which is now wanted; and thus the difficulty which has been suggested of our losing the trade would be got over; do you concur in that view?—Yes. Perhaps you will allow me to say

Chairman—continued.

say one word about the Deptford Market. In the first place, when it was established, you doubled the tolls on the home market. You really have at Deptford no Market day at all, because it is on the same day as the Metropolitan Cattle Market at Islington. In consequence, the salesmen have to run about from one market to another, and, generally speaking, foreigners are not attended to properly at the Deptford Market. Then you have a most fluctuating supply, and you have this very considerable drawback, that whereas a cargo of cattle may be landed on the north side of the Thames, and the last bullock that comes out may be affected with some sort of disease you have to reload the whole of them and send them off to the Deptford Market; and consequently an importer is never certain as to where his cattle will go, or to what market they will come. I think that Deptford is a very out-of-the-way place, because there is no rail, and the paving and the drainage are both bad; they have no adequate means of disposing of the carcases of diseased animals, and there is no proper mode of disinfecting people going out and in that I can see.

9524. You say this from having personally inspected the market?—Yes; I have been there several times; I was there last Thursday. On the other hand, I may say, that it is a very roomy, and very airy, and wonderfully well-managed place; and although I heard Mr. Giblett, I think, say that nothing would induce certain people to go down there even in a carriage and pair, I was very happy to go down in a second-class railway carriage, and I had a pleasant morning. It was said that there is no business going on there, but I found no less than 34 slaughter-houses in full employ, and they are building more, and although it is so out of the way, and has no rail accommodation. I saw sheep there which were being killed in the early morning, and which I was informed would be taken by vans to the railway station, and be in Birmingham and Manchester butchers' shops at six o'clock that evening. I saw only one single case of foot-and-mouth disease out of the whole of the many animals that were there all over that market, and that happened to be a Danish bullock. Those Danish cattle are supposed to be very healthy, but the truth of it is this: they are sent to the Metropolitan Market, and a great number of them are bought by men who have slaughter-houses at Deptford; consequently, they are taken into the Metropolitan Market, and driven eight or nine miles back to Deptford and there slaughtered, although you hear it said that cattle will not go there, even if they are forced in, and that it would destroy the foreign trade in cattle. I may, perhaps, be also allowed to say that, notwithstanding the bad management in the case of cattle plague at Deptford, I believe that the plague did not break out from the market, but was carried from the ship to Limehouse.

9525. That is to say that the precautions taken by the Privy Council of declaring the place, as soon as the cattle got there, an infected place, and disinfecting everyone who went in and out, prevented the spread of disease from Deptford; and it was simply because they had no control over the vessel that the disease spread?—My opinion upon that point is, of course, valueless, but I give it as my opinion. With regard to Hull, we had evidence before the last Committee as to its want of proper isolation from other markets; and I understood Professor Brown to say that, notwithstanding all that they had insisted upon, they still could not get the Hull authorities to carry out all the recommendations.

Chairman—continued.

9526. Did you hear the Hull witness on Monday?—I did not.

9527. The honourable Member for Hull, elicited in evidence before the Committee, that the authorities in Hull were prepared now to carry out the recommendations of the Privy Council, and to establish an entirely separate market for the home stock?—So they said before, and so they will say again, unless some one makes them do it.

9528. And that it was to be opened next week?—I am very glad to hear it. But if the authorities at Hull allow the fodder and the litter from foreign animals to go into the Hull cow-houses, we shall be no better off than we are now.

9529. You refer to the purchasing of extra forage from the vessels when they bring in the animals?—Yes; that seems to be a common practice.

9530. From your experience of the Deptford Market, you believe, first of all, that the bringing of a certain trade there will get over the difficulties that are at present suggested, and will, therefore, make it a success, and not drive away the foreigners from the place; and you believe also, as I understand you, that the supply of our towns with dead meat from Deptford is possible, because it is going on at the present moment?—Yes; it is possible now, and it would be very easy if they had a tramway or some railway communication to the market.

9531. And, with the additional facilities which a regular trade would probably bring into existence, you think that the supply of dead meat to the towns would become a very large one?—Very large.

9532. And since that trade does now exist during the hot weather, and is carried on as a remunerative trade, it cannot be subject to the inconveniences and loss that have been suggested with regard to it?—No.

9533. With regard to the fat and store stock markets, have you considered that question?—I agree with the last witness, that it is very desirable, whenever you can do so, to separate fat markets from store markets. In the country I do not think it is possible, but in a place like London you certainly ought to have a separate market; or rather, any animal that went into the Islington Market should never be allowed to be shown in any other market.

9534. Would you brand them when they came into the Islington Market, and allow them simply to have it for the purpose of slaughter?—Yes; I would brand them, or cut the hair off their tails, or do something of that sort.

9535. They are so marked at the present moment, are they not?—Yes; but, generally speaking, there is no restriction against their being sent to any other market.

9536. You think that it would not be necessary to keep a cordon round London, but merely under heavy penalties to forbid an animal branded in a particular way from being exposed in any other market?—Yes; they should be taken direct to the slaughter-houses where they were required.

Mr. *Read*, M.P.

4 July 1877.

Chairman—continued.

9537. It was suggested by one witness, Mr. Gebhardt, that that should be carried out with full permission to take them for slaughter to any part of England; do you see any risk of the evasion of the law in that way?—Not unless there is disease in the country or in the vicinity of the market.

9538. Whilst limiting it to be a market for fat animals, you would allow of their being taken for slaughter purposes properly marked to any part of England?—Yes. I was at the Metropolitan Cattle Market last Thursday, and I saw the worst diseased bullock in that market that I ever saw in my life.

9539. Was that pleuro-pneumonia or foot-and-mouth disease?—It was no acute disease, or else the thing must have died ages ago; but it was the most emaciated and the most disgraceful bullock to be exhibited in a market for human food that I ever saw. It was really so bad that I could not tell what nationality it belonged to. I rather think it was a Welsh bullock. It was not an Irish one; it was a black with a little white on it.

9540. But I suppose you represent to the Committee, that the lairs of the Islington Market are so liable to disease themselves that that is one of your reasons for saying that the market should be simply a slaughter market?—Certainly; and I would say that we can frequently trace the introduction of foot-and-mouth disease into Norfolk, to stock that have come out of the Metropolitan Market. Mr. Inspector Smith told me, that out of the eight recent outbreaks that we have had in Norfolk he could trace five or six directly to the Metropolitan Market.

9541. Do you mean home animals that had been bought in the Islington Market?—Yes, and that had been sent into the country.

Mr. *Pease.*

9542. To feed again?—To feed again, most probably; or else they have been exhibited in another market after having been exposed in the Metropolitan Market.

Chairman.

9543. The great danger is of the jobber, seeing his opportunity of making an additional shilling in another market, buying the animal in a slack trade at Islington, and taking it down to the other market?—Yes.

9544. You have of course given a good deal of attention to this dead meat trade, which has been recently attempted from America?—Yes, I have seen a good deal of it.

9545. Have you seen it at the ports where it has been introduced?—No, I have never seen it at the ports, but I have seen it in different towns in England. I saw some of it last Wednesday in the Metropolitan Market when I think the thermometer was at 80 degrees in the shade, and it was in very good order indeed.

9546. Had that been brought from Liverpool?—That had been brought from Liverpool. I was told that it was first put into a barge from the ship and then put on to the railway, without any precautions being taken to keep it cool, and there it was in very good order; but, like all other dead meat that has been kept for some days, it has a certain unsightly and tarnished appearance which is entirely confined to the outside. With

Chairman—continued.

regard to the American supply, I believe the Americans do not slaughter their cattle in the same way as we do. Instead of knocking them on the head, they hang them up by their hind legs and cut their throats; and the consequence is that there is a quantity of extravasated blood all round the shin of the bullock, which gives it a very unsightly appearance in the carcase.

9547. That arises from the mode of slaughtering?—That arises from the mode of slaughtering.

9548. Have you seen very much of this American dead meat which has been described as having come into the London market in bad condition?—I saw some of it in bad condition. It seems to me that there are two processes which are adopted: one which is successful and which keeps the air not only cool but dry, and the other which keeps it cool and damp; and the meat which is brought by the latter process is in a very nasty disgusting state.

9549. Then you represent that it is the fault of the machinery by which it is brought over and not from the difficulty of bringing it over that we suffer, where it is condemned?—From that and from the accident of not having any ice, or from the machinery breaking down, or from something of that sort.

9550. But there is nothing in it to interfere with a regular trade being established, if it is worth their while to do so?—No, not even in the hottest weather, I should say. But you will never perfect any meat trade with America unless you get cool stores here. I consider that that is an essential part of a dead-meat trade. You get the market so very much glutted at one time that, if you have not a place to keep this extra quantity of meat in, the trade will be most fitful.

9551. But the system of having cool stores is a system which is beginning to develop itself, and, of course, with an established trade, it will form a necessary part of that trade?—Yes; there is a so-called cold store under the Cannon-street Station, but it simply means that there is naturally cool air in those arches; there has been no attempt to cool the atmosphere. But they are now building some very large stores there, which I should think would contain an enormous quantity of meat.

9552. And in which the process is to be adopted for really maintaining the temperature at the proper height?—Yes; they were preparing machinery the other day when I was there.

9553. There is nothing, of course, that will prevent that being done in every port in England?—Nothing. With regard to butchering, I would say that there has not been the slightest improvement in it since I was a boy; it is just as rude, and rough and ready, as it was then; and when you talk about farmers not taking any leaf out of scientific books or discoveries, butchers have done nothing towards reducing the animal heat in the carcase of a bullock when it is killed, and I think that that is a thing which ought to be attended to.

9554. That is a system which they adopt in America, in order to prepare the meat before bringing it over for a voyage of that length?—Just so; and when once you expel the animal heat from the carcase of a bullock, I believe that it will keep very much longer than the fresh meat that is killed here in England.

9555. You

Chairman—continued.

9555. You agree with the American evidence, and with the witnesses from Liverpool, who state that that is the result of their experience of it?—Yes.

9556. Then, I suppose, you believe that this trade will become a permanent source of supply to this country, as soon as the difficulties or the uncertainties which at present attend it have been overcome?—I do, notwithstanding the opinion that is generally expressed by cattle importers and salesmen, that it will very soon die a natural death. I may also say that I have heard the men who are selling the American meat say that they believe the imports of American live animals will very soon cease; I think that in all probability they will both go on.

9557. The import of American live animals is limited, practically, to a certain number of months in the year in which they are sure of very fine weather, is it not?—Yes; and there is a very large expenditure of 7 *l.* or 8 *l.* on each animal. I may say that I saw some capital American bullocks in the Metropolitan Market last Thursday, and they seemed to have stood the journey remarkably well.

9558. But you think that the dead-meat trade, when once it is an established fact, will, from its cheapness, and from its being consequently more remunerative, supersede that American live cattle trade?—I do not know that it will supersede it entirely, unless people become less prejudiced than they are at present against the dead meat. With regard to that prejudice, I would say that it is marvellous to me that the Government should encourage it. Even at the Naval and Military Depôt that they have at Deptford, quite close to the Cattle Market, they insist upon having live animals, when they could get dead meat within a few hundred yards.

9559. Are you aware that that restriction, which I believe has existed up to very recently, has been relaxed, and that Government contracts for dead meat have been made within the last few weeks?—I am very glad to hear it; it shows that the Government officials are improving.

9560. A Government contract has been made even within the last few weeks for American dead meat?—I am very glad to hear it.

9561. Have you any experience of the dead-meat trade in your own county of Norfolk?—A few years ago it was very small. Now the Great Eastern Railway take about 5,000 tons a year to the Metropolitan Market. I will also illustrate it in another way. When the excessive restrictions were put upon the Metropolitan Market, so that no cattle could leave that market alive, Mr. Le Neve, a large dealer and salesman in Norfolk, had lost so much money by certain cattle that he had brought to the Metropolitan Market that he determined to slaughter in Norfolk; he hired a railway shed at Wrexham station, and since then he has killed on an average 50 cattle a week and sent them dead to the Metropolitan Market. He continues to do so, and all through this hot weather he has not lost a pound of meat. He sends the offal as well as the carcase of the bullock to London, and the only thing that he objects to is the cost of the carriage. He says that the Great Eastern charge him 50 *s.* per ton for the meat, and they charge him 12 *s.* 6 *d.* per head on the live animals, which, I believe, is something like half as much again for the dead weight as against the live weight. I think that they can put on a truck five tons of dead meat, which would be 12 *l.* 10 *s.*, and they can get only eight bullocks into a similar sized truck, and they charge for those bullocks 12 *s.* 6 *d.* per head; which would be 5 *l.*

Chairman—continued.

9562. But the principal fact that it represents is, that the meat has been now for some time slaughtered in Norfolk, and finds a ready sale in the London market?—It does, without losing anything. This slaughter-house at Wrexham is about 10 miles to the north of Norwich, and I have known this gentleman buy stock 30 miles south of Norwich, take them back to his slaughter-house, kill them there, and send them dead to London.

9563. Is he also able to dispose of the offal in the London market in the same way as he does of the dead meat?—He has had no loss. I would also say that there is a small butcher in my immediate neighbourhood who kills 10 or 15 a week and sends them up to London; he is 12 miles from Norwich and four miles from a station at Dereham. I said to him the other day: "I suppose that in the hot weather you do not send the meat to London, but you take it to Norwich, which is much nearer?" and he told me this: "I can do better in the hot weather by sending it to the London market. I kill at night, send it up from Dereham by the late train, and it arrives in the Metropolitan Market early the next morning."

9564. And he prefers sending them to London, notwithstanding the distance, to selling them in the town close by?—He does; it is 120 miles by rail.

9565. Does he deal with the offal of those animals?—He sends some to Norwich and some to London. He is entirely what we call a wholesale butcher, although it is in a small line. He is a carcase butcher, which is a trade which is very much developing, because even when you take the meat to the Norwich market (and it is more marked, of course, in a great city like London), you have one butcher that requires one portion of the bullock and another who wants another portion; he does not want the whole of the animal; it does not suit his customers.

9566. And those two examples confirm the evidence that was given here by a witness on Monday as to the possibility of dealing with dead meat and sending it long distances from the place where it is slaughtered, for consumption and for competition with the live animals killed on the spot?—Just so.

9567. I think I understood you to say in almost the first answer that you gave, that you thought that it was great folly to trust to inspection for the prevention of diseases; have you considered the altered circumstances that are suggested to us by the foreign witnesses, Professor Müller and others, who have suggested that the governments abroad are prepared to establish very stringent regulations in addition to those that exist, which would result, as they say, in our protection?—The folly of trusting to inspection to discover diseases whose incubation varies from two days to three months, I think, must be patent to everybody; but when you come to the German promises, I would say that we had exactly similar evidence as to what the German Government were going to do before the Cattle Plague Commission of 1865, and, with your permission, I will read you what the Commissioners

Mr. *Read*, M.P.

4 July 1877.

Chairman—continued.

missioners said then: "Against the peril which must lurk in these great importations, inspection will always be a very imperfect defence. It is proved that there was no sort of knowledge where cattle came from;" and they further added: "It is useless to trust to any inspection or precautionary measures of foreign governments for cattle leaving their own ports, or in case of through traffic."

9568. That was from the evidence which you took in 1865?—Yes. Then I may say that it will be remembered that we had pretty well the same thing said before the Committee of 1873. Dr. Williams was very hopeful that by means of improved telegraphic communication and consular intelligence we should hear of these outbreaks.

9569. There was a meeting of the veterinary departments of the different countries subsequently to that, for the purpose of arranging international communication, was there not?—I believe there was; and I may add that, notwithstanding all these facilities and improvements, I believe the Right honourable gentleman, the Member for Bradford, in the year 1872, told the German Government that they would have the cattle plague; and if our inspectors here had been wide awake at Deptford this year, they might have told them the same thing before they told us that they had sent it to England.

9570. You mean that the inspection abroad, up to the present time, has been so lax that they are not officially aware of the existence of the disease before we should be able to tell them of its importation into this country?—Quite so. With regard to the case of Hamburg, where the "Castor" came from, I hear many people say: "Oh, there are only one or two diseased cattle in a cargo, and you slaughter the whole." I find in the official Return that from Hamburg alone we received, in the year 1876, no less than 1,656 diseased animals, and it is idle to suppose but that some of them must have shown symptoms of disease on the other side of the water; it could not all have been developed *in transitu*.

9571. You think that the inspection was so lax that they were not certified as diseased when they ought to have been so certified?—Quite so. I believe it was given in evidence here that importers very frequently employ their own inspectors, who separate the pronouncedly diseased animals from the infected animals, and send us the infected animals in which the disease is as yet undeveloped, and keep the diseased animals at home. In that way they follow the advice of Professor Fergusson, who told the Irish farmers that, when any foot-and-mouth disease broke out upon their farms, the best thing was to keep the diseased animals at home, and send the others to market.

9572. When was that?—Two years ago.

9573. Was that publicly stated?—It was publicly stated, certainly.

9574. Then, as I understand you to say, it is the laxity of inspection at Hamburg which led to the import of disease in the present instance, a laxity which you represent has always existed; but now the witnesses from Germany have stated here that they have already taken certain precautions; that the Government there, being as much interested in the prevention of the introduction of this disease into Germany as we can be in preventing its being introduced here, have established a zone around their frontier over which cattle must travel, subject to inspection; that they are prepared to alter their telegraphic communication so as to give us readier intelligence of an outbreak; and that they are prepared at once, on the first discovery of it there, to stop all those markets from which we are liable to get disease; will not those additional precautions alter the condition of things?—I do not think they will do so; I should not trust them, certainly, because we have had similar promises (though not so complete) for the last 10 or 12 years. The Privy Council are supposed to know officially of the existence of disease all over the Continent. In the year 1875 the Veterinary Department of the Privy Council does not report any foot-and-mouth disease in Holland or in Belgium. We imported in that year 342 animals affected with foot-and-mouth disease from Belgium, and 418 from Holland. Although the Privy Council are supposed to know all about it, yet in their Reports they say they heard nothing of it officially.

9575. You mean that the animals were stopped here on landing, suffering from that disease?—From foot-and-mouth disease.

9576. And you believe that those animals were diseased animals when they started, and that the hardships of the voyage had not produced the disease?—They must have caught the contagion on the other side of the water.

9577. Upon those grounds, you would recommend slaughter at the port of debarkation?—Yes, but I would go beyond that in one sense, and that is, that in all these cases where you have the chance of getting cattle plague, I would not allow the cattle to come in at all.

9578. From a country like Russia, from which you are always liable to the introduction of cattle plague, you think that the entire trade should be prohibited?—Yes; and I would go beyond that, and say, that from those countries through which animals from infected countries pass, import should be prohibited.

9579. Then, do you agree with Professor Brown, in recommending, as he has done, that, if we adopt additional restrictions, the German and Belgian cattle should be prohibited, on account of the one country being liable to disease, and of the other being a transit country for it?—I am very happy to agree with Professor Brown for once.

2580. To go back to Norfolk, have you had much pleuro-pneumonia in Norfolk?—Yes; I wish just to place before the Committee a few facts relative to the experiment with regard to stamping out pleuro-pneumonia by the slaughter of animals that has been made during the last four years, imperfect and incomplete as it is. In the year previous to that commencing at Michaelmas 1873, when the slaughtering powers came into operation, we had no less than 1,722 cattle affected with pleuro-pneumonia in Norfolk. Since then, although there has been no considerable diminution, it is rather a hopeful experiment, I think, on the whole. In the next year we had 960; in the next, 692; in the third, 580; and in the year ending last Saturday we had 449.

9581. That is a steady diminution of the number of animals affected?—Yes. I would also say that the last two quarters are rather hopeful, for in the last two quarters only 174 were slaughtered for disease.

Chairman—continued.

9582. Would you tell the Committee what the process has been by which this steady diminution of disease has been arrived at; have you inoculated for the disease?—No; we have simply carried out the existing orders of the Privy Council, I believe, as strictly as any county in England. We have isolated the cattle for 28 days, and whenever an owner does not give proper notice of the outbreak of the disease, or whenever he does not carry out the orders of the local authority strictly, we do not allow him any compensation. Would you allow me to say that there have been 2,404 cattle killed by the local authority in those four years, the value of them being 32,280 *l.*; the salvage that we have made has been 16,040 *l.*, and the compensation paid to owners has been 11,105 *l.*, being one-half of the loss. I would particularly impress upon the Irish Members this amount of salvage of no less than 16,000 *l.* worth of really very good meat, because I believe that in Ireland it is the practice to bury all animals that are slaughtered with pleuro-pneumonia, and that I consider to be a wicked waste of good food.

9583. Do you mean animals that were absolutely affected with disease, or animals that had been killed because they happened to have been in contact with diseased animals?—We do not kill any animals that have been in contact with diseased animals; but I mean to say that the meat of an animal in the first stage of pleuro-pneumonia is no worse meat than that of an animal affected with foot-and-mouth disease; and I should also say that the meat would be more wholesome than that of some healthy cattle that are killed in London after they have gone through all the miseries of a long sea voyage, or even of a long railway journey, in England.

Mr. *King Harman.*

9584. You are, perhaps, not aware that cattle slaughtered in Ireland in the first stage of pleuro-pneumonia are not necessarily buried, but are sometimes sent to the butchers?—I read from the account of the Dublin authority. There is a great conflict now going on between the local authority and the inspector of the markets: he will not allow any cattle that have been killed for pleuro-pneumonia to be sold for dead meat.

Chairman.

9585. And what you represent is, that that is not necessary either for the health of the people or to prevent the spread of disease?—No; I think, with regard to the spread of pleuro-pneumonia, it is only by the direct contact of one living animal with another that you can communicate the disease.

9586. In that case, clearly, as long as it is sufficiently healthy for food, it is a great waste of food to destroy it?—Yes. Mr. Inspector Smith told me that he had condemned two bullocks within the last few days, and one of them was sold for 29 *l.* and the other for 30 *l.*

9587. And that salvage in Norfolk goes a long way towards recouping the amount paid to the owner?—Instead of costing the county 11,000 *l.*, if we had made no salvage it would have cost us 27,000 *l.*

9588. I understand you to say that you have accomplished this reduction in the number of cases of disease in Norfolk by adopting, in the strictest way, the existing regulations of the Privy Council?—Yes.

Chairman—continued.

9589. But I understood you to state before that you think that those regulations ought to be very much strengthened?—I do.

9590. Do you think that they should be strengthened in regard to the time for which places should be considered as infected districts, and that they should be made obligatory as from the central authority?—Especially with regard to compensation, and also with regard to the extension to Ireland.

9591. Would you treat Ireland, then, as part of Great Britain?—Certainly.

9592. And would you make the same regulations that you suggest for this country applicable to Ireland also?—Certainly.

9593. In that way the whole kingdom would be treated as one country, and the same methods for stamping out the disease would affect both islands?—Yes. It was said sometime ago that this could not be done in Ireland, but as soon as ever a motion was put down on the paper of the House of Commons to bring it before the notice of the House, a Bill was introduced into the House of Lords, which became law last year, and which I think came into operation on the 14th of February this year. It was said by Professor Fergusson that there was very little pleura-pneumonia in Ireland; and, in the year 1875, according to the returns, the number of all the cattle that were killed in Ireland for pleuro-pneumonia was 281. I ventured to say in the House, that I thought that if you compensated the owner, the probability was that more than 281 cases would be found in Dublin alone. I now see that in one union, the North Dublin Union, where I suppose most of the cows are, 240 cows have been killed.

9594. Is this subsequent to any change as to the compensation?—Since compensation has been paid, and that, I believe, is paid very indifferently in consequence of the conflict between the authorities and the difficulty of getting money. But in the North Dublin Union alone, from the 24th of February to the 23rd of June, about four months, there have been already 240 cows killed.

9595. And that very much confirms the opinion which you expressed before?—It does. I may also say that I hear on good authority that there is pleura-pneumonia prevalent in Mallow, in the county of Cork; two or three infected districts in Limerick; Thurles, in Tipperary; Newry, the County of Louth; King's County, Derry; and in several other neighbourhoods, which my correspondent fails to remember just then; but he adds that Dublin is the great centre of infection.

9596. I suppose, therefore, that Ireland is affected with pleuro-pneumonia, as England is very generally at the present moment?—Not in anything like the degree that some parts of England are, and certainly not to the degree that we are infected in Norfolk. If they were as bad as we are, the whole of the stock of England might be killed by the importations of stock from Ireland.

9597. If you believe that by proper regulations you may stamp it out in England, would not the same system of regulations affect its eradication from Ireland also?—Yes; they ought

Mr. *Read*, M.P.

4 July 1877.

Chairman—continued.

to be more particular in Ireland than we are here, for this reason: that whereas a cow, if she went to graze in the meadows in Ireland, would perhaps only affect another cow; if she was put into a ship and sent over with 300 or 400 cattle, she would have the chance of inoculating a great portion of the cargo, making, perhaps, 50 or 60 new centres of disease in England.

9598. You have been mentioning this experience with regard to pleuro-pneumonia in Norfolk; have you any facts to give with regard to foot-and-mouth disease also in that county?—None whatever; we have no foot-and-mouth disease now, I am happy to say, and we have had but very few outbreaks within the last ten months.

9599. Have you any reason to attribute that to any particular cause?—We employ all the powers that the Privy Council give us with regard to the strict isolation of not only all cattle affected with foot-and-mouth disease, but of all those that have been herded with them.

9600. And the regulations which you have strictly enforced have practically prevented any outbreak of foot-and-mouth disease in Norfolk?—I would not say that, because I think that something else has to do with it besides our restrictions; I believe that foot-and-mouth disease is the most perishable of all the diseases that we have, although it is the most subtle in its contagion.

9601. The virus does not last a very long time?—The virus does not last very long; and I have generally noticed that when we have a fresh import and outbreak of foot-and-mouth disease it is very virulent, and that after a time it becomes less so. In some cases it is so slight that people do not seem to mind much about it.

9602. It dies out?—It dies out; it has died out I believe in America, and I believe it would die out here if we had no fresh importations. I do not believe in the naturalization of these diseases

9603. You think that, with proper restrictions, you would be really able therefore to ensure its dying away out of the country?—I think that we should eventually get rid of it; I am not so sanguine as some of the witnesses who say that you might get rid of it entirely in a few months, but I should hope that in a few years you might get rid of pleuro-pneumonia and foot-and-mouth disease altogether.

9604. Do you think that the farmers of England would be willing to submit to the regulations which you have suggested, even stricter than those which you have enforced in Norfolk?—If they were certain that they would be protected against the re-introduction of foreign diseases I have no doubt that they would, and I say that in flat contradiction to the testimony of Professor Brown; I believe that on that point I may be considered as good an authority as Professor Brown. The truth of it is, that the farmers do not believe in the efficacy of the restrictions that are now in force in preventing the re-introduction of disease; and that was the reason, I believe, why the restrictions were so extremely unpopular in the East Riding of Yorkshire.

9605. Has your attention been called to the fact that we have had evidence from the representative of the Chamber of Agriculture that the farmers of Yorkshire would not, in his opinion, submit for any length of time to additional restrictions?—They object to those restrictions, and

Chairman—continued.

I think, rightly too. In the first place, they were not general; and in the next place there was no sort of security against the re-introduction of disease.

9606. The willingness of the farmers to submit to those regulations all hinges, you think, upon the security which they fancy they would gain by the animals being slaughtered at the port of landing, and thus the import of disease being prevented?—I believe that they would submit, I will not say cheerfully, because farmers are not a very cheerful lot of people in these times; but I believe they would submit.

9607. They would submit with no more grumbling than is our accustomed right and privilege?—Just so.

9608. Would you suggest any regulations with regard to the transit of inland stock?—I think they have been wonderfully improved of late; I think that the Privy Council have done immense service in that respect.

9609. By establishing these travelling inspectors?—By insisting that trucks and lairs should be cleansed and purified, and that the cattle should be supplied with food and water at different stations. I think that has been of immense advantage. I do not know about the qualifications of the travelling inspectors; I believe they are generals in the army, or something of that sort; but I should like some good, competent, veterinary surgeons to be appointed by the Privy Council to wander all over the country and see that the the local authorities do their duty.

9610. You agree with the witness whom we had on Monday from Scotland, who recommended that the Privy Council should have travelling inspectors going around to enforce the regulations with which the local authorities would be entrusted?—Yes, I would not take from the local authorities the power of appointing inspectors; I would make it still an imperative duty upon them; but I would have those inspectors perform pretty much the same duties as the poor law inspectors, who go round to see that the guardians administer the poor law properly.

9611. That is the same system that the witness from Scotland suggested?—It is a very good one, and I agree with him. With regard to the transportation of cattle from Ireland, I think that that is very much improved; and I believe that the lairs on the other side of the Channel, which were very filthy, and most pernicious in their influences for the spread of disease when I was over there some six or seven years ago, have been very much improved. I would add that in the last Committee I was in a minority of two when I proposed that cattle coming from Ireland should be rested at the ports of debarkation for six hours, and should have food and water before they proceeded inland. I proposed it, and there was only one Member to support me. I think that it is a humane and practical remedy, for I do not believe about feeding and watering cattle in trucks or in transit; I would have them fed and watered before they were put into the trucks, and I would have them fed and watered directly they came out; but the idea of untrucking cattle or feeding and watering them on a journey, I think is a mistake.

9612. You think that the obligation of supplying food and water at the railway stations should apply;

Chairman—continued.

apply to those places where cattle were trucked or taken off the railway?—Yes.

9613. Whilst you believe that the regulations have done much good, you think that by employing the additional staff you have suggested you would increase the benefit that might be derived?—Yes; I think that the present staff is sufficient for the transit of the animals; but what I want the other inspectors to do is to come down and look at our fairs and markets, and see whether the local authority is doing its duty; and if it was not doing its duty I would supersede it, in the same way as the Education Department, under the recent Act, can supersede the school managers if they do not carry it out.

9614. You would empower the central authority to take the power into their own hands on the inspector reporting, and its being proved, that the regulations were not being carried out?—I would, after giving them fair warning.

9615. With regard to the question of agricultural statistics, they have been quoted and relied upon very much for the number of animals that exist in the country; do you think that they are satisfactory?—They may be satisfactory in the gross, but they are misleading when you come to localities. For instance, they are collected in June, when we in Norfolk have few cattle. I wrote to three graziers, one in North Norfolk, one in South Norfolk, and one in West Norfolk, just at haphazard, to ask them to give me the number of cattle that they had over two years old that they had returned to the Board of Trade last June, and the number that they had in the previous December. The total that they had last month was 98, and the total that they had last December was 414. Those were over two years old; and when it has been so frequently said that I exaggerate the import of cattle from Ireland to Norfolk, I can only say that the Great Eastern Railway last year brought into Norfolk no less than 86,000 stores, and at least two-thirds of those came from Ireland. I would say that the trade to London from Norfolk has fallen off considerably since 1865; and that is in consequence of the buyers from the manufacturing districts coming direct to Norfolk and buying cattle at our local markets instead of doing as they did previously, viz., coming to London and buying the cattle after they had journeyed up to London. They buy them at the local markets and of the farmers themselves, and that is a considerable saving, because there is the journey up to London and back again to the manufacturing districts; they save one long railway journey.

9616. I understand you to say that you believe the origin of these contagious diseases to be generally from abroad?—I have no doubt that originally they came from abroad.

9617. Before 1842 there was an amount of disease in this country, and we were not then importing animals from the Continent; how do you account for that?—There is a Member of this Committee who knows very well that in the year 1836, between 20 and 30 Dutch cows were imported into the county of Cork. In my boyhood I have seen a quantity of Dutch cows in Norfolk; I can remember them perfectly well, black and white animals; I have also known that merino rams were imported. I remember reading in a veterinary work by Youatt that in the year 1840 the outbreak of foot-and-mouth disease in

Chairman—continued.

London was traced to the introduction of some antelopes into the Zoological Gardens.

9618. Where had they come from?—I believe they had come from Paris.

9619. That is your reply to the statement which is made that there was no importation of disease into this country, and that therefore it must have been originally produced here?—I am almost positive that it came from abroad. I have seen so much scientific evidence (particularly as to cattle plague) of the impossibility of generating those diseases by any sort of treatment that you might apply to cattle, that I am positive that they must come from abroad, and that they do not originate spontaneously in this country at all.

9620. Not pleuro-pneumonia?—Neither pleuro-pneumonia, nor cattle plaugue, nor foot-and-mouth disease, nor sheep-pox.

9621. Has your attention been directed to the evidence of Professor Simonds, and the conclusions to which he came?—Yes.

9622. Do you agree with those conclusions?—I agree with him in his remark that hitherto the prevalence of pleuro-pneumonia and foot-and-mouth disease has not been materially affected by our regulations and restrictions, and I should very much wonder if they had been materially affected, considering the loose way in which those regulations and restrictions are applied.

9623. You mean in consequence of their want of uniformity?—Yes, but I entirely differ from Professor Simonds, when he says, in conclusion, "that the present measures are satisfactory, and that it is better to leave well alone." I believe that if you took proper precautions against the introduction of foreign diseases, and stamped them out here, our cattle would be as healthy as they were previously to 1840. On the other hand, if proper precautions are not taken, I believe that it is perfectly possible, and I think probable, that we shall make these islands the home of every cattle disease upon the face of the globe.

9624. You mean unless some additional precautions are taken both with regard to the foreign import, and with regard to the home movement of animals?—Certainly; I would not separate the two for one moment.

9625. You consider that we have no right to restrict the movement of foreign animals on the ground of stopping the disease coming into this country, unless we are prepared to adopt such regulations as will give us some guarantee that it is stamped out in the country itself?—Yes.

9626. To sum up your evidence, you would recommend that the foreign cattle for these reasons should be slaughtered at the port, that stronger regulations should be issued from the Privy Council for the purpose of eradicating the disease in our own country, that inspectors should be appointed by the Privy Council to see that the local authorities carried out those regulations; you believe that the farmers of this country would be willing to submit to any such regulations with the object in view of stamping out disease; and as to store cattle, you would be prepared to allow them to enter the country under certain restrictions as to quarantine and supervision of the places to which they went?—Yes.

9627. Is there any other point that you would

Mr. *Read*, M.P.

4 July 1877.

Chairman—continued.

like to put before the Committee?—The 400 local authorities that we have in England, are a very great drawback to any uniformity of action, and I do trust that when we have the county boards, which the Government have promised us, there may be a representative assembly, not only of the counties, but of the boroughs within the counties.

9628. In order to carry out the uniformity which you suggested, you think it is necessary that the number of areas should be limited?—I do.

9629. And that there should be an authority dealing with the whole of a county, including its boroughs, for the purpose of carrying out those regulations, which would be issued by the central authority?—Yes. My experience, happily, has been one which shows how well a city and a county can act in unison. We have the great market of Norwich, which is within the area of that city, and we have the same inspector both for the city and for the county; and in everything that we do we are zealously backed up by the city authorities. I may say that if they were to be troublesome I do not know what we should do; the only thing that we could possibly do would be to blockade the market.

9630. Then it is absolutely necessary, for the purpose of carrying out these regulations, that there should be uniformity of action in all parts of a given area?—Certainly, as well as in all parts of the kingdom, if possible.

Mr. *W. E. Forster.*

9631. Another suggestion has been made with regard to the local authorities, viz., that in place of the local authorities, that is to say, authorities deriving their power from the locality, the only authority should be officers appointed by the Privy Council; what do you say to that?—I do not approve of that at all; I would have the inspectors and the officers of the local authority supervised by some inspection from the central authority.

9632. In Ireland all the officials are appointed from Dublin, are they not?—I believe they are; the police are, I believe, in a great number of instances inspectors, or they are employed for carrying out the Act.

9633. As regards foot-and-mouth disease, do you think that they have got rid of it any more in Ireland than we have in England?—Yes, I believe in Ireland they are quite free; I have not heard of a case lately.

9634. How long is it since you have heard of any cases in any imports from Ireland?—Not for months; I may say that I have no authority in that matter, because they might came into Bristol or Milford Haven without my knowing it; but I have seen no symptoms of foot-and-mouth disease in the cattle that we have had for the last 12 months; and, I think, we have very little foot-and-mouth disease from Ireland.

9635. You still get a good many store cattle, I suppose, from Ireland?—Yes, quite two-thirds of our supply.

9626. Do you find that they come in better condition than they did a year or two ago?—Yes.

9637. As if more care had been taken in their transit?—Yes, certainly.

9638. Do you get them from the south or from the north of Ireland chiefly?—They are principally sent from Dublin, but I think they come mostly from the west, and I suppose that a good many come from the south, too. I do not think that we get so many from the north; I think those from the north generally go to Scotland.

9639. You say that in Norfolk you are pretty free from foot-and-mouth disease just now; how is it about pleuro-pneumonia?—I think that we are about as low as ever we were.

9840. Then you have had no pleuro-pneumonia from Ireland lately?—We cannot say anything about that; we hope not.

9641. I understand that your chief suggestion to the Committee is that there should be a strict and permanent rule for the slaughter of all the foreign cattle at the port of debarkation?—All foreign stock.

9642. All foreign fat stock?—Yes.

9643. But you would let in store cattle?—Yes.

9644. From where?—You would allow special breeding animals, I suppose, to come; they would come from America and any part of the world that was free from disease.

9645. But at the present moment, with the attention that you have given to the matter, supposing that you were responsible for issuing the orders, from what countries would you let in the store cattle?—The chief import of stores, of course, would be dairy cows, and they mainly come from Holland; and I think that under the regulations that I have suggested of 14 days' quarantine and two months' supervision afterwards, when they go into the dairy, making that dairy, in fact, an infected district, you might admit cows from Holland.

9646. Then you would oblige them to be quarantined?—I would oblige them to be quarantined for 14 days in order to prevent the introduction of cattle plague, and foot-and-mouth disease; and then afterwards, I would have them branded, and taken to the cowhouses, and there subjected to two months' supervision, as I hope all other infected places will be.

9647. As regards pleuro-pneumonia and foot-and-mouth disease, I think I gather that you would consider that the claims of the farmer to protection against disease would be really met by ordering slaughter at the port of debarkation?—I hope they would.

9648. At any rate, you do not wish to ask for more as regards these two diseases at present?—No; I should like to try this experiment, which I have advocated for the last 12 years.

9649. You say that from all countries in which there is cattle plague they should not be allowed to come in at all?—I do.

9650. That, you are aware, is the case at present?—Yes.

9651. You are aware that they have not been let in from Russia for a long time?—Yes, but I do not see why dead meat should not come in from Russia.

9652. You do not agree with the professors who fear danger from dead meat?—No, I do not. I think that in foreign districts they are so particularly careful about the isolation of plague-striken animals wherever the disease breaks out, that it would be a preventive against the introduction of disease by dead meat.

9653. I did not quite understand the further prohibition

Mr. *W. E. Forster*—continued.

prohibition that you would suggest with regard to cattle plague?—I would prohibit cattle from all countries through which cattle plague might come, countries of transit.

9654. To take an illustration, to what countries would you apply that?—I am no authority upon that point whatever, but I should have thought Germany and Belgium.

9655. Am I to understand from you that, notwithstanding all the restrictions which they are themselves making in Germany, you would prohibit the import of all German live cattle?—Yes, I would; I have no belief in the promises of Germany. We heard almost precisely the same thing in the year 1865, before the Cattle Plague Commission.

9656. Would you not admit that the farming interest in Germany is very considerably alarmed by the last outbreak of cattle plague, and that they are likely, in their own defence, to adopt very strong measures?—Very likely; but I believe what was said by the Cattle Plague Commissioners in 1866, "that there is no certain knowledge where cattle come from, and that it is useless to trust to any inspection or precautionary measures of foreign Governments, cattle leaving their own ports, or in case of through traffic."

9657. You are aware, of course, that the largest import of German cattle that we have is from Schleswig-Holstein?—Yes, I hardly call that Germany; I believe it rightly belongs to Denmark.

9658. It is within the German dominions, and the German law applies to it?—I should not prohibit the importation of cattle from Tonning, and I believe that you would get a great many more cattle from Tonning than you do now. If I am rightly informed, we get all the best of the cattle from Tonning now, and then the small and indifferent ones go to Hamburg, and if they are not sold at Hamburg they come to us; and I believe that by making a difference between Tonning and Hamburg, you would get more cattle from Tonning.

9659. Take the case of Belgium; would you stop the whole of the Belgian import from the fear that cattle plague existing in Russia may come through Germany to Belgium?—Again I say that I am not the slightest authority upon this point; but, as I am informed, I should do so.

9660. You were very sanguine, I think, that we should be able to get rid of foot-and-mouth disease if we prevented all importation from abroad?—We must also take very stringent precautions at home.

9661. You are not discouraged, are you, by the fact that in Holland for some years they have had a prohibition of all import of cattle, and yet that they seem not all to get rid of foot-and-mouth disease?—They get rid of neither foot-and-mouth disease, nor of pleuro-pneumonia, I believe.

9662. And yet they have a prohibition of import?—They may have a prohibition of import, but at the same time we are an island, happily, and, therefore, we ought to make use of our sea to protect us.

9663. You said, in answer to the Chairman, that you also thought that we should get rid of pleuro-pneumonia; but your ground of hope with regard to foot-and-mouth disease was that it was a very perishable disease; pleuro-pneumonia is just the

Mr. *W. E. Forster*—continued.

contrary, is it not?—Just the contrary; but there is happily this, that it is a disease that in my opinion can only be conveyed by the living animal; and although the period of incubation is so extremely long, sometimes extending even to three months; at the same time, if you kill the animal, I believe you can stop the source of contagion at once.

9664. Probably few men who are not veterinary surgeons have had such good opportunities as you have had of forming opinions with regard to cattle diseases, and I should like to ask your opinion on one point. There are two different schools, one which says that foot-and-mouth disease and pleuro-pneumonia are both of them infectious diseases, and are never spontaneously generated, while the other school thinks that they are; what is your opinion as to that matter?—I am positive, so far as my knowledge goes, that they are never produced spontaneously in this country.

9665. You do not think that any amount of bad treatment, in the shape of putting them on bad soil, or over-crowding them in transit, would bring on foot-and-mouth disease?—No, because if that were so we should have had it developed years ago. I can remember when the cattle from Scotland used to walk to Norwich Hill, and they suffered an immense amount from their very long journey; and in these days they could not have gone half the distance.

9666. But we have had foot-and-mouth disease ever since 1839, have we not?—No; since 1840, I think. I think we had pleuro-pneumonia in 1839, and foot-and-mouth disease in 1840, or about that time. But after the restrictions in consequence of the cattle plague in 1866 and 1867, for eighteen months we did not see a single case of foot-and-mouth disease in Norfolk.

9667. Foot-and-mouth disease is a very fluctuating disease, is it not; sometimes we are, for two or three years, apparently, without it, and then it comes again?—That is so.

9668. You stated in your examination in chief, I think, that, in 1875, several animals came from Belgium with foot-and-mouth disease, and that the Veterinary Department knew nothing about it?—I think I read it in the Report.

9669. I have here the Appendix to the Report for 1875, in which there is this statement: "In the beginning of 1875 foot-and-mouth disease was prevalent in many parts of the country, and the extent of its existence on the Continent may be gathered from the fact that during January over 1,600 diseased animals were landed at English ports from Germany, Belgium, France, and the Netherlands." "In April foot-and-mouth disease continued to exist, and the reports from the Continent showed that the affection had attained a high rate of prevalence in Germany, France, Belgium, Netherlands, Denmark, and Sweden"?—I meant that they had no official intimation from any of those countries that the disease existed.

9670. Would not that statement in the Report seem to show that they had that official intimation?—You do not mean to have an official statement of that. I knew it by what I read in the papers. That is in the Appendix; but if you look into the General Report you will see that they had no official communication from either Holland or Belgium of the existence of that disease.

9671. Supposing

Mr. *Read*, M.P.

4 July 1877.

Mr. *W. E. Forster*—continued.

9671. Supposing that your suggestion was carried out, and that all animals were ordered to be slaughtered at the port of landing, and that there were very strict regulations to prohibit all animals from any country from which there was reason to fear the import of cattle plague, what, in that case, would be the restrictions that you would enforce, with regard to home diseases, taking foot-and-mouth disease first?—I should apply to foot-and-mouth disease the same regulations that are now in force with respect to pleuro-pneumonia, with the exception of slaughter.

9672 That is to say, you would isolate until they had a certificate of health?—Yes.

9673. Have you considered for how long you would isolate them?—For 28 days in case of foot-and-mouth disease.

9674. In addition to this isolation, would you do anything with regard to the stoppage of markets?—If the disease became general, certainly I should.

9675. Would you enforce stoppage of transit?—Yes, a limited stoppage of transit.

9676. When had you your market on the Castle Hill at Norwich last stopped?—It has not been stopped since the cattle plague of 1865 or 1866, I forget now which it was. It was always kept open for the sale of fat stock even in those times.

9677. And what would you do in case of a stoppage for foot-and-mouth disease?—I should limit certain markets for the sale of fat stock, and have them slaughtered there.

9678. But the stoppage of store stock was a great inconvenience, was it not?—Yes, it was a considerable inconvenience, but it has its good result.

9679. You feel quite sure that the farmers in Norfolk, whose views nobody is better able to tell us than you are, would assent to a stoppage of the markets, not merely for one market day but for several market days, for foot-and-mouth disease?—I think that the farmers would; but I am quite sure that the dealers, and salesmen, and the butchers would be very troublesome; and it is those gentlemen who, I believe, generally make their wants known to the Privy Council.

9680. Would you stop the importation of German sheep as well as of German cattle, for fear of cattle plague?—I think that they might come to the specified markets to be named.

9681. My reason for asking that question is on account of the large import of German sheep and Belgian sheep. I find that, in 1876, from Germany there were imported 315,619 sheep, and from Belgium 254,535 sheep, making altogether 570,154, or more than half of the total import, which was 1,044,262?—Just so. I would say, with regard to the importation of German sheep, that I find that sending them to Deptford does not materially decrease their numbers; I find that in the months of April, May, and June, this year, there were more at the Deptford Market than there were last year, In March last year there were 72,000, and in March this year there were 85,000; in April last year there were 89,000, and in April this year, 103,000. They all go to Deptford now.

Mr. *Elliot*.

9682. You said, did you not, that in your opinion there is no inspection which will suffice to keep us free from foreign diseases?—None.

Mr. *Elliot*—continued.

9683. Therefore we must think of our own farmer, and not so much of the foreigner; if he is alarmed at the restrictions that are likely to be put on, the only way is to have the restrictions that we have already got; we have no guarantee that they have hitherto had, or that they are are likely to have, restrictions that will keep us free from disease?—No, I do not think that anything which we we have will keep us from disease; and in the interests of our own consumers of meat, quite as much as in the interests of the farmers, I would desire to be free from foreign diseases.

9684. You spoke of the animals being slaughtered at Norwich; have you heard a plan or scheme suggested for having slaughter-houses throughout the whole country?—I have heard it mentioned, but I have never heard any practical suggestion.

9685. If that were done, would it not be a great preventive of disease?—I think it would.

9686. Do you not think that the restrictions which are suggested would lead towards having slaughter-houses throughout the country?—I think that the dead-meat trade will develope itself throughout the country.

9687. Would you limit the number of ports of debarkation throughout the country?—Certainly.

9688 Have you any idea of how many there should be?—I should think that half-a-dozen would suffice for England.

9689. Would you make those ports quarantine ports as well?—No, I would have all the London cows, for instance, come to Harwich; then you might have a small quarantine ground at Southampton, in case of any pedigreed stock coming in. It would be also a port for the shipment of fat cattle, I should think.

9690. Supposing that in the neighbourhood of a port there was a large mining population, and it were thought necessary to have an importation of cattle at that port, would you have some law passed to allow them to have cattle introduced there?—I would allow them to be introduced into any port where necessity arose, provided that there was proper accommodation and means of isolation.

9691. The opinion has been expressed that there is less pleuro-pneumonia and foot-and-mouth disease in this country now than there has been some time; do you agree with the opinion that the regulations of the local authorities, and of the Privy Council have assisted in making the country so free?—I think that they have in a measure.

Mr. *Dease*.

9692. Did I correctly understand you to recommend that for the cattle imported from Ireland you would have at the port of debarkation watering places, and places of rest for six hours before they were sent on inland?—I would, in order that they might be fed, rested, and watered.

9693. Would six hours be a sufficient time?—Plenty.

9694. To carry out that plan, it would be necessary to have a place either at the port or at the railway station where those arrangements could be effected, would it not?—It would be better to have it at the railway station, I apprehend.

9695. It would be some expense to the exporter, I suppose, or the man who brought over the

Mr. *Dease*—continued.

the cattle?—I should think that there would be a certain slight extra cost, but I am quite sure that the stock would be enhanced in value by being so humanely and properly treated.

9696. I think I understood you to recommend that a quarantine of 14 days should be established for the milking cows imported from the Continent into England?—Yes, and a supervision of two months.

9697. Would not a quarantine of 14 days affect the milking quality of those cows very much, even afterwards, when they were landed?—I suppose that they would be looked after and properly attended to in the quarantine grounds, and milked. If they were in good milk, the milk would nearly pay for their quarantining, I should think.

9698. Have you heard of a dairy company established at Aylesbury?—Yes.

9699. It is said that there, by the application of a refrigerating process, they are able to transmit milk to London in a good state, and to keep it for a considerable time; if such a plan could be generally used, is it your opinion that the London market could be supplied with milk from Cheshire and from the great dairy districts, without the importation of dairy cattle at all from the Continent?—I think it could. I quite agree with the last witness, that good short-horn cows are more profitable as dairy cows than any foreigners; but they certainly cost more money, and there are a great number of men with limited capital who want to buy a cheap article, and therefore they buy these foreign cows.

9700. If milk could be sent from these dairy counties, would it be as profitable to the producers as the making of cheese?—I should think that it would, certainly, and perhaps more profitable. Whether it would be good for the land or not, I will not say.

9701. I suppose that if that could be done, it would be an advantage to London itself and to the health of London to be able to do away with the dairies in the centre of a great population?—Yes, I think it is very desirable to get rid of dairies from the heart of a great city. When you consider the enormous quantity of food that you have to bring in, and the considerable amount of manure that there must be to remove, and also the manure that will naturally go into the sewers, I think that it is much better economy to have your dairies at least outside the town, in the suburban parts of this metropolis, for instance, rather than in the heart of the city.

9702. So that, in fact, if milk could be brought in as the Aylesbury Dairy Company seem to manage it, and if we could prevent the importation of dairy stock from abroad, it would tend to improve the health of the metropolis, as well as to give us a sufficient supply of milk from our own dairy farms?—Quite so, and if we could be sure of getting rid of disease, I think that the quantity and the quality of the milk produced would be enormously increased; I believe that very serious disorders are engendered in children by drinking unwholesome milk which has been produced by animals suffering from foot-and-mouth disease.

9703. Have you ever heard of an instance of a human being taking the foot-and-mouth disease?—I had an attack of foot-and-mouth disease that was very troublesome, and we had to poultice the feet of the animals, and I asked the yard-

Mr. *Dease*—continued.

man's wife to wash the cloths with which we put on those poultices; and she certainly had an eruption in her mouth, and also between her fingers; that we put down to foot-and-mouth disease; but I do not know whether it was so or not. But all warm-blooded animals, I believe, will take it.

9704. Does not that make it a much more serious matter?—Yes. That is a very exceptional case; I never heard of another.

Mr. *King-Harman.*

9705. How do you account at all for what I have noticed in Ireland with regard to foot-and-mouth disease, viz., that in the last four months of the year it is so much more prevalent than it is in the early part of the year?—Generally speaking, when there is any great movement of cattle you get a great spread of foot-and-mouth disease, and I think about the autumn you have a larger amount of transit in Ireland; we certainly have in Norfolk, and we generally have the disease worse about Michaelmas than at any other time.

9706. That would go to prove that the movement of cattle increases the disease, and that where the cattle are comparatively free from movement the disease is much less in the country?—Quite so; it is the transit that spreads the disease most rapidly.

9707. You suggest six hours rest for cattle before they go on board, do you not?—Not before they go on board, but after they are landed here; before they go on their journey inland.

9708. Then you would not propose their being rested before they go on their voyage?—I should like them to be inspected, and fed and watered there; I do not say how long they should stop, but they certainly ought to be fed and watered before they are put on board.

9709. Do you not think it very important that they should be cool before they go on board?—Certainly.

9710. And you would say that an overdriven beast driven on board the steamers and frightened, as he must naturally be, and packed with a quantity of others, must be very apt to take, if not to engender, disease?—Certainly he would be more apt to take it.

9711. At several of the ports in Ireland there is water provided for the cattle before they are put on board, but the drovers have an objection to giving them water, because they say it causes scour; do you believe that there can be anything in that?—I do not think that a bullock should have an unlimited quantity of water when he is very hot; he should have some, but not as much as he could fill himself with.

9712. With regard to the import of cattle, what would you do with cattle from the Channel Islands?—If I know anything about the Channel Islands cattle they are perfectly healthy. They have no stock going in there, and I should treat them as I should treat Ireland or the Isle of Man.

9713. They are generally landed at Southampton, are they not?—Yes.

9714. You suggested quarantine at Southampton for pedigreed stock; would you treat the Jersey cattle in the same way?—I should if it was proved that there was or ever had been any sort of disease in the island.

9715. In point of fact, if you were making a report from this Committee, you would put a

Mr. *Read*, M.P. 4 July 1877.

Mr. *King-Harman*—continued

separate paragraph for these cattle; you would not treat them as if they were not free from disease?—I think that there is no necessity for quarantining those animals.

9716. Would you not put a Government Inspector on those islands?—I think that would be a very good thing.

9717. There is one point about which I am anxious to get an opinion from you, and that is as to the movement of small stores in Ireland; as you know, the small farmers on the hill-sides breed the small store cattle, and they are then taken up as yearlings by the larger farmers and drovers; if you stop their movement in the case of foot-and-mouth disease, how would you propose that the small farmer should meet his rent, as many of them do by the one or two young cattle that they sell?—I should not restrict the movement except during the time of the disease; at the very most it would not be more than a month.

9718. But the disease might be in the district for a great deal more than a month?—It might be in the district, but I would not prevent the movement of stock all over the county in case of one or two farms being infected; I would isolate those cattle, and I would allow fair movement of the other stock.

9719. But if you only isolated a farm or two, do you think that you would have sufficient security?—I should think that if you drew a cordon round an infected place that would be sufficient. Of course if it was a very small farm, you would have to take in two or three adjoining farms too.

Mr. *Cameron* of Lochiel.

9720. You recommend that, in case of the importation of dairy cows, there should be a quarantine of 14 days, and an inspection of two months in the dairy to which they are sent?—Yes.

9721. Do you think that that would constitute any hardship to the owners of the dairy?—I do not think it would; because I am told that, as a rule, dairymen buying these cows inoculate them, and they actually quarantine them themselves, and in a great many instances keep them in a separate shed.

9722. I suppose that, as a rule, a dairyman who bought a foreign cow would not want to sell her within two months?—No, unless she happened to fall down with some complaint; in which case he would very likely want to get rid of her.

9723. So that, in point of fact, in case a man wanted to resell a cow within two months, it would not operate as a hardship if he was not allowed to do so?—I think not. It would certainly not be so hard as it would be upon a farmer who had a lot of beasts ready to sell.

Sir *George Jenkinson*.

9724. You have spoken of slaughter at the port of debarkation; do you consider that slaughter at the port of debarkation would be as efficacious against contagion as slaughter at the port of embarkation?—No; I should prefer, if I was made a dictator, excluding all live imports, and having nothing but a dead meat supply.

9725. Then you would wish to qualify your previous evidence in that respect?—I did qualify it in my examination in chief. I said, first of all, that I was in favour of a total supply of dead meat.

Sir *George Jenkinson*—continued.

9726. I was rather struck with that, because I know that you were present at the Chamber of Agriculture when we carried that resolution, that slaughter should be asked for at the port of embarkation?—I advocate this as an alternative measure, and perhaps only as a temporary measure; I do not think that the country is in a state to depend entirely upon foreign dead meat at present.

9727. Do you think that if cattle were slaughtered at the port of debarkation it would be any protection at all against cattle plague; for instance, the last outbreak of cattle plague in London?—I have said that I do not believe that in the case of the "Castor" the cattle plague got out at Deptford Market; I believe it was carried from the ship into the dairies of the metropolis; but I would prohibit, as I have stated before, the importation of stock from all countries where cattle plague exists, and also from those countries of transit through which it might come. Therefore, I should put a stoppage upon the import of cattle from Germany at all times; certainly I should after I had known that the cattle plague was in Silesia.

9728. With regard to dairy cows, you spoke of them as store stock; do you still consider that dairy cows are store stock; I ask this because a previous witness, Mr. Gebhardt, very strongly asserted that dairy cows could not be called store stock?—Mr. Gebhardt, I believe, is a foreigner, and not perhaps well versed in the terms of our language although he has been here very many years; but I should call any stock that is kept for the purpose of breeding or milking store stock. He divides cattle into three classes; I should never think of dividing cattle into more than two classes, store stock and fat stock.

9729. Do you think it possible to have quarantine at different ports without making those ports the hotbeds of disease?—I would have quarantine at a place like Harwich, and it should be a quarantine only for store stock, and no fat cattle should be landed there.

9730. You spoke of Southampton. I believe Southampton is a port where quarantine is carried out already?—Perhaps I am wrong about that, but I fancy that at Southampton the danger of disease is very little from store stock, because they would be pedigree stock that came in from America.

9731. With regard to the trade of store stock at Bristol from Ireland, and the six hours' rest and the quarantine that you advocate; Mr. Peters, one of the witnesses, spoke of himself seeing 4,000 landed in one day: how could they carry out the six hours' rest and the feeding there, considering the number that are landed there almost daily?—They do not all come in the same ship, I suppose, or all at the same time.

9732. He spoke of their being landed within two hours?—Then some of them would have to have a longer rest.

9733 How would you carry out your suggestion with regard to a large importation, which is constant at Bristol?—I would have the lairs either close to the ship or close to the railway; you do not want a very large lair for watering and giving cattle a little hay.

9734. But you think that it would be possible to land constantly 4,000 animals in the course of a couple

Sir *George Jenkinson*—continued.

a couple of hours from ships from Ireland at Bristol, and to rest all those animals for six hours, and feed them?—I think that it might be done. You could not have them all rested for exactly the same time, but some of them might be rested perhaps for a little longer, and it would do them no harm.

Mr. *Pease*.

9735. You stated that several outbreaks, I think, of foot-and-mouth disease and pleuro-pneumonia, had taken place in Norfolk from cattle brought from the Islington Market?—Foot-and-mouth, but not pleuro-pneumonia.

9736. Do many cattle, as a rule, go back again into Norfolk from the Islington Market?—No, they do not do that; but the cattle from Islington would come as far, perhaps, as Colchester, and there be mixed with store cattle that would come on to Norwich.

9737. And so they would bring the infection back into the country?—Yes.

9738. You propose, in order to avoid that, that the Islington Market should be made a market through which cattle should be merely passed for slaughter?—Yes; and I would do that wherever I could. I think that at Liverpool, for instance, it is quite possible to have two markets, one for stores and the other for fat cattle.

9739. And you think that by that means the risk of the spread of infection would be considerably lessened?—Certainly.

9740. If you did that with these Islington cattle which produce taint, why should you not do the same with the quarantined cattle, and why should you not allow fat cattle to be put into quarantine, and then go forward, say from Hull to Leeds or to Bradford, for the purpose of slaughter?—Because the quarantining of fat cattle would certainly act very much against their coming at all.

9741. Do you not think that a fat beast would be after 14 days' quarantine worth fully his keep more than he was upon landing?—No, I think not.

9742. Would he not have more bloom upon him after 14 days' rest, and sell for more?—If a bullock was fat he would require such a very expensive style of food to keep him going that I am quite sure that as a rule it would not answer.

9743. Therefore you knock it entirely out of your consideration?—Yes; I would say, on the other hand, that if disease existed in any part of England through which cattle were sent to the Metropolitan Market, I would shut up the Metropolitan Market altogether, in the same way as it is now, so that they could not go beyond the confines of the metropolis.

9744. Do you recollect the evidence of the Leeds butcher, who said that he had been obliged to give up buying his fat cattle at Hull on account of the great inconvenience of taking them as dead meat into Leeds?—Yes; I have heard of him and several other butchers saying the same thing.

9745. You do not think that there is much in that?—It disorders the trade, no doubt; and people like their own ways, and it would be some time before they accepted the change; but if they were bound to do it, they would soon fall into the new arrangement.

9746. Of course we are all trying to get the maximum of safety with the minimum of regulation?—Just so.

9747. Do you think that it is compatible with safety to carry these fat beasts forward into the inland markets to kill?—I do not think it is.

Mr. *Pease*—continued.

Colonel *Kingscote*.

9748. One word with regard to Jersey and Guernsey; is it not the fact that no foreign animals are allowed to be landed in Guernsey and Jersey, and that for generations they have had no disease there?—I have read that that is so, but I have no personal knowledge upon that point.

9749. Therefore you would not wish to cut them off by compelling slaughter or anything more than the quarantine which you suggest at Southampton or other ports?—Nothing more than that certainly.

9750. You agree with the witnesses who have stated before this Committee that foot-and-mouth disease causes very great loss, not only to the producer, the breeder, but also to the consumer?—It does. I should say that whereas cattle plague is so deadly and horrible a disease that we are sure to take measures to extinguish it, and that whereas pleuro-pneumonia is very fatal, still, at the same time, there can be no doubt whatever that foot-and-mouth disease destroys more meat and milk than all the other diseases put together.

9751. You think, therefore, that it is worth while making a strong effort to try and get rid of this disease?—I do.

9752. Under the system which you advocate of an uniform action of the different local authorities, under Government inspection, do you think that it would be feasible to stamp out foot-and-mouth disease, not by slaughter, but by isolation?—I do. I wish to guard myself against advocating in any way Government interference where it is unnecessary. I would have the local authorities appoint their own inspectors, and I would make it compulsory upon them to do so; but I would have Government inspectors supervise them, and see that they were doing their duty.

9753. Supposing that foot-and-mouth disease or cattle plague breaks out on the borders of two counties, or has happened in my experience on the borders of three counties, you have one regulation in one county, another in another, and another in the third; how would you propose to remedy that; would you have the Government inspectors omnipotent, or how would you manage it?—In the case of a fresh outbreak of cattle plague I would make the Government responsible in every way; they should supersede the local authority in every way in case of cattle plague breaking out. With regard to three different local authorities making three different orders, I would insist upon there being certain orders issued by the Privy Council which should be universally absolute. But of course if you had foot-and-mouth disease in the East Riding of Yorkshire I would not say that you would necessarily want, for instance, to put the county of Kent under restrictions; and they should have power to limit the restrictions to certain districts.

9754. Supposing that there were an effort made to get rid of foot-and-mouth disease by isolating that part of the country where it broke

Mr. *Read*, M.P.

4 July 1877.

Colonel *Kingscote*—continued.

out, you would have no need for restrictions in other parts of the country?—Certainly not. I should not wait for the local authority to go and beg the Privy Council to do this; I would make it incumbent upon the Privy Council, who must be aware of these outbreaks, to put the law in force and to issue their orders.

9755. You would make it compulsory for the farmers or breeders in the first place to report the disease to the local authority, and for the local authority immediately to report it to the Privy Council?—Yes; in the same way as they do, I believe.

9756. Supposing that by those means you got rid of foot-and-mouth disease to a very great extent, and your regulations were carried out, do you believe that more cattle would be kept or bred in your county, for instance?—There certainly would be a greater number of stock bred in England generally. We are such an essentially winter grazing county that I do not think we should breed very many more. But I may say that since the year 1865 the breeding powers of this country have been very much reduced; small farmers who lost their cattle then have been unable to replace them; and then again these other two diseases, pleuro-pneumonia and foot-and-mouth disease, afflict the breeding districts much more than they do the grazing districts like Norfolk, although, of course, we have an immense amount of disease; if there is disease anywhere in England, Scotland, or Ireland, we are sure to have it sooner or later. Still, the loss to a man who kills a bullock affected with pleuro-pneumonia is nothing like the loss to a man who loses his cow.

9757. You believe that the fear of the disease makes many farmers, great and small throughout the Kingdom, buy their cattle in and sell out, instead of breeding?—Yes, I am quite sure that it does in consequence of the fear of the disease, and the inconvenience of the restrictions which follow an outbreak.

9758. Would you have all drovers who ply for hire at fairs licensed; I do not mean to say the farmers' own men?—Yes; I should especially on the score of humanity, independently of the prevention of disease, and I think that it would be a good thing to license cattle salesmen and cattle dealers as well.

Mr. *Arthur Peel.*

9759. I gather from your evidence, that if a foreign country was unclean, so to speak, you would prohibit the cattle coming from it altogether, and if it could show a clean bill of health, you would admit the cattle from it to be slaughtered at the port; but I also gather that you consider that very few foreign countries could show a clean bill of health?—I said with regard to cattle plague, not with regard to the minor diseases.

9760. Do you agree with the opinion which Mr. Howard expressed, that this country would not stand the exclusion of cattle, except on the condition of their being slaughtered at the port of debarkation?—I think that they would stand it at the ports of debarkation; I do not see any reason why they should not, because the transit of dead meat from the ports of debarkation into the inland towns is, I think, certain to be successful.

9761. You have not expressed your confidence

Mr. *Arthur Peel*—continued.

in the conduct of foreign Governments; but supposing that a foreign Government were to say, "We will compel the slaughter of diseased cattle, and we will isolate infected cattle," would you make any distinction in favour of the foreign country that adopted those regulations?—No; take Holland for instance; the pleuro-pneumonia rules have been enforced there, they have slaughtered and they have isolated, and they have sent us in lots of disease as well.

9762. The idea is the idea of Professor Brown, who suggests in the Report that if foreign countries should not make these regulations, then they should be scheduled; would you admit that relaxation?—I have really very little faith in the restrictions that are made by foreign countries. I think it would be safer and better to rely only on our own restrictions.

9763. If you could see a security that the foreign country would carry out those regulations, you would admit the cattle?—Yes, but I would not admit them inland then. I would admit no fat stock inland, and no stores without a quarantine. I am sure that there are some countries that send us cattle, whose stock is very much more healthy than our own; but at the same time, if you are at the end of a long transit of animals converging to this country, you are almost sure to have some sort of disease caught even by healthy cattle.

9764. Then your plan in short is absolute exclusion of live cattle, except, of course, these milch cows?—I do not mean exclusion, because I would kill them at the ports.

Chairman.

9765. I think you were asked with regard to the extent to which foot-and-mouth disease at present exists in the Netherlands, and whether that exists notwithstanding that Holland and the Netherlands have prohibited for some time the import of cattle into that country?—Yes.

9766. But you are aware, I suppose, that until very recently those diseases were not dealt with by Holland with a view of exterminating them; that with regard to pleuro-pneumonia until only the other day they treated it by inoculation, but their regulations were anything but strict or severe?—I think they have been trying to deal with pleuro-pneumonia in Holland for three or four years.

9767. That was the case, was it not, up to a certain time?—Up to three or four years ago, I think.

9768. Mr. May, the Consul General of the Netherlands, told us in evidence that it was in 1873 that they began adopting the other system, and that since they have adopted that system, in the province of Friesland at all events, they have very nearly stamped out the disease?—I think so.

9769. That shows that as soon as they put in force the proper restrictions, combining them with the restriction as to the import from abroad, they effect what you think is possible in this country?—Just so. With regard to pleuro-pneumonia, I do not think they take any precautions about it in Belgium with the idea of stamping it out, as they do in Holland. Although you have all these cases reported of cattle slaughtered in Holland for pleuro-pneumonia, Belgium being divided from it by some imaginary line, a ditch, or road, you do not hear of any cattle being affected with pleuro-pneumonia in Belguim, although

Chairman—continued.

although you are quite sure that they are so affected, and that the German Government have prohibited the import in consequence of the prevalence of pleuro-pneumonia.

Mr. *M'Lagan.*

9770. As regards the Dutch cows you would allow them to come in and to be kept in quarantine for about 14 days, and then sent into the dairies in London; or would you allow them to go to any part of the kingdom?—I would under certain provisions, but they would have to be followed, and they would have to be isolated for two months.

9771. Do you not think that in transporting stock after only 14 days' quarantine would be attended with considerable danger?—I think that there would be a certain amount of danger, but I think that 14 days' quarantine would be sufficient to guard against cattle plague, foot-and-mouth disease; and the further supervision of two months, I hope, would be a fair protection against pleuro-pneumonia. I would rather not have them, as I said before.

Mr. *Pease.*

9772. In the event of your suggestion of two months' supervision being carried out, would you allow any animal to leave a dairy into which these foreign animals had been introduced?—Certainly not. I hope that we shall extend the period of isolation for pleuro-pneumonia generally to two months. During that time no animal should leave that infected place, and I would subject these foreign cows to exactly similar regulations.

Mr. *Pease*—continued.

Chairman.

9773. You do not think that that would interfere with the trade which is a constantly flowing trade, the animals being brought in and sold as soon as they go off their milk?—No.

Mr. *Pease.*

9774. Are you aware of any quantity of cattle coming into this country to be fed as store animals?—There used to be a large quantity imported into Norfolk, and when I began farming as a young man, being, as a good many farmers are, rather short of cash, I used to buy those store animals. In the first 18 months I lost 42 of them from pleuro-pneumonia, and I then learnt that pleuro-pneumonia was very rife in Holland, and that hay was exceedingly dear, and that consequently they had sent off a large quantity of these cheap stores; but I would rather feed the very worst Irish bullock that ever grew than buy a Dutch store in future.

9775–9864. Are they brought in now and used?—I believe that there is a man in Norfolk who has a few Dutch cows, but I have not seen a Dutch store animal in our market or in our county for a great number of years, I may say.

Friday, 6th July 1877.

MEMBERS PRESENT:

Mr. Assheton.
Mr. Jacob Bright.
Mr. Chamberlain.
Mr. James Corry.
Mr. Dease.
Mr. Wilbraham Egerton.
Mr. Elliot.
Mr. W. E. Forster.
Mr. French.
Mr. John Holms.
Sir George Jenkinson.
Mr. King-Harman.
Colonel Kingscote.
Mr. M'Lagan.
Mr. Murphy.
Sir Rainald Knightley.
Mr. Norwood.
Mr. Pease.
Mr. Arthur Peel.
Mr. Ritchie.
Sir Henry Selwin Ibbetson.
Mr. Torr.

SIR HENRY SELWIN IBBETSON, BART., IN THE CHAIR.

Mr. CHARLES LENNOX PEEL, recalled; and further Examined.

Mr. *Peel.*

July 1877.

Chairman.

9865. I BELIEVE you wish to state what the recent action of the Privy Council has been?—I wish to explain how the matter stands now, because the Orders perhaps would not explain themselves. From and after the 30th of last month, that is from the 1st of this month, all the Orders of the local authorities which were in force at that time are revoked, in consequence of the revocation of what is called the Cattle Plague Order, 1877, by which local authorities were authorised to make regulations for their respective districts. The Privy Council Order which applied to the East Riding of Yorkshire expired of itself; the Privy Council Order which applied to Middlesex also expired; and the Privy Council Order referring to Lincolnshire has been revoked. Therefore at this moment the practical effect is that the only restriction that remains in the county is the cordon round the Metropolis.

9866. All the other restrictions that were put in force in consequence of the outbreak of cattle plague have been revoked?—They have been revoked. The cordon will remain round the metropolis until we see the effect of restocking the infected dairies in London which is now going on.

9867. Those are, of course, being inspected?—They are all under inspection. They have been twice disinfected; in the first place, by the local authority, and afterwards we took them in hand and thoroughly disinfected them, and did everything which was necessary.

Chairman—continued.

9868. As soon as the reports show that there is no probable chance of an outbreak again in those dairies, a return will be made by the Privy Council, probably, as to the condition of things that existed before the outbreak?—I hope so. So far as cattle plague is concerned, we shall be free, I think. The Order prohibiting fairs and markets in the metropolis is also in force except by license.

9869. But all the county Orders have been either dropped or revoked?—They have been either dropped or revoked, and the country is quite free now, with the exception of the metropolis. The special Orders relating to cattle plague in London remain in force; that is to say, if there should be cattle plague we retain the power of dealing with it; but of course as there is no cattle plague those Orders are inoperative.

9870. But the power which you take is still in force?—It is still in force. I have been asked by the Swedish and Norwegian Minister to put in the regulations of the Swedish Government and of the Norwegian Government. They sent a gentleman over from Sweden, but he was not able to stop to put them in himself. (*The same were handed in*, see *Appendix.*)

9871. Those are the regulations which they have now adopted, and which are now in force in those two countries?—Those are the regulations.

9872. Those complete the regulations with regard to the northern countries—Quite so.

Professor GEORGE THOMAS BROWN, re-called; and further Examined.

Chairman.

9873. YOU are able, I suppose, to tell the Committee that, in your opinion, the cattle plague, which you described on your first examination, has practically ceased in the country?—The country has not yet been officially declared free, but I am in a position to state that there is no case of cattle plague in this country.

9874. We have just heard from Mr. Peel that the metropolis is now the only part of the country which is affected by the restrictions which were put on in consequence of that disease?—That is so.

9875. Can you give the Committee any idea of what effect those regulations that have been in force with regard to cattle plague have had upon the progress of foot-and-mouth disease during this year?—There is no doubt that the regulations, affecting as they did a considerable part of the country, have resulted in restricting the progress of foot-and-mouth disease very considerably. At the latter part of the year 1876, the new outbreak, which I expected, and which I had hinted at in my previous reports, had already commenced; and we have returns from various counties which show that, up to the middle of the spring, the disease was progressing somewhat rapidly. Since the operation of the regulations which the local authorities made under the Cattle Plague Order, 1877, the cases have very much decreased, and from some counties, where disease existed to a considerable extent, we have blank returns.

9876. That confirms what Mr. Howard stated with regard to the effect of those regulations in his county, for instance?—It does.

9877. What are the counties from which you have blank returns?—We had no returns of cases from Cambridgeshire in May, and in the previous month there were 551 cases returned.

9878. In Cambridgeshire, in the course of a month, the cases have practically ceased to exist?—For some reason the cases have declined to nil. In Cheshire, where the disease only existed to a very limited extent, only five cases being returned in April, we had a blank return in May. The same thing was true of Northumberland, and Notts, and Oxford. We had blank returns also from Somerset, Suffolk, Westmorland, and the North Riding of Yorkshire. In Bedfordshire, 13 cases were returned for the month of May.

9879. Have you any return with regard to Wiltshire, where Mr. Stratton's evidence showed that the disease had been very prevalent?—The return from Wilts for April was 17 cases, and in May it was reduced only by two, the number returned being 15.

9880. With regard to those counties which you have stated show blank returns, were the cattle plague regulations put in force strictly in those districts?—I can only say, in reference to some of them, that they were. I have not had time to go through the whole of the returns in order to ascertain the proportion.

9881. May we connect in our minds the cessation of disease in those counties with the restrictions which were put on in consequence of cattle plague this year?—We can, certainly, in some of the counties; in Bedford, for example, and Berks, and also in Kent; I am aware that in those places the regulations were in force, and also in Middlesex, where they seem to have had the greatest effect. In Middlesex, the disease began in January with three cases; it had gone on in February to 86; in March, April, and May, the returns were blank; and I may state also that we have had no cases of disease detected by the inspector of the metropolitan market for some two or three months past, whereas, up to the commencement of the cattle plague, the disease was increasing there very rapidly.

Chairman—continued.

9882. That is the Islington Market?—That is the Islington Market.

9883. Whilst the disease was increasing rapidly in that market up to the time of the issuing of those stringent regulations, since that time it has diminished very considerably?—It has. Then I have a further return here for the end of June, in which I see that some of those counties that were declared free last month have had fresh cases; in Bedford, for example, there is one attack recorded; in Berks, one attack; in the North Riding of Yorkshire five attacks; and in the West Riding, which had previously been free, there were 16 attacks; and I am afraid I must state as my strong conviction that, as soon as those regulations are revoked all over the country, and particularly when the cordon is removed from the metropolis, the accession of disease, which I expected, will really occur.

9884. In your mind the diminution and extirpation of this disease is necessarily connected with strict regulations?—Undoubtedly.

9885. And the effect that has been produced by these strict regulations is shown in the statements which you have made with regard to the cessation of this particular complaint in those counties?—It is.

9886. Looking at that, does it alter the opinion which you previously stated to the Committee as to the time required to eradicate contagious diseases in this country or otherwise?—My conviction is, that we should not succeed in getting entirely rid of foot-and-mouth disease and pleuro-pneumonia, unless those regulations were continued for a very considerable period, and I base that opinion upon the facts which have come under my own observation. For example, during the great outbreak of cattle plague in 1865, the most severe regulations were applied all over the country from March 1866, and they were continued with more or less variation until the summer of 1868. During that long period, we did not succeed in stamping out either of those diseases. I saw both of them, and foot-and-mouth disease in its most virulent form, at various periods during the whole of that time.

9887. Did you see that disease breaking out in districts where those severe regulations have been applied?—Certainly, in districts where the cattle plague rules were being enforced in consequence of the presence of cattle plague; and we have seen pleuro-pneumonia and foot-and-mouth disease existing with cattle plague in the same animal.

Professor *Brown.*

6 July 1877.

Chairman—continued.

9888. The diminution of foot-and-mouth disease in the case of those counties strengthens your opinion that there is no foundation for the statement that foot-and-mouth disease could not be stamped out by strict regulations?—It does.

9889. And your opinion also is that regulations would not, without remaining in force a considerable time, have any chance of stamping out the disease?—That is my conviction, judging from what I saw during the cattle plague time.

9890. Do you think that foot-and mouth disease would die out under these regulations?—I believe that by the continued application of the most stringent measures for the requisite time we should ultimately get rid of the disease, or reduce it to such proportions that it would be a matter of comparative unimportance; but I altogether fail to see the slightest ground for the assumption that the disease would die out if you simply cut off the supply from abroad irrespectively of any regulations which might be applied in this country.

9891. You think that the stopping of the import of the disease from abroad if it comes from there, must be combined with those strict regulations for eradicating it in the country itself before there would be a possibility of getting rid of it entirely?—Undoubtedly; we have the fact before us that the disease was introduced here in 1839, that it remained certainly up to 1842 in a very virulent form, when, if it would die out, it had had the opportunity of dying out; because no importation of foreign cattle took place to any extent, and, as a matter of fact, it was totally prohibited from about 1825 to 1842.

9892. Can you speak as to what the regulations in regard to the disease in the country were at that time; were they sufficiently severe then?—There were no regulations at that time; but that illustrates, to my mind, the point that the disease will not die out if it is left entirely to itself, the only precaution taken being to prohibit foreign imports, as was at that time done.

9893. You agree, therefore, with those witnesses who say that strict regulations with regard to the home trade must be enforced at the same time with the prohibition as to foreign importation of disease?—I have no doubt of it, and the examples which have been given of America and Australia seem to me to indicate that; because in both those countries, assuming that the disease ever was introduced, though the fact has never been satisfactorily demonstrated to my mind, whatever disease was introduced, described as foot-and-mouth disease, was dealt with very rigidly; I believe that the diseased animals, and all those herded with them, were slaughtered, and by those means the disease was stamped out; and it has not since been introduced.

9894. Then, by strict measures, they did stamp it out, as they have done on certain occasions in Denmark and Schleswig-Holstein?—Exactly, and as you may easily do in any country when it is newly introduced.

9895. With regard to pleuro-pneumonia, have you any records showing how that has been affected by the regulations which have been in force this year?—Pleuro-pneumonia has not been apparently affected at all by the action which has been taken, at any rate in the boroughs, where the disease is most rife. In

Chairman—continued.

London it has been more prevalent than it has been probably for some years previously; I speak here quite without reference to the returns which we get in the Veterinary Department, which certainly do not include anything like one-half of the actual number of outbreaks which really occur; but I happen to know from a very reliable witness that there has been more disease in London than there has been for some years previously.

9896. During the time that these strict regulations have been in force?—Yes.

9897. Then I suppose you would say that the opinion which has been expressed by a witness before this Committee, that pleuro-pneumonia could be extirpated in six months, could hardly be well-grounded?—Without knowing precisely what method would be adopted it would of course be difficult to give an opinion; but having before me the example of Holland and Switzerland, I confess I do not see what practical means could be adopted which would succeed in eradicating that disease in six months. In Switzerland, for some years past, most severe measures of repression have been adopted, and we frequently get a report that the country is declared free, and the following month we get a report of a fresh outbreak in the same district, or in another canton. In Holland, the measures which have been adopted for the last six years were of so severe a character that they would hardly have been thought of in this country. The importation of cattle was prohibited in 1870; the slaughter of diseased animals has been compulsory since 1872; and in 1874 inoculation was made compulsory, with the alternative of the slaughter of the animals which were herded with diseased ones. This year the slaughter of animals which had been herded with diseased ones has been carried out actively; and the result has been that, from 1870 to the first six months of 1877, they are able to report that they have got rid of the disease in one province.

9898. That is in Friesland?—That is in Friesland.

9899. Was there not a distinction in Mr. May's evidence as between those regulations; did he not say that the attempt to absolutely stamp out the disease, by slaughter, in Friesland had only been adopted within the last year?—He had reference, I believe, to the slaughter of animals which were herded with the diseased ones; that is to say, the slaughter of the entire herd; that, I believe, has only been carried on during the first part of 1877, but the slaughter of diseased animals was ordered in 1872.

9900. It was in reference to the last increasedly severe restriction that he quoted the diminution of cases of disease in the province of Friesland, was it not?—It was.

9901. Whilst they had attempted by inoculation, and by slaughter of the animal itself that was affected, to get rid of it witout success, he quoted that as showing that they were in one province, where they adopted the more severe measures practically succeeding?—That was so; and I may say that on that system it is conceivable that one might get rid of pleuro-pneumonia in six weeks without waiting for six months. I mean that if, by a species of jugglery, one should be allowed to find out every spot where pleuro-pneumonia existed, and you then extirpated the

Chairman—continued.

the entire herd, you would get rid of pleuro-pneumonia by the simple expedient of destroying all the susceptible animals; but I do not apprehend that that is a proposition which would be seriously suggested.

9902. It is not one, at all events, which you think would be adopted willingly by the farmers of this country?—Clearly not.

9903. With regard to the restriction as to the import of animals for the purpose of stopping the introduction of pleuro-pneumonia, there also you think that very strict home regulations must be combined with it, or we should not get rid of that disease any more than they have after having prohibited import in the Netherlands?—I think that the whole history of the affection on the Continent proves that that must be the case.

9904. And that it must be enforced by regulations which you have described as being far more severe than anything which we have ever contemplated in this country?—Decidedly. The restrictions to which I have referred have added to them a number of details which I have not quoted; such as power to stop markets, registration of cattle in various districts, and such an amount of interference as no one in this country has ever contemplated.

9905. To some extent similar to those which are now suggested for adoption in Germany?—Even more severe.

9906. You have dealt with pleuro-pneumonia and foot-and-mouth disease; and with regard to cattle plague, that, I suppose, you would consider could be dealt with by strict regulations as to import, keeping in reserve any regulations with regard to home stock until it should come over to this country?—Certainly; I think we should secure ouselves, humanly speaking, completely, by prohibiting, as I suggested to the Committee before, imports of cattle from Germany and Belgium, and from France, unless France chose to adopt the necessary precautions to guard her frontier.

9907. Germany, on account of her proximity to a contaminated frontier, and Belgium on account of her being a transit country?—Exactly.

9908. With regard to the question of inspection, it has been given in evidence before this Committee that our present system of inspection is not to be relied upon; and I think one of the witnesses, Mr. Robinson, in his evidence, made some complaint as to inspection not being worth very much as a protection against the introduction of disease; do you wish to make any remark with regard to that?—I think it must be admitted by anyone who examines the returns relating to the diseased animals which are detected on landing that, at any rate, a certain amount of advantage is gained by the inspection of animals after a certain period of detention. Were it not for some such safeguard it is quite clear that a very large number of diseased animals, amounting in the last two years to something like 30,000, would have got into the country; whereas they were stopped, with all the animals which had been in contact with them, and were slaughtered at the port. I think that Mr. Robinson's complaints had reference to the want of uniformity; and I find, on looking over the papers in the Veterinary Department, that Mr. Robinson has complained on several occasions in reference to the different

Chairman—continued.

systems which he alleges are adopted at London and at Harwich. In March 1874 Mr. Robinson reported to the Veterinary Department that a cargo of cattle *ex* Rotterdam had been passed at Harwich before the 12 hours' daylight detention had expired.

9909. What was done in that case?—An inquiry was made, and it was found that most of the animals had been detained for more than 13 hours. The detention for 12 hours' daylight is not suggested or required by the terms of the Order; the injunction is that the inspector is not to make his final examination except during daylight; but if it were insisted that the animals should be detained for 12 hours' daylight, it would happen, in some periods of the year, that they could not be allowed to go; for some months there are many consecutive days when there are not 12 hours' daylight.

9910. I suppose that detention for 12 hours after inspection is intended to secure two inspections before the animal is declared free?—It is, and also to secure that the animals remain for 12 hours after the landing of the last animal of the cargo.

9911. But I suppose you would admit that an inspection by daylight is almost necessary to enable an inspector to detect disease?—We conceived that to be absolutely necessary, and therefore we gave the order.

9912. Then if two inspections are required to give sufficient security, ought not both those inspections to be by daylight?—The requirement does not absolutely necessitate two inspections. The inspector is presumed to look round the animals when they are first landed, or as soon after as he possibly can, in order that if there are any cases of a very decided character he may at once act; but the great object of the 12 hours' detention is that the animals may be quiet and cool when he makes the real crucial inspection.

9913. You would represent that there is not the same necessity for his being able to detect the disease when the animals first come off the vessel as there is when he finally declares them sound?—There is not the same opportunity. The animals are very often, at the time of landing, not in a condition which would enable the inspector to detect whether they were suffering from disease or from extreme exhaustion.

9914. Supposing that cattle arrive at such a time that they can only in the first instance be inspected in the dark; that a large number of those animals, we will say, are affected, that some of them escape the notice of the inspector, being landed in the dark, that people come in contact with them and spread the disease, and that as soon as the daylight examination comes, the inspector at once condemns the cargo; does not that open the door to great risk?—That is undoubtedly a difficulty which is absolutely insurmountable under the present arrangements.

9915. Unless some inspection were made by daylight?—And even then, unless we prohibited tha landing of animals except during daylight, there would still be the risk of the diseased animals coming in contact with the attendants, and the attendants would have the opportunity of going away without any notice being taken, and before the disease was really discovered.

9916. Was that the only case in which the Privy Council had their attention called to this

by

Professor *Brown.*

6 July 1877.

Chairman—continued.

by Mr. Robinson.—No; in another case, in October 1874, Mr. Robinson reported that cattle *ex* "Avaton" from Rotterdam landed at Harwich had been passed after sunset. This, of course, suggested that the animals had been inspected after dark; and if this had been proved, the inspector would without question have been removed from his post. The case was inquiried into, and it was found that the last animal of the cargo was landed, and in the lairs a quarter of an hour before the time at which Mr. Robinson stated that the vessel had arrived at Harwich. Mr. Robinson grounded his complaint upon the statement that the vessel had arrived at such an hour that 12 hours' detention, from even the time of the arrival of the vessel, would have taken them beyond sunset, the fact being, that all the animals were in the sheds before the hour at which Mr. Robinson stated that the vessel had brought up her cargo to the wharf.

9917. Was the time of the arrival of the vessel ascertained by a custom house certificate?—It was; and by the statement of the persons who had been engaged at the landing; but the evidence upon which we rely in those cases is the evidence of the custom house officers, who are bound to see to the clearing of the vessel.

9918. What struck me most, and I daresay struck the Committee most, in the examination of Mr. Robinson, was a statement showing the discrepancy between the authorities at the London waterside markets and at Harwich; inasmuch as it was alleged, that at the London landing-place a number of cargoes were condemned, and yet that brother cargoes, if I may so call them, coming from the same port and from the same centre, and going to Harwich, were all left free; has your attention been called to that?—That complaint was made in August 1875. Mr. Robinson called attention to the fact that nine cargoes out of 15 had been stopped at London, whereas 12 cargoes landed at Harwich had been passed. He inferred from this, that a difference of practice existed at Harwich and at London, and he stated that he had heard that the inspector at Harwich stopped the diseased animals only, whilst at London the healthy ones were detained as well as the diseased ones. I may say at once, that we knew those complaints to be unfounded, because the inspector was one of the most experienced we have, and he knew perfectly well what his duties were. Nevertheless inquiry was made, and the evidence went clearly to show that the practice was the same at both ports; that when disease was detected at Harwich, the healthy animals were slaughtered as they would be in London. The discrepancy in the results of the inspection we could not account for, excepting that we were informed that the very greatest care was exercised by the Great Eastern Company to obtain animals from healthy sources, and that, having before them the inconvenience of their being stopped at Harwich, they took care to use every precaution to bring only healthy animals into the market. On the same subject of the want of uniformity in the method of inspection, we had a complaint from the Great Eastern Railway Company. They complained that the cattle trade was being entirely diverted from Harwich to London, on account of the different manner in which inspection was conducted at the two ports; and certain shippers and salesmen said that, as long as they could get their cattle passed at the London wharves, they would not risk sending them to Harwich, where they would be detained for slaughter. The complaint in this case was the exact opposite of the complaint in the other case, because Mr. Robinson's allegation was that all the cattle could get through at Harwich, and that they were stopped in London.

Chairman—continued.

9919. Were those complaints made at the same time?—No, but they refer to the same inspector; the same man has been at Harwich during the whole time; what I want to bring before the notice of Committee is the fact that the same inspector is charged with two different systems of action tending in opposite directions by two persons at different periods. In order to test this statement, the Great Eastern Company requested that they might be allowed to nominate a veterinary inspector for themselves to see what course was pursued in London; this request was complied with, and Mr. William Hunting was allowed to be present at the inspection of the cargoes at Brown's Wharf; Mr. Hunting attended on several occasions, and finally reported that he had no complaint to make. The Great Eastern Company wrote to the Veterinary Department in reference to the case, stating that they had no further observations to offer; and that was the conclusion of the whole matter so far as we were concerned.

9920. I think that Mr. Hunting was examined on that point before the Committee of 1873, was he not?—He was; and he stated the course which he had adopted on that occasion when he was temporarily employed by the Great Eastern Company to watch the inspection at Brown's Wharf; and I believe he was asked to hand in a report, but the report I find is not printed in the Appendix to the Committee's Report.

9921. You quote the instance of 1872, and the other of 1874, as showing that the inspector's judgment had, in both cases, been questioned from exactly opposite points of view, in fact; and that in each instance you satisfied yourself that there had been some mistake upon the subject?—That was the conclusion at which I arrived.

9922. In your inquiry as to the comparison of the healthy cargoes coming through in 1874, did you satisfy yourself on more than the statement of the inspector?—We had no very direct means of getting evidence, except that the animals go from Harwich to the London market, and they are again seen by the inspector there. In only one instance did it happen that diseased animals which had been passed by our inspector were detected with disease in the Metropolitan Market by Mr. Rayment, and the result of that discovery on his part was that the inspector of the Privy Council was immediately removed from his office.

9923. The allegation, as I understood it, was not that they sent forward cargoes without inspection, but that they separated animals from them, and sent forward what are called the healthy animals to the London market?—I think, in that case, that plan, if it had been adopted, would have defeated itself, because those animals would some of them certainly have shown the disease in the Metropolitan Market.

9924. From having been in contact with the others?

Chairman—continued.

others?—From having been in contact with the others.

9925. But at the same time there was no evidence taken in regard to it, excepting the evidence of the inspector who was accused?—No, there was no other evidence that could be obtained.

9926. Your attention has, of course, been directed to a suggestion of one witness with regard to the inspection, viz., that our English inspectors might be placed at foreign ports; have you considered that point?—That suggestion has been repeatedly made during the last 10 years, and I have always opposed the idea on the plea that it would practically throw the whole responsibility upon the Privy Council; it would invariably be said when diseased animals were landed: "Your inspector was at the port, and he ought to have prevented it;" the mere fact of his not having any such power would, I am quite certain, not be taken into account.

9927. You mean to say that the foreign inspector would relieve himself practically of the responsibility on account of the English inspector being there to certify as to the disease?—Clearly he would have the opportunity of so doing.

9928. And you do not think that the advantage which was suggested, which would be that the man would say, "I shall report your cargo if you do not take more care about it, and therefore you will have it stopped when it goes over," would compensate for that?—No, I think the whole result of that system would be probable that rather more diseased animals might by weeded out of the cargoes on the other side before they were shipped; but I would myself prefer that that should not be done at all; it is already done more than I should wish. I should prefer that they should ship the diseased animals rather than keep them back, because there is a greater risk that animals which have been herded with diseased ones may escape.

9929. That especially applies to pleuro-pneumonia, I suppose?—Certainly; and even to foot-and-mouth disease. We know that the practice is to remove diseased animals on the wharves at the other side, and to charter a special ship to take them all to Deptford afterwards.

9930. Have you considered whether any change should be made in the regulations affecting the landing places, in consequence of what has been pointed out with regard to the difficulties that at present exist in preventing the spread of disease?—I see no practical way of very much improving the arrangements at the landing places without totally altering our present system. I think anything like security could only be obtained by having special vessels, bringing them into particular ports, detaining the vessels and the persons in charge of the animals, until they were ascertained to be perfectly healthy; and then, when necessary, adopting a proper system of disinfection, both for the cattle men and for the vessels in which the cattle are brought.

9931. That is what you suggested, I think, in your first examination?—I did.

9932. And that would meet, I think, what Mr. Read in his evidence complained of, which was that the vessel was not disinfected for some time after the cattle had been landed?—It would meet that difficulty. I may further add that longer detention of animals landed in this country would, of course, give an increased opportunity to the inspectors to detect disease in those in which the disease was only in a state of incubation; I refer particularly to foot-and-mouth disease.

Chairman—continued.

9933. If you had the power which you suggest, that would prevent what Mr. Read also mentioned, viz., a vessel getting away, as it did in this case, I think, to Limehouse, where she would probably spread the disease in the London area?—She would.

9934. Mr. Read stated that it took some considerable time, I think, before any impression was made upon the Privy Council upon that subject, in reference to the disinfecting of this vessel, and its getting away to Limehouse and spreading the disease?—I think he referred on that point to the difficulty which was found in inducing the Privy Council to take charge of those places where cattle plague existed.

9935. It was with regard to your powers over the metropolitan area?—It was so, I think.

9936. Was it the case that it was a long time before it was done, and that great pressure, by deputations and otherwise, had to be put upon the Privy Council to do it?—It was not until the middle of April that the Privy Council passed an order to enable their officers to act in the metropolitan police district; and although suggestions had been previously made, I do not at this moment recollect any deputation that came to press that point particularly, excepting the one from the Royal Agricultural Society and from the Shorthorn Society. Suggestions had been made, but there was a disinclination to take the matter out of the hands of the local authority, into whose hands it was given by the Act, until there was reason to apprehend that they had not the machinery to prevent the disease from spreading to the country.

9937. That, I presume, would strengthen your suggestion that the Privy Council should be the central authority, with general powers throughout the country?—I think it does.

9938. Going back to the question of inspection, is there anything that you would wish to suggest on the evidence which has been given with regard to the inspection of Irish animals?—On the subject of the inspection of animals landed from Ireland I should like to state to the Committee that there was, from the first, some little difficulty felt in appointing men to examine animals on various parts of the coast from the conviction that we should probably convey to the public mind a totally wrong impression. As a matter of fact, we have no more power to deal with Irish animals than we have to deal with English animals, and no inspector has the right to stop an animal on a landing place and examine it, unless he has reason to suspect certain diseases; whereas, by placing an inspector at a port where Irish animals were landed, we seemed to suggest that we meant to deal with those animals as if they were animals landed from abroad, the real truth being that we had no intention of the kind.

9939. Have you any power of detention or otherwise?—We have no power whatever to detain the animals for a moment. If the owner chose to drive them away whilst the inspector was standing there, the inspector has no right to attempt to prevent him.

Professor *Brown.*

6 July 1877.

Chairman—continued.

9940. The impression left on my mind, looking at the clauses of the Act, was that one clause in the Act gives the Government Inspector all the powers of the local inspector, and that the local inspector has the power of stopping the animals landed, if disease is detected?—Yes; if he detects the disease, he has power under the 57th section, to detain the animal; supposing that it is driven along a public road, or exposed in any public place, he has power to detain it, and take it to any convenient place, and keep it there for the necessary time.

9941. It seemed to me, looking at the combination of those two clauses in the Act, and with reference to the statement that was made, that a Government Inspector at Bristol, had been present during the whole time of the landing of the cargo on the highway, and had seen the infected animals which he pointed out to the witness landed, and then driven along that highway, those two clauses practically did give him power, as Government Inspector, to stop those animals?—It did under those circumstances.

9942. Nevertheless, the inspector had told the gentleman with him, that he had no such power, and that his instructions from the central office gave him none?—The instructions which I gave all the inspectors when they were appointed, were definitely as he stated, that they were not to do anything beyond reporting the disease to the local authority, and to the Privy Council; they were particularly to avoid interfering with the action of the local authorities.

9943. Then it really results in this: that it was by instructions from the central office that the powers that might have been given to the Government Inspector under the Act were limited?—It was so for the obvious reason that if we had instructed our inspectors to go down to Bristol and take the action of the inspectors of the local authority, we must also have found a convenient place in which to keep the animals; because under such conditions the local authority's inspector would naturally have said, "You have taken charge of the animals; you must keep them; I have nothing more to do with it."

9944. That points rather to a defect in the existing regulations, does it not, because we might infer from that that there is very little utility in keeping a Government Inspector at all at the port, if under his nose animals were passing diseased into the country?—The only advantage was that by having a Government officer at the places where the larger portion of the animals from Ireland were landed, the local authorities might be informed of the existence of disease, and the Government might also be put into possession of knowledge which could be utilised under certain conditions.

9945. He is not one of your travelling inspectors who examines as to the conditions of the transit of the animals?—No; there are two men at Bristol now who are both exclusively employed in attending to the landing of animals coming from Ireland.

9946. For the purpose of giving information to the central authority if disease comes in in the cargoes?—Solely with that view: they were told not to exercise the powers which they could technically claim, because they have no machinery for the purpose of carrying them out.

9947. Therefore the system is complicated in this way, that probably the only man who sees the diseased animal at all, has first to get the local inspector from Bristol down to the port, and then the local inspector sets the machinery of the Act in operation?—Or the policeman who regularly attends.

Chairman—continued.

9948. But the policeman cannot do it under the instructions of the Government Inspector, but has to wait for the instructions of the local inspector?—He has general instructions from the local authority, and therefore he is an officer empowered on their behalf to take possession of animals that are landed diseased, and the arrangement is that they are taken to a slaughter-house, but he has no power at all to take them to a slaughter-house.

9949. Of course under your instructions the local inspector informs the local authority at once of each case of disease that he sees?—The course which is adopted is this:—As the animals are landed the inspector stands by, and if he detects disease he has the animal caught; he exceeds his power so far as to order the drover to hold it, so that he can examine it; having satisfied himself that it has disease, he points out the animal to a policeman; and the rule is, I believe, that the policeman gets the animal driven to a slaughter-house, and in some way it is contrived that the animal shall be slaughtered. But I could not ascertain how it was done; it certainly cannot be done legally without the consent of the owner.

9950. We had some evidence which rather astonished, I think, some members of the Committee, that an inspector was present and saw the diseased animals landed at this port; and the gentleman who gave the evidence, and who was with him, said that no policeman carried them away for slaughter, but that they were put into carts, not being able to walk, and were taken along the highway into the country; and that the other animals that were with them, which were apparently unaffected, were driven off as a matter of course into the country; and that the inspector stood by and pointed out the diseased animals to the gentleman who was with him, and said, "Those are infected with disease;" and he had no power to stop them?—I have no doubt that that is a literally accurate statement of what took place. It is what would take place under ordinary circumstances. Those animals must have been pigs; carts are always ready, not for the purpose of taking away diseased pigs, but for the purpose of taking away pigs that are injured, as they constantly are by scrambling over each other and scratching each other on the voyage, and even by being washed with the sea water, which causes intense irritation of the skin of the pig. When foot-and-mouth disease occurs amongst the pigs, our inspector points out the animals to the policeman, and under his direction they are put into carts and taken away to a large slaughter-house in the borough; but having got to that slaughter-house there is no one, so far as I can ascertain, whose duty it is to see that they are slaughtered; in fact there is no power on the part of anybody to see that such slaughter does take place.

9951. All that points to the necessity of some alteration in the existing system?—Yes.

9952. There is no power to slaughter home animals

Chairman—continued.

animals for foot-and-mouth disease, is there?—None whatever.

9953. Although there is for pneumonia?—Yes, but that only under an Order that was passed some time ago for the purpose of ordering slaughter, and not under the Act. I may say that these circumstances strengthen the objections which I entertained from the first to the appointment of inspectors at Irish ports, namely, that we should convey to the public a wrong impression. These men would be required to see diseased animals landed, and see them driven away, unless the policeman likes to take charge of them; and I must say I am very much surprised that no complaints have been made by the public before this time.

9954. Then you are confirmed in your opinion that the system is faulty in that respect?—I believe the system attains exactly the object which was intended, namely, that we should be informed of cases which would otherwise never come to our knowledge; and the local authorities are informed of such cases, and I believe the mistake has been that the public has not been made sufficiently aware that the whole duty of our inspectors, at ports where Irish animals are landed, is to detect disease and to report it, and not to act as the inspectors of the local authority.

9955. We have some evidence as to the arrangements that attend this trade in Bristol and that part; have you recently examined into those arrangements?—I remained in Bristol during the last two days, and I saw some hundreds of cattle, sheep, and pigs landed; I traced them into the market, and I saw them put into the lairs and the trucking pens on the railway; and I saw them packed into trucks, and I saw some of them taken away; so that I have seen the whole process, as I had seen it repeatedly before.

9956. Were those cattle, sheep, and pigs?—Cattle and sheep. Nearly all the pigs are driven away, either directly to the railway station to go to Calne, or to the large slaughter-houses to which I have previously referred; a large number of them are slaughtered in the borough.

9957. Has there been any improvement in recent times in the arrangements?—There is undoubtedly a very considerable improvement on the landing place. The arrangements are by no means perfect, but there are large stone divisions put up so that cargoes can be kept separate, and there is no longer that driving and shouting, and excitement which there used to be; and there are also water troughs, though they are not sufficient in number, and are not sufficiently supplied with water; and there are a few pens which are not yet finished, where the water troughs are entirely empty. But those are only matters of detail, to which I called the attention of the local authority; and the town clerk has promised to put the necessary pressure upon the dock company to have these things attended to at once; and I have no doubt that they will be done. However, the arrangements for dividing cargoes, and for cleansing, and for disinfection, are certainly, comparatively speaking, satisfactory, considering that no one gets any dues for the landing, and that company or individual is absolutely bound to do anything at all, except to provide water on the landing place.

9958. It was stated I think in evidence, that

Chairman—continued.

animals were constantly lost on this voyage; did you see the landing of any animals, and did you observe in what condition they came over?—They all came in what is called fresh condition; there were certainly none of them exhausted on the landing place, but, as usually happens when a large number of young stock, yearlings and two-year-olds, are driven into a vessel, they were excessively dirty; a large number of them had evidently been rolling about on each other, and they were completely covered with manure; but there was nothing that one could complain of under the circumstances. The losses were practically *nil.* I found that in one vessel there were 836 cattle, 517 sheep, and 154 pigs; in another vessel there were 75 cattle, 646 sheep, and 147 pigs; in another vessel there were 950 cattle, and 248 sheep; and the only animal landed dead was one sheep, which was brought on board the boat that had the smallest cargo.

9959. Are the fittings of those ships improved?—They are fitted quite in accordance with the directions of the Order, and they are all of them very effectually cleansed and disinfected before they leave the port; all the regular trading vessels are disinfected at Bristol by contract.

9960. Are the vessels employed for that particular trade, or do they bring mixed cargoes?—They all bring mixed cargoes and passengers.

9961. I think Sir Alexander Wood, talking of that, was strongly in favour of the separation of the carriage of animals from the carriage of passengers; what is your view as to that?—There is no doubt that a very great advantage would arise from the universal adoption of that system. That has been suggested constantly.

9962. Do you think that the scheme that was suggested by Sir Alexander Wood is one that could be put in force?—I am afraid that it is not practicable, because it would necessitate very large landing places and somewhat expensive arrangements on board the boats; but if it could be carried out, there is no question at all that it would contribute very largely to the comfort of the animals.

9963. Practically, it has been to a very great extent carried out on one side of the water, at Cork, I believe?—I am not sure that it has been carried out at Cork.

9964. As far as the arrangements with regard to the carriage and shipment of the animals are concerned, has it not been carried out?—It has been carried out at one of the southern ports, but at this moment I am not quite clear which.

9965. You have described the condition in which you found the landing places, and the condition of the water supply, and other details; what were the steps taken there beyond what we have heard as to the Government Inspectors, reporting the detection of disease?—The two inspectors were on the landing place when I arrived, and they were both engaged in looking round the animals. It would have been simply impossible to inspect each one separately, and whilst I was there I must confess that if I had been called upon to certify that the animals were all free from foot-and-mouth disease, I should simply have declined to do it, not because I had reason to suspect that any of them had the disease, but because I could get no evidence to the contrary from the kind of examination which

was

Professor *Brown.*

6 July 1877.

Chairman—continued.

was possible under the circumstances. The animals all looked to be in good health, but beyond that it would have been impossible for me to go.

9966. In your opinion there was no sufficient inspection of the animals to enable you to guarantee them as being sound?—There cannot possibly be unless the animals are kept for a certain time in a proper place, and taken individually and examined carefully. Under the present system of inspecting Irish stock, only those animals which, with the commonest care on the other side of the water, never ought to have been shipped at all, can possibly be detected by our inspectors.

9967. With regard to any animals which are not really seriously affected, but which may have the disease still in them, and may in fact be liable to become centres of that disease, there is no real inspection?—None at all.

9968. Have you anything to suggest with regard to modifying the order as regards this disinfecting?—I think, if we are to deal with the subject of the transit of animals effectually, it would be necessary to give the Privy Council larger powers than it has. We ought to be able to say, in reference to any particular lairs or landing-place, that certain things are necessary, and unless they are done within a certain reasonable time, I think the Lord President should have power to forbid the use of those places for the intended purpose. I refer, as an example, to some lairs, or, as they are called, pens or inclosed spaces belonging to the Great Western Railway Company. The disinfection of trucks at that station, and the disinfection of the landing pens is quite satisfactory. So far as I am aware, all reasonable care is taken in trucking the animals; I saw them driven in; they were driven in quietly enough, but whether they would have been driven in so quietly if I had not been there, I cannot, of course, say. They were not packed more closely than animals usually are packed for the convenience of carriage, and in order to prevent them from falling down; but the large space in which they are kept before they are trucked is certainly quite unfit for the purpose. It has no flooring which could be disinfected by any known process, or even fairly cleansed; it is simply a collection of mud and, as it was yesterday, dust. The troughs are so placed that the animals may be easily driven by them; one large trough was perfectly dry, and certainly one quarter full of large stones, and the other one contained very little water. Whilst I stood there a number of animals, which probably had not tasted water for 24 hours were driven into the pens and shut up just within sight of the water trough, but certainly not within reach of it. When I pointed this out to the agent, the stones were cleared out very rapidly and the trough was instantly filled; but whilst I was there there were no animals in a position in which they could get at the water; they were all shut up in other compartments.

9969. In fact, in your opinion, fuller powers are required to deal with this question of transit?—Decidedly.

9970. And to deal with the proper regulation of the lairage and watering of animals when landed?—Quite so.

Chairman—continued.

9971. And also with the inspection?—That is my conviction.

9972. In this, I understand you to refer to the question of those ports where the animals are landed; have you also looked to the case of the railway trucks, and the carriage by railroad?—The last case to which I referred, was with regard to railway trucks and railway pens.

9973. The same additional power would be required in your opinion, to deal with the railroad and the carriage by rail, as with the carriage by steamers, and the lairage at the port of debarkation?—I think so; in this particular case, there is just the space that would be required for a very excellent depôt.

9974. You say that you think the Privy Council powers should be enlarged; are there not powers under the existing Act, for dealing with the transit by rail?—We find those powers insufficient in reference to these inclosed spaces, and in other similar spaces over the country. Our inspectors have reported constantly, that the places were not in a condition to be properly cleansed and disinfected. Some railway companies have paved those spaces; others say that they are not prepared to go to the expense, and others have gone so far as to say they would pull down the palings and make the inclosed spaces open spaces rather than do anything for the purpose.

9975. In fact, your powers are insufficient to enable you to deal with the matter, and it would require an amending Act to enable you to deal with it?—I think so.

9976. I think Lord Fitzhardinge in his evidence states, that the animals were smuggled into the country, but there is no law at present preventing their being landed anywhere, is there?—None, whatever; the term could not be properly applied to the landing of Irish cattle, because a man has as much right to land an Irish ox on any space of ground where there is room for his feet, as he has to land a dog or a cat.

9977. Therefore the fact which has been described in evidence of animals being landed at a small port up the River Severn, and then driven back to the Bristol market is quite within the powers that they have at present?—Quite; they probably did it for the purpose of evading inspection; but it seems to me that they have as much right to evade inspection if they can do it easily, as they have to submit to it.

9978. But it points, does it not, to the necessity, if you are to set up these restrictions, of some regulation defining the places where those restrictions exist, and where the animals should be landed?—Yes, certainly; and I think in common fairness those restrictions should be applied not only to Ireland but to the whole of the kingdom. I should deal as severely with animals from Ireland as with those from Scotland; the only difference would be that I should have more difficulty in catching them, because they go by railway from Aberdeen to London. It is the mere accident of the animals having to cross the channel that gives us an opportunity of seeing in what condition they are.

9979. You mean that if animals were sent by sea from Scotland they should be only landed at certain ports where the regulations could be looked after?—Certainly.

9980. And that the railway regulations should apply

Chairman—continued.

apply as much to one part of the country as to another?—Certainly.

9981. That is to say, that all your regulations should really apply to the United Kingdom?—Undoubtedly.

9982. And for the purpose of enforcing those regulations, strong restrictions as to the port of landing would be absolutely necessary?—Unquestionably. The Committee probably are aware that on two or three occasions the local authorities have acted on the information given by our inspectors, and have made regulations under the Order to prohibit the movement of animals that had been herded with diseased ones. It was done at Silloth, and I believe at Milford. The result was that the Irish Government complained that they were being treated exceptionally; that we were dealing with Irish cattle in a manner totally different from the way in which we were dealing with Scotch and Welsh cattle.

9983. I understood you to say that any regulations that are enforced should be for the United Kingdom?—Unquestionably.

9984. There was one other point in Lord Fitzhardinge's, or his steward's evidence, in which it was stated that half the fine went, on conviction, to the local inspectors; is that a system which you think satisfactory?—To me it is an objectionable system; but I presume that anyone who chooses to inform against a man who is illegally driving diseased animals can claim half the penalty. The question was raised by one of our inspectors on one occasion; he was engaged in a prosecution which was successful, and it seems that, as a matter of course, he expected half the penalty, and he applied for it; but the result of that application was that an instruction was sent to all our inspectors cautioning them that no such application should ever be made, and that if half the penalty were offered to them, they were not to be permitted to take it.

9985. The Privy Council has shown its sense of that being an ill-advised mode of proceeding by forbidding your own inspectors to accept half the fine for conviction?—The Privy Council took that course.

9986. You have referred to the necessity of severe restrictions with regard to our home trade, and to the difficulty, in your opinion, of enforcing these restrictions in the country; has your attention been called to the fact that many witnesses before this Committee, representing largely the agricultural interest in the country, have stated that they believe that the farmers generally would be prepared to submit to such regulations; and that, if objections to them were felt, they would be objections raised by dealers, and what they called jobbers, I think, rather than by the farmers themselves?—After having read or heard all the evidence which was given up to last Wednesday, I come to the conclusion that the difficulty which I anticipated as to enforcing restrictions over the whole country is rather confirmed than modified. For example, I find that Mr. Sheldon, Mr. Rea, and Mr. Jacob Wilson are all in favour of restrictions; and they state that the farmers of the country would submit to them; Mr. Stratton stated that the farmers would be prepared to submit to the regulations suggested by the central chamber, which is a very modified approval, indeed; Mr. Lambert, as I gathered from his evidence, was quite against any such severe resirictions.

Chairman—continued.

9987. Mr. Lambert was not speaking from an agricultural point of view, but as a salesman?—Quite so. Mr. Soulby was also against restrictions, and Mr. Howard, who is a very high authority in the matter, stated it as his conviction that a large number of inspectors would not be required, that a very short time would suffice to get rid of foot-and-mouth disease and pleuro-pneumonia, and that the police system, that is to say, the local authority system, would work very effectively. Professor Gamgee, speaking as a veterinary authority on the subject, states definitely that the restrictions are not required; that foot-and-mouth disease would die out in less than a year if we did not reintroduce it; and that he should consider any one unfit for the work who could not get rid of pleuro-pneumonia in six months. With those statements before me, I still entertain the conviction that the restrictions which I think necessary for the purpose of stamping out those diseases, would not be submitted so without very strong opposition.

9988. You are more inclined to agree with what Mr. Soulby, as representing the East Riding of Yorkshire, stated than with the other witnesses on the point?—I am.

9989. It was pointed out by one of those witnesses that the restrictions would not be necessarily enforced in the whole country, but that by setting out infected areas you would practically be only producing those inconveniences in a much more limited space, and that in their opinion you would not effect the same result?—That would, of course, depend upon the state of the prevalence of the disease, if any system of the kind which I suggest could be adopted at this moment without any delay, we probably might succeed in arresting the progress of these affections by a modified course, dealing only with certain counties or with certain districts; but when the disease is extensively spread over the country, I do not see that anything could be done in the first instance short of stopping the whole cattle trade, and allowing fairs and markets to take place only by license.

9990. I understood you to say in the earlier part of your evidence to-day that disease, so far as foot-and-mouth disease goes, had certainly diminished under restrictions which were not uniform throughout the country, but which were applicable only to part of the country?—That is the case; but the restrictions affected a considerable number of fairs and markets, and the metropolis was shut up. The cases which were beginning to be numerous in the Metropolitan Market were at once stopped short; and consequently hundreds of infected animals, which would have been sent into the country, were kept and slaughtered in London.

9991. I think I understood you to say that in your original scheme, if those restrictions were enforced, they could only be carried out, in your opinion, by all the inspectors throughout the country being attached to the central authority?—I certainly think that they would have to be in some way attached to the central authority before any effective action could be taken.

9992. We have had one witness from Scotland who suggested that you might arrive at the same end by appointing, as the Local Government

Professor *Brown.*

6 July 1877.

Chairman—continued.

Board do in their poor-law cases, a number of travelling inspectors, who should "pounce down," as he described it, upon different areas, and see that the local inspector appointed by the locality was really carrying out the regulations issued from the central authority; have you considered that suggestion?—I think I have a case here which will clearly show that it would not be sufficient. It happened some time ago that I saw an animal which Mr. Rayment, the market inspector, had seized in the Metropolitan Market; that was in February; the return is dated February 5th. That animal was slaughtered, and the disease of the lungs was so marked that I sent the whole specimen down to Professor Simonds, in order that he might lecture upon it to the pupils. I asked the owner of the animal how many more he had in his shed, and he told me 19, or some such number; from 16 to 19. I immediately telegraphed to the town clerk of Bedford, from which place this animal had been sent, and informed him of the fact that a diseased animal, taken from Mr. So-and-So's shed, was seized in the Metropolitan Market. On February 15th, we had the following letter: "In reply to a letter of the 9th instant, I have to state that the inspector of this borough, on receiving information of the removal of the cow from the premises named, inspected on the 7th instant eight cows in a shed." That suggested to me at once that between the 5th of February and the 7th, the owner, warned by what had happened in the Metropolitan Market, had reduced the number of animals in his shed from the number which he had stated to me down to eight. The eight animals were found to be apparently well. On March the 7th we got a report from the inspector at Bedford to the effect that on the same premises there were "eight cows, five attacked with pleuro-pneumonia, slaughtered by order of the local authority, three remaining healthy." In that particular case the discovery of the disease was made; there was no question about it; we ascertained the locality. I should have telegraphed, if I had had the power, to the inspector of that district to tell him to apply the pleuro-pneumonia rules to those premises, so that no animal could be moved without a license, and then only for the purpose of slaughter; and the owner would not have had the opportunity of sending a number of infected animals about the country, which he could legally do under the present system.

9993. That is supposing that the inspection had been all under your own control?—Exactly.

9994. You do not think the local authority would carry out the regulations uniformly under a fear of any neglect being detected by a visit of the travelling inspector?—No; because in a case of this kind the only effective action must have been taken by means of the telegraph. Before the owner got back to his premises they would have been in charge of the local inspector under the direction of the Privy Council. In this case, I do not accuse anybody of doing anything wrong; the local authorities did all that they could do, and the owner did what he had a right to do.

9995. You do not think that the system which was suggested by a Scotch witness of telegraphing to the inspector of the local authority, and

Chairman—continued.

pointing out what had occurred, would have the same effect; and that, in order to prevent the central authority taking action against him, he would do what this man did not do?—In this case he did not. If we could obtain power to direct what we consider necessary by telegraphing to the local officer, that would be very much the system which I suggest.

9996. And it might be carried out, perhaps, without such an interference with the appointment of the inspectors as your original suggestion proposed?—Yes, it could undoubtedly.

9997. There has been a question raised, and there have been some conflicting statements as to the total loss by disease in this country; have you had your attention directed to those statements?—It has been a subject of discussion since the outbreak of cattle plague in 1865, and I am not aware that there are any reliable statistics on the subject. I may say that the estimation of loss from the returns of the insurance societies is palpably a fallacious system; because when a a society proposes to insure against losses from pleuro-pneumonia, its chief supporters are those persons who expect to have pleuro-pneumonia, such as the dairymen of large towns; and naturally, under those conditions, all the insurance societies were ruined very quickly. But I should like to state to the Committee what the loss really amounts to on the assumption that we lose 5 per cent. of our cattle every year from various diseases, including contagious diseases and others. Taking 5,846,302 cattle as the average, 5 per cent. of loss will amount to 292,315. Comparing that loss with the loss which occurred during the whole period of the prevalence of cattle plague, from 1865 to 1867, I find that we have, according to the reports, lost 278,943; which is something like 13,372 less than the alleged annual loss of cattle from various diseases. So that if that statement is true, we are annually losing, without any particular observation, more cattle every year than we lost during the whole time of the cattle plague. Then as to the further statement that 70 per cent. of the animals which are lost die from pleuro-pneumonia (I may say that I take the term "die" to include slaughter, because I presume that everybody knows that very few animals die of pleuro-pneumonia; they are all killed), that would give 204,620 every year. The total losses from pleuro-pneumonia, of which we have any knowledge in our statistics for the five years from 1872 to 1876, amounted to 33,569. The average for those five years would be 6,715. I do not presume to tell the Committee that that average loss is anything like the actual loss; I do not believe that we get at half of it; but the discrepancy between a loss of between 6,000 and 7,000 and a loss of 204,000 is something too enormous. It would suggest that our statistics are really not worth the paper that they are written upon.

9998. Therefore you infer that any facts derived from those calculations really do not represent the state of the case?—Certainly not, and I am perfectly clear that nothing like 70 per cent. of the total deaths or slaughter on account of disease can be referred to pleuro-pneumonia, considering the large number of fatal diseases, blood diseases, parasitic affections of young stock, and other maladies, which destroy large numbers every year, the losses during parturition in bad seasons.

Chairman—continued.

seasons. I am perfectly satisfied that pleuro-pneumonia does not account for anything like 70 per cent. of the total losses incurred.

9999. I understand you to say that you cannot rely upon any of those figures at all, and therefore I do not suppose that you could give us any figures upon which we could rely with regard to foot-and-mouth disease?—In conjunction with Professor Simonds, eight or ten years ago, I tried to arrive at an approach to the truth, and we came to the conclusion that the total losses of cattle from all diseases in this country could not exceed 1½ per cent.

10000. Do you mean that per-centage to apply to the whole stock of the country or to the death rate of the country?—Of the whole cattle of the country not more than 1½ per cent. die every year from various diseases, from all diseases.

10001. The death rate as compared to the stock in the country is only 1½ per cent.?—That is the conclusion to which we came; but I am bound to say that I do not attach much importance to that, because we had no proper data upon which to arrive at a proper conclusion.

10002. Were your calculations framed upon the whole of the animals, including cattle, sheep, and pigs?—No, they had reference to cattle.

10003. I gather from what you say, that you do not think that even that calculation was one which you yourself would wish to rely upon?—No, I should not be surprised to hear that it was totally wrong; but I should be very much surprised to hear that the total losses were 3 per cent., that is to say, double that amount.

10004. It has been stated by Mr. Odams, I think, that foot-and-mouth disease is prevalent in markets; is that confirmed by your own experience?—There is no doubt that foot-and-mouth disease is very frequently present in various markets, and certainly in the majority of markets no inspection of any kind takes place.

10005. We have heard, with regard to the Islington Market, a statement from Mr. Rudkin that in that market he believed the lairs were so impregnated that there was hardly ever any cessation of disease; is that in accordance with your own opinion?—It is. Excepting under special conditions during those periods when the decline of foot-and-mouth disease takes place, as it does about every two or three years, the disease is always present more or less in the markets; that is to say, it is always present in the markets when it exists to any large extent in the country.

10006. And the recent comparative cessation of it which you have described does not prove anything more than that is under conditions under which it has ceased in the country also?—The conditions in this case were that the animals were not sent; there were so many restrictions in the way of their being sent that they were kept from the market largely.

10007. Have you considered the suggestion that Mr. Rudkin made with regard to the necessity, in consequence of the almost certainty of that disease continuing in the lairs of the market, of restricting the market to an absolute slaughter market?—I believe that it would be a very desirable thing to do, but I see a great difficulty in ensuring the slaughter of all the animals which are sent there.

10008. Do you mean with regard to the difficulty of enforcing the penalties for not slaughtering animals branded in that market?—The difficulty is in branding them in such a way that the mark should not be readily obliterated, and the necessity for following the animals to a slaughter-house, or giving them in charge to some authority as soon as they arrived at their destination.

10009. You do not think that if heavy penalties were placed upon the exhibition in a market of animals branded in a particular way (which brand would of course be protected by heavy penalties on their being exhibited in other markets) that would practically effect the object?—Unless the penalties were very heavy (and then would arise the difficulty, because magistrates do not like to inflict heavy penalties for these offences), I do not think that the deterrent effect would be sufficient.

10010. I think that Mr. Odams stated that the American cattle which had been sent to Southampton have recently suffered from disease?—The inspector at Southampton reported some little time ago that a cargo of American cattle which had been landed had one or two animals in it which were suffering from some affection of the respiratory system, and that they had been killed, and he saw what he concluded to be evidence of some disease of the lungs. The chief inspector was immediately sent to Southampton; he saw a piece of the lung which was complained of, and another animal which gave evidence of some irritation in the breathing organs was killed, and he examined that carefully; but the disease was entirely confined to the windpipe, the upper part of the throat, and had no connection whatever with the disease of the lungs. There was nothing like inflammation, or congestion, or pleuro-pneumonia.

10011. It does not show that the American animals are not brought over in a healthy condition to this country?—No, not in the least. In this case there was no cause for suspicion at all.

10012. Of course your attention has been directed, in looking through the evidence, to the statements of the foreign witnesses with regard to the proposed restrictions which Germany intends to adopt for the purpose of protecting both themselves and the countries to which they export from those diseases?—It has.

10013. Has that led you to at all alter the opinion which you expressed before that evidence was given with reference to the German import?—I am still of opinion that if we wish to protect ourselves from cattle plague we must prohibit cattle from Germany and Belgium, at any rate, and probably from France, unless France will make certain regulations.

10014. You have not altered the opinion which you originally expressed upon the further information that we have had as to this protecting goal being established on her frontier, as to the regulations for the immediate stoppage of all markets from which animals could come to us, and as to the increased telegraphic facilities which they propose to adopt?—I do not doubt that those further regulations will very much tend to diminish the risk, but I do not believe that the confidence of the country will be restored, and I am certain that my own confidence in our safety would not be restored so long as we get live animals from German ports.

10015. Do you mean sheep as well as cattle?—Only

Professor *Brown.*

6 July 1877.

Chairman—continued.

—Only cattle, so far as cattle plague is concerned.

10016. With regard to other diseases, supposing that regulations are made here with a view of stamping them out, do you think that applies equally to those other diseases?—I think we could sufficiently well protect ourselves from other diseases, even by the scheme which I suggested, of allowing animals to come from countries where we have clear evidence that no foot-and-mouth disease or pleuro-pneumonia existed, and where the regulations were of such a nature that there was ground for the presumption that the animals would remain free; but if it is proposed to deal seriously with the diseases in this country, if, in short, we make up our minds to extirpate both foot-and-mouth diseases, and pleuro-pneumonia, then, seeing that this scheme was in course of adoption, I should certainly feel bound to prevent the introduction of disease by slaughtering animals of all kinds at the port of landing.

10017. Including even sheep? — Including everything; pigs, certainly, because they introduce disease more commonly than cattle.

10018. Have you any means of forming an opinion as to the statements which have been made that if that plan were adopted with regard to both sheep and cattle, that is to say, if they were slaughtered at the port, it would not necessarily interfere with the meat trade of the large towns, because it would be perfectly easy to carry the dead from those ports into the country, and that it was really being so carried now?—I am informed that the American dead-meat trade is falling off very rapidly at the present time, and that they seem to prefer bringing the live animals; but, speaking in the new light that has been thrown upon the subject by the American dead-meat trade, and with the fact before me that the meat can be brought in perfectly good condition, I have no doubt at all that we can, by adopting proper arrangements on this side, slaughter all the animals that are sent to us, and send them to any distance, certainly send them over the whole of this kingdom. But, for this purpose we must abandon what I may term the slovenly habits which are common with slaughtermen; we must have something like a proper system of dressing animals, and of gradually cooling them before they are packed.

10019. Supposing that that became a necessity, do you think that the trade would adopt those precautions for their own sakes?—I believe they would; and I may say that this is not at all a new idea in reference to the prevention of contagious disease. I have only by accident fallen upon a paper which I wrote in 1869 on foot-and-mouth disease, and, in speaking of the subject of prevention generally, I find this passage: "There remains one measure which will probably be deemed quite impracticable, but which would nevertheless tend more than any other to the extinction of contagious diseases, and greatly aid in the mitigation of unnecessary suffering; the general adoption of a system of traffic in dead meat instead of living animals." I wrote that quite without reference to the foreign trade, but merely with the fact before me that diseased and infected animals were constantly being moved about our own country.

10020. And you are of opinion now, as you were then, that really the greatest security against disease would be procured by the establishment of a dead-meat trade, and that, from the possibility of carrying the dead-meat through a country like Great Britain, the slaughter of the animals at the ports would not be objectionable, on the ground that it would reduce the food of the people?—I think not. I think the idea might be very well entertained of adopting such a system with the proper amount of notice. Of course, this change could not be made suddenly, because at this moment there is not more than one landing place in the country where all the arrangements are sufficiently extensive to enable the slaughter of the animals which are landed at the ports.

10021. And probably, also, an alteration of the trade would naturally require time before any substitute for it could be brought into working order?—Undoubtedly.

10022. I think you stated that you would prohibit meat from countries where cattle plague existed at the time; but some witnesses, especially Mr. Read, have expressed a strong opinion that that was hardly necessary; are you still of the same opinion?—I should certainly do it whenever cattle plague travelled to the coast, because, although I quite see the force of Professor Müller's remark, that the owners are paid the full value of the animals, I am also aware of the fact that that did not prevent the owners of the cattle which were sent on board the "Castor" from sending the live animals here; and it is so much more easy to slaughter diseased animals and send them off, there is so much less chance of detection, that I should be apprehensive that some persons would feel inclined to do that rather than incur the annoyance and publicity which would be involved in giving notice of the disease.

10023. Notwithstanding that, their giving notice of the disease would be no pecuniary loss to them?—Notwithstanding that.

10024. Therefore, you would still be of opinion that wherever cattle plague existed in the country there the prohibition would have to extend, not only to cattle but to meat?—For the time being I should certainly totally prohibit all animal products. The loss would be very inconsiderable, because the only country which we should have to deal with would be Germany or Belgium, probably Germany; and their regulations are of such a character that disease would be stamped out in a very short time.

10025. There is a proposal on their part to give us greater telegraphic communication, and there is the fact that they have taken notice, by the dismissal of their inspector, of the want of quickness which he displayed with regard to the shipping of the cattle in the "Castor"?—No doubt great advantage would arise from the improvements which they suggest, but in any case we should hardly get communication in time to enable us to stop a cargo. It has been stated publicly that a telegram was received relating to the leaving of the "Castor" in sufficient time to have enabled the Privy Council to have stopped the landing. I believe the Committee is informed already that this was not the case. The telegram did not arrive here until two hours after the animals were landed, and Mr. Read's statement that if the inspector at Deptford had been sufficiently energetic we might have informed

Chairman—continued.

informed the German government of the existence of cattle plague before they knew it was spoken, I apprehend, without sufficient information; because the Germans were aware of the presence of cattle plague in Hamburg on the Saturday, and the animals were not landed here until 10 o'clock on the Monday morning.

10026. From the evidence of Professor Müller, the fault, I think, seemed to lie in the present regulation, which forces the inspector abroad to send his information to the central department for transmission here?—That is the case; but even if we had had a telegram here late on Saturday night, or even earlier on Saturday, we should have known nothing about the movements of the "Castor," because no government is aware of the movements of any particular ship. We should have known that cattle plague was in Hamburg, and we might, under those circumstances, have expected the landing of animals from that port.

10027. At all events, earlier telegraphic information would put you in this position, would it not; that you would be able to inspect at once on arrival every vessel, without the chance, as in this case, of her going up the river to other places before she was properly disinfected?—We could have done that, certainly; but I would call the attention of the Committee to the fact that that is exactly what was done in 1872 on board the "Joseph Soames"; the animals were not allowed to land, they were slaughtered on board, and the vessel was disinfected before she was allowed to leave, and notwithstanding those precautions cattle plague got from the vessel into the Hull market somehow or other; so that even by that system we failed to obtain absolute security.

10028. And that is your answer to the suggestion that Germany offers greater facilities which ought to be accepted by this country as guaranteeing us against disease?—It is, I believe, that the only guarantee that we can fairly accept is the guarantee which we give ourselves by the total prohibition of cattle from German ports.

10029. You stated, I think, in evidence (and it has since been questioned) that a trade in offal had been established from Vienna to this country?—I was informed that offal was sent from Vienna to this country, and I understand from the evidence of one gentleman from Germany, that this is really the case to some extent; that intestines in some state of preservation were sent. When the information was given me I did not feel particularly interested in it, and I did not make any special inquiries; but I believe I stated to the Committee that I was not aware of it of my own knowledge. I may state that I am informed that some of the parts of the animal which are classed amongst offal, sweetbreads for example, are a very important article of trade during the London season between London and Belgium; I am told by persons who import them, that they occasionally have to pay as much as half a guinea a pair for them. They are sent from Ostend for the purpose of being used in London.

10030. Of course, at that price they would not be brought over unless they found a market in this country?—Evidently they must do so.

10031. That confirms what has been stated by Mr. Robinson and Mr. Rudkin, and by other witnesses, that the carriage of offal is not attended with the difficulty that has been suggested by some witnesses?—I do not see why it should be I do not understand why a bullock's heart or head, properly dressed, should not be kept as well as any other part of the animal's body.

10032. Then you agree with Mr. Rudkin in thinking that, if they were properly treated, all these things might be carried through England in the same way as the dead meat could be carried?—There can be no doubt of the fact that, under a proper system of regulations, they might be carried to any reasonable distance.

10033. And that, practically, as they state, a certain amount of trade in those articles is going on at present as between the Deptford Market and the towns in the interior?—I believe there is no doubt of it.

10034. It has been stated that the prohibition of live stock would have a very direct and serious effect on the price of meat, and we have had very conflicting evidence upon that point; evidence on the one hand, showing that the price of meat has not been affected by the prohibition which has taken place during the last few months; and evidence, on the other hand, that if you prohibited meat of this particular kind, which is wanted by a particular class of people, you would of necessity send up the price; with which of those views do you agree?—I should conclude that the total prohibition of the importation of live animals would necessarily send the price of meat up very considerably, and I do not apprehend that we should get anything like an equivalent from the Continent in the form of meat; because whilst prices remain as they are, normally high in Paris and in Berlin, it seems far more reasonable that a man should keep 20 oxen, and sell them in the Paris market at a high price, than that he should keep 30 or 40 more than he could sell at that high price in Paris, in order to slaughter half of them, and send them over here at a low price. The idea of meat ever coming down again to 5 *d.* or 6 *d.* per lb., as a general price, seems to me to be purely fanciful.

10035. That is as applied to continental cattle?—I believe the observation was made in reference to the effect of total prohibition of the import of live animals, that the result of this would be that in a short time meat in this country would be 5 *d.* or 6 *d.* per lb. If such a thing should ever happen, I imagine that it would arise from the fact of the prosperity of the country very materially decreasing, and from the purchasing power of the people being lessened; and certainly, if such a decrease of price takes place, the price of land and of feeding stuffs, and in short the cost of production of meat altogether must be very considerably less than it is now. I cannot conceive that farmers will produce meat for the purpose of selling it at 5 *d.* per lb. when there are other fields for their industry.

10036. You mean that prices generally have gone up so much that you do not think that they could at a profit return to the prices which used to be remunerative?—Clearly not under the present circumstances. The argument that I have always heard in favour of feeding is that the price of meat is high; but when the price of meat becomes low then meat no longer pays, and the argument is that you should produce corn. The price seems to be the stimulus to the producer.

10037. And that price affects the foreigner too, I suppose, at the present moment?—Undoubtedly; and

Professor *Brown.*

6 July 1877.

Chairman—continued.

and if the meat which he could send were of a plain character, as I know it would be, and would certainly command less in the market than the American meat, it would naturally follow that the American meat would drive it out of the market.

10038. Those remarks are with regard to the question of total prohibition?—They are.

10039. They do not apply to slaughter at the port?—No; I think that under those circumstances the foreign producer would aim at sending us the very best animals he could send over for the purpose of keeping up the price here, as they would be sent alive and in such condition that they could be slaughtered by the men who purchased them and took them to their depôts, at times convenient to themselves; presuming that the carcases could be kept (as I have no doubt they could be kept, at a place like Thames Haven, for example, where there is plenty of space) in proper cooling stores until they were wanted.

10040. You think that with proper arrangement at the ports at which cattle could be landed, and at which they would have to be slaughtered, and with the knowledge that the trade was a steady trade, in consequence of being obligatory, instead of being, as I may call it, dependent upon accident as at present, the foreign cattle would come to this country?—I believe so; but I say that only upon the understanding that the act should be the Act of the Legislature; I do not believe that a mere Order of Council would be sufficient to produce the effect.

10041. You think that a radical change of that sort ought to be under a legislative enactment?—Decidedly; so that it should be clearly understood that no amount of deputations and memorials to the Privy Council would be of the least use.

10042. Have you any information that you could lay before this Committee with regard to a point which has been raised as to the difference in commission that is said to be charged as between the foreign animal and the English animal?—I am told by the salesmen themselves and by the importers that there is practically no difference of the kind, that the allegation that there is is not true. I have no means of ascertaining the fact, but unless I am told deliberate falsehoods by men who are looked upon as being very respectable the commission is substantially the same. I believe that there is a slight difference of charges for tying up, and trifling things of that kind; practically I am told that the commission on a bullock in the Metropolitan Market amounts to something between 4 *s.* 6 *d.* and 5 *s.*, and that the nationality of the animal is not taken into account. I do not think that the matter materially affects the question, because if the statement was made for the purpose of proving to the Committee that the foreign importers are rather interested than otherwise in keeping up their own trade, I do not think it was necessary; I think it may be fairly assumed that they are.

10043. I understand you to say that although you have heard this, you are not able to assert it positively?—No; I am not able to assert it positively.

10044. I suppose that we could hardly look for perfect security, even under regulations such as you have suggested?—Considering the enormous facilities that there are now for the movement of animals in all directions, and the constant interchange of communication in all possible ways, I do not think we can under any system obtain absolute security.

Chairman—continued.

10045. What you recommend then is to attempt to obtain the nearest approach to that security by proper regulations?—By proper regulations in this country, and, to take the extreme view, by prohibiting cattle entirely from German ports, excepting Schleswig and Holstein, and allowing other animals to be landed at our own ports from all parts of Europe for the purpose of slaughter. I should not be disposed at all to interfere with the trade with the Channel Islands, nor, under the present circumstances, with the trade with America.

10046. You would treat the Channel Islands as a part of the United Kingdom, dealing with them as you would deal with Scotland and Ireland?—I should; that is to say, I should treat the Channel Islands as an unscheduled country, as we treat them now, with a sufficiently long detention of the animals to permit of their being inspected, and of its being ascertained that they were free from disease. I should treat the American and Canadian animals in precisely the same way, until in either case I found an instance of disease; and I may say that we have not yet, from either of these countries, found a single instance of contagious disease; but on the first appearance of it I should certainly deal with them as I should deal with the others.

10047. The Act which you suggest should be passed making it imperative would have to contain, I presume, an elastic clause, enabling you, should you detect disease in the American and Canadian cattle, to bring them also within its scope?—Certainly; it should do as it now does, that is, give the Privy Council power to prohibit importation, except under certain conditions.

10048. You think that the Channel Islands should be treated as part of the United Kingdom? I should still detain animals from the Channel Islands at the landing place; I should do it for the comfort of the animals themselves as well as for the convenience of inspection.

10049. In consequence of the passage?—Yes.

10050. With regard to the cessation of the returns for foot-and-mouth disease, I think it has been stated in evidence before this Committee that they ceased in 1873, when the disease had begun to decline; can you give the Committee any reason for that apparent want of curiosity?—It was complained that a great deal of expense was involved in getting those returns, and it certainly involved very considerable cost in the Veterinary Department in treating them and arranging them for publication, and there did not appear to be any corresponding advantage; but I can say most positively that they were not discontinued because the Privy Council was afraid to publish them any longer, for they were not discontinued during the time of the greatest prevalence of the disease; it was only after it began to decline that it was thought that they might be abandoned.

10051. You represent that it was not in consequence of any shirking of responsibility or fear on the part of the department that they ceased?—Certainly not. I do not see in what way the department's responsibilities could have been materially

Chairman—continued.

materially increased by refusing to take the returns any longer.

10052. With regard to a suggestion which was made by Mr. Read, although he praised very much the work that had been done by the travelling inspectors appointed under the recent order, yet he stated that he thought they ought to be veterinary inspectors instead of what he described, I think, as "general officers"; have you any remark to make upon that?—I do not think, judging from what I have seen in my journeys about the country, that the work which the travelling inspectors are called upon to do could possibly be better done than it is by any gentlemen, whatever their professional knowledge might be; and I think that if the scheme which I suggested be adopted, which would give us control over a large number of veterinary inspectors in the whole country, we should do far better by communicating with those veterinary inspectors than by sending travelling veterinarians from the Central Department.

10053. In fact, you would strengthen the number of inspectors rather than alter the character of the inspection?—Yes.

10054. It was stated also, I think, by Mr. Read, that whilst the Veterinary Department reported in 1875 that there was no foot-and-mouth disease in Belgium and Holland, we were actually directly importing animals in considerable numbers in those countries so affected; can you account for that at all?—I have no doubt that the information was obtained from our report. I have stated in my report this year that whilst we had no reports from pleuro-pneumonia from Germany for a certain period, animals with that disease were detected by our inspectors; and Professor Müller stated that that was likely to be the case, as they do not send us reports regularly, either of pleuro-pneumonia or of foot-and-mouth disease.

10055. Is there any other point in the evidence which has been given before the Committee which you wish to be examined upon?—I do not recollect any other point.

Mr. *W. E. Forster.*

10056. You stated, did you not, that you think that the ordering of all foreign animals to be slaughtered at the port of landing would be a check upon foot-and-mouth disease?—I believe it would, as nearly as possible, protect us from any chance of its re-introduction; but I should only suggest that system in connection with the stringent measures which I propose to adopt for stamping it out in this country.

10057. I am afraid I must ask you again to state the exact measures which you would propose to be combined with the slaughter of all the animals at the port of landing?—Supposing that the disease only existed in a certain number of districts, I should at once stop all movement of cattle in those districts except by license; I should also prevent the holding of fairs and markets except by license, which, of course, would only be given under special circumstances; and I should entirely prohibit the movement of any animals from a farm on which the disease existed.

10058. And unless there were those restrictions with regard to the home animals and to the

Mr. *W. E. Forster*—continued.

Irish animals, you would not think it at all advisable to order the slaughter of animals upon arrival, as far as foot-and-mouth disease is concerned?—No, certainly not.

10059. At the present moment, as we well know, all the animals that come in contact in a foreign ship with animals affected with foot-and-mouth disease are ordered to be slaughtered, whereas home animals under similar circumstances are not?—They are not.

10060. Would it not be a very considerable check upon foot-and-mouth disease, if the same plan were adopted, with regard to the slaughter of home animals, as is adopted with regard to foreign animals; I will take this as an illustration: would it not be a very great check upon the disease, if an Irish cargo were treated in the same way as a German cargo is, and if, any of the animals landing at Bristol being found to have foot-and-mouth disease, all the other animals were ordered to be slaughtered?—There is no doubt that that system would entirely stop the trade in store animals between England and Ireland. It would have the effect of preventing the introduction of the disease from Ireland, but it would only do it at the expense of the trade in stores.

10061. Supposing that it were applied only to fat stock, would it not have a strong effect?—No doubt it would.

10062. Taking the fat animals that arrive at the Islington Market, would it not have a great effect upon foot-and-mouth disease, if, upon a drove coming in with one or two amongst them affected, the rest were ordered to be slaughtered?—I should certainly insist upon that as part of the preventive measures.

10063. Would you not consider that that ought to be combined with any increase of strictness with regard to the import of foreign animals?—Undoubtedly, I should pay more attention to the Metropolitan Market than to any other part of the country.

10064. It was suggested by Mr. Rudkin, a witness of much experience, who appeared on behalf of the Corporation of London, that it would have a very good effect as regards the check of the disease to continue the cordon around London; do you concur in that opinion?—I quite believe that; I always held that view; but the inconvenience, of course, is very considerable, and if it were made a permanent institution we should be obliged to admit of certain relaxations.

10065. Will you explain to the Committee why that would be necessary?—At the present time the movement of animals from any one part of a circle outside the metropolis to the opposite side of the same circle is almost impossible; in some cases it is quite impossible, and in all cases it is exceedingly difficult; so that we should be obliged to make arrangements for movement through by railway, and I presume that we should also be obliged to allow an owner of milch cows to take them away under certain restrictions. There are favourite animals shut up in the metropolis now that the owners would be very sorry to have slaughtered.

10066. Do you find that there is much complaint in consequence of the cordon having lasted so long as it has?—We are already beginning to have applications made to us to remove

Professor *Brown*

6 July 1877.

Mr. *W. E. Forster*—continued.

the restrictions. Up to the present time it has been borne quite well, because it has been understood to be merely a temporary measure.

10067. I have been asking you hitherto with regard to foot-and-mouth disease; but as regards pleuro-pneumonia what other regulations would you combine with the order for the slaughter of all foreign animals?—I should deal with the districts in the same manner as I should with those places where foot-and-mouth disease exists; I should also shut up the premises and farms where the outbreak occurred; I should in all cases, of course, slaughter the diseased animals, and as far as possible I should arrange for the slaughter of all the fat stock which had been exposed to the infection. With animals which were not fit for the butcher I should prefer trying experimentally the value of inoculation; and for that purpose it would be necessary to compensate the owner for any animals that died in consequence of the operation, as if they were slaughtered, on account of pleuro-pneumonia.

10068. I suppose that you would not anticipate so much practical difficulty in carrying out those stringent pleuro-pneumonia restrictions as you would anticipate in carrying out the foot-and-mouth disease restrictions?—The chief difficulties would arise in the dairy districts, because I should be compelled to prevent the introduction of fresh stock probably for three or four months after the disease had apparently ceased.

10069. It has been stated in evidence, and, I think, by some gentleman appearing on behalf of the agricultural interest, that the restriction of movement and long isolation with regard to pleuro-pneumonia would not be of much practical convenience; what is your view as to that?—I believe it would totally ruin a large number of our dairymen. I know their system is to slaughter an animal and to get another one in the course of a day or two; and in that way they keep up their supply and keep up the disease.

10070. You were in the service of the Veterinary Department during the great outbreak of cattle plague in 1865, were you not?—I was.

10071. It was part of your business, was it not, to go throughout the country and see that the stricter rules that were in force when the plague had got a greater head were carried out?—It was.

10072. You found, I suppose, very great fear of the cattle plague throughout the country?—Generally; but in some districts there appeared to be no apprehension.

10073. Where you found that cattle plague really existed, and where there was all the danger from it, and the sense of danger from it in consequence of its prevalence, did you or did you not find any difficulty in carrying out the strict regulations?—In some places we found the greatest difficulty in carrying out the regulations; I have been told by owners of stock that they would rather have the cattle plague than have so much bother about it.

10074. I suppose it is from the remembrance of that opposition that you would anticipate great practical difficulty in carrying out equally strong regulations for such a disease as foot-and-mouth disease?—It is to a great extent on account of that experience.

10075. Mr. Read in his evidence stated that he would allow the continuance of the import of

Mr. *W. E. Forster*—continued.

store cattle from the Continent, especially from Holland, but under quarantine; have you had any experience with regard to quarantine?—The only experience that we have had has been on two occasions, one, I believe, at Thames Haven, and the other at Harwich; and that was on account of foot-and-mouth disease appearing in cargoes. The animals were in calf, cows in both cases. In the first instance, at Harwich, we found that it was necessary to detain them for something like six weeks before they could be set free; the owner never tried the experiment again, and he said that the cost and annoyance together were such that he would rather have them killed.

10076. That was a case in which there was quarantine on account of disease being discovered; but what would be the length of quarantine for all store animals that would be proposed to be combined with the order for the slaughter of foreign animals?—For foot-and-mouth disease ten days would be quite sufficient.

10077. How far do you think that such quarantine as that would affect the trade?—I do not think that, as a rule, people would take advantage of it, because they would find, as a matter of certainty, that a cargo would be landed with foot-and-mouth disease, and then the animals must be kept for a month or two probably or be slaughtered; and that would put a stop to the system.

10078. You think that such a quarantine would stop the trade?—I believe it would.

10079. I suppose to let in the store animals whilst you killed the fat animals, would take away the use of the restrictions with regard to fat animals?—Certainly; it would entirely negative the benefits of the system.

10080. With all your experience of the practical difficulties of carrying out any of the measures, and at the same time of the necessity of doing everything that you can reasonably do to prevent disease, would you, or would you not, so far as foot-and-mouth disease is concerned, advise any alteration of the present restrictions with regard to foreign animals?—Not unless it is seriously determined to stamp disease out of the country; unless it is admitted that the restrictions must be carried out at all risks, and in spite of any remonstrance, I certainly should not make any alteration in the present system.

10081. And you are still of opinion that it is very doubtful indeed whether those restrictions could be carried out?—That is my conviction, drawn from the experience which I have already had in the matter, although I am reminded that I have no right to interpret the feelings of the farmers.

10082. With regard to pleuro-pneumonia, you would give practically the same answer?—I should.

10083. Are you still of opinion, taking pleuro-pneumonia first, that no animal ever becomes affected with that disease without having been subjected to infection?—I think that all the evidence which we have points clearly to the conclusion that infection is the origin of the disease.

10084. And you make the same remark about foot-and-mouth disease?—Yes, certainly.

10085. Which

Mr. *Torr.*

10085. Which of those two diseases do you consider the more fatal to the herds of England?—Undoubtedly pleuro-pneumonia is much the more fatal.

10086. Which is the more prevalent?—Foot-and-mouth disease.

10087. Do you think that to deal with one of those diseases would be almost as difficult as to deal with both of them?—Quite.

10088. Then you would deal with the two together?—Certainly; because the same regulations would apply largely to both diseases.

10089. Do you think it would occupy an equally long time to stamp out the one as it would to stamp out the other?—No; I believe that we should get rid of foot-and-mouth disease sooner than we should get rid of pleuro-pneumonia, because the period of incubation is so short, and the infection consequently would not remain so long on the premises.

10090. You think it would be an easier matter to get rid of foot-and-mouth disease than it would be to get rid of pleuro-pneumonia?—Certainly.

10091. Have you formed any idea of the length of time that would be necessary to get rid of foot-and-mouth disease?—Very much would depend upon the way in which the system of restrictions was received by the persons concerned. If, as I expect they would, they threw all sorts of difficulties in the way, we should be years doing what might be done in a corresponding number of months if we were generally assisted.

10092. You think it is possible that, in the course of a certain number of months, foot-and-mouth disease might be got rid of, if the suggested restrictions were carefully and universally carried out?—I have no doubt that if we could do exactly what we wished, and nobody put any obstacle in the way, in 12 months we might be perfectly free.

10093. What time do you think it would take to stamp out pleuro-pneumonia under the same conditions?—Judging from the experience of Holland, it seems to me that it must take some years before we could pronounce ourselves free from that disease under any system.

Mr. *Elliot.*

10094. Do you agree with Mr. Clare Read, that no inspection at the port of embarkation could be relied upon?—I do not exactly understand the force of the observation. If Mr. Read meant that the foreign inspectors could not detect disease abroad, I do not agree with him at all, because I know that they do detect it; but as to the ultimate effect of inspection he is perfectly right, because they do not pretend to do more than stop the diseased animals, and they may just as well, as I have always said, send them over at once; in fact, we prefer that they should.

10095. It comes to this: that so long as foreign animals are imported we shall never be free from disease in this country?—We shall never be free from disease in this country so long as it exists abroad, that is to say, we shall never be free from the landing of diseased animals. Our ports will never be free from animals infected with the same diseases which they have at the ports abroad.

Mr. *Elliot*—continued.

10096. You said that the farmers would not submit to the severe restrictions which you suggest; have you had any complaints during the last outbreak from farmers pure and simple, not from salesman; have farmers not borne the restrictions with great patience?—I cannot say that they have. Some farmers have complained bitterly that they could not occupy their grazing land, and that they could not move their sheep from one meadow to another because they happened to be on one side of the metropolitan boundary.

10097. But I am talking of the local restrictions throughout the country, and of the Privy Council restrictions as well?—We have had representations from chambers of agriculture and societies certainly against the application of restrictive measures in some parts of their districts. I believe that the Lincolnshire Chamber of Agriculture strongly protested against the Council Order which stopped fairs and markets over the whole of Lincolnshire. That was in consequence of the outbreak that occurred near Great Grimsby.

10098. Did you say that 3½ per cent. only of the whole of the cattle of this country die of disease?—Our calculation was about 1½ per cent. I said I should be astonished if we lost as much as 3 per cent., or double that estimate.

10099. Can you give an estimate of the number of cattle that came into the country from abroad that are slaughtered by reason of the disease?—I have not the figures with me.

10100. If those cattle were not slaughtered we should have a very much larger percentage, should we not?—I think that the percentage would be something less than one per cent. of animals slaughtered for foot-and-mouth disease. The number of animals slaughtered for foot-and-mouth disease has been calculated, and I believe it is something less than one per cent. Animals that are slaughtered on account of the existence of disease of course are beyond those, because if 1,000 sheep come to Brown's Wharf and one sheep has foot-and-mouth disease, the 1,000 sheep are sent to Deptford and slaughtered.

10101. In talking of the restrictions that you would apply, supposing that the whole country were put under restrictions, would you stop all movement in the district or out of the district?—I should stop movement totally in the districts themselves until I ascertained what the state of things was.

10102. And then you would isolate the animals that were diseased?—Having found out all the centres I should surround them effectually, so that no animals could be moved from any of those farms where the disease exists.

Mr. *King Harman.*

10103. The complaint of the Lincolnshire Chamber of Agriculture, I suppose, referred to the size of the county and the fact that the outbreak having taken place in the extreme north the area was too large?—Yes, I believe they complained that the restrictions were more severe than the circumstances warranted.

10104. Do you say that they complained that they were more severe, or that they were more extensive than was necessary?—I believe that the actual terms which they used related to the

Professor *Brown.*

6 July 1877.

Mr. *King Harman*—continued.

closing of fairs and markets in all parts of the county when disease only existed in one part of it.

10105. With regard to the cattle from the Channel Islands do you think there would be any possibility of foreign cattle being smuggled into Southampton as Channel Islands cattle?—Not the slightest. The vessels only trade with the Channel Islands, and I know no foreign cattle which in any degree resemble the Channel Islands cattle.

10106. I thought the Brittany cattle resembled them?—They are quite distinct; the inspector would know them at once.

10107. You say that one difficulty with regard to the cordon around London is from owners wishing to remove favourite animals, but if those favourite animals were allowed to be removed now under proper restrictions, could not the cordon be easily removed?—Yes, but the difficulty under those conditions would be that everybody that wanted to move a cow would have a favourite cow to move.

10108. But those favourite cows are those which one may say have been caught in a trap in London when the cordon was put round the district; if those were allowed to escape now, and it should be perfectly clearly understood that for the future no animals would be allowed to go out owners would not put their favourite cattle in?—No, but it would be considered a great hardship by anyone in the country if he could not bring his Alderneys up when he came to town for the season; he would have to buy fresh stock, and leave his own animals for his servants.

10109. That is an individual case of hardship which would only occur in a few instances?—That is so.

10110. And in fact in cases where people could generally very well afford it?—No doubt.

Mr. *Murphy.*

10111. You stated, I think, that you had inspected the process of landing cattle at Bristol the other day?—I was there on Wednesday and Thursday this week.

10112. Do you know what ports in Ireland the cattle came from particularly?—They came from Cork and Waterford.

10113. You suggested that at the port of landing, say at Bristol, if proper regulations were put in force for the purpose of feeding and watering the animals before they came inland in this country, it would be a very great advantage both to the owner of the cattle and to the cattle themselves?—I have no doubt that it would.

10114. Do you think that it would be advisable in those places where the cattle should go to after being landed at Bristol, to set apart separate spaces for each port in Ireland where they came from, so as to be able to distinguish what ports they come from, whether from Cork, or from Waterford, or from Wexford, or from elsewhere, with a view, if any of them were diseased, of being able to have a special inquiry made at the port of embarkation with regard to them?—I think under that system it would be absolutely necessary that every cargo should be separated, in common justice to the owners of

Mr. *Murphy*—continued.

other cargoes, otherwise an outbreak of disease would infect the lot.

10115. Supposing that the cargoes came from Cork, or from Waterford, do you think that all the cargoes coming from those ports should be put into a particular division?—My own feeling is that all the cargoes should be kept separate for the sake of the owner; but what you suggest is already done; we always know from what part of the country the disease is brought, and returns are regularly brought to the Veterinary Department in Ireland, mentioning the places from which the diseased animals are brought.

10116. The object merely being that you may inquire what port they come from, and get a report from the veterinary surgeon, whose duty it is to examine at the place of embarkation?—That, as a matter of fact, is done now.

10117. Are you of opinion that if proper arrangements were made at the port of embarkation, yards being provided with plenty of water and food, and separate pens for the cattle, and a system of examining yards to facilitate the examination by the veterinary surgeon, and if those places of embarkation were close to the waterside, with proper disinfecting arrangements, that would tend to give a greater security of no cattle being sent from Ireland, except those that were really sound?—It would, to a considerable extent; but I should look to it as being advantageous rather for the comfort of the animals than for their freedom from contagious disease. I think the only plan that Ireland could adopt to keep her stock perfectly healthy is totally to prohibit importation, which would be a very small thing for Ireland to do, and then to apply the necessary regulations to get rid of pleuro-pneumonia and foot-and-mouth disease; and we might then be quite certain of having healthy stock, without having any restrictions at all.

10118. The question which I asked you was, of course, grounded upon the assumption that precisely the same internal regulations, with regard to the restriction of foot-and-mouth disease and pleuro-pneumonia, exist in Ireland as existed in England; I assume *à priori* that is so; but are you aware that no importation of foreign cattle is allowed into Ireland now under the Privy Council regulations?—Yes; but they get stock from England, and with that stock they get pleuro-pneumonia and foot-and-mouth disease, and then send it back again with interest. The real cause of contamination in Ireland is the introduction of English stock, and of English calves particularly.

10119. When you speak of foreign importation, are you aware that no foreign importation is allowed at the present moment?—At this moment, I believe, no importation is allowed at all, even from England, unless the Order has been revoked; there was an order passed totally prohibiting importation.

10120. Are you aware that the importation at any time of foreign stock into Ireland has been very small?—Very small. I have seen a few Spanish cattle landed at Dublin, but very rarely.

10121. In the year 1874, I believe, the last, and then only about 150 animals were imported?—The import is very small, and, therefore, Ireland would lose nothing by prohibiting from the Continent. The only small sacrifice would be chiefly

Mr. *Murphy*—continued.

chiefly in prohibiting calves from this country. Of course store stock, and pedigree stock, might be taken in under very obvious restrictions.

10122. You spoke of inoculation with regard to pleuro-pneumonia; have you ever heard whether that system was tried in the south of Ireland, about 10 years ago?—I believe it was.

10123. Did you ever hear of Professor Olden?—I know a veterinary surgeon of that name at Cork.

10124. Are you aware that, some 10 years ago, Professor Olden experimented upon pleuro-pneumonia, and that he suggested the system of inoculation, and that it has been very successful?—I do not remember his experiments, but there have been numerous experiments on the subject ever since Dr. Willems discovered what he considered to be the preventive, in 1852; but the evidence which we have gained from our experiments in this country is very conflicting; it is quite certain that inoculation is not an absolute preventive, because I have seen animals die after successful inoculation, and it remains to be ascertained, and could be easily ascertained, whether it gives such a reasonable amount of security as to make it worth while to treat a diseased herd under this system, as they are now doing in Holland.

10125. I am told that unless inoculation is practised at a certain incipient stage of the disease, it is very likely not to prove of the same advantage as if it had been performed at a more advanced stage of the disease; do you concur in that opinion?—In all my experiments upon diseased animals, even in the incipient stage of the disease, it has increased the mischief. The only chance of success, I believe, is where you deal with animals perfectly healthy which have been exposed to the disease, but which have shown no symptoms of it in themselves.

10126. Where it has been practised in that way before the animals have got it, as in the human system before the smallpox has been caught, has the result been analogous to that of vaccination in the human system, that is to say, as a preventive of smallpox?—No; I have not been able to arrive at that conclusion at all. In some cases the disease has ceased after inoculation, when the diseased animals have been slaughtered and the rest of the herd inoculated; but in more cases the same thing has happened when the diseased animals have been slaughtered and the others have not been inoculated; so that the evidence at the present time is exceedingly unsatisfactory, and without testing the operation over a large extent of country, I do not think that we shall arrive at any satisfactory conclusion. We know of hundreds of cases where inoculation has apparently succeeded.

10127. You say you would apply the same system, as to restricting the movement of cattle for foot-and-mouth disease, to Ireland as you would apply to England?—Certainly I should deal with Ireland just as I should deal with any other part of the kingdom.

10128. And you have stated that the accident of having a streak of sea between England and Ireland enables such an examination to be made at the port of debarkation as could not be well made in cattle moving from one point in England to another?—Quite so, and it was of that the Irish Government complained that we took advantage of the circumstance to stop the animals in transit; and they were right.

Mr. *Murphy*—continued.

10129. You include the cattle coming from Scotland; do you think that they should undergo the same examination if they come by sea?—Yes, and also by land.

10130. How could you manage it by land?—If I had command of the inspectors over the country I should have the trucks regularly inspected at all the stopping places; they commonly run into sidings and I should take care that there was somebody to look round, and the inspection of Scotch cattle could be made quite as satisfactorily as it is now of Irish cattle.

10131. You would recommend the same system to be applied, if it could be applied?—If it could be applied, certainly.

Mr. *French*.

10132. In your visit to Bristol during the last two days, you say that you saw a large number of cattle landed there, and although you did not inspect the animals they appeared to be healthy?—Yet, judging from the inspection that one can make of animals huddled together on a landing place.

10133. Have you had reports from the inspectors at Bristol lately, and if so, do they show that foot-and-mouth disease is prevalent in Ireland or otherwise?—It is not prevalent in Ireland, but a few cases are landed; for example, the diseased animals which have been landed from Irish ports during the first half of this year, that is to say the animals affected with foot-and-mouth disease are:—At Holyhead seven sheep and 18 swine; at Bristol 12 sheep and 185 swine; at Liverpool one sheep and six swine; at New Milford four swine; and at Silloth 20 swine, making a total of 20 sheep and 233 swine, which is a very small number considering the amount of importation.

Mr. *Arthur Peel*.

10134. Were there any diseased cattle landed?—No, no cattle at all; we have had no case of diseased Irish cattle for a length of time.

Mr. *French*.

10135. How do you account for the fact that the disease is chiefly amongst the swine, when you say that as a rule those boats bring over a very mixed cargo of cattle, sheep and swine?—But the disease would not be communicated to the other animals during the voyage in such a way as to be perceptible.

10136. You think that the boats are so well cleansed afterwards that it is not spread to the next cargo?—It is not spread if they are all cleansed as well as they are at Bristol.

10137. With regard to the dairy sheds in large towns, do you think it would be advantageous gradually to do away with them?—In reference to the prevention of contagious diseases it undoubtedly would, but I do not apprehend that it is possible, because the attempt to expel the slaughter-houses from London failed, although it was done by Act of Parliament, for just before it came into operation the pressure put upon the Legislature was such that another Act was passed

Professor *Brown.*

6 July 1877.

Mr. *French*—continued.

passed to revoke the provisions of the previous one.

10138. Did you hear the evidence which was given with regard to the Aylesbury Dairy Company?—I did.

10139. Do you not think that milk could be brought into London in a similar way by other dairy companies?—I have no doubt that it is as easy to bring milk a distance as it is to bring meat; but the amount of opposition to such a measure as doing away with the cowsheds in towns would be such that there would be very little probability of carrying it.

10140. You said, I think, that if you found amongst a herd of fat cattle coming from Ireland one suffering from foot-and-mouth disease you would have the whole herd slaughtered?—I do not think I said so; it was merely in answer to a question as to whether dealing with Ireland as a foreign country would have the effect of arresting the entrance of disease, and I said that as a matter of course it would. If the whole cargo was slaughtered as it is when it comes from abroad, we should cut off so many centres, but I did not contemplate doing that; I should not advise anything being done in reference to Ireland that I would not advise in reference to the rest of the kingdom. I should deal with the whole of the kingdom on exactly the same basis.

Mr. *Chamberlain.*

10141. That is to say, that even in the event of these very strict regulations being put in force, you would not propose to treat Ireland as a foreign country?—Certainly not.

10142. With regard to the death-rate of cattle, I think you said that 3 per cent. was your estimate?—No, the estimate which we arrived at very roughly was 1½ per cent., but I said I should be very much surprised to hear, on good authority, that the amount was double that, and I totally disbelieve that it amounts to 5 per cent.

10143. Supposing that 3 per cent. die from all causes, would not that give an average length of life of 33⅓ years to every head of cattle?—I am afraid I should be obliged to employ our statistical clerk to settle that question.

10144. Unless I am mistaken it appears on the face of it, that if only 3 per cent. die each year it will be 33⅓ years before they all die?—But then you leave out all the slaughtering.

10145. Is the average life of a healthy cow 33⅓ years?—Certainly not.

10146. Does not that show that your death-rate must be incorrect?—I confess that I do not follow the argument in the least, because on that principle, if you take 5 per cent., the average of a cow's life must be considerably more than it really is.

10147. Five per cent. would give an average life of 20 years, supposing that the animal was not previously killed for the purpose of the food supply?—It would not be 10 years. I should think that the average life of an ox in this country is not five years, or not more than that.

10148. Then if the average life of an ox is only five years, 20 per cent. of all the oxen must die every year?—I must be content to admit everything that you say upon that subject, because I am not in a position to explain it. I know, as a

Mr. *Chamberlain*—continued.

matter of fact, that it is not the case; but I believe that so far as figures are concerned, any one who is clever at working them can prove anything. I know certainly that 20 per cent. do not die, and that the average life is not 20 years.

10149. You do not place much trust in your own figures?—I do not place much trust in anybody's figures on this subject, I may say.

10150. Supposing that you were not allowed to carry out these very extreme regulations you propose, I think that the work which is now done by the local authority should be left to the central department?—Yes, I think that unless the central department has some district power of interfering and directing, it will be impossible to prevent the movement of infected animals in the way that they are moved at present, and I think that the case which I referred to of the outbreak of pleuro-pneumonia in the town of Bedford proves that it is so.

10151. Have you had any cause hitherto to complain either of negligence or of ignorance on the part of the local authorities in carrying out the regulations?—I have been in the habit of saying that the subject is not one which comes within their scope; that they have not the technical knowledge necessary, and that they have not the requisite machinery.

10152. That would not apply to the local authorities of large towns, would it?—I think so; I think that the local authorities of large towns are less inclined to make the regulations than the local authorities of counties are.

10153. I know most about my own town; have you had any cause to complain of the way in which the Act has been carried out in Birmingham?—I believe that Birmingham is particularly strict in its regulations, and the inspectors are remarkably active and capable men; but certainly the same remarks cannot be made of every town in this country.

10154. In the last case of cattle plague did you have any difficulty with the local authorities?—Yes, we found it impossible in some cases to get the regulations carried out with sufficient energy and promptness, and certain recommendations which we thought it necessary to make were simply disregarded.

10155. What regulations?—For example in London, the same butchers were employed to slaughter animals that were herded with those affected with cattle plague and those affected with pleuro-pneumonia; the same men who took the carcases of the so-called healthy animals from a shed where cattle plague existed would to-morrow be employed in dealing with carcases of animals affected with pleuro-pneumonia; the same men would go into the two sheds.

10156. Without being disinfected?—We had no means of ascertaining whether they were disinfected.

10157. You do not know that they were not disinfected after killing the unhealthy animals?—No.

10158. Surely, it is rather a hasty conclusion, is it not?—I say that I do not know that they were not, but I am morally certain that they were not; I cannot say that I know, because I did not see them; but my information leads me to state, without hesitation, that they were not disinfected.

10159. Is it on such grounds as that that you would

Mr. *Chamberlain*—continued.

would take away this duty from the local authorities throughout the country?—Certainly. If I met with a single case where local authorities were employing men to go from sheds where cattle plague existed to sheds where it did not exist, I should not ask anything further. I should take away their power at once.

10160. Are there not instances of neglect at least as great on the part of the central authority?—I am not aware of any. The central authority has had so little to do beyond advising and reporting that I do not exactly see how any case of negligence could be charged against it; it has certainly been very liberal of its advice and suggestions.

10161. Taking the case of Irish cattle coming into Bristol, in which it appears that the central department send down inspectors with no power to interfere, and expressly prohibiting them from interfering, although the Act gives them power to interfere when they see diseased cattle, would you consider that a due exercise of its power by the central authority?—The Act only gives them power to act when the local authority declines to act.

10162. I understood the Chairman to say that they had the same power as the local authority?—Yes, there is a section in the Act which provides that every inspector of the Privy Council has over the whole of Great Britain the power of a local inspector in his district. But that was meant for remarkable cases of emergency; it does not mean that the Government should appoint inspectors everywhere to do the local inspectors' work, otherwise you adopt the principle of centralisation at once.

10163. And yet it seems absurd that your inspectors should be on the spot and able to prevent the mischief, and yet that they should be expressly prohibited from interfering?—It is simply impossible that one of our inspectors could seize half a dozen pigs, or three or four oxen, and take them to a convenient place, and there separate them for the necessary period until they had recovered. We have no power of acquiring property in those places, and we should meet with no assistance from the persons around, because they would not like to have infected animals brought near them, so that the inspector is practically powerless, and, therefore, he is told not to go through the form of professing to have powers which he does not actually possess; but the information which he gave to the local authority has enabled that local authority to take action when it has been so disposed.

10164. How long were you in putting your powers into full force in the country?—The Order was passed on April 12th, and it came into operation on April the 16th.

10165. When did the rinderpest break out?—It was detected in Limehouse on the 31st of January.

10166. Then the action of the Central Department was not very prompt in that case?—The action of the Central Department was not contemplated at all, because the whole action is left to the local authority, and it was only in accordance with the strong pressure put upon the Central Department that they agreed at last to step in and do the local authorities' work.

10167. Have you no positive cases of negligence to charge against the local authority?—I do not remember any special instances except one may say generally that they do not take advantage of the powers which are conferred upon them. They have power, for example, to prohibit and regulate the movement of animals that have been herded with those suffering from an infectious disease, but they do not do it.

Mr. *Chamberlain*—continued.

Professor *Brown*.

6 July 1877.

10168. You say that you do not take advantage of all the powers which are placed in your hands, I suppose for good and sufficient reason; do you dispute that they may have had good and sufficient reason too?—Yes, I do dispute it, because I think we take advantage of our powers so far that we give the local authorities more regulations than they have carried into effect.

10169. That may be because in the exercise of their discretion they do not think your regulations wise?—That is the very point. As a sanitary department we do not think the local authorities ought to have any opinion in the matter, but that it is simply their business to do the work that is set out for them and to attend to all the suggestions that are made, and they certainly do not do that. I do not attribute any blame to them on that account; I merely say that it is not within their province to deal with questions relating to contagious diseases.

10170. In the case of a local authority employing its own experienced officers, as in the case of Birmingham, I presume that it would have ample means of forming a correct opinion on the subject?—Yes; but I must repeat that Birmingham stands with a few other towns in an exceptional position. The local officers are generally policemen, and it is very rarely that veterinary surgeons are called in to assist the policemen.

10171. In cases in which the local authority do not carry out your regulations, have you any means of interfering?—Only by remonstrating and suggesting.

10172. You have no power?—I presume that we have power by an Order in Council, but that involves the principle of centralisation.

10173. But if they do not carry out your regulations, why do you not force them to do it, having this power in reserve?—That is what I propose to do.

10174. You propose to do so in the case of those who are not guilty; I say why do you not do it in the case of those who are guilty?—There are so many that are guilty that I do not think it would be worth while to leave out those who are not guilty, and so to establish an exception.

10175. You would punish all the big towns, such as Manchester, Liverpool, Birmingham and Bristol, because some of the smaller places do not come up to your idea?—I do not think that either Liverpool or Bristol are doing perfectly well.

10176. But you have said that you have no evidence of positive negligence on their part?—Yes, I have the evidence of years; I have the accumulated statements which have been made to me, and which have been repeated over and over again. I got yesterday the answer which I was prepared to receive from the local authority when I went to make the statement which I had to make; I asked if they were prepared to furnish a convenient place for the reception of these animals, and for the reception of those that were herded with them; and the answer which I got was what I have always got, viz.,

Professor *Brown.*

6 July 1877.

Mr. *Chamberlain*—continued.

viz., that they were not prepared to take such steps, and that they did not intend to find lairs for the reception of Irish animals for the encouragement of the Irish trade.

10177. They are not bound by law to do it, are they?—I will not pretend to interpret the clause strictly, but I believe they have power to seize an animal that is moved in contravention of the 57th Section, and to take it to some convenient place for the purpose of preventing the extension of the disease; and they have power to make regulations to prevent the further movement of all the animals which have been herded with diseased animals; and as it is necessary that these regulations should be made if they mean to stop the disease, it seems to me that the act of not making them is an act of negligence.

10178. What is the excuse in that case for their not doing this which you think necessary?—I do not think that they have made any excuse; they merely say that they do not intend to do it. I have been told that they have no means of doing it, that they have no premises, and that they do not intend to erect them.

10179. Have they funds which they can apply for such a purpose?—I do not know.

10180. You yourself think that it is doubtful whether they have the legal authority to do it?—The Act distinctly states that they may do it.

10181. That they may provide premises?—Yes, there is a section of the Act which gives them power to purchase land for any purpose connected with the carrying into effect of the provisions of the Act, and they have power to levy rates. I think they have full powers under the Act if they like to exercise them. I am not complaining that they do not exercise them, but I merely state the fact that they do not.

10182. Do you not think that everything that you desire could be obtained without taking the execution of the Act from the local authority, but merely giving the central department greater power with respect to the making of regulations?—If, in addition, the central department had power to call for the enforcing of the regulations, so that it should not be left to the discretion of the local authority as to whether the regulations should be enforced or not, it might not be necessary to actually supersede them; but it certainly would be necessary to have the power to direct that the regulations should be carried out.

10183. If you had power to see that the Act was carried out, that would be sufficient for you?—Presuming that that power went to the extent of enabling us to telegraph to the local authority, to state that disease had broken out in such a place, and to insist that the regulations directed by the Privy Council should be applied to that place without delay, some such power as that would meet the difficulty.

10184. Without superseding the local authority?—Yes, I should not call that superseding them; it would still leave them the power of control to a certain extent; but I should not leave them the power to decide whether certain regulations were to be carried out or not.

10185. Would you leave them the absolute power of appointing their own servants?—I see no objection to that, because we have by the Act power to dismiss if we do not approve of the appointment.

10186. Have you had correspondence with some of the local authorities with respect to the cleansing of cattle trucks?—Yes, but it is some-time back.

10187. Do you recollect that it was urged upon the department that the railway companies should be required to cleanse the cattle trucks at the station before they were allowed to be removed?—Yes.

10188. And the department, I think, were in favour of that?—We found from the representations made by a deputation from the principal companies, which came to the Lord President upon the subject, that it was impracticable; that the detention of the trucks at the station where the animals were unladen would involve so much obstruction that they represented that they would not be able to carry on the traffic of their lines, though it would be possible at certain stations.

10189. Has it been stated to you that it was the practice of all the companies to do this up to a certain period, until they discovered that they were not compelled to do it by the Act?—It was the practice at certain stations, but not at all.

10190. Would it not be very desirable that it should be done wherever practicable?—Yes, I think it would.

10191. You have not the power to require it at present, have you?—I am not quite clear about that. I believe we have very large powers to make regulations with regard to animals in transit, for cleansing and for disinfection, and I presume that we have power to say that a truck should not be moved from a station until it had been cleansed and disinfected.

10192. But you have always declined to make such regulations?—Simply because the railway companies assured us that it could not be done without totally interrupting the traffic of the line; and they went so far as to say that they would not be responsible for consequences, if we insisted upon detaining trucks in the middle of the line where an extensive traffic would be going on.

10193. I understand you to say that you think it desirable and practicable that that cleansing and disinfection of trucks should be done at the larger stations?—Yes, but an Order in Council could hardly deal with a few stations. If we left some stations out (and we must leave some hundreds out), it would naturally happen that the companies would go on exercising their own discretion, and doing it where it was most convenient to themselves, as they do now; but there would be always a large number of stations at which it could not be done.

10194. By far the larger proportion of the traffic is at some hundred of the largest stations, is it not?—It is.

10195. You could make the rule apply to all of those, could you not?—We could.

10196. Do you think that additional power should be given to the local authorities to control and license cowsheds in the same way as they now control and license slaughter-houses?—Undoubtedly.

10197. Do you think that power should be given to the local authority to enter premises where glanders and farcy are supposed to exist, as they can in the case of cattle plague?—There would be a difficulty about that, because glanders

is

Mr. *Chamberlain*—continued.

is not a disease which is so distinctive as cattle plague, and it would be met, I have no doubt, by a great deal of opposition. To give a man the right to go into any gentleman's stables to examine his horses is rather a strong measure, and it could only be done by Act of Parliament; but, so far as the sanitary question is concerned, there is no doubt that the inspectors should have that power.

Mr. *Pease*.

10198. I think I understood you to say, in answer to a question put by an honourable Member, that if Mr. Read's plan of quarantining milch cows was carried out, it would practically put an end to the trade?—I believe it would.

10199. Do you not think that it would be attended with very beneficial results to the existing dairies?—I should attain the result in a much more simple way by slaughtering all animals at the port of landing.

10200. That is to say, you would put an end to the importation of store beasts?—I should, because I see no way of dealing with them which is not so complicated as really to negative all the benefits gained by importing them.

10201. You think that the improved condition of the dairies would in any degree compensate for the want of supply of store beasts?—I have no doubt that we could get a sufficient supply of dairy cows from our own country, and we must be content with the cows which were fattened in the Netherlands and sent here for slaughter.

10202. Confining it to milch cows, do you not think that it would tend, in the first instance, to a very great increase in the price of milk, especially in such places as London and other large towns?—I should think not, considering the comparatively small number of Dutch cows that are introduced.

10203. You think that it would be more than compensated for by the increased health of the remaining cows?—Certainly; if it had an important effect in reducing pleuro-pneumonia, the good effects would be beyond all calculation.

10204. I think you stated that you would be prepared to give a considerable time for carrying out any change in the regulations, if it involved slaughtering all beasts at the port of debarkation?—Yes, I think that we should be bound to allow a considerable time.

10205. What length of time do you think would be required?—I think that it would vary in different parts of the kingdom. I should say that as a maximum we should allow 12 months, and I should take different periods during that time of three, six, and nine months.

10206. I presume you are acquainted with the position of the port of Newcastle?—Perfectly.

10207. There, I believe, they have no accommodation whatever for slaughtering?—At the present time they are, by way of completing the most perfect landing place that I know.

10208. Have they, at the present moment, slaughter-houses?—No, not to any extent, but there would be no difficulty in converting a large number of their present sheds into slaughter-houses. They have a site which is, without exception, superior to anything on the coast.

Mr. *Pease*—continued.

10209. It would involve a very large outlay, I presume, to slaughter the number of animals which they bring in, which is something like 1,000 a week?—I do not think that the expense would be a serious element, because the persons to whom the animals belong pay for the slaughter; and, in fact, it is a profitable business.

10210. Are you acquainted with the general character of the trade from Newcastle into the colliery districts, and up among the ironworks?—Yes.

10211. Do you not think that the slaughtering there would be attended with very great inconvenience to the supply of meat in those colliery districts?—Not if proper regulations were made for cooling the meat, and keeping it in good order. I believe that it might be sent quite as easily as live cattle are sent such an exceedingly short distance.

10212. You think that the trade would accommodate itself, if it had fair time, to the circumstances of the case?—I have no doubt that it would when it was once known to be a matter of absolute necessity.

10213. You do not think that the necessity of slaughtering at the port would add very materially to the cost of the meat to the inhabitants of that district?—I do not think it should, if the slaughtering were conducted in a proper manner.

10214. Does it not involve the small local butchers buying dead meat instead of slaughtering their own animals?—Yes, it does.

10215. You do not think that they would buy their beasts at the port and slaughter them there?—I think they would find it more convenient to buy carcases; in fact, they would be driven out of the market by the large butchers.

10216. They would deal through a middleman?—Generally.

10217. Does not that involve another profit?—Yes, to a certain extent; but I presume that the price would be regulated by the paying power of the consumer.

10218. Do you think that the improved health of the cattle in the country would at all bring down the price of meat proportionately?—I do not think it would bring down the price to any great extent.

10219. But would it bring it down to an extent equal to the amount by which it would be raised by the increased cost of slaughtering at the port?—Yes; I do not apprehend that the result of this system, when it is fairly established, would be an actual increase in cost. I should imagine that, on the whole, when we get a more healthy race of cattle, the price would be decreased to some extent, because the animals would be purchased more cheaply.

Colonel *Kingscote*.

10220. The honourable Member for Birmingham asked you if you knew any case of a local authority being negligent in carrying out the regulations; the late outbreak of rinderpest having taken place at Willesden, as it did on a Tuesday, and the Privy Council Office not having heard of it until the Saturday, although the local inspector was called in on the Wednesday, you would

Professor *Owen.*

6 July 1877.

Colonel *Kingscote*—continued.

would call that a case of negligence, would you not?—Certainly, it was a case of negligence on the part of the officer, although the local authorities of Middlesex are among the most active, and the instant that the clerk of the peace for the county heard of the disease, he came to the Privy Council Office with the inspector who brought the news; for some reason or other, he did not feel satisfied that it was cattle-plague, in fact, he distinctly told the owner that it was not; but under the system which I propose, such a thing as that cannot possibly occur, because on the mere report or suspicion of the disease, the premises would be taken possession of.

10221. Do you consider that if the Privy Council had not taken the matter into their own hands, the local authority of the metropolis would have been able to stamp out the cattle plague in the same time, since the Orders of the Privy Council came into force?—I do not think that they have shown the same power of dealing with it which was exhibited by the Central Department, because they had already had to deal with it for nearly three months before we commenced our operations, and it was still spreading outside the metropolis; and other outbreaks occurred subsequently in the metropolis.

10222. As regards steamboats bringing cattle, do you not think that a longer time should elapse between their discharging cargoes of live cattle and taking in fresh cargoes; as for instance, in the case of steamboats coming from Ireland to Bristol with cattle, and their taking cattle back from Bristol to Ireland?—I do not think that that is done as a rule; it must be in exceptional cases, for they generally take back ordinary cargoes as soon as they are disinfected.

10223. But I presume that you would consider that a bad practice, as being likely to engender infection on board the ship?—It is not a practice that one would recommend, although if the disinfection were perfectly conducted, it might be safe.

10224. I suppose you have no doubt that foot-and-mouth disease was intoduced into America?—The evidence is not absolutely satisfactory. I have not seen any statements which convince me, beyond all doubt, that the disease ever was introduced there.

10225. I thought it spread into several States?—I think it existed only to a very slight extent, and it was stamped out very quickly indeed.

10226. Has it died out now?—So far as we know there is no case of foot-and-mouth disease in the States.

10227. I suppose you would consider it a great gain to this country if foot-and-mouth disease could be stamped out?—Undoubtedly it would be an enormous gain; the gain chiefly arising from the immense value of our improved breeds, which suffer more than others from attacks of that disease.

10228. It would also be a gain to the consumer in the price of meat, would it not?—Yes. I believe that if those diseases ceased to exist, animals would be purchased at a lower rate, and therefore you could produce the meat at a lower cost.

10229. With regard to a question which was put to you by the honourable Member for Liverpool, who asked you whether, supposing that you were in a position to dictate the stoppage of all

Colonel *Kingscote*—continued.

importation of live stock, and also of all movement of cattle, and to stop fairs and markets in this country where foot-and-mouth disease broke out, establishing a zone or circle round every such place; you were of opinion that it would not take above 12 months to get rid of the disease; do you think such a result might be attained by the adoption of those measures?—I think that we might get rid of foot-and-mouth disease in that time.

Mr. *Arthur Peel.*

10230. When you advocate the slaughter at the ports, I understand you to recommend that hypothetically, on the assumption that we wish to extinguish foot-and-mouth disease and pleuro-pneumonia?—Entirely.

10231. I ask you that question because there is an expression of yours on page 21 of this Report of 1876, in which you suggest that "the introduction of diseased and infected animals from abroad can be prevented by slaughter of imported cattle at the port of landing, but (you go on to say) the danger would be reduced to a minimum if all exporting countries would consent to apply the system of compulsory slaughter of diseased cattle and the isolation of infected herds;" and then you say that you might place in the schedule all exporting countries which declined to adopt that rule. According to that view, you would freely admit cattle from all countries which consented to adopt those stringent regulations, and you would schedule those countries which refused to do it. Would you do that now with your present views?—The slaughter of animals at the port of landing is the extremest measure of precaution that I should adopt as an alternative to total prohibition, which I think could not be tolerated; but I should be prepared, as I stated to the Committee in my previous examination, to allow the landing of stock from countries where no disease exists, and where the regulations are such as to make it probable that no disease would be introduced from those countries, on the understanding that the cattle should be dealt with when they arrived here as I should be dealing with the cattle of the country. For example, those cattle which were landed for slaughter I should immediately transmit to a slaugthering depôt; those which were landed purely for stock purposes, I should keep under observation in the premises of the persons to whom they were consigned.

10232. If by this plan you would reduce the danger to a minimum, we should scarcely need any more precautions, should we?—By reducing the danger to a minimum, you only diminish the risk; you do not obtain what would be, in common parlance, absolute security. If you want to prevent the introduction of these diseases absolutely, I see no escape from the conclusion that you must slaughter at the port of landing.

10233. Assuming that you would slaughter at the port of landing, I suppose that at every port where cattle came in now, you would establish these slaughtering depôts?—I should limit the number to those ports which had the space necessary for the erection of the proper premises.

10234. Of course, the fact that the trade comes to those ports now, shows that convenience has dictated lines of trade; and you would not interfere,

Mr. *Arthur Peel*—continued.

fere, I suppose, with what commercial enterprise has already pointed at as the proper lines of commerce?—Except in those ports where they declined to make the proper arrangements for slaughter, or where from the local conditions they could not make them. There are some ports which would have to be struck out still.

10235. Is there great variety in the quality of the cattle which come now to this country?—Yes, great variety.

10236. Do you anticipate that that variety would continue if there was slaughter at the ports?—I think that it is probable, when they found out that the best animals made the best carcases and fetched the best prices, they would take care to send a better class than they now send.

10237. You think, therefore, that a higher class of animals would come at a higher price?—I think so. I think they would manufacture cattle for the English market as they manufacture wine for the English market.

10238. And, in addition to the natural high price of the animal, there would be an additional price caused by the requirement of slaughter at the port?—Decidedly.

10239. So that the consumer would have to pay considerably more for his beasts than he would under the other system?—For some beasts, certainly.

10240. For all beasts, if all were slaughtered at the port?—He would probably not get the second and third rate quality of meat to the same extent that he gets it now.

10241. Do you not think that that would be a serious loss to the poor consumer?—I apprehend that there is always a certain quantity of parts of the beast which are sold at a low price, and the poor consumer would get the coarser portions of a better bullock instead of the better joints of a worse bullock; and probably he would be a gainer by the exchange.

10242. With regard to the importation into Ireland, I understand you to say that there is very little importation of foreign beasts into Ireland?—At the present time there is none, and there has never been any importation of any consequence.

10243. Is there anything in the fact of the existence of foot-and-mouth disease and pleuro-pneumonia in Ireland, as compared with the small importation of foreign cattle, which would lead you to suppose that those diseases are generated in Ireland?—No. Considering that we are always sending animals over there, and that outbreaks in Ireland have been traced frequently to the introduction of English stock, I have no doubt that we are the cause of the infection in Ireland.

10244. Is there a large export of cattle from this country to Ireland?—Not a large one, but a sufficiently constant one to keep up the supply of disease.

Mr. *Jacob Bright.*

10245. I judge from the answer you gave just now, that the inferior cattle would probably be kept out by slaughter at the port of landing?—I think it is very probable that they would be.

10246. It would seem as though there must be some risk in that case, that the people who can only afford to pay for the inferior meat would not get quite so much as they got formerly?—I think there would be always enough inferior meat sent to give a reasonable share to those who could not afford to pay for anything better.

Mr. *Jacob Bright*—continued.

10247. Still, to those who consume the inferior meat it would be rather a serious matter, would it not, if they felt that we were adopting some new plan which kept back a quantity of inferior meat?—Yes, but taking the supply from abroad, which we should slaughter here, and the supply which we should get from America, I imagine that the prices would not be likely to rise above those which are at present obtained.

10248. When you support the view that cattle should be slaughtered at the port of entry, as I understand you, it is always on condition that we have restrictions with regard to our home cattle?—Certainly, because I fail to see that we should get any benefit worth the cost unless we do.

10249. Unless we have, in fact, restrictions and restrictions that may be continued as long as necessary?—Certainly.

10250. You admit that to slaughter at the port of entry, if the people in the interior of the country are to get the meat in good condition, greater preparations must be taken than those which now exist?—Undoubtedly they must.

10251. Will you describe to the Committee what those preparations ought to be at Newcastle or Hull, or anywhere, where cattle would have to be killed for large populations in the interior?—At a place like Newcastle or Deptford they would be required to construct the necessary slaughter-house accommodation for the number of animals which they expect to receive. Of course that would be a mere matter of calculation. They would also require to have for the reception of the carcases chambers which were artificially cooled, so that the heat of the meat would be gradually reduced.

10252. How would you have those chambers cooled?—The methods which are now in use in the American depôts, I have no doubt, might be applied here; but even the simple expedient of keeping a current of air passing over a wet surface would have a great effect, and that is never done in this country.

10253. In point of fact you would require the meat to be cooled and prepared probably as the American meat is now prepared?—Not to the same extent; perhaps 24 hours would be necessary to cool it, so that it would then last for some days, even in the hottest weather.

10254. By whom is this preparation to be made?—I presume by the persons who now receive the animals which are landed alive, the corporation in most cases.

10255. Would not it be done by a private enterprise?—Generally I should think it would be done by the corporation of the town where the animals are landed, and sometimes by the dock authorities. There is no doubt that the transit of cattle is a very profitable affair, and so long as they can be brought here alive no doubt there will be plenty of people ready to carry them.

10256. Do you propose to exclude store cattle altogether?—Except stores which are required for particular purposes; and they could be landed, as they are now, at Southampton, or if necessary, at any other port where similar arrangements might be made.

10257. And we should still run the risk of diseases

Professor *Brown.*

6 July 1877.

Mr. *Jacob Bright*—continued.

diseases being introduced by store cattle?—I have never known an instance of the introduction of disease along with store cattle which were selected for that particular purpose and quarantined at Southampton.

10258. You would treat the Channel Islands and America as unscheduled countries?—I would.

10259. You would not do the same with Spain, would you?—No, because we get foot-and-mouth disease from Spain. On several occasions there has been foot-and-mouth disease amongst Spanish cattle, and we have been informed of outbreaks of pleuro-pneumonia on the west coast of Spain.

10260. There is no other European country that is as free from disease as the Channel Islands, is there?—No country that we know of at all.

10261. You gave some evidence with reference to the effect in some of the counties of England of the recent restrictions, and you named the county of Bedford; I understood you to say that there were some counties where disease had greatly diminished if it had not entirely disappeared?—Yes.

10262. Are there not parts of England where there were no such restrictions, but where the disease has much disappeared?—I am not prepared to answer that question, because I have not had time, in consequence of going to Bristol, to compare these returns with the arrangements made by the local authorities; but I should think it is quite possible that it is the case, because foot-and-mouth disease frequently disappears from a county or from a district when, from any cause, the traffic through that district has been temporarily stopped, and not uncommonly from the circumstance that all the diseased and infected animals are rapidly sent out of it to markets and distributed to other districts.

10263. Still I am speaking of counties where restrictions have not existed?—I am not aware of any cases where disease has died out naturally, unless in the way that I have described.

Chairman.

10264. You were speaking just now of the dairies in London; have you any knowledge of the number of cows kept in the London dairies?—I have a report of the number of dairies, but it is only in a few cases that we have been able to get a statement of the number of cows. I know that as compared with 1865 and 1866 the number of dairies has considerably diminished, and therefore I conclude that the number of cows has also diminished.

10265. Is that in consequence of the dairy trade being more established in the country?—I have no doubt that the supply of country milk has lessened the number of town dairies.

10266. But you have no actual knowledge of the number of cows?—No, we have not been able to obtain it.

10267. You stated, in answer to the right honourable gentleman the Member for Bradford, that from your experience of Holland you thought that we should take years to stamp out pleuro-pneumonia?—Yes.

10268. The delay in stamping out pleuro-pneumonia in Holland arises, does it not, from the fact that they have not until very recently

Chairman—continued.

attempted it?—Yes; so far back as 1870 they stopped the importation of cattle.

10269. But they took no steps beyond the inoculation of the animals for getting rid of the disease among their own herds, even after they had prohibited the re-introduction of disease from abroad?—In 1872 slaughter was made compulsory.

10270. At the discretion, I understand, of the mayor of the locality?—No, I think the diseased animal was slaughtered compulsorily, and the rest of the herd also, unless they were inoculated.

10271. The impression left on my mind, from Mr. May's evidence, was that it was only within the last year that they had practically attempted by these more stringent regulations to stamp out the home diseases, and that as the result of those regulations they had, as he stated, stamped them out as nearly as possible in the district to which they had been applied, that is Friesland?—I think that remark was made in reference to the action which they have taken in Friesland, of slaughtering the whole herd; but the other regulation to which I have referred, I have taken during the various years from the official papers which we have in the office from the consul in Holland.

10272. As to your recommendation with regard to these restrictions, do I correctly understand you to say that these restrictions should apply universally all over the country, and that if an outbreak of foot-and-mouth disease or pleuro-pneumonia occurred in Devonshire, the restrictions would apply equally to Northumberland; or would you merely apply them to such districts as were reported to be subject to the disease?—In the present state of affairs, where disease is scattered about, I should merely deal with the district in which disease exists; but when foot-and-mouth disease prevails, as it did in 1872, I should certainly be compelled to deal with the whole country.

10273. What you mean then really is, that in recommending these regulations to be applied to the home districts, if the slaughter at the port is to take place it would not necessarily mean that these regulations should be a hard-and-fast line applying equally to districts where there was no pleuro-pneumonia and no foot-and-mouth disease and to districts where the disease existed?—Certainly not.

10274. Therefore the annoyance to the home trade would only exist in those districts in which your returns showed you that these diseases were rife?—Only in those districts; but there are now some 34 counties in which pleuro-pneumonia exists.

10275. That number of 34, I suppose, is reduced by the number that you have now fresh evidence about, in which foot-and-mouth disease has disappeared?—Yes.

10276. With regard to the question of inspection and the powers under the Act, general powers are given, under the 57th section, to the inspector of the local authority, to inform against any person who exposes in a market or fair, or other public place, or on any railway or highway, any animal affected with an infectious or contagious disease, and to seize the animal for the purpose of slaughter or removal; that is so, is it not?—Yes.

10277. Therefore

Chairman—continued.

10277. Therefore, of course, anybody has the power under that section, of prosecuting?—Yes.

10278. Then, under the 75th section, the regulations are given to the local authorities, and under the 76th section, "A person for the time being appointed by the Privy Council an inspector, for the purposes of this Act, shall have for and throughout Great Britain all such powers, authorities, and privileges as an inspector of a local authority has within, or in relation to, his district, and a direction of the Privy Council shall, in the case of an inspector appointed by them, be deemed equivalent to a direction of a local authority in the case of an inspector appointed by them." That clause gives absolute power to the Privy Council inspectors to deal as the local inspectors can with cattle infected travelling upon a highway?—Yes; but it was felt that that section was so distinctly directed to certain emergencies, where special interference on the part of the Central Department would be necessary, that the inspectors have always been instructed not to interfere with the action of the

Chairman—continued.

local authority, unless they receive particular directions from the office.

10279. You have practically limited the powers which might have been exercised under the Act, because you had not the full means of carrying them out?—Certainly, it was the case that we had no means of carrying out the powers, and, therefore, it would have been absurd to tell the inspectors to exercise them.

10280. And if these powers are useful, and ought to be carried out, it points to an amendment of the Act?—Yes; and it points also to the principle of centralisation, that is to say, giving the Central Department not only the powers, but the means to enforce those powers.

Mr. *King Harman.*

10281. You said that 34 counties were affected with pleuro-pneumonia; how many counties are affected with foot-and-mouth disease?—There were, in May last, 24 counties in England, including the metropolis, subject to foot-and-mouth disease; none in Wales, and none in Scotland; we have no return from Ireland.

Thursday, 19th July 1877.

MEMBERS PRESENT:

Mr. Anderson.
Mr. Chamberlain.
Mr. Chaplin.
Mr. James Corry.
Mr. Dease.
Mr. Wilbraham Egerton.
Mr. Elliot.
Mr. John Holms.
Colonel Kingscote.
Sir Rainald Knightley.
Mr. Murphy.
Mr. Pease.
Mr. Arthur Peel.
Sir Henry Selwin Ibbetson.
Mr. Torr.

SIR HENRY SELWIN IBBETSON, IN THE CHAIR.

Professor GEORGE THOMAS BROWN, re-called and further Examined.

Professor *Brown.*

19 July 1877.

Chairman.

10282. IN your last evidence before this Committee, you said, in answer to a question that I put to you, that you thought you might state to the Committee that the cattle plague which broke out in the beginning of this year had been finally stamped out, and that from a date which I think you fixed at the 17th of May there had been no further outbreak in the metropolis, and that, looking at the time in which those diseases are supposed to develope themselves that gave you sufficient guarantee, in your opinion, for the correctness of that statement; since you gave that evidence, I believe, another outbreak has taken place in the metropolis?—The statement which I made then I based on the fact, as we then believed it to be, that no case of cattle plague had occurred since the 17th of May, and it was generally considered that an interval of nearly two months was sufficient to justify the belief that the disease had ceased to exist. There was a clear apprehension that an outbreak might occur in one of the premises where disease had previously existed and had not been detected; and in consequence of that apprehension, the Metropolitan Cattle Plague Order, which prohibits the removal of cattle, sheep, and goats out of the metropolitan boundary, was continued in operation; so that if an outbreak should occur, there might be no risk of animals which had been herded with diseased ones being sent into the country. Another outbreak of cattle plague, in point of fact, has occurred, and the disease was detected on the 14th July.

10283. Where did the outbreak occur?—The outbreak occurred in Norfolk-street, Bethnal-green.

10284. Had there been any previous outbreak in that district?—The last previous outbreak occurred on the 17th May, in White's-row; and an outbreak occurred, at some little distance, in Suffolk-street, on the 17th of March.

10285. Were both those outbreaks in the Bethnal-green district, on the 17th May and on the 24th March?—The one on the 24th March was in the Whitechapel district, but the distance is something under half-a-mile in either case; and by the dots which I have put on the map

Chairman—continued.

it will be evident to you that the two last outbreaks are almost equi-distant from the point where the carcases of the animals are destroyed, at Barber's the horse-slaughterer's.

10286. The circle with the black cross in it which is between the two red centres, is the place where the carcases are sent for the purpose of destruction?—It is (*the Witness pointed out to the Committee on a Map the sites of the recent outbreaks*).

10287. These other red spots, I presume, are the sites of the other outbreaks that have occurred during the last four months?—They are.

10288. And in all of them the disease had disappeared before the 17th May?—Certainly, in all of them.

10289. With regard to that spot which is equidistant from the site of the present outbreak, and from the site of the outbreak of the 17th of May, I understood you to say that the bodies of the animals that had been slaughtered in the previous outbreak were buried there?—They were taken there to be boiled down; after being cut up into quarters, they are placed in a copper and submitted to the action of high pressure steam. I may say that this is the only possible method of dealing with the carcases in places like Bethnal Green and indeed in most parts of London, because we have no means of taking possession of lands, as they have in Germany, for the purpose of burial. The plan is undoubtedly objectionable, but it is the only one which can be adopted. I say that it is objectionable for one reason which occurs to me at this moment; Mr. Courtney, the travelling inspector, who has taken charge of the destruction of carcases, on one occasion at least, saw cats go from the vicinity of the outbreak of the 17th May into the knacker's yard; he saw them jump through the iron railings, and he presumed, reasonably enough, that they had gone there for the purpose of feeding on the carcases; and those same cats would of course after their meal go back to the premises to which they belonged, and habitually they would go into the cow-sheds, and they commonly lie very close to the animals which are kept there. On another occasion, when the chief inspector went to a slaughter-house

Chairman—continued.

house in the west of London to make a post-mortem examination of some parts which had been left for him, he found that the larger portion of them had been eaten by some animals during the night; and it is quite probable that those animals were cats that had got out. I mention this as a possible source of an outbreak, which would generally be looked upon as mysterious if there were no connecting link of this sort.

10290. With regard to the evidence which you are at present giving, you only refer to that to point to the danger of the system which is at present adopted of boiling down the carcases, but you do not wish to lead the Committee to suppose that the disease can have been disseminated in that way in the present instance?—Certainly not in this instance.

10291. Has any inquiry been made officially as to the present outbreak?—We have ascertained that the premises on which the last outbreak occurred were inspected on the 12th May, and at that time there were in them 11 animals, reported to be perfectly healthy.

10292. Was that ascertained by an inspection made by a person who went from your office, or was it simply hearsay?—It was merely information given by the wife of the owner. The inspectors had sometime previously to the 12th May been instructed not to insist upon entering premises, because we found that the owners of cattle were very strongly opposed indeed to visits of inspectors at all; several complaints on the subject were made to the Lords of the Council, and in one or two instances it was suggested that if an outbreak of cattle plague did occur after the inspector's visit, the owner would hold the Government responsible for the full amount of damage which might have been incurred. We had a large staff of men, and although we have taken every precaution, and anyone who met with cattle plague was distinctly instructed to confine himself to those premises, and not to visit other premises again until he had been perfectly disinfected, and had changed his clothes, still there was that objection; and under the circumstances we felt bound to instruct the men not to insist upon visiting, but to content themselves with a house to house inquiry.

10293. Then, practically, the inspection which has been exercised over those dairy sheds since the 17th of May has apparently been simply information derived from the people themselves in charge of the cattle, without the least investigation being made as to whether that statement was true or not?—Certainly, in the majority of cases it was so.

10294. Therefore there was absolutely no guarantee that disease was not in existence during the whole time in the shed, although the statement was made that the animals were perfectly free from it?—There was no stronger guarantee than the statement of the owner of the premises.

10295. That of course did not apply to the premises which had been infected; there you exercised an effective inspection, because your inspectors themselves ascertained the fact that no fresh outbreak had occurred there?—Certainly, in those cases; because, as it was presumed, that cattle plague had ceased, there was no apprehension that the inspectors visiting the animals had previously been in contact with diseased animals,

Chairman—continued.

so that the owners did not object to have their sheds visited after the fresh stock had been introduced.

10296. At the same time, I suppose the same objection might be raised in that case; the stock would be considered fresh stock; the inspector would come to the owner without the owner's knowing that he had not been in contact with diseased animals; and therefore if it is sound in principle that he should visit a place that has been infected it is sound in principle that he should visit all the others?—It is so in reality, but the same objection is not felt. I believe that in very few instances was there any attempt made to prevent the inspectors from seeing the animals, but even then they were distinctly told that if an objection was raised they were not to force an entrance.

10297. I understand that at present there is legal power of entry given to the Privy Council?—There is not, unless the inspector has reason to suspect disease; and he is called upon to give his reasons in writing if he is asked to do so.

10298. Before going to the present outbreak, I should like to ask whether, in your opinion, you having charge of the Privy Council Department dealing with these complaints think that at all a satisfactory inspection?—It certainly is not, in my opinion. So little satisfactory do I think it, that I advised the removal of all the extra inspectors as soon as there was reason to believe that the disease had ceased.

10299. In your opinion, does not an inspection which is valueless in its results, but upon which the public may rely for security against disease, give a false security to the public?—It does; and for that reason I do not intend to propose the appointment of any additional inspectors now, but to obtain the sort of information which those inspectors obtained for us by the aid of the police, who, in that particular, I believe, will act more efficiently than professional men.

10300. With regard to the type of this particular outbreak, have you ascertained thoroughly to your satisfaction that this is an outbreak of real cattle plague?—There is, I believe, no question at all about the matter. Our first information was obtained through the police. We have reason to believe that the owner did not intend to inform the Government of the fact that the disease existed amongst his animals, and the evidence which we have up to the present time been enabled to gain, leads us to suspect that the animals would all have been slaughtered on the night when the cattle plague was first detected. The owner certainly did not give notice, and he will, I apprehend, if it can legally be done, be prosecuted for not having given notice. At the same time, if it is clearly shown that he did not give information, it will be submitted to the Lords of the Council that no compensation whatever shall be given; and I may go further, and state to the Committee that that course will be recommended if unfortunately any further outbreak should take place; if the disease should be discovered before the owner gives notice, he will, if possible, be prosecuted, and compensation will be entirely withheld.

10301. You have stated that the information was given to you by the police on this occasion; are you aware how the police became acquainted with the outbreak?—It appears that on Friday, the 13th July, at about 6 o'clock in the evening,

Professor *Brown.*

19 July 877.

Chairman—continued.

some man who gave either a false name, or a false address, or both, called at the Bethnal Green police station, and stated that the milk-sellers in the neighbourhood had declined to sell any milk from the premises referred to in Norfolk-street, in consequence of the report that the cows there were very ill; and it was further stated that the owner intended to have some of the animals killed that night. A policeman was immediately sent to inform the local inspector, Mr. Shaw, who at once attended; and on arriving at the shed he found such evidence of cattle plague, that he immediately telegraphed to me, using these words: "Please come as soon as possible; I have some cows at 15, Norfolk-street, Bethnal Green, that are very suspicious of cattle plague." The chief inspector, Mr. Cope, went at once to see the animals, and found that the evidences of cattle plague were quite distinct. Further, it was noticed that in some of the cases, that peculiar type of symptoms which has not been recognised, excepting in occasional instances, during the recent outbreak, was remarkably well developed. It was observed by the local inspector, that we had got back to the old type of cattle plague. The chief inspector telegraphed to me at Liverpool, where I then was, to the same effect; but in order that there might be no question at all about the matter, I directed that Professor Simonds, Mr. Priestman, and the inspector of cattle at the Metropolitan Market should be asked to see the animals; and after making a careful inspection, including a post-morten examination of several of them, their unanimous conclusion was, that it was cattle plague of the most pronounced type.

10302. Of course, every precaution was taken with regard to dininfecting the people who were admitted under those circumstances?—Certainly; they, as scientific men, adopted the most complete method; in fact, Mr. Priestman assured me yesterday that he did not come away from his house again with a single article of clothing on which he had on at the time when he made the inspection, and that after undressing, he took the precaution to have a bath before putting on fresh clothes; so that I do not apprehend that there is the slightest danger of the disease being disseminated by those gentlemen who were engaged in this work.

10303. At the time that the first inspector viewed the animals, were any of them then dead, or were they slaughtered afterwards?—All the animals, 10 in number, were alive at the time of his inspection. One died the same night that they were seen by the chief inspector of the Veterinary Department; that animal was the one which was undoubtedly first attacked, and the one which probably introduced the disease.

10304. You have stated that 10 animals were affected; did I not correctly understand you to say that at the time of the previous inspection (the unsatisfactory inspection, as I call it), when the wife spoke as to the health of the animals, 11 was the number in the sheds?—There were 11 animals in the sheds on the 12th May. On the 12th June pleuro-pneumonia was detected on those premises, but at that time there were only eight animals; so that between the 12th May and the 12th June three animals had been disposed of.

10305. Pleuro-pneumonia having in the meantime developed itself in the shed?—That is so.

Chairman—continued.

Only one of those eight animals was attacked, and it was slaughtered in the usual way; the other seven appear to have remained healthy. Then, on the 22nd June, the cow which died on the day of the declaration of cattle plague was brought in by a man named Plummer, who is a drover, and also a jobber, and who has premises not very far from the scene of the outbreak. Then, on the 3rd July, two other animals were brought in by Mr. Payne, and my first impression was that the disease was most probably connected with the introduction of those two animals, but Mr. Payne (who is here) has been seen upon the subject; and he states that the animals came from his own premises at Romford, and that he has a large number there which are now perfectly healthy.

10306. Have you been able to trace this previous introduction of another animal on the 22nd June?—We have; and we have also ascertained that that animal was known to be ill on the 10th July. It was certainly in the very last stage of the disease when it was seen by the chief inspector, and it died in a few hours afterwards.

10307. Therefore that animal which had been affected by this disease since the 22nd June had been standing with the other animals in the shed, as you imagine?—It had; and that would account for the extension of the disease to the whole of the animals in the shed.

10308. That time would be sufficient to develope the disease in the whole of the other animals, supposing that it was brought in by that one?—It would.

10309. You have traced the two last introductions of animals coming from Mr. Payne, of Romford, to this herd; can you state where the animal came from which Mr. Plummer, the jobber, brought in on the 22nd June?—We have not been able to trace that animal yet, because when one of the inspectors visited Mr. Plummer's premises yesterday he was not at home, and his wife stated that they had only one cow, and she refused to allow the chief inspector (who made this visit) to see it, as her husband was not at home; but she assured him that it was perfectly well. This will, of course, form a subject of further inquiry; but, up to the present, I have not been able to obtain any further information upon that point.

10310. Has the man Plummer himself a dairy-shed?—He has a shed in which he keeps animals that he has purchased, until he finds an opportunity of selling them to dairymen; and he is generally, I believe, employed as a drover by one of the cattle salesmen at the market.

10311. Has Plummer's shed been the subject of any inquiry during the last few months in the recent outbreak?—No; no inquiry has been made with reference to Plummer; his name has not in any way transpired until this event.

10312. Will you describe to the Committee the system which is at present adopted with reference to sending cattle into these dairy sheds; are they purchased from the salesman in the country direct, or are they sent in on approval?—The system which is adopted appears to be in some way mysterious. I have been informed repeatedly, certainly during the last 10 years, that dairymen have cows sent to their sheds by dealers, when they do not even know that they are coming; indeed, as a matter of fact, the dairymen themselves have told me repeatedly that

Chairman—continued.

that they may have two or three cows, or even a larger number, sent in without any warning that they are coming; and I have also been informed that they do not pay for them at the time that they are sent, but that they pay some sort of instalment of their value, or something in the way of hire, and that when the payments or instalments amount to the value of one or more cows, those cows are put to their credit, and for the rest they still go on paying. I may, however, tell the Committee that these statements are absolutely denied by the dealers who have most to do with the London dairies. Of course, individually, I cannot possibly be in a position to say which is the truth; but I am quite unable to understand why dairymen should make these statements unless there is some sort of foundation for them.

10313. Of course if there was any foundation for those statements, such a system would be most objectionable, from the fact that the animals would be constantly liable to be shifted from one dairy to another?—That is so; and I am perfectly certain that the dealers have some sort of control over the animals, because it happened quite recently that the inspector of the Metropolitan Board of Works was sent for in a great hurry to examine an animal which a drover was waiting to take away, and the owner assured him that he had not the slightest idea that anybody was coming for it. The gentleman under the Metropolitan Board of Works, who has charge of all the regulations relating to cattle plague, made that statement to me yesterday, and he complained of the great inconvenience which was caused in consequence of the liability which the inspector was under of being summoned at any moment to license the removal of a cow, the owner not being at the time aware that any such removal was contemplated. As a matter of fact, there is no question at all that that really did happpen. The actual system under which such things are possible I can only refer to from what I have heard.

10314. But if such a thing occurred, that clearly points to the fact that the owner, or supposed owner, had not the property in that cow? Certainly.

10315. All this points distinctly, then, to a confirmation of the evidence which we have already had, that the dairyman in London practically has the greatest possible facilities for evading any restrictions that are placed upon the movement of animals, and for not only receiving but spreading the disease broadcast through the town?—There is no doubt whatever that that is the case under the existing system; and unfortunately it seems that no amount of compensation is sufficient to tempt a large number of men to give notice of the existence of disease, in consequence of the great interruption to their business which is the necessary result. If a man has disease, which he believes to be cattle plague, or even knows to be cattle plague, he can easily get the animals out to a slaughter-house, which may be close at hand; he may clear out his sheds, and have them swept and washed and roughly disinfected; and there is nothing to prevent him from getting a fresh stock of animals in the following week. But if he gives notice of the disease, he knows perfectly well that his business will be interrupted for some weeks, and possibly for some months.

Chairman—continued.

10316. Therefore, in consequence of the fresh difficulties that have arisen in this case, the proper inspection and proper restriction upon the movement of their animals, to which the representative of the dairymen who gave evidence before this Committee stated that the dairy men were willing to submit, becomes absolutely necessary?—Undoubtedly it does; but I may say that the willingness of the dairymen to submit to any restrictions is an assumption which is contradicted by the whole history of the outbreaks of cattle plague in the metropolis from the year 1865.

10317. But we as a Committee have had before us the evidence of the representative chosen by those dairymen, who, acknowledging here the difficulties that there were in protecting the town against the spread of the disease, owing to this constant circulation of the cattle through the dairies, said that he, speaking for his association, was willing that proper inspection, and proper restriction as to movement, should be enforced?—I have no doubt that a certain number of the higher class of dairymen would be willing to submit to proper restrictions, and it is certainly exceedingly desirable that all the dairies in the metropolis should be under proper supervision. A large number of the places where cows are now kept are totally unfit for that, or indeed for any other purpose; and it is exceedingly desirable that something should be done for the purpose of bringing the whole of them under proper restrictions in regard to their general sanitary arrangements, even irrespectively of an outbreak of disease.

10318. And in the interests of the public the dangers that they are liable to from those men who may object to proper regulations are so great, that this Committee may, in your opinion, fairly infer that one of the principal amendments of the law that is now required is a proper inspection of places of this kind?—Undoubtedly.

10319. You have given us, in your previous evidence, the history of the former outbreak in the metropolis this year, and I think you gave us an account of the action that was taken on that discovery?—I did.

10320. Will you state what are the regulations now in force?—Immediately on the detection of the disease in Bethnal Green I received a telegram, informing me of the fact, even before it had been absolutely determined that the affection was cattle plague; and I, in answer, submitted that an Order should be at once passed absolutely to prohibit the movement of cows from any dairies within certain limits round that district; the Order which was passed prohibited the movement of cattle in the whole of the metropolis, and it was found that so much difficulty would be caused in giving licenses to and from the Metropolitan Market, and so much interference with the entrance of the cattle from the country, where we have no reason to believe that disease exists, that I submitted to the Lords of the Council the desirability of revoking that Order, and substituting another, which establishes what we have termed an "infected area," which I have placed upon this map, surrounded by a red line (*producing a map*).

10321. Then the restriction on the movement of cattle at the present time is limited to that infected area?—The Order provides that "for the purposes of this Order that part of the metropolis which is situate within the following boundaries

Professor *Brown.*

19 July 1877.

Chairman—continued.

boundaries shall be deemed to be the infected area." Those boundaries are marked on the map. Then the prohibitions are, "No cow or heifer shall be removed alive out of the infected area. No animal (that is to say, no cattle of any kind, or sheep, or pigs) shall be moved alive out of a cow-house or shed within the affected area. The movement of cows and heifers within the infected area is hereby prohibited, except as follows; and then follows the exceptions. This was done in order to allow the few fat cows which may be sent from the country to the Metropolitan Market, to be sent to Whitechapel, which we have included in the infected area, where there is a large number of slaughter-houses. There is no objection to letting them in, but we prevent their exit; and further, we restrict the action of this part of the Order to cows and heifers, because we have no desire to interfere with the passage of oxen which are sent for slaughter in any direction through this district; there is no object in preventing that.

10322. Do you mean that the transit of fat animals through the infected area is allowed?—There is nothing in the Order to prohibit it, because the animals would only be sent from the Metropolitan Market to Whitechapel for the purpose of slaughter.

10323. But I understood you to say, that besides that there was a permission of the transit through this area of oxen that were being driven not to the slaughter-houses but to other places?—There is nothing to prevent it.

10324. That is surely a possible mode of spreading the infection?—Hardly so, because those oxen would not be likely to come in contact with any diseased animals in the infected area, for the reason that the removal of them out of the sheds is absolutely prohibited. Neither a diseased nor a healthy cow or heifer which is now in a shed in the area can be taken out.

10325. And this does not in the least interfere with the cordon which is still in existence round the metropolis, across which cordon no animal can be driven?—It does not in any way interfere with it. We still protect the country by shutting up the whole of the metropolis, and we have further protected the counties on the south side of the Thames, by totally prohibiting the movement of cattle from any part of the north of the metropolis into any part of the south of the metropolis. Having revoked the Order which gave local authorities power to protect their own counties, we thought it only fair that as the counties north of Middlesex are protected by the metropolitan boundary, we should protect the counties which are partly in the metropolis south of the Thames by totally prohibiting movement across the bridges.

10326. Therefore, whilst you have made the boundary line of the metropolitan area the protection of the north, the River Thames is the protection for the southern counties?—That is so. These two Orders I hand in. (*The same was handed in.*)

10327. Have you at all altered the course of action which you propose to adopt in case of any further outbreaks?—The establishment of the infected area occurred to me as an advantageous substitute for the system which has hitherto been adopted of giving local authorities power to make regulations for their own protection, which regulations may seriously interfere with the traffic of cattle without any corresponding advantage; and I should propose in the possible event of any further outbreaks, to deal with any part of the country as we have dealt with the Bethnal Green district; that is to say, to make a certain boundary an "infected area," and to avoid the use of the term "infected place," excepting as applicable to the premises where disease exists.

10328. That is, I think, very much carrying out the idea that was sketched out to this Committee of dealing with the home trade for the purpose of stamping out the disease?—It is, to a considerable extent; I may add, that the advantage which arises from calling a place an "infected area" is, that we avoid all the difficulties which attach themselves to infected places. In an infected area, declared by Order in Council, it seems that we have absolute power to make almost any regulations we please with regard to the animals in that area.

10329. When was it first brought to your notice that the power existed of creating infected areas in opposition to the system which has been in use up to the present time?—The idea occured to me when we were engaged in drawing the Order yesterday afternoon. I had seen the advantages of having power to declare large areas infected, but practically great difficulty arose in consequence of the restrictions imposed by the Act; no person can take out a joint of meat of more than a certain weight, and fodder from perfectly healthy places cannot be moved without a license, and a variety of difficulties of this kind occur; and the term "infected area," suggested itself to me as a substitute; and at the same time, with the use of that term, the 76th Section seems to give us power to make any regulations that may be required.

10330. Would that power extend beyond the metropolitan area, to localities in the country?—I apprehend that it would extend to any part of the country where the Privy Council has power to legislate for cattle plague. At present that power is limited to the Metropolitan Police district.

10331. But that only applies to one disease, the cattle plague?—I believe it would apply to any contagious or infectious disease.

10332. It would therefore apply to outbreaks of pleuro-pneumonia or foot-and-mouth disease?—Speaking under possible correction from legal authorities, I should say that it would.

10333. Therefore, under the Act as it is at present, the Privy Council has power to deal in the way that was suggested by the agricultural witnesses with outbreaks of these contagious diseases in any part of the country?—I do not think I should be correct in saying that the Privy Council have this power in all parts of the country. I believe at present we can only deal with the Metropolitan Police district; we can deal with any diseases in that district, I apprehend.

10334. But that is because you have assumed the full control which one section of the Act gives you, the local authority having failed?—That is so.

10335. Does not that same section give you power to take the control on the failure of the local authority in rural districts also?—It gives us power to declare infected places in regard to cattle

Chairman—continued.

cattle plague, but that is a power which we cannot conveniently exercise.

10336 You have now, as I understand you, assuming that you have power over the metropolitan area, altered your system of dealing with it; and instead of dealing with it as infected places, you have dealt with it under this new Order in Council as an infected area?—That is so.

10337. Could you not in the same way deal with any part of the country where you thought the local authority had failed to carry out the proper restrictions?—I do not think we have any such power, except where we have assumed the function of a local authority, in the Metrolitan Police district, and then in regard merely to cattle plague.

10338. Does not Section 75 of the Act give the Privy Council full power to do this anywhere in Great Britain?—I am not quite certain that would give us that power; if it does, it seems to me to give us all the power which we require.

10339. That Section enacts that the Privy Council may from time to time make Orders for certain purposes, "and generally any Orders whatever which they think it expedient to make for the better execution of this Act, or for the purpose of in any manner preventing the introduction or spreading of contagious or infectious disease among animals in Great Britain, and may in such Order direct or authorise the slaughtering of animals that are affected with any contagious or infectious disease, or that have been in contact with animals so affected; and may in such Order direct or authorise the local authority to pay compensation for any animal so slaughtered; and may in any such Order impose penalties for offences against the same not exceeding the sum of 20 *l.* for any such offence, and so that in every such Order provision be made that a penalty less than the maximum may be ordered to be paid; and this section shall extend to horses and all ruminating animals not within the definition of animals in this Act." That section seems to give you power first of all to regulate and prohibit the building of markets and to regulate the disposal of dead animals, and the further power to make any orders in any area that you choose?—It does so apparently; but we are advised that that power can only come into operation when there are no specific provisions in the Act giving the local authorities special powers to deal with certain diseases.

10340. And that power you have exercised over the metropolitan area, because the local authority have failed?—We have, in regard only to cattle plague.

10341. What seems to be wanted is, that that power of the Privy Council, as sketched out in that clause, should extend to all these diseases, and that it should be applicable all over the country?—That is so; and for that reason it has constantly occurred to me that if the Act had stopped with the 75th section, we should have all the powers that we require; I think that a short Act, embodying what is stated in that section, would include nearly all that would be necessary.

10342. Going back to the question of this last outbreak, you have not been able, I think I understood you to say, to trace where the animal came from; have you made any inquiries as to whether the animal was an important animal?—There was no foreign animal in the shed at the time of the chief inspector's visit except two Dutch cows which had been in there a long time.

Chairman—continued.

10343. Was that at the time when his first visit was made, on the declaration of the disease?—On July the 14th, when the existence of cattle plague was first reported to the Veterinary Department.

10344. At that time there was no animal in the shed of foreign origin?—Only the two Dutch cows.

10345. And therefore if the disease came in the way that you suggest, it must have come from an English animal which had been infected previously in the other outbreak?—It is possible, of course, that during the interval between the 17th May and the 14th July other outbreaks may have occurred, and dairymen may have got rid of their stock in the way that I have suggested.

10346. In the way that you have suggested that this man probably would have done, from the fact that he did not give notice of the outbreak?—Yes. We have already met with one instance in that same district, where a shed has been entirely emptied in the interval. In this case the man had an outbreak of pleuro-pneumonia, and he therefore suggests that it was on this account that he got rid of his stock. I may, however, state that this is quite contrary to the course of proceeding generally. There is no instance that I have ever met with where a dairyman has got rid of the whole of his stock in consequence of an outbreak of pleuro-pneumonia?

10347. You are of opinion that that would point to the possibility of there having been another centre of cattle plague in that shed?—I think it is quite possible.

10348. So that we are no means safe that the evidence that you gave us the other day is correct, that cattle plague is even now stamped out by the slaughter of those animals?—No, it would be premature to suggest that we are safe, although I must confess that I do not experience any great alarm on account of this recent outbreak, for the reason that similar things happened during the progress of the disease in the former outbreak in the metropolis, commencing in 1865.

10349. Do you mean that after the disease was supposed to be stamped out in 1867, fresh outbreaks took place after a considerable lapse of time?—During the time of the prevalence of the disease in the country the metropolis was twice apparently free. The affection was detected in June 1865, and it prevailed up to December 1866, at which time it ceased; at least, no cases were detected for some considerable period, and during that period, from June 1865 to December 1866, we lost something like 8,000 cows, out of a total of nearly 16,000, which I estimated as the dairy population at that time. Nothing more was heard of the disease in the metropolis until January 1867, when another outbreak occurred on the same premises at Islington, where the disease was first detected; and although the plague existed at the time in Holland and Belgium, we were not able to trace it to any direct contact with animals from those countries, and its actual origin was really never ascertained. The disease ceased again for a time after its appearance in these premises in January 1867, and we heard nothing more of it until April 1867, three

Professor *Brown.*

19 July 1877.

Chairman—continued.

months later, when it was detected in Limehouse; but in this instance, also, we found that several sheds in various parts of the metropolis had been emptied, and we had reason to suspect that the removal of the animals was in consequence of the extension of cattle plague to those places. From April 1867 we had occasional outbreaks up to the end of August, and a noticeable instance which came under my own observation occurred in Pond-street, Hampstead, on 23rd July, on the premises belonging to a cattle jobber. The animals were slaughtered, and no further outbreaks were reported or detected until I again, by accident, found several animals affected with cattle plague, nearly five weeks later, on the 25th August, in Bermondsey; and this case impressed itself on my mind most strongly, because I remember that in walking over the premises I found that next to the shed where the cows were kept there was a roughly-appointed slaughter-house, into which the owner could easily drive a diseased cow, send for a butcher's man in the same street, and have the animal dressed and taken away as beef, a thing which would of course excite no particular observation. In this instance the disease ceased, and no further cases occurred, or at least no further cases were detected, and by degrees the various restrictions which had been imposed were removed, but the cordon was kept on the metropolis for nearly two years longer.

10350. Up to nearly the end of 1869?—Up to, I believe, 1872, until the opening of the Deptford Foreign Cattle Market.

10351. All that evidence points, then, to the fact, that during that outbreak of the disease many intervals of comparative freedom occurred, and that then it broke out again?—It does.

10352. That was under a system very similar to that which at present exists of sheds over which you have no control, where these diseased animals may be readily got rid of without the knowledge of the authorities?—That is the case; but we hoped, with good reason on this occasion, that we had eradicated the affection, because it had at no time extended to any great distance amongst the dairy cows in the metropolis; it had been chiefly confined th the eastern district; and the fact of no more cases having been detected during this considerable interval, and the further circumstance that the disease had never spread extensively in consequence of the restrictions which had been adopted, afforded fair ground for the belief that it had been eradicated; and that impression appears to have been somewhat widely diffused, because we had considerable difficulty in keeping up the restrictions during the time that they really existed. A large deputation of dairymen, introduced by several Members of Parliament, came to the Lord President in the last week of June, about the 22nd June, I believe, to request that as there no longer existed any reason for interference with the movement of dairy-cows, the dairymen might be allowed to stock their sheds. The restrictions which prevented the introduction of fresh animals into sheds were removed on the 22nd June, and on the 23rd the cow which we have reason to believe introduced the cattle plague into this shed in Bethnal Green was taken there.

10353. You said that it was on the 22nd of June, in your previous evidence, did you not?—I believe it was on the 23rd. If it was moved on the 22nd it was moved illegally. That we shall inquire into. The man states that he brought it into the shed on the 23rd; this was most likely the case, because as the Order was then published, which revoked the restriction, he would hardly care to run the risk of getting summoned for the sake of getting the animal in a day earlier. I have the note on my paper that it was on the 22nd; but on looking this morning to the Order, and finding that it was an illegal removal, I made further inquiry of the inspector who visited the shed, and he then told me that the man himself said that it was on the 23rd.

Chairman—continued.

10354. That proves that the restrictions were taken off at all events too soon?—It certainly does.

Mr. *Chaplin.*

10355. I understand you to say that you have been unable at present to trace the cause of this outbreak to your satisfaction?—We have.

10356. Are your inquiries still being prosecuted?—They are still going on.

10357. Do you anticipate that you will be able to trace it?—Judging from the results of the inquiries during this outbreak, and also during the whole time of the previous existence of the disease in 1865 to 1867, I am afraid that we shall not be able to trace it. It was in very few instances indeed that we could connect the disease with any distinct source of infection.

10358. In cases where you have been able to trace it, how long have you been doing so as a general rule?—In those cases where we have been able to trace the disease, we have generally ascertained it at once, and in all those instances we have traced it to the introduction of diseased cattle, either foreign or English.

10359. In this case you say there were 11 animals in the infected dairy?—There were 11 animals originally in May, when the inquiry was made by one of the Privy Council inspectors.

10360. But at the time when you first received information of this outbreak, how many animals were there?—There were 10. The 11 had been reduced to 8 before the pleuro-pneumonia broke out. One animal was killed in consequence of pleuro-pneumonia, leaving seven; one fresh animal was introduced on 22nd June by Plummer, and two others on 3rd July, which were brought from Mr. Payne's establishment at Romford, making the number 10.

10361. I understood that on the evening of the 13th, when the news was received at the police office that there were infected cows, you sent your head inspector, and then there were 10?—Then there were 10.

10362. Do you know how long each of those 10 had been there?—Seven had been there some very considerable time; some months.

10363. Then I presume that the disease could not have arisen from any one of those eight?—I apprehend not, because it would be more reasonable to conclude that the fresh animals had introduced the disease than that it had originated in those which had remained there for some time.

10364. Then, probably, it arose from one of those three?—That it arose from one of those three is certainly probable.

10365. Which died first?—The one that was introduced on the 23rd June.

10366. And that came from Plummer?—That came from Plummer.

10367. But you have not been able to trace it beyond?—

Mr. *Chaplin*—continued.

beyond?—We have not been able to trace it beyond yet, in consequence of not being able to find the man; but he will probably be seen to-day by the inspector, as he is engaged as a drover in the Metropolitan Market.

10368. Then you do not despair of being able to trace it?—I do not absolutely despair, but I think that we shall probably be told that it only came from this man's premises, and that his animals are in perfect health.

10369. Where did those two come from on the 3rd July?—They came from Romford, from Mr. Payne's premises there; and he states that the large number he now has there are all healthy. He is here to be examined.

10370. You said, I think, that you thought cats conveyed the infection; is that from their eating the offal or the meat?—I stated what one of the travelling inspectors had seen, namely, that cats had gone into the yard where the carcases are kept whilst they are being cut up to be boiled down; and I suggested that that at least was a possible source of the communication of the disease, because those cats would naturally go back to the cow sheds.

10371. What sort of place is it where they keep these carcases?—It is a large yard which is closed by means of gates.

10372. I suppose that it would not be difficult to adopt such measures as would render it impossible for cats and dogs to get in?—Dogs might be kept out, but I doubt whether it would be possible to keep out the cats; I think that we should require an air-tight chamber to keep out cats.

Mr. *Pease*.

10373. I think you stated that out of the eight cattle that there were on 12th June one had pleuro-pneumonia?—Yes, one was attacked with pleuro-pneumonia.

10374. Was information duly given of that attack?—The report was sent in the usual way by the inspector of the local authority.

10375. Therefore you then had access to the dairy?—In reference to pleuro-pneumonia, we should not interfere, because that disease is entirely in the hands of the local authority even in the metropolitan district.

10376. Was it reported to you?—It was by the local inspector.

10377. And you believe that proper steps were taken for the destruction of that beast?—We have no reason to doubt it.

10378. You said, I think, that on the 10th July, from information which you have received since then, one of the cows introduced by Mr. Payne was ill?—No, the cow that was brought in by Mr. Plummer; but I may tell the Committee that Mr. Payne visited this shed some little time back before we heard of the outbreak, and he will be able to give some information about it.

10379. You have hinted your suspicions that in many of these cases where cattle plague has broken out the dairymen have put the cows out of the way and emptied the dairies?—We have evidence of the strongest possible character that that has been done over and over again.

10380. Does not that deprive the man of the compensations which he would otherwise get?—It does; but he gets, probably, nearly as much and sometimes rather more from the butcher,

Mr. *Pease*—continued.

and he avoids all the annoyance attending the publicity.

10381. You think that what he gets from the butcher is equal to two thirds of the value if the beast is in pretty good condition?—I think that in many cases he gets quite as much, and I know that he can get cows in again without paying for them at the time; that is a fact about which I am quite clear.

10382. With regard to the inspectors being liable to carry disease from one dairy to another, is it not a fact that the inspectors may come in contact with a beast in the primary stage of disease and not be able to detect it, and still carry away infection?—As far as the evidence extends, an animal which is not discoverably infected is not in such a condition as that it would transmit the disease to another by mediate contagion.

10383. Are you of opinion that if inspection was authorised by law it could be carried on without jeopardy to the sound dairies?—I have no doubt that with proper precautions it could.

10384. Do you not think that a great deal of disease at the present moment is carried from house to house by the doctors, such as scarlet fever especially?—I have not the slightest doubt of it.

10385. For want of proper precaution?—Apparently in some cases from the want of any precaution at all.

10386. Would you keep a separate staff for inspecting the healthy and the diseased animals?—Not exactly a separate staff, because that would be quite impossible, the fact being that a man who is engaged in inspecting healthy stock must occasionally come into contact with disease; but the plan which we adopted was to confine the individual who discovered the disease to the premises on which it existed until he had completed his work there; he was then required to disinfect himself thoroughly and change his clothes completely, and have them properly disinfected, and then go on with his ordinary means of inquiry. A system might easily be arranged of practically disinfecting a man after he entered every shed.

10387. And you think that the safety afforded of inspection would be so great as to counterbalance the dangers connected with it?—I am quite sure that it would if proper precautions were taken.

10388. Do you see any difficulty in taking the proper precautions?—Undoubtedly there is considerable difficulty, and for that reason I propose to do what we have now done in all cases where we have detected cattle plague, or where we have had reason to suspect it, viz., totally to prevent movement from a certain area round the infected place.

10389. That would still be looking to the question of an universal inspection. It has been proposed here that these London dairies should be under constant inspection; what is your opinion as to that?—I think it would be advantageous, because, in ordinary times, when no cattle plague exsits, I do not apprehend the slightest danger, with reference to pleuro-pneumonia, from the visits of inspectors.

10390. Your idea, as I gather, is that cattle plague has continued so exist amongst these dairies in London during the last few months, although it has not been known to exist?—I think that the evidence which we have obtained up to the present time leads to that conclusion.

10391. Do

Professor *Brown*.

19 July 1877.

Professor *Brown.*

19 July 1877.

Colonel *Kingscote.*

10391. Do you think that it would restrict the dairy trade too much if every cow which was moved to or from a dairy was not allowed to be moved except under license?—It would give rise to a large amount of difficulty, and practically the system of moving under license is so complicated that it may be very readily evaded. The system was adopted in the former outbreak in the metropolis, and, notwithstanding the machinery which was employed it was evaded very frequently indeed.

10392. Are those daries registered in any way?—The greater number of them are licensed by the vestries; but we have discovered in our house-to-house visitations several dairies that have no license.

10393. Was this a licensed one in which the disease has recently appeared?—It was a licensed one.

10394. Even at a licensed dairy the owner could resist the inspector coming into it, as I understand?—I believe that the sanitary inspector, who is an officer of the vestry, has power of entry, not in reference to disease, but with a view to see that the sanitary regulations are properly carried out; but I have no evidence that this system of visiting has the slightest beneficial effect; it does not lead, certainly, to any improvement in the arrangements of a very large number of the daries in London.

10395. Was it the sanitary inspector who called at the place yesterday when the wife said that everything was well?—That was the inspector of the Privy Council, not the sanitary inspector.

10396. You do not know whether or not the sanitary inspector called there afterwards?—No, we have no communication at all with the sanitary inspectors; but I know that the sanitary inspectors have frequently visited sheds in which diseased animals have stood without making any comment upon the fact of disease being there; but they are generally men who have no professional knowledge.

10397. Do you think that it would do any good if every owner of a dairy had to keep a register of his cows, where he buys them, and to whom he sells them?—I do not think that any particular advantage would arise from that, because there would be no means of identifying the cows under ordinary circumstances; and even with a system of licensing, the dairyman may (and I am speaking of what I know to have taken place over and over again) send for the local officers to license the removal of an animal to a slaughter-house; he may state at the time that he has no disease upon his premises; he may pick out a cow which he believes has something the the matter with it, or which he well knows to be affected with pleuro-pneumonia, put it in some back place, get one of a similar colour examined by the inspector, obtain a certificate to remove the healthy animal to the slaughter-house, and then use the certificate to remove the diseased one. In that way the inspectors may be absolutely instrumental in concealing an outbreak of pleuro-pneumonia.

10398. You can suggest no method of registering cattle?—I am afraid that unless there was some mode of branding adopted, which would be attended with considerable pain, there would be no means of insuring that a man had the same animals always in his sheds.

Colonel *Kingscote*—continued.

10399. As to cats, do you not think that it would be very desirable to keep them out of the slaughter-houses? — Undoubtedly, in districts where cattle plague exists, it is very desirable that they should be secured if possible, or destroyed; but although the Act provides for the restriction of the movement of the dogs, it says nothing at all about the more dangerous animals, the cats.

10400. Cats are probably a much more fruitful source of carrying contagion than dogs?—Undoubtedly.

10401. As to your proposition to create infected areas, whether the Act of Parliament does give you the power or not, you would, I understand, like the Privy Council to possess the power to make infected areas throughout the country with the object of stamping out either rinderpest, pleuro-pneumonia, or foot-and-mouth disease?—I should, because as far I can see at present the system would be of the most elastic character possible, inasmuch as by the defining of a certain area we could make any regulations which we thought necessary.

10402. It would free the rest of the country from vexatious restrictions?—It would.

10403. And you think that that would be a very effectual remedy?—I believe so; I believe that it is the nearest approach to the Prussian system which is likely to be tolerated in this country.

Mr. *Anderson.*

10404. Does it not occur to you that the evidence in this case points rather to a spontaneous outbreak than to contagion?—No, I am perfectly satisfied that whatever may have been the source of the disease it had no connection with a spontaneous origin.

10405. But you have no evidence of any source from which it could have arisen?—We have the whole evidence of the history of these contagious diseases as far back as we have any records.

10406. That means that you are already so satisfied of the impossibility of spontaneous generation of the disease that you cannot be convinced of it, whatever happens?—Yes, I should be convinced if in any part of the country an outbreak occurred which was totally unconnected with the introduction of foreign stock.

10407. You have been unable to trace any connection with the introduction of foreign stock in this last case, have you not?—No, I think the connection is most direct. We had foreign animals affected with cattle plague brought into this country in the beginning of the year, and the disease has prevailed with a certain period of intermission up to this last outbreak.

10408. In this case there has been a breach in the continuity to an extent of time which you in your former evidence considered sufficient to render us safe?—Presuming that no outbreak had occurred meanwhile.

10409. And you have no evidence of any outbreak having occurred meanwhile?—We have no positive evidence, but the presumptive evidence is very strong, because we are quite certain that the disease would not have originated spontaneously.

10410. It comes back to this, that you are quite certain that it could not have originated spontaneously?—Yes, certainly, for the reason that all the evidence which we have in reference to cattle plague clearly points to the fact that it

Mr. *Anderson*—continued.

it never arises in a country unless it is introduced from some country where it has always existed.

10411. You think that no sort of bad drainage, or foul air, or over-crowding, or anything of that sort would produce it?—Clearly not; it never arises in any part of Germany unless diseased animals are brought across their eastern frontier. They have no instance in their history of an outbreak which they could not trace to the movement of cattle from an infected place.

10412. As you are satisfied that it must have connection with contagion, is it not very important that you should endeavour to trace it?—Undoubtedly it is.

10413. Are the inquiries which you are making at present of a character likely to bring out the whole of the facts?—I think they are as complete as we could possibly make them.

10414. Has anybody any power to examine witneses on oath?—I do not think that anyone has; but if they had I do not think it would make much difference.

10415. When you go to men who are pecuniarily interested in concealing the truth, and you do take many of these facts from them, you think it would not much matter whether they gave the facts on oath or not?—In the case of some of the men that we have to deal with, I do not think that an oath would have the slightest effect.

10416. Does not a mis-statement upon oath entail upon the person making it the risk of being punished for perjury?—Yes, but when the only repositories of the facts are the men themselves, they are pretty safe on that score.

10417. Then you think that your means of inquiry at present are as good as you can get?—I think so; but, as I have already stated to the Committee, they are obstructed by the fact that the men who could give us the information simply decline to do it, or make statements which will tend rather to lead us in the wrong direction; and when we get the answers we are, as a rule, perfectly aware that they are either utterly false or vaguely misleading.

10418. That rather points, does it not, to the necessity of some power to compel witnesses to attend and give evidence on oath?—To my mind it does not, for the reason which I have given. They answer questions, but the statements which they make we either know at the time from something which we have previously ascertained, or we find out afterwards to be entirely false, even in so simple a matter as to whether a man has had the animals in his shed a certain time, and as to the places from which they have been brought.

10419. Do you think that he would equally give that evidence falsely if he were doing it before an authority upon oath?—I have not the slightest doubt of it.

10420. You seem to have rather a low opinion of the *morale* of the people who keep cattle?—I do not apply the observations to all the people who keep cattle, but I speak of an inconsiderable number of persons who would have to be examined upon such a question as this.

Mr. *Chamberlain.*

10421. I do not understand that you consider that there has been any new importation of diseased cattle from abroad?—No, I think that that is as nearly as possible entirely out of the question, because the Orders prohibiting the importation of cattle from Germany and Belgium are still in force; the Order which compels the slaughter of cattle from Holland is also still in force, and in addition to those facts, we have no reason at all to believe that cattle plague exists now, either in Germany, Belgium, or Holland.

Chamberlain—continued.

10422. If I understand you correctly, although you do not know as an actual fact what is the cause of this last outbreak, your theory is, that the disease has lingered in the country unsuspected by your officers, until it has now once more appeared upon the surface?—I think that that is an obvious conclusion.

10423. Do you suggest any alteration in the method of compensation, so as to secure better information than you appear to have had?—I should be disposed to pay full compensation in cases of a disease like cattle plague, which is so excessively deadly and difficult to get rid of, in the hope I should induce a larger number of people to report; but I still believe that no amount of compensation would induce others to report, whose business would be seriously interfered with, and who, from their position, would not be able to bear that loss of trade in consequence of want of capital.

10424. Are you able to enforce any penalty for concealment of the facts?—Yes; if the magistrate chooses he may fine the individual, I believe, 20 *l.* for the infringement of the Order; but in the majority of cases our prosecutions have failed, because the Act provides that the owner must be proved to have guilty knowledge; and it has always been found very difficult to prove the existence of guilty knowledge on the part of the person concealing the existence of disease.

10425. Would you suggest any alteration in the Act in order to make the recovery of penalties more certain?—I think that the question of guilty knowledge might be altogether left out.

10426. You think that it should be left to the discretion of the magistrates?—Certainly, if it is not left entirely out of the Act, because all owners of cattle know perfectly well whether an animal is well or ill; their observation is generally extremely acute, and it would be no great hardship if they were compelled to give notice of the existence of any disease, and the inspector should be left to decide whether that disease was of a nature to call for any interference or not.

Mr. *Arthur Peel.*

10427. I suppose since the Deptford case in January you have not been able to connect one case with another as coming distinctly from the Deptford case?—We have not in a single instance. In every outbreak we have made very strict inquiry, and we have not once succeeded in tracing the disease to any introduction of diseased animals into the shed, or to the movements of any persons who have been in connection with those animals.

10428. But you trace this last outbreak primarily to that case at Deptford?—Undoubtedly the disease was introduced into the country by that cargo of cattle.

10429. Are you satisfied with the present system of licensing dairies in the metropolis?—No, I think that the whole system of dealing with

Professor *Brown.*

19 July 1877.

Mr. *Arthur Peel*—continued.

with dairies in the metropolis and other large towns requires revision.

10430. Are they all of them licensed at present, in London, by the different vestries?—Judging from the lists which we have they are not; because in addition to the list of licensed dairies which we have from the vestries, we have found other places where cows are kept, and where no license has been given.

10431. Do you know whether the dairies which are licensed by the vestries, are licensed under uniform conditions attaching to the licenses?—I believe that they are, but those conditions are not carried into effect; one condition is that an animal must have a certain cubic space to stand in; but I go into dairies very frequently where the animals have not half the minimum cubic space that ought to be allowed.

10432. Would you supersede this vestry system of licensing by a Privy Council license?—No, I think that in the metropolis certainly the Metropolitan Board of Works should have full power to deal with the dairies as they deal with the slaughter-houses: they have effected immense improvements in those establishments, and I have no doubt that if they had the power they would very soon alter the condition of the dairies.

10433. By a right of entry, without the necessity of a license?—And by power to remove or to cease to give licenses to dairies which were unfit for the reception of cattle; in fact, if they had power to insist upon the observance of certain conditions as they have in slaughter-houses, I have not the slightest doubt that they would exercise that power, because they would have no temptation of a local kind to influence them, and they would deal with all the parishes in the metropolis in exactly the same way.

10434. That recommendation, I suppose, would apply to all towns, as well as to London?—I certainly think that the principal authority in the borough should have the power to legislate for dairies and slaughter-houses.

10435. A question has arisen in the part of the country with which I am acquainted which bears upon the point with reference to superseding the local authority by a central authority. The case is this: a local committee is appointed by the magistrates to carry out the Animals Order of 1877, and the question has arisen whether the officers of that local committee can legally stop cattle which are being moved from place to place in contravention of that Order. I understand that reference has been made to the Veterinary Department of the Privy Council, and that your opinion is that neither the cattle nor the drovers can be stopped by the local authority though the drover was manifestly violating the regulations of the Animals Order of 1877; is that a true statement of the case?—That is a matter which has not come before me at all. It probably occurred when I was at Liverpool last week; it would be referred to our legal adviser, and a letter would be written according to his directions.

10436. You cannot say whether the only remedy against the drover would be by summons, and whether the local authority is not empowered to stop the cattle?—The interpretation which we have always put upon the terms of the Order, is that the local authority have power to seize diseased animals and to detain them; but there is nothing to suggest that they have power to interfere with the man driving them, beyond

Mr. *Arthur Peel*—continued.

taking out a summons against him, and fining him up to the extent of 20 *l.*

10437. Of course by the time the summons is taken out the harm is done, and the infection is spread?—Undoubtedly.

Mr. *Elliot.*

10438. Is not this last outbreak another very startling proof to you of the insidiousness of the disease?—It is another proof, but I may say that we have so many proofs of that fact, that we do not need any more evidence of it.

10439. You mentioned that cats and other animals were likely to carry infection; does not that impress your mind very strongly with the necessity of not allowing live cattle to come into the country at all, because when we have got them at the port, we are never safe from disease?—My suggestion to the Committee on my last examination was, that with a view to entirely getting rid of contagious diseases, I should advise as the extreme measure, that cattle should be entirely prohibited from Germany and Belgium, and that all other animals should be slaughtered at the port of landing, on the understanding always that we adopted in this country such restrictions as would suffice to get rid of the disease.

10440. Such restrictions as have been mentioned by you in your examination?—I believe we have no power under the 75th section, to deal with diseases which are specially provided for in other parts of the Act; at least we are so advised.

Mr. *Wilbraham Egerton.*

10441. Do you think that this fresh outbreak shows the necessity for the cordon round London being kept up?—I do not think that we could contemplate the idea of relieving London, for certainly the remainder of this year.

10442. I was going to ask you how long you thought that the cordon should be kept up, understanding as I did from your previous answer that on a former occasion the cordon was kept up for two or three years?—It was kept up then in consequence of foreign cattle being landed from countries where cattle plague was likely to exist. The disease still prevailed on the Continent, and we allowed cattle to be landed at the port of London, and taken by rail to the Metropolitan Market, in order that they should not, if affected, escape into the country; and the cordon was only removed when the Deptford Market was opened.

10443. Supposing that animals from Germany were allowed to be slaughtered in this country; Germany being a country where cattle plague is known constantly to exist, do you think that the cordon round the metropolis should be kept up as long as that state of things exists?—Certainly, if we allowed cattle to be landed from Germany when cattle plague existed there.

10444. Or at any time, Germany being constantly liable to cattle-plague?—No; if cattle are not entirely prohibited from Germany, as I suggest, I should certainly, on the very instant that we received information of an outbreak on the Eastern frontier of Germany, advocate the total prohibition from Germany of cattle, meat, and all animal products, without waiting to see whether the disease passed into the interior of the country or not, as we have hitherto done.

10445. Is

Mr. *Wilbraham Egerton*—continued.

10445. Is there any practical difficulty in keeping up the cordon round London at the present time?—Yes, there is a great deal of difficulty in doing so, chiefly in regard to the railway traffic; this difficulty might, however, be got over, as it was in 1866, by allowing animals to be moved through the metropolis at certain junctions. The other difficulty is, that persons who have animals in London cannot move them into the country; but that is a matter of comparatively small importance.

10446. Of course if the dairies were kept outside the metropolis, that would also facilitate the maintenance of a cordon round London, would it not?—I do not think that it would affect the question largely, because the great difficulty arises from the impossibility of transmitting animals from the Metropolitan Market to various parts of the country. A butcher living in Sussex cannot come to the metropolis to buy a bullock and take it away alive. But in theory, at least, I see the great advisability of making the Metropolitan Market a market for London, and not allowing animals from that market to go out of the metropolitan district.

10447. Do you think that the police are the best inspectors to employ in London?—So long as we are restricted to merely making inquiries and watching the movement of cattle out of the sheds, I believe that the police will do more effective work than professional men, because we could hardly ask a professional man to station himself in a street and watch a certain number of dairies; in fact, if we did it, it would be a pure waste of his knowledge and skill.

10448. You also find, do you not, that the police in the country generally act as efficient inspectors?—They do, so far as making inquiries is concerned, and carrying the orders into effect; and I have no doubt that they would act much more efficiently if they had a reasonable additional remuneration, their remuneration, I believe, being at present very small.

10449. You do not think that your system of creating an infected area in any part of the country where disease should break out would involve much extra expense, because the police would still be used for the maintenance intact of that infected area?—We must, of course, have a certain number of competent professional men so placed that they could be sent to any part of the country upon very short notice for the purpose, which is most important, of identifying disease, because there are numerous reported outbreaks of pleuro-pneumonia which we are perfectly satisfied are not pleuro-pneumonia at all; and, in the first place, I think that the disease should be identified by good authority before any action is taken.

10450. Would you with your existing staff of inspectors be able to ascertain, first of all, when an outbreak takes place in the country, whether it is a *bonâ fide* outbreak of the particular disease suspected, and then, by employing the police, would there be any chance of additional cost being incurred?—No doubt there would be additional cost, because we must have a head inspector somewhere in every place where there is a separate jurisdiction.

10451. But these infected areas would not be very numerous if you could stamp out the disease rapidly?—The process would be most costly in the first instance; we might adopt the system of

Mr. *Wilbraham Egerton*—continued.

paying competent men a retaining fee, and remunerating them for their services when they are required.

10452. Would it not be most economical in the end to adopt the course which you have suggested?—Undoubtedly. If the estimate that is given is anything like correct, a tenth part of the annual loss would pay all the inspectors very liberally indeed.

Chairman.

10453. I understood you to say just now with regard to these dairy-sheds in London, that you thought it would be difficult, if power was taken to inspect and regulate movement, to establish a system of licenses for that purpose; was that so?—A difficulty always arises where licenses are concerned, because we have no means of identifying the animal to which the license refers. Sometimes merely "a cow" or "a heifer" or "a red and white ox" is put down on the license, and of course the license applies to any animal which may answer the description.

10454. How do you suppose that the Metropolitan Board of Works, if they had the power which you suggest they should have, would deal with the restrictions of movement in those dairy sheds?—My proposition was that the Metropolitan Board of Works should have power to regulate the construction and arrangement of the dairies.

10455. Your answer did not refer to the restriction of movement of the animals to and from those dairy sheds for the sake of security to the public?—No, it was without reference to that.

10456. I understood you to say that you thought it would be necessary, in order to obtain that protection if dairy sheds were allowed to continue in London, to have some security against their continuing to be centres of infection?—I think it is quite necessary to have them under very strict regulations, and to have them so constructed that the sanitary arrangements should be as nearly as possible perfect, and that inspectors should be able to enter with a probability of making proper inspection without difficulty, which at the present moment would be impossible.

10457. The inspection would be an inspection by the authorities in charge of the regulations; the regulations as to movement would be made by them, but the Metropolitan Board of Works would be, as they are in the case of slaughter-houses, entrusted with the supervision of the construction of the sheds?—Yes, and with the general sanitary arrangements without reference to contagious diseases.

10458. I understood you to say, in answer to an honourable Member, that in dealing with the penalties under the Contagious Diseases Act in enforcing your powers under that Act, the men got off because they pleaded that they had no guilty knowledge?—That has been very frequently the case.

10459. I do not see that in the Act; the Act gives absolute power to the Privy Council first, to fix the penalties, and then to recover the penalties in the ordinary form; and there is no such words as "knowingly" in the Act?—I think the words somewhere occur, "unless he can show that he did not possess such knowledge,

Professor *Brown.*

19 July 1877.

Chairman—continued.

or that he could not, with the exercise of reasonable diligence, have obtained such knowledge."

10460. Is not that entirely confined to the subsection of the clause which refers to the falsification of the license?—I know that it has been pleaded in cases relating to the detection of contagious diseases, and I know that the opposing counsel has succeeded in getting a verdict in his favour entirely on that ground.

10461. The sections of the Act which apply to the recovery of penalties in no way allude to it, except in that one case of the falsification of a license, and it must be proved there that the falsification was with the knowledge of the man?—I believe that it occurs either in the Act or in the Order, in reference to the detection of disease.

Chairman—continued.

10462. In your opinion, as far as you have been able to trace it, the probability is, that Plummer's cow was the means of introducing the disease into this shed?—The present state of the inquiry rests with that assumption; but it is possible that we may, in the course of the day, obtain evidence which will lead us in quite another direction.

10463. You are following out the inquiry with a view of obtaining such knowledge, if it exists?—We are.

Mr. WILLIAM PAYNE, called in; and Examined.

Mr. *Payne.*

Chairman.

10464. I BELIEVE you are a large Cattle Salesman at Romford, in Essex?—Yes.

10465. And you have, in the course of your business, to deal largely with the different dairy-sheds in the metropolis, supplying them with animals?—Yes.

10466. Your attention has been directed, has it not, to the present outbreak of cattle plague in the shed at Bethnal Green?—Yes.

10467. Can you tell the Committee the circumstances under which two animals which, I believe, you supplied to that shed were sent in?—Yes. The two cows that I sent in I bought on the 16th of April.

10468. Were they English cows?—They were.

10469. Had you them in your possession from that date?—From that time.

10470. And were they standing in your own yard?—They were in a park that I held.

10471. Were they running with any other animals?—Yes.

10472. What has been the condition of those animals?—They are all as healthy as can be.

10473. And those animals were sent direct from that pasture to this place in Bethnal Green?—They were.

10474. On what date did you send them in?—About the beginning of July.

10475. And you have not had any symptom of contagious disease among the animals that remain still at home?—Not the least.

10476. There are no other animals but your own on that pasture; it is not one of the Lammas lands?—No, nothing but my own animals.

10477. Did you yourself see the condition of this shed, or are you able to speak as to the place?—I have been in it three or four times; not many times.

10478. Could you speak as to the animals that you saw there?—Yes.

10479. Have they been subject to disease?—Not that I know of.

10480. You are not aware, from your own knowledge, of the fact of pleuro-pneumonia having existed there?—No, not at all.

10481. What was the number of animals there at the time that you saw them?—I should think about 10 or 11, but I cannot say exactly.

10482. Does the man constantly change his stock there?—Yes, when they drop off their milk he changes them.

10483. He shifts them as they diminish in giving milk?—Yes.

Chairman—continued.

10484. So that there is a constant flood of animals through that and through most of the other sheds, I suppose, to fill up the gaps?—Yes.

10485. Have you supplied him constantly before?—Not long, perhaps eight or ten months.

10486. But you have sent a good many animals in there during that time?—I have sent several in.

10487. Were these the animals that were there when the outbreak occurred?—I think there were four or five of them that I had supplied.

10488. Had you supplied them in the same way from your own Essex pasture?—Yes.

10489. Can you tell the Committee the system on which this flow of cattle, through these dairies, takes place; is it by direct purchase with payment on delivery?—Most of them.

10490. In your own instance it was a case of payment on delivery?—Yes.

10491. And when it it is suggested that those animals are sent in on a system of payment by instalments, with a power to the sender to remove them to other dairies as he sees fit if they are not paid for, that is not a part of your business?—No, I never did so.

10492. Are you aware that it is a system which is adopted to any extent?—No, not that I know of.

10493. In your own business your practice is on sending the animals to be paid for them?—Yes.

10494. Therefore the additional charges that might ensue from their being only there waiting until they were paid for, and liable to be transferred, do not exist in your own case?—No, I have never heard of it.

10495. And you do not practice it yourself?—No, never.

10496. Are you able to speak at all as to the effect which would be produced upon the trade by more strict regulations as to movement for the purpose of protecting London against these sheds being means of propagating disease?—Yes, I think that it would be a very good plan.

10497. You see no objection to the inspection of them, and to some regulations being made as to the animals coming in and going out?—It would be a very good plan I should say.

10498. Protecting the districts from disease, and protecting the men themselves from the losses incurred by it?—Yes.

10499. Are you able to give the Committee any

Chairman—continued.

any further information as to the animals in this shed?—No, not at all.

10500. You are not able, I suppose, to speak as to the animal which has been described to the Committee as coming from a man named Plummer?—No.

10501. Do you know Plummer?—Yes, I think I know the man.

10502. Does he do a large business?—I do not know at all. He attends the cattle market, and I never go up there.

10503. You have had no business with him?—No, never.

10504. Have you any other information that you can give the Committee upon this point?—No, not at all.

10505. It really results in this: that you delivered two animals there from a pasture of your own where they had been perfectly healthy since April, and where they had been in contact with animals which were then healthy, and are still healthy; and that all the animals that you sent to him, of which four or five were in his yard at the time of the slaughter came from the same place under the same conditions; is that so?—Yes.

10506. Were you at the shed during the course of last week?—Yes, I was there on Saturday, but I did not hear anything about it until I called at the shed.

10507. Was that the time at which you say 10 animals stood there?—I only stood at the door, and I could see only one.

10508. That was not at the time of your sending in the animals?—No, I sent them in three weeks ago.

10509. Was that the time when you were paid for them, or were you in treaty for other animals?—I had a fat cow at the same time. I think the same night or the next morning.

10510. Where did that animal go to?—To Aldgate, to be slaughtered.

10511. Was that animal in a healthy condition?—Quite healthy.

10512. How long did you move the animal before the first notice on the Friday of the animals being affected?—I think it was the 3rd of July when that one went away.

10513. Was that the same day that you sent them in?—I think it was either that night or the next morning. I would not be sure whether it was that night or the next morning.

10514. It was a certain number of days, at all events, before the disease showed itself?—Yes.

10515. Was that animal taken direct to the slaughter-house?—It was slaughtered.

10516. It was not placed in contact with any other animal?—No.

Mr. *Chaplin.*

10517. Where did you buy these two cows?—At St. Ives.

10518. Is your park where they were running near any place that has been infected?—No, nowhere near it.

10519. You had a great number of other animals running with them?—Yes.

10520. Had any of those come from places which had been infected or within reach of infection?—Not the least.

Mr. *Pease.*

10521. I suppose those other animals that were running with them have been introduced since the date at which you bought those two cows?—Some of them might have been, and some before.

10522. And you have parted with those since, probably, or some of them?—Yes.

10523. May I ask how many of these cows you turn through your hands in the course of a good year?—I cannot give it now; 30 or 40 a week, perhaps; sometimes more and sometimes less.

10524. Do you ever deal in Dutch cows?—No, not without I see one that has been in the country for two or three years.

10525. You do not think that they are now forming a large proportion of the supply of the London dairies?—No, we see very few now.

10526. Why do you not deal in them?—I never buy them unless they have been in the country for a year or two.

10527. Are you afraid of them?—I never deal in them.

10528. Do you not deal in them because you think that there is not the same profit as there is on English cows?—I do not know about that.

10529. There is a market for them, is there not?—Yes, there is a market for them, but I never buy them.

10530. Is it not a constant practice with men who are supplying the London dairies if they see a good cow, to send it on without a question of price, and settle the price aftewards?—Sometimes; but they generally come down and buy them themselves.

10531. They would not say to a man like you, "Send me down three of the best cows you get in"?—Yes, they very often do.

10532. And you settle the price afterwards?—Yes.

10533. Does not that same sort of thing take place with a much inferior order of tradesmen to yourself?—It might.

Colonel *Kingscote.*

10534. What took you to Norfolk-street, Bethnal-green, last Saturday?—I sometimes call as I am going by, but I had no thoughts of anything there.

10535. You say you have been into the premises?—Yes.

10536. What sort of premises are they, as dairies go?—It is a lowish shed, holding about a dozen or 14 cows, I expect.

10537. Is it airy?—Yes.

10538. And well ventilated?—Pretty well for that, I think.

Chairman.

10539. Then do I understand you that it was last Saturday that you were there?—Yes; he told me that the inspector had been there, and I had better not go into the shed, and I went away as soon as I could.

10540. You did not get any information from the owner of the shed at all?—Not in the least; I did not stop two minutes with him.

10541. You very naturally got as far away as possible?—I did.

LIST OF APPENDIX.

PAPERS delivered in by Count *C. F. Danneskiold-Samsoe.*

ORDER concerning Contagious Diseases in Domestic Animals. (29 December 1857.)

Art. I.—Every veterinary surgeon who has passed the proper examination, and desires to avail himself of the right of practice which he has thereby acquired, shall be supplied (by the proper local authorities, and at the public expense) with a register, authorised for the purpose, into which he is to enter a short account of such cases of infectious diseases in domestic animals which may become subject to his investigation or treatment, as well as of the measures which he has adopted or ordered to be taken for the purpose of preventing the spread of the contagion.

With regard to these diseases, the veterinary surgeons are to observe the instructions which will be issued by the Home Office, and to carry out such special directions as may be given them by the veterinarians sent out by the Office in particular cases. They are likewise bound to act on the orders of the Prefects or of the Chiefs of Police, on receiving the legally fixed payment for their services.

Art. II.—The diseases in domestic animals, which are to be subjected to the special care of the public authorities, are the following:—

Splenitis in all domestic animals.
Sheep-pox, malignant foot-disease, and scab in sheep.
Glanders and malignant strangles in horses.
Pleuro-pneumonia in horned cattle, and
Cattle plague.

In case of any other contagious disease in domestic animals assuming a similar malignant character, the Home Office is empowered to subject it to the regulations of this law through public decree.*

Art. III.—If any domestic animal is attacked by any of these diseases, or if there is a probability of such being the case, the owner shall either call in a veterinary surgeon authorised to treat such cases (*vide* Art. I.), or give information to the Chief of Police or the Mayor of the Commune.

The Prefect is empowered, if he considers it to be necessary, to order a veterinary surgeon to be present, on behalf of the authorities, at horse and cattle fairs, in order to inspect the domestic animals there collected, with regard to the possibility of any of them suffering from any infectious disease (*vide* Art. II. and X.). The Prefect may likewise order the examination by a veterinary surgeon of the animals sent to graze on common pastures.

The Prefect is further empowered, if he sees cause for so doing, to cause a general examination to be made of all domestic animals of any species, which might be threatened with an epidemic, throughout as large a district as he may consider necessary, which examination, however, must be carried out in such a manner as to avoid any danger of spreading the contagion.

Art. IV.—If the veterinary surgeon finds that an animal examined by him is suffering from any of the diseases before mentioned, or that there is a strong probability of such being the case, whether he be called in by the owner, or he be sent by the Chief of Police, or he has met with the animal accidentally, then he shall order and, as far as possible, at once cause the animal in question to be separated from healthy animals, as completely as the nature of the disease requires and circumstances allow, unless the owner consents to the immediate killing of the animal. Wherever there is reason for so doing, he shall order the places where the sick animal has been standing and the objects which may have touched it, to be properly disinfected.

When the veterinary surgeon has entered on his register the record enjoined by Art. I. (which

* In this manner the foot-and-mouth disease has since been included in the list of the diseases to which these regulations apply: viz., by the law of 10th April 1875.

Appendix, No. 1.

(which record is to contain the date of the examination, the name and abode of the owner, a statement of the species and individual marks of the animal, the kind of disease from which it is supposed to suffer, and the measures ordered), this entry is to be read to the owner or the person who, on behalf of the owner, is responsible for the treatment of the animal. By signing the entry the owner or his representative undertakes to see the orders of the veterinary surgeon carried out. Should the owner refuse to sign the entry, the surgeon shall immediately send an extract of the same to the Chief of the Police, if the case occurs in a town, or to the Mayor of the Commune in question, if it occurs in a rural district, and these officers will then at once order the necessary preliminary measures. The owner is bound to obey their injunctions absolutely, even if he may find cause for complaining of them to the superior authorities.

After having finished his investigation, the veterinary surgeon shall send a report as soon as possible to the Chief of Police, together with proposals for any further measures which he may think necessary. A report of the case, with an account of what has been done in consequence of it, is to be sent to the Prefect, and by him forwarded to the Home Office.

Art. V.—If the veterinary surgeon in his report declares it to be certain or probable that the disease belongs to one of the kinds specified in Art. II., and if the Chief of Police has not so much doubt on the subject that he is inclined to postpone further measures on his own responsibility until a further examination shall have taken place, then the Chief of the Police shall issue a decree, to be entered on the register of the police, placing the whole stock, as well as any other stocks which may be suspected of having been infected by the contagion, under the supervision of the authorities.

Art. VI.—If in this manner the stock of one or more farms have been placed under public supervision, the Chief of the Police is empowered to order any further measures which may be necessary for the more complete isolation and disinfection of the infected animals, such as their confinement in a suitable distance from other animals, and in a place affording proper security, the removal of excrements, the use of separate tools, disinfection or destruction of objects which have been exposed to their influence, the employment of separate men, the prohibition of excess on the part of strangers, destruction of the contagion in all persons who have been in contact with them, and the interment of the dead animals whole, or of those parts which cannot be used without danger of spreading the infection The Chief of the Police is likewise empowered to forbid any animal belonging to the infected stock or stocks, even if it is not suffering from the disease, to be removed, by sale or otherwise, or allowed to go on another farm or on the public thoroughfare.

In cases of sheep-pox, sheep-scab, or malignant foot-disease in sheep, and in cases of pleuro-pneumonia in horned cattle, or of cattle plague, a distance may be fixed within which the herd or flock, when grazing, must be kept from the pastures of others.

Should the disease spread further, or assume a very malignant character, the Prefect shall cause a public notice on the subject to be inserted in the principal newspapers of the locality, and no fair for the species of animal concerned shall then be held in the district. In case of malignant lung disease in horned cattle, or of cattle plague, such notification and prohibition shall invariably take place.

Art. VII.—The Chief of the Police decides, in accordance with the proposal of the veterinary surgeon, and the other information at his disposal, to what extent those measures, which by the foregoing he is empowered to take, shall be applied, as also when they may be discontinued. As far as practicable, he shall investigate the state of affairs himself on the spot, give the necessary instructions for carrying out the regulations, and see that the orders which have been given are obeyed. If the owner shows negligence in this respect, or even opposition, the Chief of Police is empowered to cause everything necessary to be done at the expense of the owner, and payment of the amount, after having been approved by the Prefect, may be enforced by distress; if not thus recoverable, the expense must be borne by the county. If it is on account of the poverty of the owner that the authorities have been obliged to act in this manner, the Prefect may order payment to be made from the County Fund, and the Board of Local Government will have to decide whether the claim against the owner may be abandoned.

If there is reason to suppose that the contagion is imported from elsewhere, or that it may have spread to other stocks, this question must be accurately investigated, the measures necessary under such circumstances must be taken without delay, and if the infection can be traced into other districts, the Chiefs of Police in these are to be informed of it.

If the Home Office decides to send a veterinarian to the place, the Prefect must be apprized of it, and the responsibility then passes from the veterinary surgeon to the person sent out.

Art. VIII.—In case of a suspicion of cattle plague or pleuro-pneumonia having seized a stock of cattle, the Chief of Police may order the slaughter of one or two heads, in order to obtain greater certainty by their dissection. The Chief of the Police may continue to order the slaughter of animals, which, according to the declaration of the veterinary surgeon, must be considered with certainty to suffer from one of the two diseases mentioned, until the Home Office shall order the discontinuance of this measure, when there is no longer any hope of arresting the disease in this way.

The Home Office may, at the outbreak of an epidemic, order the killing of the entire stock in which the disease has appeared, or parts of it.

Every

Every horse that the veterinary surgeon declares to suffer from the glanders, or a malignant form of strangles, shall be killed.

The animals which are thus killed shall be dissected, and the reports on such dissections shall be forwarded to the Home Office by the Prefects. The owner may within a certain time fixed by the Chief of Police call in a certificated veterinary surgeon to be present at the dissection, and take part in deciding the question whether the animal has been suffering from the disease indicated. In case of doubt or dissension between the surgeons, the question is to be decided by the Veterinary Board of Health.

[Concerning compensation to the owner.]

Art. IX.—If any of the malignant contagious diseases of domestic animals, enumerated in Art. II., makes its appearance in a foreign country, the Government may issue a prohibition of importation of the species of animals attacked by the disease, as well as of raw produce of the same, such as hair, hides, tallow not melted, or meat; and it may likewise, if any of these diseases should appear within the frontiers of the monarchy in one or more provinces or counties, either entirely prohibit importation of the species of animal attacked to the other provinces or counties, or subject the traffic to such conditions as may be thought necessary in order to prevent the spreading of the infection, for instance, the use of bills of health.

Art. X.—With regard to contagious diseases of a milder kind, such as the foot-and-mouth disease,* various kinds of strangles, ringworm, and scab in other animals than sheep, the owner is bound not to take any animal so affected to any fair or to the pastures of others. The owner of any horse suffering from scab, typhoid or putrid fever, or any other infectious disease, save strangles in a mild degree, or cancer of the tongue, is, moreover, bound to give information to the Chief of the Police or the Mayor of the Commune, stating at the same time what he has done himself in the way of isolation and treatment.

If the Chief of the Police finds it necessary in order to prevent the further spread of the contagion, he is empowered to order an examination by a veterinary surgeon, to give the required orders with regard to isolation and disinfection, and to enforce the observance of these orders.

Art. XI.—[Concerning mad dogs.]

Art. XII.-XIV.—[Concerning prosecutions and fines under the provisions of this law, fees, and payment of expenses.]

General Orders for the Treatment of Infectious Diseases in Domestic Animals.—(28 September 1858.)

Art. I.—In examining a stock of cattle which has been placed under public supervision, the veterinary surgeon ought to examine the healthy animals first, and afterwards, those which are suffering, lest he should cause the contagion to be transferred from these to the former, and he must not only be careful that he does not himself occasion the spread of the contagion, but he must also give all those who have to do with the sick animals, the necessary instruction and orders in this respect, as well as with regard to the proper pre cautions against their taking the disease themselves, where such is possible.

Art. II.—In arranging for the isolation of the diseased animals, the veterinary surgeon must always consider the intensity and the peculiarities of the contagion, specially with regard to whether it is volatile or not, and choose accordingly the locality where the diseased animals are placed, which at the same time must be so situated, and isolated, that nobody can come near to the diseased animals, not even by accident, except those whose duty it is. The same is to be observed with regard to disinfection of persons and implements which have been in contact with the sick animals, fumigation with chlorine being applied so much the more strongly as the contagion is more volatile and adhesive.

The individuals which are less dangerously affected must be kept separate from those in a more dangerous state; the isolated animals must have their own attendants, stable tools, and other implements, which must not be used with those other animals to which the contagion might be transferred. Nor must common watering places be used.

Art. III.—No animal forming part of an infected stock must be sold or brought outside the limits of the stable without special permission; the slaughter of diseased animals must be done on the spot; all the offal must be interred.

Art. IV.—The veterinary surgeon must assist the authorities in carrying out the supervision of the stock.

Art. V.—It will depend on the character of the disease, its degree of prevalence and local circumstances, how often the veterinary surgeon must visit a stock of this description, and he is to apprize the authorities of it.

Art. VI.—Disinfection of stables or parts of stables, where one of these diseases has occurred, or of implements which have been employed in attending on these animals, is to be

* This disease is now classed amongst the more dangerous ones (*vide* Art. II.).

Appendix, No. 1.

be effected by thorough cleaning, and, if necessary, washing down of the same, the iron and woodwork being, in the next place, washed with boiling water, which must not be allowed to cool down below 60° R. (167° Fahrenheit), and, when dry, painted over with a solution of chloride of lime (one part of the chloride to twelve of water).

If an entire stable is to be disinfected, it must be kept closed; if a part of a stable only, it must be partitioned off. After the lapse of four days the same process is repeated, and if there have been several cases of disease in the stable, it must be fumigated with chlorine, during which the stable must be kept well closed. After the lapse of four more days, the stable is to be whitewashed and aired, and it is not to be taken into use again before it is quite dry, or after such a time as is enjoined for each particular disease.

Implements which could not stand this treatment, must be heated to 60° R. (167° Fahrenheit).

Art. VII.—It is the duty of the veterinary surgeon to inform the authorities when he considers the disease to be at an end.

Regulations to be Observed with regard to Pleuro-pneumonia.—(Part of Decree of 28 September 1858.)

When pleuro-pneumonia has broken out in a single farm or premises, which is then put under the supervision of the Government officers, access to the cattle must be forbidden to all persons not concerned, whether strangers or persons belonging to the farm or premises. As a rule, all cattle which the veterinary surgeon declares to be infected, must be killed immediately.

As long as all infected cattle are killed at the cost of the Treasury, no surgical treatment of the infected cattle must be attempted.

The attendants, milkmaids and others that come near the infected cattle, must not be allowed to approach non-infected animals on the farm or elsewhere, without first being fumigated with chlorine gas, or having changed their clothes. The veterinary surgeon himself must observe the same precautions against spreading the contagion.

The infected cattle must be placed in separate stables or enclosures as far distant as possible from the other stock. If any head of cattle is discovered suffering from symptoms which render the presence of the disease probable, it must be separated from the other animals as soon as possible. Particular animals, which may have been specially exposed to the contagion, may also be isolated at once.

The infected animals must have separate attendants and milkmaids, as well as separate pails and stable implements, which must not be used with healthy animals. Their dung should be carried out on the fields immediately, and buried or ploughed down there; in the latter case, not nearer to any neighbouring fields than 50 feet.

The diseased animals must be slaughtered on the farm or premises themselves.

The stalls which have been used by the diseased animals must, immediately after their removal, be cleaned with boiling water and chloride of lime in the manner prescribed in the general orders [vide *supra*]. Weak fumigations with chlorine may be used in the stable.

No cattle, hay, straw, nor dung must be carried away from the premises or farm, which remain closed in this manner, at least three months after the disappearance of the disease.

When any cattle is to be slaughtered, the veterinary surgeon must guard against any opportunity being given for the spreading of the contagion, at the valuation, the slaughter, or the dissection.

Not only the slaughtered animals, but also those that die a natural death, must be dissected by the veterinary surgeon.

The hides of the slaughtered animals must either immediately be thrown in a lime pit on the spot, or must be taken, with due precautions, direct to the tanner, covered with a layer of chloride of lime.

The meat from cattle that, before the slaughter, have been declared by the veterinary surgeon to be suffering from pleuro-pneumonia must not be used as food; but the meat of those animals which, before the slaughter, have been pronounced apparently healthy may be used, even if the dissection should show that they have suffered slightly from the disease, provided that the alterations in the tissue of the lungs are not present in any high degree, or to any great extent, or, generally speaking, that no such diseased condition is observed which would render the use of the meat unadvisable.

All meat that may be used ought, as soon as it has cooled, to be salted into barrels, in the same premises where the slaughter has taken place, which barrels should be kept in some place there, to which strangers have no access.

The tallow must be melted down on the premises.

The interment of the dead and slaughtered animals must be done by persons belonging to the farm or premises, or by people who have no occasion of going near cattle.

The place of interment must be in some out-of-the-way situation, and a layer of chloride of lime must be spread over the body, the whole to be covered with, at least, four feet of earth.

The

The head, feet, and entrails, the blood and other offal from cattle, of which the meat may be used, must be buried in the same manner as the infected animals.

Not more animals must be killed on any one day than can be interred on the same day.

With regard to the dissection and the preservation of the diseased parts in case of doubt, the same rules hold good which are enjoined in cases of glanders.

A stock of cattle amongst which pleuro-pneumonia has appeared, must not be allowed to graze within a distance of 50 feet from any fields belonging to a neighbour, and should therefore be carefully watched whether tethered or not.

As long as the system of slaughtering the cattle is pursued, animals which have recovered from the disease may be considered as infected and may be killed. When the Minister of the Interior has ordered the discontinuance of slaughtering infected cattle, the animals which have recovered had better be fattened and then slaughtered, but in any case they must be kept isolated for at least three months.

Infected or suspected cattle must not be driven on, to, or along any common road.

The roads along which infected cattle have passed, ought to be cleansed from all excrements, and, when such can be done, closed for some time.

Fields on which infected or suspected cattle have been ought to be closed for healthy animals for six weeks.

Fodder which has been exposed to the exhalations of infected cattle must not in any way be used in such a manner as to expose other cattle to the contagion through the use of it. With due care it may be used for other domestic animals. Whatever may not have been utilized in this manner must be destroyed before new cattle are brought into the stock.

Inoculation must not take place without the permission of the proper authority, and an inoculated stock must be treated as infected.

A stable which has been used by infected cattle must be properly cleaned and fumigated with chlorine, and it must be exposed to air for six weeks before being taken into use.

DECREE concerning the Foot-and-Mouth Disease of 10 April 1875.

The measures prescribed by the law of 29 December 1857, Art. 1 to 7, 9, and 12–14, with regard to infectious diseases amongst domestic animals, are in future to apply also to the foot-and-mouth disease, which is hereby brought to public knowledge in accordance with Art. II. of the said law.

REGULATIONS to be observed with regard to the Foot and Mouth Disease, issued 16 October 1875.

Art. I.—The animals affected must be kept indoors. It is not necessary to keep them separate from the other animals on the premises which are under public supervision.

Art. II.—Milk and cream from the diseased animals must not be taken out from the farm except after being boiled.

Art. III.—As long as the public supervision lasts no hay nor straw must be carried away from the farm without the permission of the veterinary police.

Art. IV.—Animals affected with this disease may be taken away from the farm to be killed, but only with the permission, and under the supervision, of the veterinary police.

Art. V.—Especial care must be taken in order that the infection may not spread through the dung or offal from the place where the diseased animals are kept.

Art. VI.—When the disease has ceased on the premises, complete disinfection must be effected. The public supervision may then terminate at the expiration of four weeks after the disappearance of the disease.

Art. VII.—As a rule, it suffices that the stock is examined by the veterinary surgeon, on behalf of the authorities, three times, viz., at the outbreak of the disease, when it is supposed to have ceased, and when the final disinfection has taken place.

Appendix, No. 1.

ORDER concerning Measures against Importation of Cattle Plague from Germany.—(16 January 1877.)

Inasmuch as the cattle plague has appeared in Germany, the Home Office has decided, in virtue of the Infectious Diseases of Domestic Animals Act of 29 December 1857, Art. 9, to order the following measures in order to prevent this disease being brought into the country, viz.:—

Art. I.—Importation into this country from Germany of horned cattle, sheep, goats, or undressed parts of these animals, such as hides or skins, whether dried or salted, horns, hoofs, wool, hair, meat not smoked, tallow not melted, &c., is prohibited. No cattle-truck, foreign or Danish, at this moment being abroad, may be brought across the frontier of Jutland. All other domestic animals than those above-mentioned, on arriving from Germany, must be disinfected before being imported.

Likewise all hay and straw from Germany is to be disinfected before importation, unless it serves as packing, properly speaking, for goods which are not themselves likely to carry infection, being placed in baskets, barrels, or boxes, in which the goods are transported, or tied round the merchandize, in which case the hay or straw may be unloaded and delivered to the importer without previous disinfection, on the condition that the latter, immediately after reception of the goods, causes them to be unpacked, and the packing to be disinfected or burnt under the supervision of the veterinary police.

Art. II.—Vessels arriving here, having on board animals or goods of which the importation is prohibited, or allowed only after previous disinfection, must not unload before the veterinary police, having examined the vessel, has given permission for unloading, together with instructions as to the mode of proceeding, in order to prevent the spread of any infection. The same rule holds good with regard to vessels which have had cattle, sheep, or goats, from any foreign place on board, if any of these animals has died on board or been killed in a state of disease.

Art. III.—Merchandize of vegetable or animal description arriving together with objects of which the importation is prohibited, must be disinfected. The same applies to vessels, carts, and tools which have been used in the transport of objects which are to be disinfected, provided that such disinfection is not to be deemed necessary merely because hay or straw has been used for the packing properly speaking (*vide supra* Art. I.)

Art. IV.—The disinfection enjoined by this order must always be carried our under the supervision, and according to the instructions, of the veterinary police. Goods which are to be disinfected, are to be unloaded, where special localities for disinfection have been provided, close to these; until such localities have been provided, the goods must be subjected to a preliminary process of disinfection in the hold of the vessel itself previous to being unloaded. All expenses connected with the disinfection are to be borne by the owner of the goods.

Art. V.—Transgressions of the provisions of this order are to be punished according to the law of 29 December 1857, Art. XII., with fines from 1 to 100 crowns, which will be doubled in case of repetition of the offence. Damage done by such transgressions will have to be made good according to the general rules of the law.

Art. VI.—The present order takes effect at once.

LAW concerning the Export of Domestic Animals from *Denmark*.—(25 February 1876.)

The Government is authorised to take such measures as may be found necessary, in order to prevent that domestic animals are exported from this country which are or may be suspected to be affected with contagious diseases, and also to prevent that the animals sent to foreign countries from Denmark, are exposed to such diseases on the journey to their destination.

ORDER concerning Measures with regard to Export of Domestic Animals to *Great Britain*.—(26 February 1876).

In pursuance of the authorization granted to the Government by the law of the 25th of this month concerning measures with regard to the exportation of domestic animals from Denmark, the following provisions are hereby ordered in respect of export of domestic animals to Great Britain.

Art. I.—Every head of cattle which is intended for shipment to Great Britain must, before

before it is brought on board, be examined at the expense of the sender, by a veterinary surgeon authorised for the purpose by the local chief of police, and must not be shipped unless it is proved by examination not to exhibit any symptom of any infectious disease; and unless there is no other reason for suspecting it of being infected with any such disease, to which effect a certificate is to be given by the veterinary surgeon.

Art. II.—At the examination of the animals the different droves are to be kept separate in such a manner as to prevent an infectious disease which might possibly exist in one of them, from being transferred to others.

Art. III.—No cattle intended for shipment to Great Britain must be shipped until the veterinary police has given permission for cattle to be brought on board, which permission can be granted only when the vessel has been properly disinfected, in case there are reasons for considering the vessel dangerous in respect of infection.

Art. IV.—Every head of cattle before shipment is to be marked plainly, the mark being either put on in oil paint, or burnt into the horn. The veterinary surgeon is to indicate the mark in the certificate which he issues for the animal, in which also the sex of the animal is to be stated. The shipment has to be executed under the supervision of the veterinary police.

Circular to the Prefects in view of an eventual Importation of the Cattle Plague.—(10 February 1877.)

For the case that the cattle plague which at present exists in Germany and in England should make its way into this country, in spite of the precautionary measures which have been adopted, the Home Office has considered it right already now to avail itself of the power conferred upon it by Art. VIII. of the Law of 29 December 1857, concerning infectious diseases in domestic animals, and to order the immediate slaughter, in its entirety, of any stock of cattle in this country in which the existence of cattle plague may have been ascertained.

In communicating the above, the Home Office at the same time requests you to order the chiefs of police in your district, in case of need, to take the necessary measures for carrying out this injunction, and you are also desired, if any suspicion should arise of the said disease having made its appearance in any stock, immediately to report to the Home Office by telegraph.

Veterinary Department,
Privy Council Office, 16 May 1877.

Memorandum.—Computing the value of the cattle at 20 *l.* a head for those diseased, and all those slaughtered healthy on the infected premises, the loss would be about 5,000 *l.* in 1872, and about 22,000 *l.* in 1877; but against these losses there would be the set-off in the salvage for carcases of cattle slaughtered healthy, which appears in the latter year to have been considerable, say about half the value.

ORDERS OF COUNCIL.

(366.)

At the Council Chamber, Whitehall, the 2nd day of August 1873.

By the Lords of Her Majesty's Most Honourable Privy Council.

PRESENT:

Lord President. | Mr. Forster.

The Lords and others of Her Majesty's Most Honourable Privy Council, by virtue and in exercise of the powers in them vested under The Contagious Diseases (Animals) Act, 1869 (in this Order referred to as the Act of 1869), and of every other power enabling them in this behalf, do order, and it is hereby ordered, as follows:—

1. This Order may be cited as the Animals (Amendment) Order of 1873.

2. This Order shall take effect from and immediately after the thirty-first day of August, One thousand eight hundred and seventy-three; and words in this Order have the same meaning as in the Act of 1869.

Pleuro-pneumonia.

3. Every Local Authority shall cause all cattle affected with pleuro-pneumonia within their district to be slaughtered.

The provisions numbered (1), (2), and (3) of Article 31, and Articles 32, 33, and 34, relating to compensation, of the Animals Order of 1871, shall have effect in case of slaughter under this Article of this Order.

Foot-and-Mouth Disease.

4. Foot-and-mouth disease shall not be deemed to be a contagious or infectious disease within either of the following Articles of the Animals Order of 1871, namely, Articles 19 and 27.

Any regulations made by a Local Authority under the said Article 27 as far as they relate to foot-and-mouth disease are hereby revoked.

5. Where an animal becomes affected with foot-and-mouth disease while exposed or placed or being carried, led, or driven, as in Section 57 of the Act of 1869 mentioned, it may, notwithstanding anything in that section, be, with a license of an Inspector of the Local Authority authorised to issue the same, but not otherwise, moved for purposes of feeding, or watering, or other ordinary purposes connected with the breeding or rearing of animals, to any land or building in the occupation of the owner of the animal, or for slaughter to the nearest slaughter-house or some other slaughter-house approved by the Local Authority.

The form given in the Second Schedule to this Order, or a form to the like effect, with such variations as circumstances require, shall be used.

Revocation.

6. The Orders and part of an Order of Council described in the First Schedule to this Order, and any regulations made by a Local Authority under that part of an Order, are hereby revoked: Provided that nothing in this Order shall invalidate or make unlawful anything done under the said Orders and part of an Order and regulations, or interfere with the institution or prosecution of any proceeding in respect of any offence committed against or any penalty or forfeiture incurred under the same.

(370.)

At the Council Chamber, Whitehall, the 27th day of February 1874.

By the Lords of Her Majesty's Most Honourable Privy Council.

PRESENT:

Lord President. | Mr. Secretary Cross.

THE Lords and others of Her Majesty's Most Honourable Privy Council, by virtue and in exercise of the powers in them vested under The Contagious Diseases (Animals) Act, 1869, and of every other power enabling them in this behalf, do Order, and it is hereby Ordered, as follows:—

1. This Order shall take effect from and immediately after the twenty-seventh day of February, One thousand eight hundred and seventy-four, and shall cease to have effect from and immediately after the thirtieth day of November, One thousand eight hundred and seventy-four.

2. This Order may be cited as the Schleswig-Holstein Order of 1874.

3. This Order extends to Great Britain only.

4. In this Order—

The Act of 1869 means The Contagious Diseases (Animals) Act, 1869:

A defined part of a port means a part of a port defind by a special Order of the Privy Council in pursuance of Regulation 2 of the Fourth Schedule to the Act of 1869:

Landing-place for slaughter means a landing-place within a defined part of a port.
Master includes any person having the charge or command of a vessel.
Other terms have the same meaning as in the Act of 1869.

5. Notwithstanding anything in the Foreign Animals Order of 1871, the regulations in the Fourth Schedule to the Act of 1869 shall not apply to cattle brought from a port in either of the parts of the German Empire, respectively known as Schleswig and Holstein.

6. Cattle brought from a port of Schleswig or of Holstein shall not be landed elsewhere than at a landing-place for slaughter, unless and until the owner, agent, or charterer of the vessel in which they are brought has received the special permission of the Privy Council to employ the vessel in the trade of importation of cattle from ports of Schleswig and of Holstein or of either of them under this Order.

7. The landing of cattle brought from a port of Schleswig or of Holstein, elsewhere than at a landing-place for slaughter, shall be subject to the following conditions:—

First. That the vessel in which they are imported has not, within three months before taking them on board, had on board any cattle exported or carried coastwise from any port in any part of the German Empire, other than Schleswig or Holstein, or from any port of any of the following countries, namely:—

The Dominions of the Emperor of Russia.
The Austrian-Hungarian Empire.
The Dominions of the Sultan.
The Dominions of the King of Italy.
The Dominions of the King of the Hellenes.
Belgium.
France.

Secondly. That the vessel has not, since taking on board the cattle imported, entered any such port as aforesaid.

Thirdly. That the cattle imported have not, while on board the vessel, been in contact with any cattle exported or carried coastwise from any such port as aforesaid.

Fourthly. That the cattle imported are accompanied by a declaration and certificates, such as are indicated in the forms set forth in the schedule to this Order, or to the like effect.

Appendix, No. 4.

8. Further, cattle brought from a port of Schleswig or of Holstein shall not be landed elsewhere than at a landing-place for slaughter, unless and until—

(1.) The owner or charterer of the vessel in which they are imported, or his agent in Great Britain, has entered into a bond to Her Majesry the Queen, in a sum not exceeding one thousand pounds, with or without a surety or sureties, to the satisfaction of the Commissioners of Her Majesty's Customs, conditioned for the observance of the foregoing conditions in relation to cattle to be landed under this Order from the vessel; and

(2.) The master of the vessel has on each occasion of importation of cattle therein, satisfied the Commissioners of Her Majesty's Customs, or their proper officer, by declaration made and signed, or otherwise, that none of the cattle then imported therein have been exported from any port in any part of the German Empire, other than Schleswig or Holstein, or from any port of any of the other countries named in Article 7 of this Order, and that the foregoing conditions have been observed in relation to all the cattle then imported therein.

9. If the Veterinary Inspector of the Privy Council is of opinion, on the examination of any cattle imported under this Order, that the declaration accompanying the cattle is untrue in any particular, as regards any one of the cattle in the vessel, then all the animals in the vessel shall be detained and dealt with in accordance with instructions from time to time given by the Privy Council.

10. If the declaration accompanying any cattle imported under this Order is untrue in any particular, as regards any one of the cattle to which it relates, the master of the vessel shall be guilty of an offence against this Order, unless he shows to the satisfaction of the justices before whom he is charged, that he did not know of the same being so untrue, and that he could not with reasonable diligence have obtained such knowledge.

11. Subject to the provisions of this Order all the provisions of the Foreign Animals Order of 1871 shall continue to apply to cattle brought from a port of Schleswig or of Holstein.

(signed) *Arthur Helps.*

(371.)

At the Council Chamber, Whitehall, the 3rd day of June 1874.

By the Lords of Her Majesty's Most Honourable Privy Council.

PRESENT:

Lord President. | Lord Sandon.

THE Lords and others of Her Majesty's Most Honourable Privy Council, by virtue and in exercise of the powers in them vested under The Contagious Diseases (Animals) Act, 1869 (in this Order referred to as the Act of 1869), and of every other power enabling them in this behalf, do order, and it is hereby ordered, as follows:—

1. This Order may be cited as the Foot-and-Mouth Disease Order of 1874.

2. Words in this Order have the same meaning as in the Act of 1869.

3. Articles 19, 27, and 28 of the Animals Order of 1871, shall have effect as if the Animals (Amendment) Order of 1873 had not been made.

4. Nothing in this Order shall revive any Regulation made by a Local Authority which was revoked by the Animals (Amendment) Order of 1873.

5. Article 28 of the Animals Order of 1871 shall extend to authorise a Local Authority to make regulations for prohibiting or regulating the movement, as therein provided, of any animal affected with foot-and-mouth disease; but nothing in this Order, or in any regulation of a Local Authority thereunder, shall be deemed to authorise the movement of any animal in contravention of Section 57, or of any other provision of the Act of 1869.

6. Article 5 of the Animals (Amendment) Order of 1873 is hereby revoked.

Where an animal becomes affected with foot-and-mouth disease, while exposed or placed, or being carried, led, or driven, as in Section 57 of the Act of 1869 mentioned, it may, notwithstanding anything in that Section, be, with a license of an Inspector of the Local Authority authorised to issue the same, but not otherwise, moved for purposes of feeding, or watering, or other ordinary purposes connected with the breeding or rearing of animals, to any land or building in the occupation of the owner of the animal, or for slaughter to the nearest slaughter-house, or some other slaughter-house approved by the Local Authority.

The form given in the Schedule to this Order, or a form to the like effect, with such variations as circumstances require, shall be used.

(372.)

At the Council Chamber, Whitehall, the 7th day of August 1874.

By the Lords of Her Majesty's Most Honourable Privy Council.

PRESENT:

Lord President. | Lord Sandon.

THE Lords and others of Her Majesty's Most Honourable Privy Council, by virtue and in exercise of the powers in them vested under The Contagious Diseases (Animals) Act, 1869, and of every other power enabling them in this behalf, do declare and order, and it is hereby declared and ordered, as follows:—

1. This Order may be cited as the Animals (Amendment) Order of 1874.

2. In this Order the Act of 1869 means The Contagious Diseases (Animals) Act, 1869; and words in this Order have the same meaning as in that Act.

3. The Foreign Animals Order of 1871 has and shall have effect subject and by way of supplement to the Animals Order of 1871; and nothing in the Foreign Animals Order of 1871 interferes or shall interfere with the execution or discharge by the Local Authority, or the Inspector or other officer of the Local Authority, of any power or duty conferred or imposed on them or him by the Act of 1869, or by any Order of Council.

4. Regulation Seven of the Fourth Schedule to the Act of 1869 shall apply in every case where a vessel comes into port having on board foreign animals maimed or injured on the voyage; but, notwithstanding anything in Section Nineteen of the Act of 1869, any animals being at any time within any such port shall not be deemed foreign animals, by reason only of anything in this Order.

5. The Order of Council on the 30th day of June 1873, relating to glanders and farcy shall have effect as if in Article Two thereof the word glanders were substituted for the words contagious or infectious disease.

(signed) *Arthur Helps.*

By the Lords of Her Majesty's Most Honourable Privy Council

PRESENT:

Lord President. | Lord Sandon.

Mr. Secretary Cross.

THE Lords and others of Her Majesty's Most Honourable Privy Council, by virtue and in exercise of the powers in them vested under The Contagious Diseases (Animals) Act, 1869, and of every other power enabling them in this behalf, do order, and it is hereby ordered, as follows:—

1. The Orders of Council described in the Schedule to this Order are hereby revoked; but this revocation shall not—

(*a*) revive any Order revoked by or otherwise affect the past operation of any of those Orders;

(*b*) affect the validity or invalidity of anything done or suffered, or any appointment made, or any license or authority granted, or any right, title, obligation, or liability accrued thereunder, before this Order takes effect; or

(*c*) interfere with the institution or prosecution of any proceeding in respect of any offence committed against or any penalty or forfeiture incurred under any Order hereby revoked.

2. All orders and regulations made by a Local Authority under any former Order of Council, in force at the commencement of this Order, shall, as far as the same are not varied by or inconsistent with the Animals Order of 1875, remain in force until altered or revoked by a Local Authority.

3. This Order shall take effect from and immediately after the twenty-third day of June, One thousand eight hundred and seventy-five.

THE ANIMALS ORDER OF 1875.

(374.)

At the Council Chamber, Whitehall, the 5th day of June 1875.

By the Lords of Her Majesty's Most Honourable Privy Council.

PRESENT:

Lord President. | Lord Sandon.

Mr. Secretary Cross.

WHEREAS by an Order of the Privy Council of the same date as this Order all former Orders of Council in force relative to contagious or infectious disease among animals in Great Britain (except Orders relating to particular ports), have been revoked as from and immediately after the twenty-third day of June, One thousand eight hundred and seventy-five:

And whereas it is expedient to renew such of the provisions of those former Orders as are intended to remain in operation, and to make some further provisions for better preventing the introduction or spreading of contagious or infectious disease among animals in Great Britain:

Now, therefore, the Lords and others of Her Majesty's Most Honourable Privy Council, by virtue and in exercise of the powers in them vested under the Contagious Diseases (Animals) Act, 1869, and of every other power enabling them in this behalf, do order, and it is hereby ordered, as follows:

Preliminary.

1. This Order shall take effect from and immediately after the twenty-third day of June, One thousand eight hundred and seventy-five.

2. This Order may be cited as the Animals Order of 1875, and is divided into Parts as follows:

PART I.—CONTAGIOUS OR INFECTIOUS DISEASE AMONG ANIMALS.
PART II.—TRANSIT OF ANIMALS.
PART III.—FOREIGN ANIMALS.
PART IV.—GENERAL PROVISIONS.

3. This Order extends to Great Britain only.

4. In this Order—

The Act of 1869 means The Contagious Diseases (Animals) Act, 1869:

An Inspector of the Privy Council means a person for the time being appointed by the Privy Council an Inspector for the purposes of the Act of 1869, and includes a Veterinary or other Inspector appointed by the Privy Council for any of those purposes:

Customs means Her Majesty's Customs:

Cattle means bulls, cows, oxen, heifers, and calves:

Animal means, unless it is otherwise expressed, cattle, sheep, goats, and swine:

Foreign, as applied to cattle or animals, means brought from any place out of the United Kingdom:

Cattle-plague means the rinderpest, or disease commonly called the cattle-plague:

Contagious or infectious disease includes cattle-plague, pleuro-pneumonia, foot-and-mouth disease, sheep-pox, sheep-scab, glanders, and farcy:

Person includes a body corporate or unincorporate:

Railway company includes a company or person working a railway under lease or otherwise:

A defined part of a port means a part of a port defined by a special Order of the Privy Council in pursuance of Regulation 2 of the Fourth Schedule to the Act of 1869:

Master includes a person having the charge or command of a vessel:

Loading-pen means a stationary pen or other inclosed space being in or about a station, building, or land of a railway company, and used or intended for the reception or keeping of animals before, after, or in course of their transit by railway:

Truck means a vehicle (not being a horse-box) used or intended for carrying animals (including horses) on a railway:

Van means a vehicle (not being a horse-box) used or intended for carrying for hire animals (including horses) on land otherwise than on a railway:

Other terms, unless it is otherwise expressed, have the same meaning as in the Act of 1869:

Appendix, No. 4.

PART I.

Contagious or Infectious Disease among Animals.

Chapter 1.—*Discovery and Prevention of Disease.*

5. Every person having in his possession or under his charge an animal (including a horse) affected with a contagious or infectious disease shall observe the following rules:

(1.) He shall, as far as practicable, keep that animal separate from animals not so affected.

(2.) He shall with all practicable speed give notice of the fact of the animal being so affected to a constable of the police establishment for the place where the animal is.

The constable shall forthwith give notice thereof to the Inspector of the Local Authority.

The Inspector shall forthwith report the same to the Local Authority and (except in the case of foot-and-mouth disease) to the Privy Council.

6. Where an Inspector of a Local Authority finds in his district cattle-plague, pleuro-pneumonia, sheep-pox, sheep-scab, glanders, or farcy, he shall forthwith make a return thereof to the Local Authority and to the Privy Council, on a form provided by the Privy Council, with all particulars therein required, and shall continue to so make a return thereof on the Saturday of every week until the disease has ceased.

7. Any dung, and any hay, straw, litter, or other thing commonly used for food of animals or otherwise for or about animals, may be moved out of an infected place in the Metropolis (but not out of the Metropolis) with a license signed by an officer of the Local Authority appointed in that behalf certifying that the thing moved has been disinfected, but not otherwise.

8. An officer of a Local Authority authorised in this behalf, or a constable or police officer, may stop and detain an animal (including a horse) which is being moved, or which he has reasonable grounds for suspecting is being moved, in contravention of the Act of 1869 or any Order of Council, and may apprehend, without warrant, the person having charge thereof, and bring him before a Justice.

The Justice shall inquire into the case in a summary manner, and may, if satisfied that there are good grounds for so suspecting, by writing under his hand direct the animal to be detained, and the person having charge thereof to be brought before two Justices as soon as practicable.

On the person being brought before two Justices they shall adjudicate on the case in a summary manner, and if satisfied that the animal was being moved in contravention as aforesaid, may direct it to be disposed of in conformity with the provisions of the Act of 1869 or any Order of Council.

9. An officer of a Local Authority authorised in this behalf, or a constable or a police officer, may inspect a vehicle being a truck, horse-box, or van, within this Order, or a vessel used or intended for carrying animals (including horses) for hire, by sea, or on a canal, navigation, or river, or a vehicle or vessel used or intended for carrying hay, manure, litter, straw, or other article commonly used for food of animals, or otherwise for or about animals, and may examine the person having charge thereof, with a view to ascertain whether any animals or articles are being moved or carried in contravention of the Act of 1869 or any Order of Council; and may, if he has reasonable grounds for suspecting that any animals or articles are being moved or carried in contravention as aforesaid, apprehend, without warrant, the person having charge thereof, and bring him before a Justice.

The Justice shall inquire into the case in a summary manner, and may, if satisfied that there are good grounds for so suspecting, by writing under his hand direct the animals or articles to be detained, and the person having charge thereof to be brought before two Justices as soon as practicable.

On the person being brought before two Justices they shall adjudicate on the case in a summary manner, and if satisfied that the animals or articles were being moved or carried in contravention as aforesaid, may direct them to be destroyed or otherwise disposed of in conformity with the provisions of the Act of 1869 or any Order of Council.

10. A person having charge of an animal (including a horse) or thing that is being moved, for the moving whereof a license is requisite, shall, on being so required by an officer of a Local Authority authorised in this behalf, or by a constable or police officer, produce the license (if any) for the moving of that animal or thing.

11. An officer or constable detaining an animal (including a horse) under the Act of 1869 or any Order of Council, shall cause it to be supplied with requisite food and water during its detention; and the expenses incurred by him in respect thereof may be recovered from the person having charge of the animal or from its owner.

12. An Inspector or other officer empowered to carry the Act of 1869 or any Order of Council into effect may, if authorised in this behalf by general or special order in writing of

of the Privy Council or Local Authority, enter, for the purpose of carrying into effect the provisions of the Act or Order, any field, stable, shed, or other premises within his district, where he has reasonable grounds for supposing that an animal affected with cattle-plague, pleuro-pneumonia, or sheep-pox has been, or that the carcase of such an animal has been buried or otherwise disposed of.

If any person refuses admission to, or obstructs or impedes, or aids in obstructing or impeding, the Inspector or other officer, he shall be deemed guilty of an offence against this Order.

13. A Local Authority may, from time to time, with the view of preventing the spreading of contagious or infectious disease, make regulations for the following purposes, or any of them:

For prohibiting or regulating the movement of animals (including horses) on, to, from, and through, and the keeping thereof on, commons and wastes and commonable and other lands whereon there exists a right of common or other right in the nature thereof.

For preventing any person from driving animals (including horses) under his charge, or allowing them to be driven or to stray, into an inclosed field or place without the consent of the occupier thereof.

For preventing the spreading, by means of dogs, of contagious or infectious disease.

For prohibiting or regulating the removal of hay, straw, litter, or other thing commonly used for food of animals, or otherwise for or about animals, that has been in the same field, stable, shed, or other premises with an animal affected with a contagious or infectious disease, or any dung that has been therein.

For providing for the cleansing and disinfection of places used by animals affected with a contagious or infectious disease.

Chapter 2.—*Cleansing and Disinfection.*

14. Every vessel used for carrying animals for hire, by sea, or on a canal, navigation, or river, shall, after the close of each voyage, and before the taking on board of any fresh animals or other cargo, be cleansed and disinfected in the mode following:

(1.) By the sweeping of the hold and every other part of the vessel used for animals, and the effectual removal therefrom of all dung and litter, and of all ashes, sand, sawdust, and other matter with which animals or their droppings have come in contact:

(2.) Then by the thorough washing of the same parts of the vessel with water:

(3.) Then by the application to the sides, floor, and ceiling of the hold, and to every other part of the vessel used for animals (except those parts ordinarily used for passengers), of a coating of limewash made of good freshly burnt lime and water, and containing in each gallon of limewash either one-fifth of a pint of commercial carbolic acid, or one-fifth of a pint of commercial cresylic acid, or four ounces of fresh dry chloride of lime, the limewash being prepared immediately before use: and

(4.) By the application to every part of the vessel which is ordinarily used for passengers, and with which animals or their droppings have come in contact, of limewash or of water, containing in each gallon of limewash or of water one-fifth of a pint of commercial carbolic acid, or one-fifth of a pint of commercial cresylic acid, or four ounces of fresh dry chloride of lime.

The sweepings of the vessel shall be well mixed with quicklime, or be treated in such other manner as the Privy Council direct or approve, and be effectually removed from contact with animals.

15. Every vessel used for carrying horses for hire, by sea, or on a canal, navigation, or river, shall be cleansed and disinfected in such manner and at such times as the Privy Council from time to time direct or approve.

16. Every loading-pen shall be cleansed and disinfected, either on each day on which it is used and after the using thereof, or at some time not later than twelve o'clock at noon of the next following day, unless the following day is Sunday, and then of the Monday following, and before the using thereof.

17. Every truck and every van shall, on every occasion after an animal is taken out of the same, and before any other animal is placed therein, be cleansed and disinfected.

18. A loading pen, truck, and van shall be cleansed and disinfected in the mode following:

(1.) By the sweeping thereof, and the effectual removal therefrom of all dung, sawdust, litter, and other matter:

(2.) Then by the thorough washing thereof with water:

(3.) Then by the application to the surface or floor thereof, and to all parts thereof above the surface or floor with which animals or their droppings have come in contact, of a coating of limewash made of good freshly burnt lime and water, and containing in each gallon of limewash either one-fifth of a pint of commercial carbolic acid, or one-fifth of a pint of commercial cresylic acid, or four ounces of fresh dry chloride of lime, the limewash being prepared immediately before use.

Appendix, No. 4.

The sweepings of the loading-pen, truck, or van shall be well mixed with quicklime, or be treated in such other manner as the Privy Council direct or approve, and be effectually removed from contact with animals.

19. Every horse-box used for carrying horses or animals on a railway or otherwise on land for hire, and every moveable gangway or passage-way, cage, or other apparatus, used or intended for the loading or unloading of animals on or from a truck or vessel, or otherwise used in connection with the transit of animals, shall be cleased and disinfected in such manner and at such times as the Privy Council from time to time direct or approve.

20. Where an animal at a place of landing or place adjacent thereto is affected with a contagious or infectious disease, that place and every other place where the animal is or has been shall not be used for any animals other than animals brought thereto with that animal (in the same vessel or otherwise) unless and until the place has been cleansed and disinfected.

21. Where a Local Authority exercise the power of causing a place to be cleansed and disinfected, conferred on them by Section 61 of the Act of 1869 or by any Order of Council, the occupier thereof shall give all facilities for that purpose.

22. If anything is done or omitted to be done in contravention of any of the foregoing provisions of this chapter, the owner and the master of the vessel in which, and the railway company carrying animals on or owning or working the railway on which, and the owner of the horse-box in respect of which, and the owner and the occupier of the place of landing or place adjacent thereto or other place in which, and the occupier of any other place in respect of which (as the case may be), the same is done or omitted, shall each be deemed guilty of an offence against this Order.

23. A Local Authority may, from time to time, with the view of preventing the spreading of contagious or infectious disease among animals, make regulations for the following purposes, or any of them:

For requiring the owners, lessees, or occupiers of places used for the holding of markets, fairs, exhibitions, or sales of animals, or for the lairage of animals, to cleanse those places from time to time at their own expense:

For requiring the owners, lessees, or occupiers of those places to disinfect the same or any specified part therof, from time to time, at their own expense, where, in the judgment of the Local Authority, the circumstances are such as to allow of such disinfection being reasonably required:

For prescribing the mode in which such cleansing and such disinfection are to be effected.

If the owner, lessee, or occupier of any such place does any act in contravention of the regulations of a Local Authority under this Article, or fails in any respect to observe the same, it shall not be lawful for him or any other person at any time thereafter, until further Order of the Privy Council, to hold a market, fair, exhibition, or sale of animals in that place, and the holding therein of any market, fair, exhibition, or sale of animals shall be and the same is hereby prohibited accordingly.

If any person holds a market, fair, exhibition, or sale of animals in contravention of this Article, he shall be deemed guilty of an offence against this Order.

24. Where the cleansing and disinfection of a place are directed by the Act of 1869, or any Order of Council, or are ordered by a Local Authority, and the mode of the cleansing and disinfection thereof is not described, the same shall be cleansed and disinfected in the mode following:

(1.) By the sweeping thereof, and the effectual removal therefrom of all dung, sawdust, litter, and other matter:

(2.) Then by the thorough washing thereof with water:

(3.) Then by the application to the surface or floor and to all parts above the surface or floor with which animals or their droppings have come in contact, of a coating of limewash made of good freshly burnt lime and water, and containing in each gallon of limewash either one-fifth of a pint of commercial carbolic acid, or one-fifth of a pint of commercial cresylic acid, or four ounces of fresh dry chloride of lime, the limewash being prepared immediately before use.

The sweeping of the place shall be well mixed with quicklime, or be treated in such other manner as the Privy Council direct or approve, and be effectually removed from contact with animals.

Chapter 3.—*Carcases.*

25. Where, under Section 60 of the Act 1869, a Local Authority cause a horse or animal to be buried, they shall cause its skin to be first so slashed as to make it useless.

The Local Authority may, if they think fit, use for the purpose of such burial any place on the premises of the owner of the horse or animal.

26. A Local

26. A Local Authority authorised by license from the Privy Council to destroy, under Section 60 of the Act of 1869, horses or animals that have died or been slaughtered as therein mentioned, shall cause the carcase of every such horse or animal to be destroyed in the mode following:

The carcase thereof shall be disinfected, and shall then be removed, in charge of an officer of the Local Authority, to a horse-slaughterer's or knacker's yard approved for the purpose by the Privy Council, or other place so approved, and shall be there destroyed by exposure to a high temperature, or by chemical agents.

In every such case the Local Authority shall report to the Privy Council the fact and mode of destruction.

27. A Local Authority may, from time to time, with the view of preventing the spreading of contagious or infectious disease, make regulations, in relation to carcases being within their district of animals (including horses) which have died of a contagious or infectious disease, for the following purposes, or either of them:

For prohibiting or regulating the removal of any such carcase:

For securing the burial of any such carcase as soon as possible in its skin in some proper place, the carcase being covered with a sufficient quantity of quicklime or other disinfectant, and with not less than six feet of earth, and the skin being first so slashed as to be useless:

and, where they are authorised in this behalf by license from the Privy Council, but not otherwise, for the following purpose:

For securing the disinfection of any such carcase, and the removal thereof in charge of an officer of the Local Authority to a horse-slaughferer's or knacker's yard approved for the purpose by the Privy Council or other place so approved, and the destruction of the carcase there by exposure to a high temperature, or by chemical agents.

In every such last-mentioned case the Local Authority shall report to the Privy Council the fact and mode of destruction.

28. If any person throws or places, or causes or suffers to be thrown or placed, into or in any river, stream, canal, navigation, or other water in Great Britain, or into or in the sea within three miles of the shore of Great Britain, the carcase of an animal (including a horse) which has died of a contagious or infectious disease, or been slaughtered in consequence of being affected with a contagious or infectious disease, he shall be deemed guilty of an offence against this Order, unless he shows to the satisfaction of the Justices before whom he is charged that he did not know that the same had so died or been slaughtered, and that he could not with reasonable diligence have obtained that knowledge.

29. If an animal (including a horse) on board a vessel in Great Britain, or within three miles of the shore thereof, dies of a contagious or infectious disease, or is slaughtered in consequence of being affected with a contagious or infectious disease, the master of the vessel shall, with all practicable speed, cause the carcase thereof to be disinfected on board the vessel in such mode as the Privy Council from time to time direct or approve.

If without lawful excuse (proof whereof shall lie on him) he fails to do so, he shall be deemed guilty of an offence against this Order.

30. It shall not be lawful for any person, except with the license of the Privy Council, to dig up, or cause to be dug up, the carcase or any part of the carcase of an animal (including a horse) buried under a regulation of a Local Authority or under the direction of a receiver of wreck.

If any person acts in contravention of this Article, he shall be deemed guilty of an offence against this Order.

Chapter 4.—*Pleuro-Pneumonia.*

31. A Local Authority may, from time to time, with the view of preventing the spreading of pleuro-pneumonia, make regulations for the following purpose:

For prohibiting or regulating the removal of the carcases of any cattle that have been slaughtered in consequence of being affected with pleuro-pneumonia.

32. Every Local Authority shall cause all cattle affected with pleuro-pneumonia within their district to be slaughtered, and the following consequences shall ensue:

(1.) The Local Authority shall, by way of compensation for every animal so slaughtered, pay to the owner thereof such sum not exceeding thirty pounds and not exceeding three-fourths of the value of the animal immediately before it was affected with pleuro-pneumonia, as to the Local Authority seems fit.

(2.) They may require the value of the animal to be ascertained by their officers, or by arbitration, and generally they may impose conditions respecting evidence of the slaughter and value of the animal.

(3.) They may, if they think fit, withhold compensation in respect of an animal, where the owner or person having charge thereof has in their judgment been guilty, in relation to the animal, of any act in contravention of the Act of 1869, or of any Order, regulation, or license, of the Privy Council, or of a Local Authority, or has, in relation to the animal, failed to comply with the provisions of the Act of 1869, or

Appendix, No. 4.

of any such Order, regulation or license, in respect of the giving of notice of disease, or in any other respect.

33. Where the Local Authority under this Chapter cause an animal to be slaughtered, the owner thereof shall not be entitled to recover in respect of the insurance thereof any sum which, together with the compensation which he receives for the animal under this Chapter from the Local Authority, would exceed the sum which he would have been entitled to receive in respect of the insurance.

34. Every Local Authority shall keep, in such manner and form as the Privy Council from time to time direct or approve, a record, stating the date of any order made by them for slaughter under this Chapter and the execution of the order, and other proper particulars.

That record shall be evidence if a question arises concerning an order for the slaughter of an animal, or concerning compensation in respect thereof.

35. A Local Authority authorised by the Privy Council to put in operation this Article, may, from time to time, with the view of preventing the spreading of pleuro-pneumonia, prohibit or regulate the holding of any specified market, fair, auction, sale, or exhibition, of cattle within their district.

Chapter 5.—*Foot-and-Mouth Disease.*

36. A Local Authority may, from time to time, with the view of preventing the speading of foot-and-mouth disease, make regulations for the following purpose:

For prohibiting or regulating the movement out of a field, shed, or other premises in which foot-and-mouth disease has been found to exist, or from any land or building contiguous thereto in the same occupation, of an animal affected with foot-and-mouth disease, or that has been in contact with or in the same field, shed, or other premises with an animal affected with foot-and-mouth disease;

but nothing in this Article, or in any regulation of a Local Authority thereunder, shall be deemed to authorise the movement of an animal in contravention of Section fifty-seven of the Act of 1869, or of any other provision of that Act.

37. Where an animal becomes affected with foot-and-mouth disease while exposed or placed or being carried, led, or driven, as in Section fifty-seven of the Act of 1869 mentioned, it may, notwithstanding anything in that Section, be, with a license of an officer of the Local Authority authorised in this behalf, but not otherwise, moved for purposes of feeding, or watering, or other ordinary purposes connected with the breeding or rearing of animals, but not for any other purpose, to any land or building in the occupation of the owner of the animal, or for slaughter to the nearest slaughter-house or some other slaughter-house approved by the Local Authority.

The form of movement licensed in the First Schedule, or a form to the like effect, with such variations as circumstances require, shall be used under this Article.

Chapter 6.—*Sheep-Scab.*

38. A Local Authority may, from time to time, with the view of preventing the spreading of sheep-scab, make regulations for the following purposes, or either of them:

For prohibiting a person from having in his possession or under his charge a sheep affected with sheep-scab, without treating that sheep, or causing it to be treated, with some dressing or dipping or other remedy for sheep-scab.

For prohibiting or regulating the movement out of a field, shed, or other premises in which sheep-scab has been found to exist, of a sheep affected with sheep-scab, or that has been in contact with or in the same field, shed, or other premises with a sheep affected with sheep-scab;

but nothing in this Article, or in any regulation of a Local Authority thereunder, shall be deemed to authorise the movement of a sheep in contravention of Section fifty-seven of the Act of 1869, or of any other provision of that Act.

Chapter 7.—*Glanders.*

39. Where a person having a horse in his possession or under his charge gives notice under Article 5 that the horse is affected with glanders, or any person is convicted of an offence against this Order by reason of his having failed to give such a notice, then, if at any time thereafter it appears to the Local Authority, on a special report of an Inspector, being a member of the Royal College of Veterinary Surgeons, that the horse is affected with glanders, and the horse is alive at the end of fourteen days after the receipt by the Local Authority of that special report, the Local Authority may serve on the owner of the horse a notice in writing requiring him to slaughter the horse, or permit them to slaughter it, within a time specified in the notice.

If in any case the owner fails to comply with the requisition of the notice, he shall be deemed guilty of an offence against this Order, unless he shows to the satisfaction of the Justices before whom he is charged that the horse is not affected with glanders, or that the slaughter thereof is for any reason unnecessary or inexpedient.

The provisions of this Article may be put in force, from time to time, as often as occasion requires, in relation to the same horse, on a further special report, as aforesaid.

40. A Local

40. A Local Authority may, from time to time, with the view of preventing the spreading of glanders, make regulations for the following purpose:

For prohibiting or regulating the movement out of a field, stable, shed, or other premises in which glanders has been found to exist, of a horse affected with glanders, or that has been in contact with or in the same field, stable, shed, or other premises with a horse affected with glanders:

but nothing in this Article, or in any regulation of a Local Authority thereunder, shall be deemed to authorise the movement of a horse in contravention of Section fifty-seven of the Act of 1869, or of any other provision of that Act.

Chapter 8.—*Farcy.*

41. Farcy is a contagious disease for the purposes of the Act of 1869, and the provisions of Sections sixty and sixty-one of that Act specifying glanders shall extend to farcy.

42. A Local Authority may, from time to time, with a view of preventing the spreading of farcy, make regulations for the following purpose:

For prohibiting or regulating the movement out of a field, stable, shed, or other premises in which farcy has been found to exist, of a horse affected with farcy, or that has been in contact with or in the same field, stable, shed, or other premises with a horse affected with farcy;

but nothing in this Article, or in any regulation of a Local Authority thereunder, shall be deemed to authorise the movement of a horse in contravention of Section fifty-seven of the Act of 1869, or of any other provision of that Act.

PART II.

Transit of Animals.

Chapter 9.—*Transit by Sea.*

43. In this Part the term animals extends to all ruminating animals and to horses.

44. With respect to places used for animals on board vessels, the following regulations shall have effect:

(1.) Every such place shall be divided into pens by substantial divisions.

(2.) Each pen shall not exceed nine feet in breadth, or fifteen feet in length.

(3.) The floor of each pen shall have proper battens or other foot-holds thereon.

(4.) Every such place, if inclosed, shall be ventilated by means of separate inlet and outlet openings, of such size and position as will secure a proper supply of air to the place in all states of weather.

45. Between each first day of November and the next following thirtieth day of April (both days inclusive) freshly shorn sheep shall not be carried on the deck of a vessel.

46. Where sheep are carried on the deck of a vessel, proper gangways shall be provided either between or above the pens in which they are carried.

47. Animals landed from a vessel shall, on a certificate of an Inspector of the Privy Council, certifying to the effect that the foregoing regulations, or some or one of them, have not or has not been observed in the vessel, be detained, at the place of landing, or in lairs adjacent thereto, until the Privy Council otherwise direct.

Chapter 10.—*Shipping and Unshipping Places.*

48. At every place where animals are put on board of or landed from vessels, provision shall be made, to the satisfaction of the Privy Council, for a supply of water for animals; and water shall be supplied there, gratuitously, on request of any person having charge of any animal.

49. At every place where animals are landed from vessels, provision shall be made, to the satisfaction of the Privy Council, for the speedy and convenient unshipment of animals, and for a supply of food for them; and food shall be supplied there, on request of any person having charge of any animal, at such price as the Privy Council, from time to time, approve.

Chapter 11.—*Transit by Railway.*

50. Every truck shall be provided with spring buffers, and the floor thereof shall have proper battens or other foot-holds thereon.

51. A railway company shall not allow any truck to be overcrowded so as to cause unnecessary suffering to the animals therein.

Appendix, No. 4.

52. Between each first day of November and the next following thirtieth day of April (both days inclusive), trucks used for carrying sheep freshly shorn and unclothed shall be covered and inclosed so as to protect the sheep from the weather, but shall be properly ventilated.

Chapter 12.—*Offences.*

53. If anything is done or omitted to be done in contravention of any of the foregoing provisions of this Part, the owner and the master of the vessel in which,—and the owner and the occupier of the place where animals are put on board of or landed from vessels at which, and the railway company carrying animals on or owning or working the railway on which,—and also, in case of the overcrowding of a truck on a railway, or of the carrying on a railway of sheep freshly shorn and unclothed, the consignor of the animals in respect of which—(as the case may be), the same is done or omitted, shall each be deemed guilty of an offence against this Order:

But no person shall be liable to a penalty under this Part in respect of sheep as freshly shorn, where it is proved that the sheep have not been shorn within sixty days before the time of the commission of the alleged offence.

Chapter 13.—*Water Supply on Railways.*

54. The railway companies working the railways named in the Second Schedule shall make a provision of water, to the satisfaction of the Privy Council, at each of the stations therein named, for animals carried or about to be or having been carried on those railways.

PART III.

Foreign Animals.

Chapter 14.—*Foreign Animals Generally.*

55. This Part shall have effect subject and by way of supplement to Parts I. and II.; and nothing in this Part shall interfere with the execution or discarge by a Local Authority, or by an Inspector or other officer of a Local Authority, or by a constable, or by any person, of any power or duty conferred or imposed on them or him by the Act of 1869, or by Part I. or Part II., or by any other Order of Council, or relieve them or him from the obligation to execute and discharge the same.

56. This Chapter applies to all foreign animals.

57. In Regulation 5 of the Fourth Schedule to the Act of 1869 the words Privy Council shall be deemed to be substituted for the words Commissioners of Customs.

58. Where a vessel comes into port having on board foreign animals maimed or injured on the voyage, the owner, consignee, or other person in charge thereof, or the master of the vessel, shall, if directed by the Inspector of the Privy Council, or may if he thinks fit, slaughter those animals or any of them immediately on their being landed; but the carcase, hide, skin, hair, wool, horn, hoof, or offal of any such animal or any part thereof is not to be moved from the place of landing, or some lair or slaughter-house adjacent thereto approved by the Privy Council, without a certificate from the Inspector certifying that it is not likely to introduce or spread contagious or infectious disease.

59. Where any regulation relating to foreign animals is in operation, the Local Authority and all constables and police officers shall assist the Inspector of the Privy Council to carry the same into effect and to enforce the same, and shall do or cause to be done all things from time to time necessary for the effectual execution of the same.

60. If a vessel arriving has on board the carcase of a foreign animal (including a horse) which was taken on board for the purpose of importation, but has died on the voyage, the master of the vessel shall, immediately on arrival, report the fact to the Principal Officer of customs at the port.

The carcase shall not be landed or discharged from the vessel without the permission in writing of the Principal Officer.

61. Where it appears to the Principal Officer of Customs with respect to any foreign animal (including any animal not within the definition of animal in this Order), or any hay, straw, fodder, or other article, brought by sea, that contagious or infectious disease may be thereby conveyed to animals, he may seize and detain the same, and he shall forthwith report the facts to the Commissioners of Customs, who may give such directions as they think fit, either for the slaughter or destruction or the further detention thereof, or for the restoration thereof, to the owner on such conditions, if any (including payment by the owner of expenses incurred by them in respect of detention thereof), as they think fit.

62. A defined part of a port for cattle shall be deemed a defined part of the same port for animals.

63. Foreign

63. Foreign animals shall not be landed at any place except the ports following:

Barrow-in-Furness.	Grimsby.	Newhaven.
Bristol.	Hartlepool.	Penzance.
Cardiff.	Harwich.	Plymouth.
Dartmouth.	Hull.	Portsmouth.
Dover.	Kirkwall.	Shields, North.
Falmouth.	Leith.	Shields, South.
Folkestone.	Littlehampton.	Shoreham.
Glasgow.	Liverpool.	Southampton.
Goole.	London.	Sunderland.
Grangemouth.	Middlesbrough.	Weymouth.
Granton.	Newcastle-upon-Tyne.	

64. Foreign animals shall not be landed except in such manner, within such times, and subject to such surpervision and control, as the Commissioners of Customs from time to time direct, and when landed shall be placed under the charge of an Inspector of the Privy Council, and shall be dealt with in accordance with instructions from time to time given by the Privy Council.

65. Foreign animals shall be detained in some lair or other proper place adjacent to the place of landing, and shall be inspected by an Inspector of the Privy Council.

The detention shall continue for at least twelve hours reckoned from the time of the landing of the last animal of the cargo, whether the whole cargo is landed continuously without intermission at one place, or part thereof is landed at one place and part at another place, or parts thereof are landed at different times at the same place.

If a contagious or infectious disease is detected in any animal of the cargo, every animal in each separate part of the cargo shall be dealt with as if that disease had been detected in an animal in each separate part.

If more contagious or infectious diseases than one are detected in an animal or animals of the cargo, every animal in each separate part of the cargo shall be slaughtered, destroyed, or otherwise dealt with in accordance with instructions from time to time given by the Privy Council.

This Article is subject to the provisions of Chapter 20.

66. Where a foreign animal forming part of one cargo has not been kept separate from a foreign animal forming part of another cargo, all the animals forming those cargoes shall be treated as forming one cargo.

67. An Inspector of the Privy Council may detain, for any period that he thinks necessary or proper, a foreign animal (including an animal not within the definition of animal in this Order) which he has reason to suspect is affected with or may introduce a contagious or infectious disease.

68. If any foreign sheep or swine are found to be affected with a contagious or infectious disease (not being cattle-plague), they shall be kept separate from those of the same cargo not found to be affected with a contagious or infectious disease; and notwithstanding Article 65 the slaughter of those not found to be so affected may, with the permission of an Inspector of the Privy Council, be begun at any time before the expiration of the twelve hours detention, and be continued without intermission.

69. No animal, carcase, hide, meat, or offal, and no hay, straw, litter, or other thing commonly used for food of animals, or otherwise for or about animals, and no dung, shall be removed from the lair or other place adjacent to the place of landing where foreign animals are detained, except with the permission of an Inspector of the Privy Council.

If the Inspector is of opinion that any such animal or thing as aforesaid may introduce a contagious or infectious disease, the same shall be slaughtered, destroyed, or otherwise dealt with in accordance with instructions from time to time given by the Privy Council.

CHAPTER 15.—*Cattle from Austria-Hungary, Belgium, France, Germany (subject to Chapter* 18.—Cattle from Schleswig and Holstein), *Greece, Italy, and Turkey.*

70. All the regulations of the Fourth Schedule to the Act of 1869 shall apply to cattle brought from any of the countries comprised in the following

Schedule:

The Austrian-Hungarian Empire.
Belgium.
France.
The German Empire (subject to Chapter 18.—*Cattle from Schleswig and Holstein*).
The dominions of the King of the Hellenes.
The dominions of the King of Italy.
The dominions of the Sultan.

Appendix, No. 4.

71. Cattle brought from any of the countries scheduled in Article 70 shall not be landed except at a landing-place within the respective defined parts of the following ports:

Dover.	Littlehampton.
Glasgow.	London.
Goole.	Middlesbrough.
Granton.	Newcastle-upon-Tyne.
Grimsby.	Plymouth.
Hartlepool.	Shields, North.
Hull.	Southampton.
Leith.	Sunderland.

CHAPTER 16.—*Animals in Defined Parts of Ports.*

72. All cattle landed in a defined part of a port shall be slaughtered within ten days after the landing thereof, exclusive of the day of landing.

But this Article shall operate subject to the special provisions of Orders of Council defining parts of ports.

73. Foreign cattle, sheep, goats, and swine, in a defined part of a port (except sheep, goats, and swine in a defined part of the Port of London) shall be marked as follows:

Cattle.—By clipping a broad arrow, about five inches long, on the left quarter (in addition to clipping the hair off the end of the tail, as prescribed by Regulation 4 of the Fourth Schedule to the Act of 1869).

Sheep and Goats.—By clipping a broad arrow, about four inches long, on the forehead.

Swine.—By printing a broad arrow about three inches long, on the left side, with the following composition, namely:—rosin, five parts; oil of turpentine, two parts; red ochre, one part; melted, and used warm.

CHAPTER 17.—*Animals landed out of Defined Parts of Ports.*

74. The landing of foreign cattle elsewhere than in a defined part of a port shall be subject to the following conditions:

First. That the vessel in which they are imported has not, within three months before taking them on board, had on board any cattle exported or carried coastwise from a port or place in any country which at the time of that exportation or carrying coastwise was scheduled in Article 70, or from a port or place in the dominions of the Emperor of Russia.

Second. That the vessel has not, since taking on board the cattle imported, entered any such port or place.

Third. That the cattle imported have not, while on board the vessel, been in contact with any cattle exported or carried coastwise from any such port or place, or with any sheep or goats exported or carried coastwise from a port or place in the dominions of the Emperor of Russia.

And those foreign cattle shall not be landed elsewhere than in a defined part of a port, unless and until—

(1.) The owner or charterer of the vessel in which they are imported, or his agent in Great Britain, has entered into a bond to Her Majesty the Queen, in a sum not exceeding one thousand pounds, with or without a surety or sureties, to the satisfaction of the Commissioners of Customs, conditioned for the observance of the foregoing conditions in relation to cattle to be landed under this Chapter from the vessel; and

(2.) The master of the vessel has on each occasion of importation of cattle therein satisfied the Commissioners of Customs or their proper officer, by declaration made and signed or otherwise, that none of the cattle then imported therein have been exported from a port or place in any of the countries scheduled in Article 70, or from a port or place in the dominions of the Emperor of Russia, and that the foregoing conditions have been observed in relation to all the cattle then imported therein.

75. Foreign animals landed elsewhere than in a defined part of a port shall not be moved therefrom or be allowed to come in contact with any other animals until they have been examined by an inspector of the Privy Council; and according to the result of that inspection the following consequences shall ensue:

(1.) If the Inspector certifies that all the animals landed from the same vessel are free from contagious or infectious disease, they shall thereupon cease to be deemed foreign animals.

(2.) If

(2.) If the Inspector certifies, with respect to any one or more of the animals landed from the vessel, that it or they is or are affected with a contagious or infectious disease, all the animals then imported in the vessel shall be slaughtered or otherwise dealt with in accordance with instructions from time to time given by the Privy Council.

CHAPTER 18.—*Cattle from Schleswig and Holstein.*

76. This Chapter applies to cattle brought from a port or place in either of the parts of the German Empire respectively known as Schleswig and as Holstein, and to no other cattle.

77. This Chapter shall take effect from and immediately after the twenty-third day of June in each year, and shall cease to have effect from and immediately after the seventh day of December following, and for and in respect of that period in each year Schleswig and Holstein shall not, for the purposes of Article 70, be deemed parts of the German Empire.

78. Notwithstanding Article 70, the regulations of the Fourth Schedule to the Act of 1869, shall not apply to cattle brought in conformity with the provisions of this Chapter.

79. All the provisions of Chapter 17 shall apply to the landing elsewhere than in a defined part of a port of cattle brought under this Chapter from a port of Schleswig or of Holstein, and, in addition, the landing thereof shall be subject to the following conditions:

First. That the owner, agent, or charterer of the vessel in which they are brought has in the year of importation received the special permission of the Privy Council to employ the vessel in the trade of importation of cattle from ports of Schleswig and of Holstein, or of either of them, under this Chapter.

Second. That the cattle imported are accompanied by a declaration and certificates, such as are indicated in the forms in the Third Schedule, or to the like effect.

80. If an Inspector of the Privy Council is of opinion, on the examination of any cattle imported under this Chapter, that the declaration accompanying them required by Article 79 is untrue in any particular, as regards any one of the cattle in the vessel, then all the animals in the vessel shall be detained and dealt with in accordance with instructions from time to time given by the Privy Council.

81. If the declaration accompanying any cattle imported under this Chapter, required by Article 79, is untrue in any particular, as regards any one of the cattle to which it relates, the master of the vessel shall be deemed guilty of an offence against this Order with respect to all the cattle to which the declaration relates, unless he shows to the satisfaction of the justices before whom he is charged, that he did not know of the same being so untrue, and that he could not with reasonable diligence have obtained that knowledge.

CHAPTER 19.—*Animals and Articles from Russia.*

82. Cattle brought from a port or place in the dominions of the Emperor of Russia, and cattle, sheep, or goats being or having been on board a vessel at the same time with cattle so brought, shall not be landed in Great Britain.

83. The following articles brought from a port or place in the dominions of the Emperor of Russia shall not be landed in Great Britain:

Manure; hay.

84. All the regulations of the Fourth Schedule to the Act of 1869 shall apply to sheep and goats (not prohibited) brought to Great Britain from the dominions of the Emperor of Russia.

85. Sheep and goats so brought shall not be landed except at a landing-place within the respective defined parts of the ports named in Article 71, and they shall be slaughtered within ten days after the landing thereof, exclusive of the day of landing.

But this Article shall as regards the ports of

Granton,	Southampton,
Leith,	

operate subject to the special provisions of Orders of Council defining parts of those three ports.

86. The following articles brought from a port or place in the dominions of the Emperor of Russia shall not be landed in Great Britain, except at a port named in Article 63, and shall not be removed from the place where they are landed except with a certificate of an Inspector of the Privy Council, certifying that they are not likely to introduce contagious or infectious disease:

Meat; hides; fat; hoofs; horns.

Appendix, No. 4.

CHAPTER 20.—*Milch Cows and Surplus Ships' Stores.*

87. Notwithstanding Chapters 15 and 19, the regulations of the Fourth Schedule to the Act of 1869 shall not apply to a milch-cow brought from a port or place in one of the countries scheduled in Article 70, or from a port or place in the dominions of the Emperor of Russia, provided the Commissioners of Customs are, on each occasion of the same being so brought, satisfied that it has been taken from Great Britain to that port or place, and has not been landed at that port or place, or at any other port or place in any of those countries or in those dominions, and has not been in contact with any other foreign animal (not being an animal coming under the provisions of this chapter).

In relation to the landing, on any occasion, elsewhere than in a defined part of a port, of any such milch-cow, the condition that the vessel has not, since taking on board the cattle imported, entered a port or place in any of those countries or in those dominions, shall not operate, provided the Commissioners of Customs are, on each occasion, satisfied as aforesaid.

Every such milch-cow shall, if landed, be detained for at least twelve hours in some lair or other proper place adjacent to the place of landing, unless accompanied with a certificate of an Inspector of the Privy Council, certifying that it is free from contagious or infectious disease.

88. A foreign animal which is brought from a port or place in a country other than one of the countries scheduled in Article 70, or the dominions of the Emperor of Russia, but which was not taken on board for importation into Great Britain, and has not been in contact with any other foreign animal (not being an animal coming under the provisions of this Chapter), shall, if landed, be detained for at least twelve hours in some lair or other proper place adjacent to the place of landing, unless accompanied with a certificate of an Inspector of the Privy Council, certifying that it is free from contagious or infectious disease.

PART IV

GENERAL PROVISIONS.

CHAPTER 21.—*Local Authorities.*

89. A Local Authority may, from time to time, revoke or alter any Order, prohibition, or regulation made by them under the Act of 1869, or any Order of Council.

90. Every Local Authority shall send to the Privy Council a copy of every Order, prohibition, or regulation made by them.

91. If the Privy Council are satisfied on inquiry, with respect to any prohibition or regulation made by a Local Authority under the Act of 1869, or any Order of Council, that the same is of too restrictive a character, or otherwise objectionable, and direct the revocation thereof, the same shall thereupon cease to operate.

92. Whenever an inspector is appointed under Section 12 of the Act of 1869, or there is any change in the name or address or district of such an Inspector, the Local Authority shall forthwith report the same to the Privy Council.

93. Except where otherwise provided for in any Order of Council, a Local Authority shall provide and supply, without charge, printed copies of documents or forms requisite under the Act of 1869, or any Order of Council.

94. Every regulation made by a Local Authority under any Order of Council shall (where no other provision is made for the publication thereof) be published by advertisement in a newspaper circulating in the district of the Local Authority.

95. All Orders and regulations made by a Local Authority under any former Order of Council and in force at the commencement of this Order shall, as far as the same are not varied by or inconsistent with this Order, remain in force until altered or revoked by the Local Authority.

96. Forms of Movement Licenses which have been before the date of this Order printed or otherwise prepared for use by a Local Authority, under the Foot-and-Mouth Disease Order of 1874, may be used for the purposes of Article 37.

CHAPTER 22.—*General Offences.*

97. If any person fails to give, produce, do, or observe any notice, license, thing, or rule, which he is by this Order, or by any Order or regulation of a Local Authority thereunder required to give, produce, do, or observe, he shall be deemed guilty of an offence against this Order.

98. If

98. If any animal (including a horse) or anything is moved or dealt with in contravention of this Order, or of any Order or regulation of a Local Authority thereunder, the owner thereof and the person directing or permitting the moving thereof, or dealing therewith, and the person or company having charge of or removing or conveying the same, shall each be deemed guilty of an offence against this Order.

(signed) *C. L. Peel.*

THE FIRST SCHEDULE.

Foot-and-Mouth Disease.—Form of Movement License.

* No.

Dated this of 18 .

Name and address of owner, or his or her agent -

Number of animals

Description of ditto

Route

From

Through

To

Purpose

[To be signed]

* This number must correspond with that on the license.

This counterfoil is to be retained by the person granting the license.

Caution.—Persons fabricating or altering or committing other offences with respect to licenses are liable, under The Contagious Diseases (Animals) Act, 1869, to fine or imprisonment.

FOOT-AND-MOUTH DISEASE.

Movement License.

* No.

I, *A.B.*, of , being an Officer authorised by the Local Authority of the of under the Order of the Lords of the Privy Council in this behalf to issue licenses for the movement of animals becoming affected with foot-and-mouth disease while exposed or placed or being carried, led, or driven, as mentioned in Section 57 of The Contagious Diseases (Animals) Act, 1869, hereby license the person undermentioned, being the owner of the undermentioned animals, or his [*or* her] agent, to move the said animals from to by the undermentioned route for the undermentioned purpose:

Number and Description of Animals.	Name and Address of Owner, or his or her Agent.	Route to be taken.	Purposes for which Movement is licensed.	Remarks.
		From Through To		

The time allowed for removals under this license is two days, from and after to-day.

[To be signed]

Dated this day of 18 .

* This number must correspond with that on the counterfoil.

Caution.—Persons fabrica ing or altering or committing other offences with respect to licenses are liable, under The Contagious Diseases (Animals) Act, 1869, to fine or imprisonment.

THE SECOND SCHEDULE.

Railway Stations at which Water is to be provided for Animals.

Name of Station.	Name of Railway.
Aberdeen	Caledonian.
Aberfeldy	Highland.
Abergavenny	Great Western.
Accrington	Lancashire and Yorkshire.
Afon Wen	Cambrian.
Alford	Great Northern.
Alford (Aberdeenshire)	Great North of Scotland.
Almond Bank	Caledonian.
Alnwick	North-Eastern.
Alston	North-Eastern.
Alyth	Caledonian.
Ampthill	Midland.
Annan	Glasgow and South-Western.
Appledore	South-Eastern.
Arbroath	Caledonian.
Ardler	Caledonian.
Ardrossan	Glasgow and South-Western.
Ardwick	Manchester, Sheffield, and Lincolnshire.
Arundel	London, Brighton, and South Coast.
Ashbourne	North Staffordshire.
Ashford	South-Eastern.
Ashton-under-Lyne	Lancashire and Yorkshire.
Ashton-under-Lyne	Manchester, Sheffield, and Lincolnshire.
Aspatria	Maryport and Carlisle.
Auchterarder	Caledonian.
Aylesbury	Aylesbury and Buckingham, and Great Western.
Aylesbury	London and North-Western.
Ayr	Glasgow and South-Western.
Bacup	Lancashire and Yorkshire.
Balfron	North British.
Balloch	North British.
Banbury	Great Western.
Banbury	London and North-Western.
Banff	Great North of Scotland.
Bangor	London and North-Western.
Barnard Castle	North-Eastern.
Barnet	Great Northern.
Barnsley	Lancashire and Yorkshire.
Barnstaple	London and South-Western.
Barrhead	Glasgow, Barrhead, and Kilmarnock Joint.
Barrow	Furness.
Basingstoke Junction	London and South-Western.
Beattock	Caledonian.
Beccles	Great Eastern.
Bedale	North-Eastern.
Bedford	London and North-Western.
Bedford	Midland.
Belford	North-Eastern.
Bellgrove	City of Glasgow Union.
Beverley	North-Eastern.
Bicester	London and North-Western.
Birkenhead (New Station).	Great Western.
Birkenhead (Joint Station).	London and North-Western, and Great Western.
Birmingham	Great Western.
Birmingham	London and North-Western.
Birmingham	Midland.
Bishop Auckland	North-Eastern.
Bishops Stortford	Great Eastern.
Bishopstoke Junction	London and South Western.
Blackburn	Lancashire and Yorkshire.
Blackford	Caledonian.
Blairgowrie	Caledonian.
Bletchley	London and North-Western.
Blythe Bridge	North Staffordshire.
Bodmin-road	Cornwall.
Bolton	Lancashire and Yorkshire.
Bolton	London and North-Western.
Bonar Bridge	Highland.
Boroughbridge	North-Eastern.
Boston	Great Northern.
Botley	London and South-Western.
Bradford	Great Northern.
Bradford	Lancashire and Yorkshire.
Bradford	Midland.
Braintree	Great Eastern.
Brechin	Caledonian.
Bridge of Dun	Caledonian.
Bridgwater	Bristol and Exeter.
Bridlington	North Eastern.
Brighouse	Lancashire and Yorkshire.
Bristol	Bristol and Exeter.
Bristol	Great Western.
Bristol	Midland.
Brockholes	Lancashire and Yorkshire.
Bromsgrove	Midland.
Broughty Ferry	Caledonian.
Builth	Mid Wales.
Bullgill	Maryport and Carlisle.
Burnley (Bank Top)	Lancashire and Yorkshire.
Burntisland	North British.
Burslem	North Staffordshire.
Burton	Midland.
Bury	Lancashire and Yorkshire.
Bury St. Edmund's	Great Eastern.
Buxton	Midland.
Callandar	Caledonian.
Cambridge	Great Eastern.
Cambridge	London and North-Western.
Canterbury	London, Chatham, and Dover.
Canterbury	South-Eastern.
Cardiff	Rhymney.
Carlisle	Caledonian.
Carlisle	London and North-Western.
Carlisle	Maryport and Carlisle.
Carlisle	North British.
Carlisle (Goods)	North-Eastern.
Carmarthen	Great Western.
Carmarthen	Llanelly Railway and Dock.
Carnarvon	London and North-Western.
Carnforth	London and North-Western.
Carnoustie	Caledonian.
Castle Douglas	Glasgow and South-Western.
Castleton	North-Eastern.
Chatburn	Lancashire and Yorkshire.
Chatham	London, Chatham, and Dover.
Chelmsford	Great Eastern.
Chester (Joint Station)	London and North-Western, and Great Western.
Chesterfield	Midland.
Chichester	London, Brighton, and South Coast.

Name of Station.	Name of Railway.
Chippenham	Great Western.
Cirencester	Great Western.
Cleckheaton	Lancashire and Yorkshire.
Clitheroe	Lancashire and Yorkshire.
Cockermouth	Cockermouth, Keswick, and Penrith.
Colchester	Great Eastern.
Colne	Lancashire and Yorkshire.
Congleton	North Staffordshire.
Cooper Bridge	Lancashire and Yorkshire.
Cornhill	North-Eastern.
Corwen	Great Western.
Cosham	London and South-Western.
Coupar Angus	Caledonian.
Craven Arms	London and North-Western and Great Western (Joint Lines).
Crediton	London and South-Western.
Creetown	Caledonian.
Cresswell	North Staffordshire.
Crewe	London and North-Western.
Criccieth	Cambrian.
Crieff	Caledonian.
Croston	Lancashire and Yorkshire.
Cupar	North British.
Dalkeith (or Eskbank)	North British.
Dalwhinnie	Highland.
Darlington (N.E.)	North-Eastern.
Darlington (S. & D.)	North Eastern.
Dartford	South-Eastern.
Denbigh	London and North-Western.
Denny	Caledonian.
Derby	Midland.
Dereham	Great Eastern.
Dewsbury	London and North Western.
Didcot	Great Western.
Dingwall	Highland.
Diss	Great Eastern.
Doncaster	Great Northern.
Doncaster	Midland.
Dorchester	London and South Western.
Doune	Caledonian.
Dover	London, Chatham, and Dover.

THE THIRD SCHEDULE.

Schleswig and Holstein.—Declaration and Certificates.

DECLARATION.

I, *A.B.*, of , being the agent for the owners [*or* charterers] of the vessel , of , hereby solemnly and sincerely declare to the best of my knowledge and belief, that each of the cattle described below, now about to be put on board the said vessel, has been bred and fed exclusively in Denmark, Schleswig, and Holstein, or some or one of them, and has never been in contact with cattle not so exclusively bred and fed, and has not within the last three months been carried at sea on any vessel.

Dated this day of

[To be signed] *A.B.*

Description of Cattle above referred to.

	Number *
Bulls	
Oxen	
Cows	
Calves	

* Number to be expressed both in words and figures.

CERTIFICATE BY CONSULAR OFFICER.

I, *C. D.*, Vice consul [*or as the case may be*] of Her Britannic Majesty at the Port of Husum [*or as the case may be*], hereby certify that the foregoing declaration was made by the above-named *A. B.* before me, this day of , 18 , and that I know the said *A. B.*, and that he is worthy of belief.

[To be signed] *C. D.*

[and Consular Seal to be affixed.]

CERTIFICATE BY OFFICER OF ROYAL PRUSSIAN PROVINCIAL COUNCIL OFFICE.

I, *X. Y.*, hereby certify that I have this day seen the cattle above described, and that I believe the statements respecting the breeding, feeding, and carrying of each of them contained in the foregoing declaration of *A. B.*, to be true in all respects.

[To be signed] *X. Y.*,

Officer of the Royal Prussian Provincial Council Office, at the Port of Husum [*or as the case may be*].

(375.)

SOUTHAMPTON.

At the Council Chamber, Whitehall, the 5th day of June 1875.

By the Lords of Her Majesty's Most Honourable Privy Council.

THE Lords of Her Majesty's Most Honourable Privy Council, by virtue and in exercise of the powers in them vested under The Contagious Diseases (Animals) Act 1869, and of every other power enabling them in this behalf, do hereby define the parts of the Port of Southampton, in the town and county of that name, within which foreign cattle may be landed for slaughter and quarantine respectively, as follows:

(1.) All that space in the borough of Southampton on the property of the Southampton Dock Company, lying between the River Itchen and a line commencing at the water of the said river at the Mooring Dolphin at the South East Quay, and following the line of the South East Quay, and skirting the boundary wall of the Open Dock across the entrances of the three Graving Docks to the turntable at the soth-west corner of the Open Dock, thence in a southerly direction for a distance of four hundred feet along the outer line of railway to the junction of the two lines of railway on the south-west sides of the said Graving Docks, and continuing along the outer line of railway to a point immediately opposite the head of the East Graving Dock, thence in an easterly direction to the water of the said River Itchen, which space is coloured pink on the plan of Southampton Docks, deposited at the Privy Council Office, a copy of which is deposited at the office of the Town Clerk of the borough of Southampton:

(2.) All that space on the property of the Southampton Dock Company, lying between the dock wall forming the southern side of the Close Dock, and a line from the south-western corner of the said dock in continuation of the said dock wall to the western boundary wall of the said property, and a line commencing at the south-eastern corner of the Close Dock, and running southward in continuation of the eastern wall of the said dock for a distance of seventy-two yards, thence in a westerly direction on the southern side of the said Dock Company's sheds on a line parallel with the said wall forming the southern side of the said dock and extending to the said western boundary wall, which space is coloured blue on the said plan and copy deposited as aforesaid; which landing-place is hereinafter referred to as (No. 2):

And do hereby prescribe as follows:

Regulation Six of the Fourth Schedule to The Contagious Diseases (Animals) Act, 1869, shall not apply to cattle landed within the landing-place (No. 2), and such cattle shall be placed in pens, sheds, or other receptacles within that landing-place properly prepared for their reception by the consignees or other persons, and approved for that purpose by the Commissioners of Her Majesty's Customs, and shall be kept therein at the sole expense of the owner or consignee, subject to the supervision and control of the said Commissioners, and in accordance with any regulations made by them, for such period, not exceeding fourteen days, as the Privy Council from time to time prescribe, and any cattle so landed and

Appendix, No. 4.

kept may be moved to any place out of the limits of the landing-place (No. 2), with a certificate of the Veterinary Inspector appointed in that behalf by the Privy Council, certifying that they are free from contagious or infectious disease; but not otherwise.

This Order shall take effect from and immediately after the twenty-third day of June, One thousand eight hundred and seventy-five.

(signed) *C. L. Peel.*

(380.)

At the Council Chamber, Whitehall, the 18th day of January 1876.

By the Lords of Her Majesty's Most Honourable Privy Council.

PRESENT:

Lord President. | Viscount Sandon.

THE Lords and others of Her Majesty's Most Honourable Privy Council, by virtue and in exercise of the powers in them vested under the Contagious Diseases (Animals) Act, 1869 (in this Order referred to as the Act of 1869), and of every other power enabling them in this behalf, do order, and it is hereby ordered, as follows:—

1. This Order shall take effect from and immediately after the twenty-third day of January, One thousand eight hundred and seventy-six; and words in this Order have the same meaning as in the Act of 1869.

2. The Animals Order of 1875 shall be read and have effect as if Granton and Leith were not named in Article 71 or Article 85 of that Order.

3. The Orders described in the Schedule to this Order are hereby revoked.

4. Nothing in this Order shall be deemed to invalidate or make unlawful anything done under the said Orders, or either of them, before the date when this revocation takes effect, or interfere with the institution or prosecution of any proceeding in respect of any offence committed against, or any penalty incurred under, the said Orders, or either of them.

(signed) *C. L. Peel.*

SCHEDULE.

Order of Council of 10th August 1869, defining the part of the Port of Granton, within which foreign cattle might be landed for slaughter.

Order of Council of 10th August 1869, defining the part of the Port of Leith, within which foreign cattle might be landed for slaughter.

(381.)

At the Council Chamber, Whitehall, the 6th day of April 1876.

By the Lords of Her Majesty's Most Honourable Privy Council.

PRESENT:

Lord President. | Viscount Sandon.

THE Lords and others of Her Majesty's Most Honourable Privy Council, by virtue and in exercise of the powers in them vested under the Contagious Diseases (Animals) Act, 1869, and of every other power enabling them in this behalf, do order, and it is hereby ordered, as follows:—

1. With respect to the places of landing for animals at the Bristol Docks, at Bristol, in the county of Gloucester, and the places adjacent thereto, the mode of the cleansing and disinfection thereof is, with reference to Articles 20 and 24 of the Animals Order of 1875, hereby prescribed, and the same shall be cleansed and disinfected in the mode following:—

(1.) By the sweeping thereof, and the effectual removal therefrom of all dung, sawdust, litter, and other matter:

(2.) Then by the thorough washing, with water, of the floors of the pens, and of the walls or fences of the pens, and of all other parts above the surface of the floors of the pens:

(3.) Then

(3.) Then by the application to the surface of the ground and floors of the pens of a mixture of water and commercial carbolic acid in the proportion of one-fifth of a pint of carbolic acid to a gallon of water:

(4.) Then by the application to the walls and fences and all other parts above the surface of the ground or floors of the pens with which animals or their droppings have come in contact, of a coating of limewash made of good freshly burnt lime and water, and containing in each gallon of limewash one-fifth of a pint of commercial carbolic acid, the limewash being prepared immediately before use.

2. The sweepings of the places of landing and places adjacent thereto shall be well mixed with quicklime, and shall be effectually removed from contact with animals.

3. This Order shall take effect from and immediately after the thirteenth day of April, One thousand eight hundred and seventy-six; and words in this Order have the same meaning as in the Animals Order of 1875.

(signed) *C. L. Peel.*

(382.)

At the Council Chamber, Whitehall, the 11th day of May 1876.

By the Lords of Her Majesty's Most Honourable Privy Council.

PRESENT:

Lord President. | Viscount Sandon.

THE Lords and others of Her Majesty's Most Honourable Privy Council, by virtue and in exercise of the powers in them vested under the Contagious Diseases (Animals) Act, 1869 (in this Order referred to as the Act of 1869), and of every other power enabling them in this behalf, do order, and it is hereby ordered, as follows:—

1. This Order shall take effect from and immediately after the eighteenth day of May, One thousand eight hundred and seventy-six; and words in this Order have the same meaning as in the Act of 1869.

2. The Animals Order of 1875 shall be read and have effect as if Dover, Folkestone, and Newhaven were not named in Article 63, and Dover was not named in Article 71 of that Order, and after this Order takes effect foreign animals shall not be landed at any of those ports.

3. The Order described in the Schedule to this Order is hereby revoked.

4. Nothing in this Order shall be deemed to invalidate or make unlawful anything done under the said Orders, or either of them, before the date when this Order takes effect, or interfere with the institution or prosecution of any proceeding in respect of any offence committed against, or any penalty incurred under, the said Orders, or either of them.

(signed) *C. L. Peel.*

SCHEDULE.

Order of Council of 10th August 1869, defining the part of the port of Dover, within which foreign cattle might be landed for slaughter.

(383.)

At the Council Chamber, Whitehall, the 16th day of June 1876.

By the Lords of Her Majesty's Most Honourable Privy Council.

PRESENT:

Lord President. | Viscount Sandon.

THE Lords and others of Her Majesty's Most Honourable Privy Council, by virtue and in exercise of the powers in them vested under the Contagious Diseases (Animals) Act, 1869 (in this Order referred to as the Act of 1869), and of every other power enabling them in this behalf, do order, and it is hereby ordered, as follows:

1. This Order shall take effect from and immediately after the eighth day of July, One thousand eight hundred and seventy-six; and words in this Order have the same meaning as in the Act of 1869.

2. This Order may be cited as the Sheep-Scab (Returns) Order of 1876.

3. Article 6 of the Animals Order of 1875 shall not apply to sheep-scab.

Appendix, No. 4.

4. Where an Inspector of a Local Authority finds sheep-scab to exist in his district, he shall forthwith make a return thereof to the Local Authority and to the Privy Council, on a form provided by the Privy Council, with all particulars therein required, and shall continue to so make a return thereof on the last day of every month, unless the last day of the month is Sunday, and then on the Saturday previous, until the disease has ceased.

(signed) *C. L. Peel.*

(384.)

At the Council Chamber, Whitehall, the 29th day of September 1876.

By the Lords of Her Majesty's Most Honourable Privy Council.

PRESENT:

Earl of Derby. | Sir John Dalrymple Hay, Bart.

THE Lords and others of Her Majesty's Most Honourable Privy Council, by virtue and in exercise of the powers in them vested under the Contagious Diseases (Animals) Act, 1869 (in this Order referred to as the Act of 1869), and of every other power enabling them in this behalf, do order, and it is hereby ordered, as follows:

1. This Order shall take effect from and immediately after the first day of October, One thousand eight hundred and seventy-six; and words in this Order have the same meaning as in the Act of 1869.

2. Notwithstanding anything in the Animals Order of 1875, foreign animals may be landed at the Port of Rochester.

3. All the regulations applicable to the landing of foreign animals at the ports named in Article 63 of the said Order shall apply to foreign animals landed at the Port of Rochester.

(signed) *C. L. Peel.*

(385.)

At the Council Chamber, Whitehall, the 16th day of January 1877.

By the Lords of Her Majesty's Most Honourable Privy Council.

PRESENT:

Earl of Carnarvon. | Viscount Sandon.

THE Lords and others of Her Majesty's Most Honourable Privy Council, by virtue and in exercise of the powers in them vested under the Contagious Diseases (Animals) Act, 1869 (in this Order referred to as the Act of 1869), and of every other power enabling them in this behalf, do order, and it is hereby ordered, as follows:

1. This Order shall take effect from and immediately after the seventeenth day of January, One thousand eight hundred and seventy-seven; and words in this Order have the same meaning as in the Act of 1869.

2. All the regulations of the Fourth Schedule to the Act of 1869 shall apply to sheep and goats brought to Great Britain from a port or place in the German Empire and landed in Great Britain, and such sheep and goats shall not be landed except at a landing-place within the respective defined parts of the following ports:—

Glasgow.	Middlesbrough.
Goole.	Newcastle-upon-Tyne.
Grimsby.	Plymouth.
Hartlepool.	Shields, North.
Hull.	Southampton.
Littlehampton.	Sunderland.
London.	

3. All such sheep and goats shall be slaughtered within ten days after the landing thereof, exclusive of the day of landing.

But this Article shall operate subject to the special provisions of the Order of Council defining parts of the Port of Southampton, dated the 5th day of June, One thousand eight hundred and seventy-five.

(signed) *C. L. Peel.*

(386.)

At the Council Chamber, Whitehall, the 18th day of January 1877.

By the Lords of Her Majesty's Most Honourable Privy Council.

PRESENT:

Earl of Carnarvon. | Viscount Sandon.

THE Lords and others of Her Majesty's Most Honourable Privy Council, by virtue and in exercise of the powers in them vested under the Contagious Diseases (Animals) Act, 1869 (in this Order referred to as the Act of 1869), and of every other power enabling them in this behalf, do order, and it is hereby ordered, as follows:—

1. This Order shall take effect from and immediately after this eighteenth day of January, One thousand eight hundred and seventy-seven; and words in this Order have the same meaning as in the Act of 1869.

2. All the regulations of the Fourth Schedule to the Act of 1869 shall apply to sheep and goats brought to Great Britain from a port or place in Belgium or France and landed in Great Britain, and such sheep and goats shall not be landed except at a landing-place within the respective defined parts of the following ports:—

Glasgow.	Middlesbrough.
Goole.	Newcastle-upon-Tyne.
Grimsby.	Plymouth.
Hartlepool.	Shields, North.
Hull.	Southampton.
Littlehampton.	Sunderland.
London.	

3. All such sheep and goats shall be slaughtered within ten days after the landing thereof, exclusive of the day of landing.

But this Article shall operate subject to the special provisions of the Order of Council defining parts of the Port of Southampton, dated the fifth day of June, One thousand eight hundred and seventy-five.

(signed) *C. L. Peel.*

(387.)

At the Council Chamber, Whitehall, the 27th day of January 1877.

By the Lords of Her Majesty's Most Honourable Privy Council.

PRESENT:

Lord Chancellor. | Viscount Sandon.

THE Lords and others of Her Majesty's Most Honourable Privy Council, by virtue and in exercise of the powers in them vested under the Contagious Diseases (Animals) Act, 1869 (in this Order referred to as the Act of 1869), and of every other power enabling them in this behalf, do order, and it is hereby ordered, as follows:—

1. This Order shall take effect from and immediately after the twenty-ninth day of January, One thousand eight hundred and seventy-seven; and words in this Order have the same meaning as in the Act of 1869.

2. Cattle brought from a port or place in Belgium or the German Empire, and cattle, sheep, or goats being or having been on board a vessel at the same time with cattle so brought, shall not be landed in Great Britain.

3. The following articles brought from a port or place in Belgium or the German Empire shall not be landed in Great Britain:—

Fat; hay (not being hay used in the packing of merchandise); fresh hides; hoofs; horns; manure (not being artificial manure); fresh meat.

(signed) *C. L. Peel.*

Appendix, No. 4.

(388.)

At the Council Chamber, Whitehall, the 31st day of January 1877.

By the Lords of Her Majesty's Most Honourable Privy Council.

PRESENT:

Lord President. | Mr. Chancellor of the Exchequer.

WHEREAS the cattle plague or rinderpest has appeared in the metropolis:

Now, therefore, the Lords and others of Her Majesty's Most Honourable Privy Council, by virtue and in exercise of the powers in them vested under the Contagious Diseases (Animals) Act, 1869 (in this Order referred to as the Act of 1869), and of every other power enabling them in this behalf, do order, and it is hereby ordered, as follows:

1. This Order shall take effect from and immediately after this thirty-first day of January, One thousand eight hundred and seventy-seven; and words in this Order have the same meaning as in the Act of 1869.

2. This Order may be cited as the Metropolitan Cattle Plague Order of 1877.

3. This Order relates to the metropolis only; and the provisions thereof are supplemental to, and not in substitution of, those of the Animals Order of 1875.

4. No cattle, sheep, or goats shall be moved out of the metropolis.

(signed) *Edmund Harrison.*

(389.)

At the Council Chamber, Whitehall, the 2nd day of February 1877.

By the Lords of Her Majesty's Most Honourable Privy Council.

PRESENT:

Lord President. | Mr. Chancellor of the Exchequer.

THE Lords and others of Her Majesty's Most Honourable Privy Council, by virtue and in exercise of the powers in them vested under the Contagious Diseases (Animals) Act, 1869 (in this Order referred to as the Act of 1869), and of every other power enabling them in this behalf, do order, and it is hereby ordered, as follows:

1. The holding of all markets or sales of cattle, sheep, or goats within the metropolis is hereby prohibited, except as follows:

(1.) Cattle, sheep, or goats belonging to the owner or occupier of premises not in an infected place may be sold on those premises, if the cattle, sheep, or goats are not affected with cattle-plague, and have been on those premises in possession of the owner or occupier thereof not less than 28 days immediately before the sale:

(2.) Markets and sales may be held under license of the Privy Council.

If any cattle, sheep, or goats are sold, or exposed or put up for sale, in contravention of this Article, the seller and the purchaser thereof, and the auctioneer putting the same up for sale, or the person exposing the same for sale, shall each be deemed guilty of an offence against this Order; and if any person holds a market, or sale, in contravention of this Article, or fails to comply with any of the conditions, provisions, or regulations of any license for the holding of a market or sale, he shall be deemed guilty of an offence against this Order.

2. Cattle, sheep, or goats exposed for sale in a market the holding whereof for the sale of cattle, sheep, or goats for immediate slaughter is licensed by the Privy Council, may be kept alive for a period of 10 days after such exposure, and no longer.

If any person keeps any cattle, sheep, or goats alive in contravention of this Article, he shall be deemed guilty of an offence against this Order.

3. The owner, consignee, or other person exposing in a market the holding whereof for the sale of cattle, sheep, or goats for immediate slaughter is licensed by the Privy Council, any cattle, sheep, or goats shall, at his own expense, mark them as follows:

Cattle.—By clipping the hair off the end of the tail, and by clipping a broad arrow, about five inches long, on the left quarter.

Sheep and Goats.—By clipping a broad arrow, about four inches long, on the forehead.

If any person fails to comply with the provisions of this Article, he shall be deemed guilty of an offence against this Order.

4. This Order shall take effect from and immediately after the fourth day of February, One thousand eight hundred and seventy-seven; and words in this Order have the same meaning as in the Act of 1869; and the provisions thereof are supplemental to, and not in substitution of, those of the Animals Order of 1875.

(signed) *C. L. Peel.*

(390.)

At the Council Chamber, Whitehall, the 8th day of February 1877.

By the Lords of Her Majesty's Most Honourable Privy Council.

PRESENT:

Lord President. | Viscount Sandon.

The Lords and others of Her Majesty's Most Honourable Privy Council, by virtue and in exercise of the powers in them vested under the Contagious Diseases (Animals) Act, 1869 (in this Order referred to as the Act of 1869), and of every other power enabling them in this behalf, do order, and it is hereby ordered, as follows:

1. This Order shall take effect from and immediately after the tenth day of February, One thousand eight hundred and seventy-seven; and words in this Order have the same meaning as in the Act of 1869.

2. All the regulations of the Fourth Schedule to the Act of 1869 shall apply to cattle, sheep, and goats brought to Great Britain from a port or place in the Netherlands and landed in Great Britain, and such cattle, sheep, and goats shall not be landed except at a landing-place within the respective defined parts of the following ports:

Glasgow.	Middlesbrough.
Goole.	Newcastle-upon-Tyne.
Grimsby.	Plymouth.
Hartlepool.	Shields, North.
Hull.	Southampton.
Littlehampton.	Sunderland.
London.	

3. All such cattle, sheep, and goats shall be slaughtered within 10 days after the landing thereof, exclusive of the day of landing.

But this Article shall operate subject to the special provisions of the Order of Council defining parts of the Port of Southampton, dated the fifth day of June, One thousand eight hundred and seventy-five.

(signed) *C. L. Peel.*

(391.)

At the Council Chamber, Whitehall, the 9th day of February 1877.

By the Lords of Her Majesty's Most Honourable Privy Council.

The Lords of Her Majesty's Most Honourable Privy Council, by virtue and in exercise of the powers in them vested under the Contagious Diseases (Animals) Act, 1869, and of every other power enabling them in this behalf, do hereby declare the following place to be free from cattle-plague (that is to say):

So much of the Foreign Cattle Market at Deptford, in the county of Kent, as was declared by the Local Authority on the seventeenth day of January, One thousand eight hundred and seventy-seven, to be an infected place:

And do order that as from the date of this Order the same shall cease to be an infected place within the meaning of the said Act accordingly.

(signed) *C. L. Peel.*

(392.)

At the Council Chamber, Whitehall, the 13th day of February 1877.

By the Lords of Her Majesty's Most Honourable Privy Council.

PRESENT:

Lord President. | Mr. Secretary Cross.

Whereas the cattle plague, or rinderpest, has appeared beyond the limits of the metropolis:

Now, therefore, the Lords and others of Her Majesty's Most Honourable Privy Council, by virtue and in exercise of the powers in them vested under the Contagious Diseases (Animals) Act, 1869 (in this Order referred to as the Act of 1869), and of every other power enabling them in this behalf, do order, and it is hereby ordered, as follows:

 1. This

Appendix, No. 4.

1. This Order shall take effect from and immediately after this thirteenth day of February, One thousand eight hundred and seventy-seven; and words in this Order have the same meaning as in the Animals Order of 1875.

2. This Order may be cited as the Cattle Plague Order of 1877.

3. This Order extends to Great Britain only.

4. The provisions of this Order are supplemental to and not in substitution of those of the Animals Order of 1875, and of the Metropolitan Cattle Plague Order of 1877.

5. A Local Authority may from time to time, with the view of preventing the introduction or the spreading of cattle-plague within their district, make regulations for the following purposes, or any of them:

(1.) For prohibiting the holding of markets, fairs, exhibitions, or sales of cattle within their district, except as follows:

a. Cattle belonging to the owner or occupier of premises not in an infected place may be sold on those premises if the cattle are not affected with cattle-plague, and have been on those premises in possession of the owner or occupier thereof not less than 28 days immediately before the sale.

b. Cattle within a defined part of a port, which have been delivered to the owner or his agent, may be sold within such defined part.

c. Markets, exhibitions, and sales of cattle may be held under license of the Privy Council.

(2.) For prohibiting or regulating the movement into their district of cattle from the district of any other Local Authority, and for prohibiting or regulating the movement of cattle within their district: provided that any such prohibition or regulation shall not restrict the moving of any cattle by railway through or out of their district.

If any cattle are sold, or exposed or put up for sale, or exhibited in contravention of this Article, or of a regulation made by a Local Authority thereunder, the seller thereof, and the auctioneer putting the same up for sale, or the person exposing the same for sale, or exhibiting the same, shall each be deemed guilty of an offence against this Order; and if any person holds a market, exhibition, or sale in contravention of this Article, or of a regulation made by a Local Authority thereunder, or fails to comply with any of the conditions, provisions, or regulations of any license for the holding of a market, exhibition, or sale, he shall be deemed guilty of an offence against this Order; and if any cattle are moved in contravention of a regulation made by a Local Authority under this Article, the owner thereof, and the person directing or permitting their removal, and the company or person removing or conveying them, shall each be deemed guilty of an offence against this Order.

6. Cattle exposed for sale in a market, the holding whereof for the sale of cattle for immediate slaughter is licensed by the Privy Council, may be kept alive for a period of 10 days after such exposure, and no longer.

If any person keeps any cattle alive in contravention of this Article, he shall be deemed guilty of an offence against this Order.

7. The owner, consignee, or other person exposing any cattle in a market the holding whereof for the sale of cattle for immediate slaughter is licensed by the Privy Council, shall, at his own expense, mark them as follows:

By clipping the hair off the end of the tail, and by clipping a broad arrow, about five inches long, on the left quarter.

If any person fails to comply with the provisions of this Article, he shall be deemed guilty of an offence against this Order.

(signed) *C. L. Peel.*

(393.)

At the Council Chamber, Whitehall, the 20th day of February 1877.

By the Lords of Her Majesty's Most Honourable Privy Council.

PRESENT:

Lord President. | Viscount Sandon.

The Lords and others of Her Majesty's Most Honourable Privy Council, by virtue and in exercise of the powers in them vested under the Contagious Diseases (Animals) Act, 1869 (in this Order referred to as the Act of 1869), and of every other power enabling them in this behalf, do order, and it is hereby ordered, as follows:

1. This Order shall take effect from and immediately after the twentieth day of February, One thousand eight hundred and seventy-seven, and shall cease to have effect from and immediately after the thirty-first day of May, One thousand eight hundred and seventy-seven; and words in this Order have the same meaning as in the Animals Order of 1875.

2. Notwithstanding

2. Notwithstanding anything in the Cattle Plague Order of 1877, or in any other Order of Council, the holding of markets, fairs, exhibitions, or sales of cattle within the East Riding of Yorkshire, and within the boroughs of Beverley, Hedon, Kingston-upon-Hull, and York, is hereby prohibited, except as follows:

a. Cattle belonging to the owner or occupier of premises not in an infected place may be sold on those premises if the cattle are not affected with cattle-plague, and have been on those premises in possession of the owner or occupier thereof not less than 28 days immediately before the sale.

b. Cattle within a defined part of a port, which have been delivered to the owner or his agent, may be sold within such defined part.

c. Markets, exhibitions, and sales of cattle may be held under license of the Privy Council.

The movement of cattle within the East Riding of Yorkshire, and within the boroughs of Beverley, Hedon, Kingston-upon-Hull, and York, is hereby prohibited, except with a license prescribed in that behalf by the Local Authority of the district where such cattle are: Provided as follows:

(1.) No cattle shall be moved out of the district in which they are, except with a license of the Local Authority; and if that license is not signed by a justice of the peace, then there shall also be requisite a license of the Local Authority of the district into which they are to be moved, indorsed on or referring to such first-mentioned license; but such secondly-mentioned license shall not be necessary in the case of movement from lands to other lands in the same occupation, situate in the district into which the cattle are moved, within 500 yards of the boundary of the district out of which they are moved: provided that no license for movement shall be available for movement into the district of any Local Authority, if such Local Authority have made a regulation wholly prohibiting such movement.

(2.) No license shall be necessary for movement within the district for a distance not exceeding 500 yards from lands to other lands in the same occupation.

3. If any cattle are sold, or exposed or put up for sale, or exhibited in contravention of this Order, the seller thereof, and the auctioneer putting the same up for sale, or the person exposing the same for sale or exhibiting the same, shall each be deemed guilty of an offence against this Order; and if any person holds a market, exhibition, or sale in contravention of this Order, or fails to comply with any of the conditions, provisions, or regulations of any license for the holding of a market, exhibition, or sale, he shall be deemed guilty of an offence against this Order; and if any cattle are moved in contravention of the provisions of this Order, the owner thereof, and the person directing or permitting their removal, and the company or person removing or conveying them, shall each be deemed guilty of an offence against this Order.

4. Cattle exposed for sale in a market the holding whereof for the sale of cattle for immediate slaughter is licensed by the Privy Council, may be kept alive for a period of 10 days after such exposure, and no longer.

If any person keeps any cattle alive in contravention of this Article, he shall be deemed guilty of an offence against this Order.

5. The owner, consignee, or other person exposing any cattle in a market the holding whereof for the sale of cattle for immediate slaughter is licensed by the Privy Council, shall, at his own expense, mark them as follows:

By clipping the hair off the end of the tail, and by clipping a broad arrow, about five inches long, on the left quarter.

If any person fails to comply with the provisions of this Article, he shall be deemed guilty of an offence against this Order.

(signed) *C. L. Peel.*

(394.)

At the Council Chamber, Whitehall, the 6th day of March 1877.

By the Lords of Her Majesty's Most Honourable Privy Council.

PRESENT:

Lord President. | Viscount Sandon.

THE Lords and others of Her Majesty's Most Honourable Privy Council, by virtue and in exercise of the powers in them vested under the Contagious Diseases (Animals) Act, 1869, and of every other power enabling them in this behalf, do order, and it is hereby ordered, as follows:

Appendix, No. 4.

1. This Order shall take effect from and immediately after this sixth day of March, one thousand eight hundred and seventy-seven, and words in this Order have the same meaning as in the Animals Order of 1875.

2. Notwithstanding anything in the Cattle Plague Order of 1877, or in any other Order of Council, the holding of markets, fairs, exhibitions, or sales of cattle within the Parts of Holland, the Parts of Kesteven, and the Parts of Lindsey, Lincolnshire, and within the boroughs of Boston, Grantham, Grimsby, Lincoln, Louth, and Stamford, is hereby prohibited, except as follows:

a. Cattle belonging to the owner or occupier of premises not in an infected place may be sold on those premises if the cattle are not affected with cattle-plague, and have been on those premises in possession of the owner or occupier thereof not less than 28 days immediately before the sale.

b. Cattle within a defined part of a port, which have been delivered to the owne or his agent, may be sold within such defined part.

c. Markets, exhibitions, and sales of cattle may be held under license of the Privy Council.

If any cattle are sold, or exposed, or put up for sale, or exhibited in contravention of this Article, the seller thereof, and the auctioneer putting the same up for sale, or the person exposing the same for sale, or exhibiting the same, shall each be deemed guilty of an offence against this Order; and if any person holds a market, exhibition, or sale in contravention of this Article, or fails to comply with any of the conditions, provisions, or regulations of any license for the holding of a market, exhibition, or sale, he shall be deemed guilty of an offence against this Order.

3. Cattle exposed for sale in a market the holding whereof for the sale of cattle for immediate slaughter is licensed by the Privy Council, may be kept alive for a period of 10 days after such exposure, and no longer.

If any person keeps any cattle alive in contravention of this Article, he shall be deemed guilty of an offence against this Order.

4. The owner, consignee, or other person exposing any cattle in a market the holding whereof for the sale of cattle for immediate slaughter is licensed by the Privy Council, shall, at his own expense, mark them as follows:

By clipping the hair off the end of the tail, and by clipping a broad arrow, about five inches long, on the left quarter.

If any person fails to comply with the provisions of this Article, he shall be deemed guilty of an offence against this Order.

(signed) *C. L. Peel.*

(395.)

At the Council Chamber, Whitehall, the 8th day of March 1877.

By the Lords of Her Majesty's Most Honourable Privy Council.

PRESENT:

Lord President. | Viscount Sandon.

THE Lords and others of Her Majesty's Most Honourable Privy Council, by virtue and in exercise of the powers in them vested under the Contagious Diseases (Animals) Act, 1869 (in this Order referred to as the Act of 1869), and of every other power enabling them in this behalf, do order, and it is hereby ordered, as follows:

Every Local Authority shall keep, in the form given in the Schedule to this Order, or a form to the like effect, a record relative to proceedings, under Part V. of the Act of 1869, stating the particulars indicated in the form given in the said Schedule, with such variations as circumstances require; and every Local Authority shall keep the record in such manner, and shall furnish to the Privy Council such copies thereof, or extracts therefrom, as the Privy Council from time to time require.

(signed) *C. L. Peel.*

					£. s. d.				£. s. d.				£. s. d.	£. s. d.

REMARKS.

(396.)

At the Council Chamber, Whitehall, the 12th day of March 1877.

By the Lords of Her Majesty's Most Honourable Privy Council.

PRESENT:

Lord President. | Viscount Sandon.

THE Lords and others of Her Majesty's Most Honourable Privy Council, by virtue and in exercise of the powers in them vested under the Contagious Diseases (Animals) Act, 1869, and of every other power enabling them in this behalf, do order, and it is hereby ordered, as follows:

1. This Order shall take effect from and immediately after this twelfth day of March, One thousand eight hundred and seventy-seven; and words in this Order have the same meaning as in the Animals Order of 1875.

2. Notwithstanding anything in the Cattle Plague Order of 1877, or in any other Order of Council, the movement of cattle within the Parts of Holland, the Parts of Kesteven, and the Parts of Lindsey, Lincolnshire, and within the boroughs of Boston, Grantham, Grimsby, Lincoln, Louth, and Stamford, is hereby prohibited, except with a license prescribed in that behalf by the Local Authority of the district where such cattle are: Provided as follows:

(1.) No cattle shall be moved out of the district in which they are, except with a license of the Local Authority; and if that license is not signed by a justice of the peace, then there shall also be requisite a license of the Local Authority of the district into which they are to be moved, indorsed on or referring to such first-mentioned license; but such secondly-mentioned license shall not be necessary in the case of movement from lands to other lands in the same occupation, situate in the district into which the cattle are moved, within five hundred yards of the boundary of the district out of which they are moved: provided that no license for movement shall be available for movement into the district of any Local Authority, if such Local Authority have made a regulation wholly prohibiting such movement.

(2.) No license shall be necessary for movement within the district for a distance not exceeding five hundred yards from lands to other lands in the same occupation.

3. If any cattle are moved in contravention of the provisions of this Order, the owner thereof, and the person directing or permitting their removal, and the company or person removing or conveying them, shall each be deemed guilty of an offence against this Order.

(signed) *C. L. Peel*

(397.)

At the Council Chamber, Whitehall, the 12th day of April 1877.

By the Lords of Her Majesty's Most Honourable Privy Council.

PRESENT:

Lord President. | Viscount Sandon.

THE Lords and others of Her Majesty's Most Honourable Privy Council, by virtue and in exercise of the powers in them vested under the Contagious Diseases (Animals) Act, 1869, (in this Order referred to as the Act of 1869), and of every other power enabling them in this behalf, do order, and it is hereby ordered, as follows:

1. This Order shall take effect from and immediately after the fifteenth day of April, One thousand eight hundred and seventy-seven; and words in this Order have the same meaning as in the Animals Order of 1875.

2. This Order extends to the City of London and the Metropolitan Police District only.

3. Every person having in his possession or under his charge an animal affected with cattle-plague, or with disease suspected to be cattle-plague, shall observe the following rules:—

(1.) He shall, as far as practicable, keep that animal separate from animals not so affected:

(2.) He

Appendix, No. 4.

(2.) He shall, with all practicable speed, give notice of the fact of the animal being so affected to a constable of the police establishment for the place where the animal is.

The constable shall forthwith give notice thereof to the Clerk of the Council at the Veterinary Department.

4. No animal (including a dog) shall be moved alive out of a building or enclosed space in which cattle-plague exists, or has existed, within seven days.

5. Where an Inspector of the Privy Council affixes at or near the entrance to a building or enclosed place in or on which cattle are kept, and wherein cattle-plague exists, or has existed within seven days, a notice forbidding persons to enter into or on that building or place without his permission, then, if any person not having a right of entry or way into, on, or over that building or place, enters into, on, or over the same, or any part thereof, in contravention of the notice, he shall be deemed guilty of an offence against this Order, and shall, for every such offence, be liable to a penalty not exceeding five pounds.

6. Every person having been in a building or enclosed place in which cattle-plague exists or has existed within seven days shall, before leaving that building or enclosed place, disinfect his clothes to the satisfaction of the Inspector of the Privy Council, or other officer acting on his behalf.

7. The carcase of an animal that has died of cattle-plague, or has been slaughtered in consequence of being affected with cattle-plague, shall not be moved out of a building or enclosed place in which it has so died or been slaughtered, except in a van exclusively set apart and used for the purpose of conveying such carcases; and every such van shall, immediately after each occasion of use, be cleansed and disinfected in manner provided by Article 18 of the Animals Order of 1875.

8. All milk-cans, churns, pails, tools, and appliances, and other apparatus, used for or about animals, in a building or enclosed place in which cattle-plague exists, or has existed within seven days, shall be cleansed and disinfected as often, and in such manner, as an Inspector of the Privy Council directs or approves.

9. Every building or enclosed place in which an animal affected with cattle-plague has been kept while so affected, or has died of cattle-plague, or been slaughtered in consequence of being affected with cattle-plague, shall be thoroughly cleansed and disinfected under the direction of an Inspector of the Privy Council.

10. The provisions of this Order apply to all places being infected places at the time when this Order takes effect.

11. Nothing in this Order shall relieve any Local Authority affected by this Order, or any of their officers, from the obligation to carry into effect the provisions of the Act of 1869, and the Orders of Council thereunder with respect to diseases other than cattle-plague.

12. Article 7 of the Animals Order of 1875 shall be deemed to be omitted from that Order, and that Order shall be read and have effect as if the following article was therein substituted:

> Any dung, and any hay, straw, litter, or other thing commonly used for food of animals, or otherwise for or about animals, may be moved out of an infected place, with a license, signed by an Inspector of the Privy Council, certifying that the thing moved has been disinfected, but not otherwise; and shall only be so moved, in any case, for the purpose of being buried or destroyed.

13. If any person fails to give, produce, do, or observe any notice, license, thing, or rule which he is by this Order required to give, produce, do, or observe, he shall be deemed guilty of an offence against this Order.

14. If any animal (including a dog) or anything is moved or dealt with in contravention of this Order, the owner thereof, and the person directing or permitting the moving thereof, or dealing therewith, and the person or company having charge of or removing or conveying the same, shall each be deemed guilty of an offence against this Order.

(signed) *C. L. Peel.*

(400.)

At the Council Chamber, Whitehall, the 27th day of April 1877.

By the Lords of Her Majesty's Most Honourable Privy Council.

PRESENT:

Lord President. | Viscount Sandon.

The Lords and others of Her Majesty's Most Honourable Privy Council, by virtue and in exercise of the powers in them vested under the Contagious Diseases (Animals) Act, 1869

1869 (in this Order referred to as the Act of 1869), and of every other power enabling them in this behalf, do order, and it is hereby ordered, as follows:

1. Article 12 of the Order of the Privy Council bearing date the twelfth day of April, One thousand eight hundred and seventy-seven, is hereby revoked, but not so as to revive Article 7 of the Animals Order of 1875.

2. This Order shall be read and have effect as one Order with the Animals Order of 1875.

3. Rules 4 and 5 of Part I. of the Sixth Schedule to the Act of 1869 shall not apply to an infected place within the metropolis.

4. No animal shall be moved alive out of a building or shed in the metropolis in which cattle-plague exists, or has within 28 days before the time of intended movement existed.

5. An animal may be moved alive within an infected place in the metropolis as follows, but not otherwise:

With a license signed by an Inspector of the Privy Council, certifying that the animal moved has not been in contact with an animal affected with cattle-plague, or in a building or shed in which cattle-plague exists, or has within 28 days before the date of the license existed; and in that case the animal moved shall only be so moved for the purpose of being immediately slaughtered.

6. The carcase of an animal which has died of cattle-plague, or been slaughtered in consequence of being affected with cattle-plague, may be moved out of an infected place in the metropolis as follows, but not otherwise:

With a license signed by an Inspector of the Privy Council, certifying that the carcase has been disinfected; and in that case the carcase moved shall not be moved out of the metropolis, and shall be buried or destroyed within the metropolis.

7. Any dung of animals (including horses) or any manure may be moved out of an infected place in the metropolis as follows, but not otherwise:

(1.) With a license signed by an Inspector of the Privy Council, certifying that the dung or manure moved has not been in a building or shed in which cattle-plague exists, or has within 28 days before the date of the license existed; or

(2.) With a license signed by an Inspector of the Privy Council, certifying that the dung or manure moved has been disinfected; and in that case the dung or manure moved shall be buried, burnt, or otherwise destroyed at a place to be specified in the license, in accordance with Section 61 of the Act of 1869.

8. Any hay, straw, fodder, or other thing commonly used for food of animals, may be moved out of an infected place in the metropolis as follows, but not otherwise:

(1.) With a license signed by an Inspector of the Privy Council, certifying that the thing moved has not been in a building or shed in which cattle-plague exists, or has within 28 days before the date of the license existed; or

(2.) With a license signed by an Inspector of the Privy Council, certifying that the thing moved has been disinfected; and in that case the thing moved shall not be moved out of the metropolis, and shall be buried, burnt, or otherwise destroyed within the metropolis, at a place to be specified in the license, in accordance with Section 61 of the Act of 1869.

(signed) *C. L. Peel.*

(401.)

At the Council Chamber, Whitehall, the 27th day of April 1877.

By the Lords of Her Majesty's Most Honourable Privy Council.

PRESENT:

Lord President. | Viscount Sandon.

THE Lords and others of Her Majesty's Most Honourable Privy Council, by virtue and in exercise of the powers in them vested under the Contagious Diseases (Animals) Act, 1869 (in this Order referred to as the Act of 1869), and of every other power enabling them in this behalf, do order, and it is hereby ordered, as follows:

1. This Order shall take effect from and immediately after the first day of May, One thousand eight hundred and seventy-seven, and shall cease to have effect from and immediately after the first day of June, One thousand eight hundred and seventy-seven; and words in this Order have the same meaning as in the Act of 1869. And the county of Middlesex means that county, except so much thereof as is in the metropolis.

2. Notwithstanding anything in the Cattle Plague Order of 1877, or in any other Order

Appendix, No. 4.

of Council, the movement of cattle, sheep, and goats out of the county of Middlesex is hereby prohibited, except as follows:

Cattle, sheep, and goats may be moved for immediate slaughter out of the county of Middlesex to the Metropolitan Cattle Market at Islington, or to a slaughter-house within the metropolis, with a license of an Inspector of the Local Authority of the county of Middlesex authorised to issue the same; and such license shall be available for twelve hours, and no longer, and shall specify the slaughter-house to which such cattle, sheep, and goats may be taken for slaughter.

The movement of cattle within the county of Middlesex is hereby prohibited, except as follows:

Cattle may be moved for immediate slaughter to a slaughter-house within the county of Middlesex, with a license of an Inspector of the Local Authority authorised to issue the same, and such license shall be available for 12 hours, and no longer, and the license shall specify the slaughter-house to which they may be taken for slaughter, and they shall not be taken elsewhere:

Provided that no license shall be necessary in the case of movement of cattle for a distance not exceeding five hundred yards from lands to other lands in the same occupation within the county of Middlesex.

3. Nothing in this Order shall restrict the moving of any cattle, sheep, or goats by railway through the county of Middlesex, or affect the operation of the provisions of the Metropolitan Cattle Plague Order of 1877.

4. If any cattle, sheep, or goats are moved in contravention of the provisions of this Order, the owner thereof, and the person directing or permitting their removal, and the company or person removing or conveying them, shall each be deemed guilty of an offence against this Order.

(signed) *C. L. Peel.*

(402.)

At the Council Chamber, Whitehall, the 27th day of April 1877.

By the Lords of Her Majesty's Most Honourable Privy Council.

PRESENT:

Lord President. | Viscount Sandon.

The Lords and others of Her Majesty's Most Honourable Privy Council, by virtue and in exercise of the powers in them vested under the Contagious Diseases (Animals) Act, 1869 (in this Order referred to as the Act of 1869), and of every other power enabling them in this behalf, do order, and it is hereby ordered, as follows:

1. This Order shall take effect from and immediately after the first day of May, One thousand eight hundred and seventy-seven, and shall cease to have effect from and immediately after the first day of June, One thousand eight hundred and seventy-seven; and words in this Order have the same meaning as in the Act of 1869.

2. Notwithstanding anything in the Cattle Plague Order of 1877, or in any other Order of Council, the movement of cattle within the metropolis is hereby prohibited, except as follows:

Cattle may be moved for immediate slaughter to the Metropolitan Cattle Market at Islington, or to a slaughter-house within the metropolis, with a license of an Inspector of the Local Authority authorised to issue the same, and such license shall be available for twelve hours and no longer; and in the case of cattle moved to a slaughter-house, the license shall specify the slaughter-house to which they may be taken for slaughter, and they shall not be taken elsewhere:

Provided that no license shall be necessary in the case of movement of cattle for a distance not exceeding five hundred yards from lands to other lands in the same occupation within the metropolis.

3. Cattle exposed for sale at the Metropolitan Cattle Market at Islington shall not be moved out of the limits of the area of such market, but shall be slaughtered within those limits.

4. Nothing in this Order shall affect the operation of the provisions of the Metropolitan Cattle Plague Order of 1877, or of the Order of the Privy Council dated the second day of February, One thousand eight hundred and seventy-seven.

5. If any cattle are moved in contravention of the provisions of this Order, the owner thereof, and the person directing or permitting their removal, and the company or person removing or conveying them, shall each be deemed guilty of an offence against this Order.

(signed) *C. L. Peel.*

(406.)

At the Council Chamber, Whitehall, the 4th day of May 1877.

By the Lords of Her Majesty's Most Honourable Privy Council.

PRESENT:

Lord President. | Viscount Sandon.

THE Lords and others of Her Majesty's Most Honourable Privy Council, by virtue and in exercise of the powers in them vested under the Contagious Diseases (Animals) Act, 1869 (in this Order referred to as the Act of 1869), and of every other power enabling them in this behalf, do order, and it is hereby ordered, as follows:—

1. This Order shall take effect from and immediately after the tenth day of May, One thousand eight hundred and seventy-seven; and words in this Order have the same meaning as in the Act of 1869.

2. The Animals Order of 1875 shall be read and have effect as if Barrow-in-Furness, Bristol, Cardiff, Dartmouth, Grangemouth, Littlehampton, Penzance, North Shields, and Shoreham were not named in Article 63, and Glasgow, Littlehampton, Newcastle-upon-Tyne, and North Shields were not named in Article 71, of that Order.

3. The Orders described in the Schedule to this Order are hereby revoked.

4. Nothing in this Order shall be deemed to invalidate or make unlawful anything done under the said Orders, or any of them, before the date when this Order takes effect, or interfere with the institution or prosecution of any proceeding in respect of any offence committed against, or any penalty incurred under, the said Orders, or any of them.

(signed) *C. L. Peel.*

SCHEDULE.

Orders of Council revoked.

Date.	Subject.
1869:	
10 August - -	Defining the part of the Port of North Shields, within which foreign cattle might be landed for slaughter.
10 August - -	Defining the part of the Port of Littlehampton, within which foreign cattle might be landed for slaughter.

1870:	
12 January - -	Defining the part of the Port of Glasgow, within which foreign cattle might be landed for slaughter.
1875:	
9 August - -	Defining the part of the Port of Newcastle-upon-Tyne, within which foreign cattle might be landed for slaughter.

(407.)

At the Council Chamber, Whitehall, the 9th day of May 1877.

By the Lords of Her Majesty's Most Honourable Privy Council

PRESENT:

Lord President. | Viscount Sandon.

THE Lords and others of Her Majesty's Most Honourable Privy Council, by virtue and in exercise of the powers in them vested under the Contagious Diseases (Animals) Act, 1869,

Appendix, No. 4.

1869, and of every other power enabling them in this behalf, do order, and it is hereby ordered, as follows:

1. This Order extends to the City of London and to the Metropolitan Police District only.

2. The Veterinary Department of the Privy Council Office shall slaughter every animal that is affected with cattle-plague, and may slaughter any animal that has been in contact with any animal so affected.

3. The Local Authority shall pay compensation for animals so slaughtered.

4. Words in this Order have the same meaning as in the Contagious Diseases (Animals) Act, 1869.

(signed) *C. L. Peel.*

(409.)

At the Council Chamber, Whitehall, the 29th day of May 1877.

By the Lords of Her Majesty's Most Honourable Privy Council.

PRESENT:

Earl of Carnarvon. | Mr. Sclater-Booth.

THE Lords and others of Her Majesty's Most Honourable Privy Council, by virtue and in exercise of the powers in them vested under the Contagious Diseases (Animals) Act, 1869 (in this Order referred to as the Act of 1869), and of every other power enabling them in this behalf, do order, and it is hereby ordered, as follows:—

1. This Order shall take effect from and immediately after the thirty-first day of May, One thousand eight hundred and seventy-seven; and words in this Order have the same meaning as in the Act of 1869.

2. The Orders described in the Schedule to this Order are hereby revoked.

3. Nothing in this Order shall be deemed to invalidate or make unlawful anything done under the said Orders, or either of them, before the date when this revocation takes effect, or interfere with the institution or prosecution of any proceeding in respect of any offence committed against, or any penalty incurred under, the said orders, or either of them.

(signed) *C. L. Peel.*

SCHEDULE.

Order of Council of 6th March 1877, relating to the holding of markets, fairs, exhibitions, or sales of cattle within the Parts of Holland, the Parts of Kesteven, and the Parts of Lindsey, Lincolnshire, and within the boroughs of Boston, Grantham, Grimsby, Lincoln, Louth, and Stamford.

Order of Council of 12th March 1877, relating to the movement of cattle within the Parts of Holland, the Parts of Kesteven, and the Parts of Lindsey, Lincolnshire, and within the boroughs of Boston, Grantham, Grimsby, Lincoln, Louth, and Stamford.

(410.)

At the Council Chamber, Whitehall, the 31st day of May 1877.

By the Lords of Her Majesty's Most Honourable Privy Council.

PRESENT:

Mr. Secretary Cross. | Mr. Sclater-Booth.

THE Lords and others of Her Majesty's Most Honourable Privy Council, by virtue and in exercise of the powers in them vested under the Contagious Diseases (Animals) Act, 1869 (in this Order referred to as the Act of 1869), and of every other power enabling them in this behalf, do order, and it is hereby ordered, as follows:

1. This Order shall take effect from and immediately after the first day of June, One thousand

thousand eight hundred and seventy-seven, and shall cease to have effect from and immediately after the thirtieth day of June, One thousand eight hundred and seventy-seven; and words in this Order have the same meaning as in the Act of 1869, and the county of Middlesex means that county, except so much thereof as is in the metropolis.

2. Notwithstanding anything in the Cattle Plague Order of 1877, or in any other Order of Council, the movement of cattle, sheep, and goats out of the county of Middlesex is hereby prohibited, except into the metropolis.

3. Nothing in this Order shall restrict the moving of any cattle, sheep, or goats by railway through the county of Middlesex, or affect the operation of the provisions of the Metropolitan Cattle Plague Order of 1877.

4. If any cattle, sheep, or goats are moved in contravention of the provisions of this Order, the owner thereof, and the person directing or permitting their removal, and the company or person removing or conveying them, shall each be deemed guilty of an offence against this Order.

CATTLE PLAGUE.—COUNTY OF WORCESTER.

AT a Meeting of the Executive Committee of the Local Authority of the County of Worcester, for the purposes of "The Contagious Diseases (Animals) Act, 1869," held at the County Hall, Worcester, on Monday, the 2nd day of April 1877:

Present:

The Rev. John Pearson, in the Chair.

The Right Hon. the Earl of Dudley.
George Woodyatt Hastings, Esq.
Sir Richard Harington, Bart.
John Gregory Watkins, Esq.
Edward Vincent Wheeler, Esq.
George Whitaker-Wilson, Esq.

It is ordered, under the authority of "The Cattle Plague Order of 1877," as follows:

1. This Order shall take effect from and immediately after the 10th day of April 1877, and shall continue in force for one calendar month from that date, unless sooner revoked.

2. No cattle brought into the district of the county of Worcester, by rail or by water, shall be removed or landed from the truck or vessel in which such cattle are brought, at any place within the district of the said county.

3. No cattle shall be moved (otherwise than by rail) into the district of the county of Worcester from the district of any other Local Authority (other than the districts of the City of Worcester, and of the boroughs of Bewdley, Droitwich, Evesham, and Kidderminster, respectively), except under a license to be signed by a justice of the peace for the said county of Worcester, such license to continue in force for three days from the date to be named therein, and to be verified by a declaration of the owner of the cattle, or his agent, that such cattle have been in the possession of the owner thereof

Appendix, No. 4.

thereof for twenty-eight days immediately preceding the date of such declaration, and have not, during that time, been affected, or in contact with cattle affected, with any contagious disease.

County Hall, Worcester,
2 April 1877.

Wm. Nichols Marcy,
Clerk of the Peace.

The term "cattle" means bulls, cows, oxen, heifers, or calves.

PROHIBITION.

Cattle Plague.—County of Gloucester.

Order prohibiting Movement of Cattle into the County.

County of Gloucester, to Wit.

At the General Quarter Sessions of the Peace of Our Sovereign Lady the Queen, holden at the Shire Hall, in Gloucester, for the county aforesaid, on Tuesday, the twentieth day of March, in the fortieth year of the Reign of Our Sovereign Lady Victoria, by the Grace of God of the United Kingdom of Great Britain and Ireland Queen, Defender of the Faith, and in the year of Our Lord 1877. Before Sebastian Stewart Dickinson, Esquire; Charles Sumner, Esquire (Chairman); and others, their Fellows, Her Majesty's Justices of the Peace for the said county, as the district Local Authority of the same county.

It is ordered under the authority of the "Cattle Plague Order of 1877:"

That the holding of markets, fairs, exhibitions, or sales of cattle within the county of Gloucester be prohibited for twenty-eight days from the 27th March 1877, except as follows:

Cattle belonging to the owner or occupier of premises not in an infected place, may be sold on those premises if the cattle are not affected with cattle-plague, and have been on those premises in possession of the owner or occupier thereof not less than twenty-eight days immediately before the sale.

Cattle within a defined part of a port which have been delivered to the owner or his agent may be sold within such defined part.

Markets.—Exhibitions and sales of cattle may be held under license of the Privy Council.

That from the 27th March 1877, no cattle landed from any vessel in any part of the district of the county of Gloucester be moved from the place of landing to any other part of the county, for a period of twenty-eight days from the said 27th of March.

And that for a period of twenty-eight days from the same date the entrance of cattle into the district of the Local Authority of the county of Gloucester from any district under any Local Authority in England or Scotland be prohibited: provided that the above prohibitions shall not restrict the moving of any cattle by railway through or out of the district of the Gloucestershire Local Authority.

Shire Hall, Gloucester,
20 March 1877.

Geo. Riddiford,
Clerk of the Peace.

The term "cattle" means bulls, cows, oxen, heifers, and calves.

PROHIBITION.

County of Buckingham.

Prevention of Cattle Plague.

Whereas cattle plague has appeared at several places in the metropolis, and very recently at Shepherd's Bush, in the county of Middlesex, within eight miles of the confines of this county:

Notice is hereby given, that the Executive Committee of the Local Authority for the purposes of "The Contagious Diseases (Animals) Act, 1869," for the county of Buckingham, have this day, in pursuance of the power given to them by "The Cattle Plague Order of 1877," made a Regulation prohibiting the movement into this county of cattle from the district

trict of any other Local Authority: Provided, nevertheless, that such prohibition shall not restrict the moving of any cattle by railway through or out of the said county.

The word "cattle" in the above Regulation means bulls, cows, oxen, heifers and calves.

This Regulation is to take effect on and after Saturday, the 7th day of April 1877, and to remain in force for one calendar month from that day.

If any cattle are moved in contravention of the above Regulation the owner thereof, and the person directing or permitting their removal, and the company or person removing or conveying them, will each be deemed guilty of an offence against the said "Cattle Plague Order of 1877," and be liable to a penalty not exceeding 20 *l.*; and where such offence is committed with respect to more than four animals, to a penalty not exceeding 5 *l.* for each animal.

By Order,

(signed) *Acton Tindal,*
Clerk of the Peace for Bucks.

Dated this 29th day of March 1877.

MOVEMENT *into* DISTRICT WITH A LICENSE.

The Contagious Diseases (Animals) Act, 1869, and the Cattle Plague Order of 1877

COUNTY OF LANCASTER.—HUNDRED OF SALFORD.

RULES for the Cattle Plague or Rinderpest.

THE Executive Cattle Plague Committee for the Hundred of Salford, in the county of Lancaster, being the Local Authority under the provisions of the "Contagious Diseases (Animals) Act, 1869," do hereby, under and by virtue and in exercise of the powers vested in and conferred upon such Local Authority, by the said Act, or by any Order of Council made thereunder, rescind their Order of the 24th day of February last, and in lieu thereof the said committee do hereby, with the view of preventing the introduction or the spreading of the cattle plague or rinderpest within the said hundred, make and issue the following Regulations:—

1. The word "cattle" shall mean cows, bulls, oxen, heifers, and calves, and the word "jurisdiction" shall mean so much and such part of the Hundred of Salford as under the provisions of the "Contagious Diseases (Animals) Act, 1869," is under the jurisdiction of the said committee for the purposes of the said Act.

2. No cattle shall be brought or moved into the said jurisdiction without a license signed by a justice of the peace acting in the district from which the cattle are proposed to be moved, such license to be accompanied by a certificate of a veterinary surgeon that the said cattle are free from disease, and by a declaration by the owner or his agent (to be made in the presence of the justice granting the license), that the cattle have been in the owner's possession for 28 days immediately preceding the date of such declaration, and have not during that time been affected with or been herded with cattle affected with any contagious or infectious disease: Provided always, that such license shall only be in force for three days from the date thereof; and provided also that nothing herein contained shall restrict the moving of any cattle by railway through or out of the said jurisdiction.

3. If any cattle are moved in contravention of the foregoing Regulation, the owner thereof and the person directing or permitting their removal, and the company or person removing or conveying them, shall each be guilty of an offence against the said Act and Order.

4. No market, fair, exhibition, or sale of cattle shall be held within the said jurisdiction except as follows:—

Cattle belonging to the owner or occupier of premises not in an infected place may be sold on those premises if the cattle are not affected with cattle-plague, and have been on those premises in possession of the owner or occupier thereof not less than 28 days immediately before the sale.

5. If any cattle are sold or exposed or put up for sale, or exhibited in contravention of these Regulations, the seller thereof and the auctioneer putting the same up for sale, or the person exposing the same for sale or exhibiting the same, shall each be deemed guilty of an offence against the said Act and Order; and if any person holds a market, exhibition, or sale in contravention of these Regulations he shall be deemed guilty of an offence against the said Act and Order.

6. If any person acts in contravention of or is guilty of any offence against the said Act, Order, or these Regulations, he shall for every such offence be liable to a penalty not exceeding 20 *l.* Where any offence is committed with respect to more than four animals a penalty not exceeding 5 *l.* for each animal may be imposed instead of the penalty of 20 *l.*

By Order of the Committee,

(signed) *Birchall, Wilson, & Hulton,*
Deputy Clerks of the Peace.

Dated this 23rd day of April 1877.

Appendix, No. 4.

LIBERTY OF PETERBOROUGH.

MOVEMENT *within* DISTRICT.

At a Meeting of the Executive Committee, held at the Office of the Clerk of the Peace, on Saturday, the 24th day of February 1877, at 12 o'clock.

PRESENT:

The Marquis of Exeter in the Chair.

Charles J. Strong, Esq.	Edward A. Skrimshire, Esq.
William Paley, Esq.	J. Yeoman, Esq.

It is ordered that the following Regulations for the movement of cattle within such part of the Liberty of Peterborough as is not within the City and Borough of Peterborough, be, and the same are hereby made; and that they be put in operation on and after the 3rd day of March next.

No cattle shall be moved into or from one place to another, within the said liberty, without the written license of a justice of the peace of the said liberty, or of one of the following persons, viz.:—

Mr. Thomas Close, of Barnack.	Mr. George Allatt, of Marholme.
Mr. Thomas Vergette, of Borough Fen.	Mr. John Rippon, of Maxey.
Mr. Thomas Carter, of Ailsworth.	Mr. John Odam, of Newborough.
Mr. John Beecroft, of Eye.	Mr. William Cole, of Northborough.
Mr. Samuel Vergette, of Glinton.	Mr. Francis Gordon, of Thornhaugh.
Mr. William W. Pearce, of Helpstone.	Mr. Clement W. Griffin, of Werrington.

The movement of cattle from one part to another of the same farm or occupation is exempt from the above Regulations, provided they do not pass more than 100 yards along any public highway.

The Clerk of the Peace is directed to publish the above Regulations, and report the same for approval of the Privy Council.

The Committee appointed Mr. Wattam, M.R.C.V.S., of St. Martin's, Stamford, an Inspector for the liberty under The Contagious Diseases (Animals) Act, 1869, in addition to Messrs. Mackinder, who are already appointed, and on the same terms.

(signed) *Exeter.*

CLOSING MARKETS.

CATTLE PLAGUE.—COUNTY OF OXFORD.

AT a Meeting of the Executive Committee of the Local Authority of the county of Oxford, for the purposes of The Contagious Diseases (Animals) Act, 1869, held at the County Hall, Oxford, on Friday, the 23rd of February 1877.

PRESENT:

Charles Edward Thornhill, Esq., Chairman.

The Earl of Jersey.	Henry Norris, Esq.
Sir Henry William Dashwood, Bart.	Major John Augustus Fane.
Charles Lane, Esq.	Holford Cotton Risley, Esq., and
Charles Jacob Bullock Marsham, Esq.	William Earle Biscoe, Esq.

Mr. Hamersley, the elected Chairman of the Committee, not being present, the members now present chose Mr. Thornhill (one of their number) to be chairman of the meeting.

The Order of the Privy Council, dated the 13th instant, having been read, the chairman reviewed the provisions against the spread of cattle plague contained in the Act 32 & 33 Vict. chap. 70, and the Order in Council of the 5th of June 1875, part of such provisions being that an owner must, with all practical speed, give notice of any outbreak to a constable, and the constable to the inspector of the district, who must forthwith make a provisional declaration that the premises and contiguous fields, &c., are an infected area. Then the Executive Committee are to confirm or negative the inspector's declaration, with power to increase the area by an additional circuit of one mile. Further, that, under the sixth schedule of the Act, no animal is to be moved alive out of the area; and carcases, skins,

skins, offal, &c., only under special conditions by license. And the chairman explained that the Consolidated Order of the Executive Committee, dated the 12th day of July 1875, provides how and by whom licenses may be granted. Further, that burial, disinfection of premises, &c., are also provided for. Also, that the Executive Committee has power to expand the existing statutory precautions, and may make regulations with reference to commons, to the closing of markets, to the prohibition of movement, and to other matters.

After a discussion of the existing powers of the Committee irrespective of the said Order of the 13th instant, and upon consideration of the circumstances which dictated that Order,—the meeting resolved (upon the motion of the Earl of Jersey, seconded by Mr. Holford Risley),—and it is hereby ordered that, from and after Monday the fifth day of March next, the holding of markets, fairs, exhibitions, or sales of cattle within the county of Oxford proper * (that is, the district of the Executive Committee), is prohibited, until a further Order be made:—[the term "Cattle" meaning bulls, cows, oxen, heifers, and calves].

Provided always, that by virtue of the said Order of the 13th instant, cattle belonging to the owner or occupier of premises not in an infected place may be sold on those premises if the cattle are not affected with cattle plague, and have been on those premises in possession of the owner or occupier thereof, not less than twenty-eight days immediately before the sale.

Also that markets, exhibitions, and sales of cattle may be held under license of the Privy Council. And cattle exposed for sale in a market, the holding whereof for the sale of cattle for immediate slaughter is licensed by the Privy Council, may be kept alive for a period of ten days after such exposure, and no longer.

Further, that the owner, consignee, or other person exposing any cattle in a market, the holding whereof for the sale of cattle for immediate slaughter is licensed by the Privy Council, shall, at his own expense, mark them as follows:

> By clipping the hair off the end of the tail, and by clipping a broad arrow, about five inches long, on the left quarter.

Any infringement of this Order of the Executive Committee (embracing the above provisions), will involve heavy pecuniary penalties.

And, as to compensation to be made for animals ordered to be slaughtered, the meeting ratified, and desire to call attention to the following Resolution passed by the Executive Committee on the 12th of July 1875:—

> "That, in fixing the amount to be paid in cases of slaughter, the Committee will have regard to the degree of caution shown by the owner in making the purchase of the slaughtered animal or animals, and especially as to the care shown by him in keeping all newly-purchased animals apart from his general herd for a period sufficiently long to warrant him in the belief that such newly-purchased animals were free from disease: and also that the Committee will in every case require satisfactory evidence upon these points prior to their adjudication."

The Committee appointed to meet again, at the County Hall, at 12 o'clock on Saturday, the 10th of March next.

John M. Davenport,
Clerk of the Peace.

Surrey.

Contagious and Infectious Diseases among Animals.

At a Meeting of the Executive Committee of the Justices of the Peace of the county of Surrey, for the purposes of The Contagious Diseases (Animals) Act, 1869, being the "Local Authority" under the said Act for the county of Surrey (except the boroughs of Godalming, Guildford, Kingston-on-Thames, and Reigate, and the district of the Metropolitan Board of Works), held at the Sessions House, Newington, in the said county, on Thursday, the 29th day of March 1877.

Cattle Plague.

"Ordered that the movement of cattle from the county of Middlesex into the county of Surrey, be, and the same is, hereby prohibited."

By Order of the Committee,

R. H. Wyatt,
Clerk of the Peace.

* The city of Oxford and the borough of Banbury are separate jurisdictions.

PAPERS handed in by Mr. *Stratton*, 22 June 1877.

(A.)

Appendix, No. 5.

Mr. *C. E. Wilmot* to Mr. *W. Beach*, M.P.

" Veterinary Department, Privy Council Office,
" 44, Parliament-street, Westminster, S.W.
" 11 November 1876.

" Sir,

" In reply to your letter of the 24th ultimo, addressed to the Lord President, requesting to know the decision at which his Grace had arrived on the memorial presented by you in June last, from the Central Chamber of Agriculture, and the Farmers' Club, on the subject of cattle disease, I am directed to state that the memorial has been under his Grace's serious consideration.

" Referring to the 11 regulations submitted by your Committee, and proposed to be enforced for the prevention of contagious diseases of animals, I am instructed to offer the following observations:—

" (1.) It appears to the Lord President that there are practical difficulties in the way of carrying out your proposal in regard to foreign animals intended to be slaughtered for meat, and further, that such a scheme as that proposed would obviously alter the whole system at present in force as regards the trade of this country with foreign animals.

" (2.) I am directed to point out the extreme difficulty by which the carrying out of your second proposition would be surrounded. It must be remembered that at every port where store stock would be landed, the quarantine station would naturally become a centre of infection, and unless the quarantine ground were of such gigantic proportions as would be extravagantly expensive, both as regards area and accommodation, disease in one cargo would render it a hotbed of infection to subsequent cargoes, so that congestion would inevitably ensue; *i. e.*, when one cargo had developed disease, each succeeding cargo would be exposed to infection, and the store stock quarantine grounds would become lazarettos, where disease would be always latent, and generally active.

" At present there is only one quarantine ground existing in Great Britain, viz., at the port of Southampton; but it has been established for a special purpose. It was not intended that cargoes from unscheduled countries should be placed therein to be detained for a certain period, and then be emancipated from all restrictions, but that cattle arriving there from scheduled countries should undergo quarantine, and should then be liberated, instead of being landed at the defined part of any other port, in which case they would of necessity be slaughtered within ten days. The quarantine ground at the port of Southampton has chiefly been used to enable valuable store stock and milch cows to be imported from scheduled countries, more particularly from France. During 1875 the number of animals that underwent quarantine at Southampton was only 83.

" The further suggestion with reference to foreign countries where pleuro-pneumonia exists would appear practically to 'schedule' every foreign country; as, though there does not from information received appear to be any prevalence of pleuro-pneumonia in any one of them, there are doubtless isolated cases in all, or nearly all of them.

" (3.) I am to draw your attention to the fact that Ireland being an integral portion of the United Kingdom, animals arriving in Great Britain are subject to the same restrictions as animals arriving in one district from another in Great Britain, and that the treatment of animals in Ireland is under the direct control of the Irish Privy Council. The Lord President is in constant communication with the Irish authorities, with a view to the adoption of such measures as may ensure an efficient inspection in that country.

" (4.) I have to state that all the Privy Council regulations in regard to the vessels bringing animals to this country, are specially under the charge of the travelling inspectors of the Privy Council, and of the inspectors of the Privy Council stationed at the various ports of Great Britain where animals are landed; and that prosecutions at the instance of the Privy Council are instituted by the Treasury when any flagrant breach of any of these regulations takes place. The treatment of the animals, the accommodation provided, and the cleansing and disinfection of the ships carrying them, are already made subjects of special examination and report. This will be further referred to by me in reply to your proposal, No. 7.

" (5) I am

"(5.) I am directed to remind you that in 1873, in consequence of the Report of the Parliamentary Committee on the Contagious Diseases (Animals), the permissive powers then in force for regulating the movement of animals exposed to foot-and-mouth disease were revoked, and that they were only restored in the following year at the earnest request of several agricultural bodies. From the great diversity of opinions on the subject, there appears to be little doubt that the country would not now be prepared to submit to the imposition of such stringent and uniform restrictions as your society consider would be effectual to check the spread of this disease, such restrictions never having been hitherto resorted to, except during the actual prevalence of the cattle plague.

"(6.) I am to point out that the powers proposed to be conferred on local inspectors in proposition 6 are so arbitrary, and even aggressive, that there would be great difficulties in carrying them out. In the years when rinderpest was most prevalent in this country, such powers were never conferred on inspectors, and his Grace is of opinion that to propose to establish them now would be calculated to raise an organised opposition throughout the country.

"(7.) The Privy Council have already serving under them five gentlemen appointed as travelling inspectors, who inspect fairs, markets, railways, and ships employed in the importation of foreign animals, and their services have been found to be most beneficial to the public interests; but I am to point out that the local inspectors are entirely under the control of the local authorities of the respective districts for which they are appointed, under the provisions of the Act. It would appear to be within the scope of the duties of each local authority to appoint a superintending inspector, who, by careful supervision within his district, would ensure that the orders of the Privy Council, and of his actual employers, should be rigidly enforced. There would appear to be insuperable difficulties in the way of a central authority, such as the Privy Council, supervising the action of all the inspectors of the various local authorities of Great Britain, as proposed by your Society.

"(8.) I am to point out that by one of the provisions of the Animals Order of 1875, owners are now compelled to give notice of any case of an animal affected with a contagious disease, and are forbidden to move such animal, and that the further power of forbidding animals that have been in contact with disease to be moved is conferred on local authorities by Article 36 of the same Order.

"(9.) I am to state that this regulation would appear to be of so stringent a character that it would be impossible to carry it out in cases of contagious and infectious diseases generally. The Select Committee of the House of Commons, in 1873, reported strongly against such a measure being adopted in the case of foot-and-mouth disease, and I am instructed to state that his Grace is unable to accept the proposal.

"(10.) I am instructed to state that the prohibitions suggested have only been in force during the time that rinderpest was prevalent in this country, and that their stringency was frequently the subject of animadversion even under those peculiar circumstances. His Grace is of opinion that the Privy Council would not be justified, except under very exceptional circumstances, in adopting so severe a measure as that proposed by you, to meet the case of a prevalence of foot-and-mouth disease.

"(11.) The proposal that the compensation to be awarded to the owner in the case of compulsory slaughter for pleuro-pneumonia, should bear a certain proportion to the loss sustained rather than to the value of the animal, was adopted by the Committee of 1873. The difficulty of ascertaining the amount of loss so sustained has prevented the Lords of the Council from giving effect to that recommendation, but I am to point out that the maximum amount of compensation has been raised from one-half the value, not exceeding 20 *l.*, to three-fourths, not exceeding 30 *l.* I am to add that any alteration in the period of isolation of cattle that have been herded with cattle affected with pleuro-pneumonia, can only be made by Act of Parliament, not by an Order of Council.

"In conclusion, I am instructed to express the deep interest which the Lord President takes in all things connected with the importation of animals and the prevention of the diseases to which they are subject, and I am to assure you that his Grace is fully impressed with the necessity of providing every possible safeguard against the introduction of disease into this country, without unduly interfering with an important branch of trade in which importers and consumers are alike interested.

"I am, &c.

(signed) "*Charles Eardley Wilmot*,

"For Secretary.

"W. W. B. Beach, Esq., M.P.,
"Oakley Hall, Basingstoke."

Appendix No. 5.

(B.)

From the "Chamber of Agriculture Journal and Farmers' Chronicle," the Organ of the Chambers of Agriculture.

London, 12 February 1877.

THE Council meeting of the Central and Associated Chambers of Agriculture at the Salisbury Hotel, on Tuesday, was attended by 13 members representing the Central Chamber, and 34 deputed members from 22 Associated Chambers, Earl Fortescue presiding. The Chambers represented were—The Central, Banbury, Buckinghamshire, Cambridgeshire, Essex, Gloucestershire, Hampshire, Hertfordshire, Herefordshire, East Kent, West Kent, Leicestershire, Lincolnshire, Nottinghamshire, Peterborough, Shropshire, Somersetshire, Staffordshire, East Suffolk, Warwickshire, South Wiltshire, Worcestershire, West Riding of Yorkshire.

Sir George S. Jenkinson, Bart., M.P., was unanimously elected vice-chairman for 1877, to succeed to the chair in 1878. The following important resolutions, on the reply of the Lord President to the proposals for the prevention of cattle disease, were carried unanimously, with the exception of one dissentient:—

"This Council regrets that the reply of the Lord President is unsatisfactory."

"The Council cannot admit that the difficulties attending interference with existing trade are insuperable; the contrary being proved by the successful importation of dead meat from America."

"That this Council considers that an alteration in the manner of conducting the trade in animals with the Continent of Europe is absolutely necessary, and firmly maintains the proposals of the joint deputation with regard to slaughter, quarantine, and uniform internal regulations, as the minimum that can be considered to afford anything like adequate protection from disease."

"That in view of the altered circumstances of the present time, this Council desires to press as strongly as possible the great desirableness of the slaughter of all cattle at the port of embarkation, except such as are intended for, and entered as, store stock; and that such live stock shall be admitted, as before proposed, only under regulations of strict quarantine at the ports of debarkation."

"That copies of these resolutions be sent to the Lord President of the Privy Council and to the Premier."

Appendix, No. 6.

PAPER handed in by Sir *Alexander Wood.*

SCHEME submitted in February 1876 to the PRIVY COUNCIL in reference to the working of the CONTAGIOUS DISEASES (ANIMALS) ACT.

Appendix, No. 6.

THE prevalence of contagious diseases among live stock excites increasing apprehensions among breeders, dealers, and consumers, and commands the grave attention not only of local authorities but of both Houses of Parliament.

Stringent regulations have been enforced in England to prevent the spread of disease, but in Ireland, where circumstances are entirely different, these measures are inapplicable. While England is an importing, Ireland is to a very large extent a producing and exporting country, and it is of the utmost importance to both that every practicable facility should be afforded to the cattle traffic between them; therefore a combination of the greatest precaution with the least restriction is the end to be obtained.

It is with these views that the question as affecting the south of Ireland and the west of England has been practically dealt with by the undersigned, who respectfully submit the following suggestions for the consideration of Her Majesty's Government.

For the purpose of meeting the several contingencies of the traffic effective provisions must be made for:—

1st. Facilitating the embarkation of healthy stock.

2nd. The isolation and treatment of unhealthy stock.

3rd. Precautionary dealing with animals that may have been in contact with unhealthy stock.

4th. Their subsequent consignment, after approval by the Government inspectors, to English markets.

It is proposed that depôts (on the plan shown by the attached Diagram No. 1) be prepared at the shipping ports in Ireland (Cork and Waterford), and used under the control and supervision of the Government inspectors, for the reception of cattle intended for importation only.

They will be in four principal divisions, namely: the "Examination Pound," from which, as examined, the animals will pass either into the "Shipping Pens" for healthy stock, the "Infirmary Pens" for unhealthy animals, or the "Quarantine Pens" for suspected stock; slaughter-houses will also be attached for use when required. The floors will be of Staffordshire bricks; there will be a plentiful supply of good water, and every provision made to secure perfect cleanliness and disinfection; the pens will be roofed, so that the risks arising from the use of litter and from exposure to cold after travelling, will be avoided.

On the arrival of consignments of stock at the respective depôts, each animal will be passed separately through the "Examination Pound" by the Government inspector, and if the whole consignment from one consignor proves to be healthy, they will at once be taken to the "Shipping Pens."

If, on the contrary, a consignment arrives consisting of healthy and unhealthy stock, the former will be taken to the "Quarantine Pens" and the latter to the "Infirmary Pens," and both will be detained until pronounced sound by the Government inspector.

Depôts on the same principle will be provided at the landing ports on the English side, and similar regulations enforced.

For the Bristol market, where the greatest difficulties have been experienced, Portishead Pier will be the landing place, and Diagram No. 2 shows the arrangements there.

An isolated road leads from the pier landing stages to the depôts, and a similar road from the depôt to the railway loading pens, and the trucks in which the cattle will be conveyed to Bristol.

At the Bristol Station there will again be a private passage from the trucks into the Bristol Cattle Market.

It is believed by this scheme every possible facility will be given for the Irish breeders and dealers to supply healthy stock to the English markets, while the English farmers and graziers resorting to the markets as buyers or sellers, will be protected from the risks of imported disease, which now render valueless the severe restrictions to which they have to

Appendix, No. 6.

submit, and both home and imported stock will be guarded from the alleged dangers of infected roads.

At Cork, Waterford, Milford, and Portishead, sites well adapted for depôts have been provisionally secured, and can be made at once available on very reasonable terms, while the entire cost at each place will be but small when compared with the value of the important results to be obtained.

The undersigned have not entered upon the cost of management, nor of the charges, if any, for entering the depôts, nor for the necessary care and fodder to be provided in the case of detention, believing such details would be more properly settled by Government after the principle embodied in the above suggestions is admitted.

---

1. Like Orders in Council, by the Queen in England, and by the Lord Lieutenant in Ireland, should declare that all live stock, except horses and asses, passing from Ireland into England, and *vice versâ*, before embarkation, shall be properly inspected, and none but healthy stock shall be allowed to embark; and also stock in contact with any that is unhealthy shall be detained.

2. The orders also should provide that at certain ports, where the extent of the cattle trade may justify their establishment, depôts should be formed, where, so soon as they shall be erected, the inspection shall take place, and consequently no animals will be embarked at these ports unless they are passed through the depôts.

3. Like regulations to be made for the inspection of animals after the voyage, also at approved depôts.

In order to encourage the erection of these depôts, the following arrangements to be adopted:—

1. At certain ports to be declared by Government as requiring depôts (the sites for the same with water frontage to be preferred), shall be provided by either local authorities or railway and steamship companies.

2. When approved by Government, the owners of the sites shall submit plans of their distribution and proposed erections for Government approval; and when approved, the whole of the authorised outlay for the same shall be provided, in the first instance, by Government. But as regards one-half of the amount so to be expended, it shall be repaid with interest at per cent. in years.

3. The tariff of charges, and rules of management, to be approved by Government, as in the case of depôts for the reception of foreign animals.

Appendix, No. 7.

PAPER handed in by Sir *C. Alexander Wood*, 25 June 1877.

GREAT WESTERN RAILWAY.

Appendix, No. 7.

Chief Goods Manager's Office, Paddington Station,
London, March 1877.

1. I BEG to inform you that the Great Western Railway Company have two rates for the carriage of Fish Traffic from New Milford to places in England: the one an Insurance Rate, in respect of which the Company undertake the liabilities of common carriers; the other a Cheap Rate, in respect of which the owners take the entire risk of the journey. The Company will not undertake to deliver the fish carried at the cheap rate in time for any particular market, nor will they be responsible for any loss, delay, or damage in transit, except upon proof that such loss, delay, or damage occurred through the wilful neglect or misconduct of the servants of the Company.

2. The rates given on the other side are calculated at the cheap rate, and are those which will be in force during the season of 1877; the insurance rates are calculated at 25 per cent. in excess of the cheap rates.

3. The rates include delivery in London, but not at any other place. The Birmingham rates apply to Snow Hill, Bordesley, and Hockley Stations.

4. All fish not expressly consigned at the cheap rate, will be carried and charged at the insurance rates.

5. No rebate or drawback will be allowed off the rates.

6. The fish, whether packed in boxes or baskets, will be carried and charged at the actual gross weight.

7. The fish handed to the Company at New Milford will be invoiced from that place to destination at the Milford rates, but the sea freight will be added and charged out as a "paid on" in cases where it is desired that the consignee should pay the charges throughout from Kinsale to destination. In all such cases the sea freight must be shown on the consignment notes, and will be accounted for to the senders when paid by the consignees.

8. In order to facilitate the loading and transit of the fish, and to prevent delay or wrong sending at Milford, it is essential that the boxes, &c., should be addressed, or bear some clear and distinctive mark, to show where and to whom the various consignments are to be sent.

9. The fish will be carried by the passenger trains, or by special fish trains from New Milford.

10. It is very desirable that the boats conveying the fish from Kinsale should reach Milford by 11 a.m., so that the fish may be forwarded by the ordinary train, or by special fish trains timed to leave at or about 3.0 p.m. for London, and 2.0 p.m. for Birmingham and the North.

11. Steamers in connection with the Great Western Company sail from Cork and Passage to New Milford, by which some portion of the fish traffic may be carried. Particulars of the days and times of sailing, and of the rates from Cork and Passage, can be obtained from their agent at the former place, and from the City of Cork Steam Packet Company.

12. Special trains will be provided upon special orders being given, when there is a load of not less than 30 tons for the station to which the special is intended to run, or when the carriage for that quantity is paid. Smaller quantities will be sent by the first available train.

I am, &c.
(signed) *John Grant.*

Appendix, No. 9.

PAPERS handed in by Mr. *May*.

Appendix, No. 9.

ROYAL DECREE of the 3rd February 1877, containing the appointing of further Regulations for the checking of Lung Disease among Cattle, and also the revoking of the Royal Decrees of the 17th April 1874, of the 9th October 1874, and of the 30th June 1875.

Article 1.—As soon as a head of cattle is attacked with lung disease, the owner, keeper, or shepherd shall cause all the cattle which may in consequence thereof become suspected to be inoculated by a duly qualified veterinary surgeon, if the burgomaster so orders it. Before giving the order, the burgomaster must take the advice of the district veterinary surgeon. The cost of the inoculation done by order of the burgomaster shall be defrayed by the State Treasury at the rate of 50 cents. per head.

If no proper virus can be obtained, in the opinion of the district veterinary surgeon, the burgomaster may give his consent to the postponement of the inoculation until such virus can be procured. The district veterinary surgeon shall supply the veterinary surgeon charged with the inoculation as early as possible with good virus.

If the owner, keeper, or shepherd does not immediately conform to the obligation laid upon him by this article, the inoculation is then to take place by direction of the burgomaster, notwithstanding which he remains liable to a criminal prosecution.

Article 2.—When a head of cattle suspected of lung disease cannot, while in the pasture, be entirely isolated to the satisfaction of the district veterinary surgeon, the burgomaster, acting under his advice, shall order its removal to a stable or other building, with the observance of precautions to be instituted by the burgomaster, with the advice of the district veterinary surgeon, and it shall remain isolated until the expiration of the term mentioned in Article 5 of the Royal Decree of the 30th October 1872.

Article 3.—Our Decrees of the 17th April 1874, of the 9th October 1874, and of the 30th June 1875, are withdrawn.

Article 4.—Our present Decree will come into operation on the fifth day after its publication in the Official Gazette.

ROYAL DECREE of the 28th February 1877, containing Regulations concerning the Removal of Cattle, Sheep, Goats, &c.

Article 1.—In those districts to be indicated by our Minister of the Interior by an announcement in the Official Gazette, it is forbidden to remove, or to cause to be removed, any live cattle, sheep, or goats without a permit given by the burgomaster of the commune in which the cattle are. In the permit must be stated the number and species of the animals which it is proposed to remove, the route by which they are to be forwarded to their place of destination, and also the time during which the permit is to remain valid. It must not be given by the burgomaster except in the following cases :—

1st. For the removal of animals to the slaughter-house.

2nd. Because of the change of residence of the owner or person in charge of the cattle.

3rd. For the removal of cattle by the buyer at a public sale.

If the removal extends to another commune, the burgomaster who issues the permit is to send a copy of it to the burgomaster of the commune whither the removal shall extend.

Article 2.—Whenever the person in charge of the cattle removing is unprovided with a permit for their removal, or when the removal is by another route or at another time than that prescribed in the removal permit, the cattle shall be detained, and a *procès-verbal* shall be made against the person in charge.

The slaughtering of cattle mentioned in the preceding Article, under Clause 1, is to take place

place under the supervision of the police, within a time to be fixed by the burgomaster of the commune in which the cattle are after their removal.

Article 3.—The holding of markets and public sales of all cattle, in so far as they may be allowed by the local regulations, is prohibited in those communes which may be indicated by our Minister of the Interior, by means of a notice in the Official Gazette.

The public sale of cattle belonging to the same owner, or forming part of the estate of a deceased person, continues to be allowed.

Article 4.—Our present Decree will come into operation on the fifth day after its publication in the Official Gazette.

ABSTRACT of the LAW of the 20th of July 1870, regulating the Government Supervision of Cattle and Veterinary Police. 131.

Article 1.—The Government supervision of cattle includes—

a. Inquiry as to the general condition of the animals, and, when necessary, the application of means for its improvement.

b. Enforcement of the laws and regulations enacted.

Article 2.—Appointment of district veterinary inspectors by the Minister of the Interior.

Article 3.—Oath to be taken by the veterinary officers.

Article 4.—Suspension of appointment of veterinary officers.

Article 5.—Power of district inspectors to enter all places within their district, fields, stables, and other places where cattle are kept, slaughter-houses, shops or places where meat is kept, zoological gardens, exhibition of cattle flayers, tripe dressers' shops, and all similar places, with or without the consent of the owners.

Article 6.—Reports to be made up by the district inspectors and sent in to the proper authority.

Article 7.—District inspectors to have a fixed salary, together with payment of office and travelling expenses. They are not to follow any other employment. Other inspectors can practise on their own account, and do not have a fixed salary.

Article 8.—Yearly reports to be sent in before the 1st of April in each year.

Article 9.—District inspectors keep an accurate account of the condition of the cattle within their district, and see to the due application of the laws and regulations made with respect to them, and countersign the diplomas and certificates of the veterinary surgeons.

They are to visit markets where the trade in cattle is carried on, and places where public sales of cattle are held, and order the detention and isolation of all cattle suffering from a contagious disease.

Article 10.—On any disease occurring among the cattle, or in case there may be reason to suppose that any cattle disease might be imported from abroad, immediate notice is to be given to the Minister of the Interior, to the Governor of the province, and to the district inspectors in the neighbouring places. When any such disease appears in their district, they shall make themselves personally acquainted with its nature, and propose such measures to the burgomaster as may be immediately taken for the suppression of the disease.

Article 11.—On the occurrence of cattle disease, temporary district inspectors may be appointed.

Article 12.—Report to be made by the Minister of the Interior every year; this report to be communicated to the States General.

Article 13.—On signs of contagious disease appearing, the owner or person having charge of the animal or animals to give immediate notice to the burgomaster of the commune in which the cattle is.

Article 14.—Affected animals to be immediately separated by the owner, and to be kept separated until the burgomaster in consultation with the district veterinary officer shall have decided on the measures to be taken.

Article 15.—Whenever it may be thought advisable, in consequence of the occurrence of any contagious disease in the country or abroad, the importation and transit of cattle may be prohibited; also, all movement of cattle, living or dead, and transport of meat, hides, hair, wool, manure and offal, fodder, instruments and things used in connection with cattle, may be stopped, and the holding of markets, exhibitions, &c., of cattle prohibited, and regulations made as to the matters mentioned in this article.

Appendix, No. 9.

Article 16.—On notice of any contagious cattle disease being given by the owner or person in charge, or when an animal may be suspected of suffering from any contagious disease, the burgomaster shall immediately order an investigation or inspection of the animals attacked or which may be supposed to be suffering from any disease, the investigations to be made by the district veterinary officer, or, in his absence, by the substitute veterinary inspector, or if necessary, in order to save time, by any duly qualified veterinary surgeon; report in writing is to be made to the burgomaster, and if the disease be of a contagious nature, the veterinary officer shall propose the measures to be taken with a view of checking the spread of the disease, and the burgomaster shall immediately cause such measures to be enforced.

Article 17.—At the direction of the burgomaster, who shall, if possible, take the advice of the district veterinary officer, or in his absence, and in that of the substitute veterinary authority, the advice of any qualified veterinary surgeon, the place, stall, or field in which any head of cattle affected with a contagious disease, or suspected of being so affected, is or may have been, shall have a distinct sign set upon it, by or in the presence of an officer of police; the sign employed for this purpose shall remain where it is placed for a time to be determined by the burgomaster in consultation with the district veterinary officer, but which shall not exceed 100 days after the termination of the last case.

Article 18.—The material, form, and size of the signs to be employed, to be determined by the Minister of the Interior, and published in the Official Gazette.

Article 19.—It shall be the duty of the burgomaster, with the advice of the district veterinary officer, or in his absence and in that of the substitute veterinary authority in urgent cases, on the advice of any qualified veterinary surgeon, to cause any cattle affected by or suspected of a contagious disease, or after its recovery therefrom, to be distinctly marked.

Article 20.—Instruments for marking cattle and the signs ordered in pursuance of Article 17, to be provided in every commune at the expense of the Government.

Article 21.—Removal of cattle affected with or suspected of a contagious disease is prohibited; should, however, such removal be necessary, the burgomaster may allow it to take place after taking the advice of the veterinary authority, and with the observance of the precautions recommended by such authority.

Article 22.—Cattle is held to be suspected whenever the district veterinary officer may observe in it the signs of a contagious disorder, whenever it can have been in contact with contagious matter, or may have been in the same place with an animal affected with contagious disease, or may have been in such place within a period to be determined in accordance with Article 34, or has been in immediate contact with such animal.

Article 23.—All orders for the slaughtering or detention of cattle to be made by the burgomaster on the report of the verterinary officer.

Article 24.—Compensation to be made for cattle ordered to be slaughtered.

An expert to be appointed by the burgomaster for the purpose of valuing the cattle; the full value of the cattle, if in a healthy condition, to be given for suspected animals, and for animals affected with a contagious disorder, the half of such value. For the purpose of compensation, cattle shall be considered as affected or suspected, according to its condition at the moment of its being taken possession of by the burgomaster.

The remainder of this article contains provisions for the settlement of differences as to the value of the cattle ordered for slaughter.

Article 25.—The provisions of Articles 23 and 24 to be applied to all articles destroyed on the recommendation of the veterinary authority.

Article 26.—Fixes the time within which the claim for compensation remains in force, and the deposit of monies awarded in compensation, but not accepted as sufficient by the owner of the cattle slaughtered, or articles destroyed.

Article 27.—The claim for compensation is forfeited in cases where notice has not been given as required by Article 13, or the separation of the animals as required by Article 14 has been neglected, or in case the owner shall have taken his cattle within the prohibited period into stalls or fields, or other places in which a contagious disease has prevailed, or shall in any way purposely have caused his cattle to become suspected.

Article 28.—Prescribes the method of payment of the amounts required for compensation, and the mode in which the accounts are to be sent in.

Article 29.—If considered necessary by the district veterinary officer, all infected places to be isolated; the military power may be called into aid in effecting this object. The clothes of persons coming from an infected place to be disinfected.

Article 30.—Dogs may be ordered to be detained in infected places.

Article 31.—Instructions as to destruction, by burning or otherwise, of cattle slaughtered in pursuance of this law, or which may have died from any infectious disease, and of other objects,

objects, and also as to the disinfection of stables and other buildings, and of manure-pits, issued by Royal Decree to be observed. Appendix, No. 9.

(Instructions issued in pursuance of this article will be found in the law of the 4th of December 1870).

Article 32.—No cattle to be introduced into pastures or places where any contagious disease has prevailed, until the expiration of a period of time, the length of which shall be specially determined for each disease.

Article 33.—The burgomaster, accompanied or not by such persons as he may consider necessary, may enter the pastures, stables, and dwelling places of the owners or keepers of cattle for the purposes of this law, or of the decrees issued in pursuance thereof.

Article 34.—A schedule of diseases to be considered contagious to be issued by Royal Decree, whereby also shall be determined what measures contained in this law shall be applied on the breaking out or threatening of each of such diseases.

Articles 35 to 41.—Penalties.

Articles 42 to 46 (the end).—Definitions, &c., and laws repealed.

ABSTRACT of Regulations respecting the burying, burning, or otherwise destroying of Cattle, which have been slaughtered according to the Law of the 20th of July 1870 (Act No. 131), or which have died of a Contagious Disease, and of other objects; and the Disinfection of Stables and other Buildings, and of Manure Pits:— 191.

No. 191.—4 December 1870.

Sect. 1. Destruction of Infected Articles by means of Burning or Burying.

Infected hay, straw, reeds, dry manure, wooden flooring, if in bad condition, old woodwork, strongly infected clothing, and other objects not suitable for disinfection, to be burned, or if this be dangerous, buried.

Animals dying of, or slaughtered in consequence of, cattle plague or sheep-pox, more especially to be burned, or when the locality does not allow of burial.

The things to be burned are collected together with the upper layer of the road along which they have been brought, and are placed in a pit; and after having a sufficient quantity of pitch and petroleum poured over them are set on fire. The ash, or what may remain, is buried to the depth of a meter. In burying without burning, the cattle are cut open, the hide is rendered valueless by being slashed; it is then placed in a pit with pitch, petroleum, or with a layer of quicklime, at least one decimeter thick, over it; on this are placed the manure, hay, and straw to be buried; and over all a layer of earth one meter thick; the place is, if necessary, surrounded by a thick fence, sufficient to keep out all cattle, and is to be kept fenced in for one year.

Sect. 2. Disinfecting Infected Articles.

The disinfection of infected articles is effected by first scraping them, and then scrubbing them with boiling water, to be followed by the process mentioned in Sect. 3.

Sect. 3. Destruction of Contagious Matter.

The destruction of contagious matter is effected by exposing the infected articles to a current of air, or to a high temperature, or by the application of disinfectants. The district inspector decides which of these means shall be employed.

The most usual disinfectants employed are chlorine or chloride of lime, sulphuric acid, or carbolic acid.

Stalls and sheds to be disinfected by means of chloride of lime, with or without whitewash; chloride of lime to be put in pans in infected sheds.

Sulphuric acid fumes to be used for disinfecting hides, wool, and similar articles.

Disinfecting of persons is effected by the careful washing of the hands and face with soap and water, and is, as a rule, confined to the outer garments; special care being taken with the disinfection of boots or shoes. The underclothing to be disinfected if necessary; this may be so in the case of persons employed in the slaughter of infected animals.

Cotties infected by blood or excretion from the mouth are washed in boiling soap and water; or if not adapted for this treatment, or are of little value, they are burned. The shoes to be carefully washed with a solution of carbolic acid.

Sheds and other buildings are first cleansed from manure. The manure to be removed with all necessary precautions, and disinfected or buried in the neighbourhood of the building.

Appendix, No. 9.

All articles not suitable for disinfection, such as old flooring, woodwork, &c., to be broken down and burned or buried. (Indemnification according to Art. 25 of the Law of 20 July 1870, No. 131.)

Walls and flooring to be then carefully scraped and scrubbed with boiling water, and afterwards washed with solution of carbolic acid; and after this has drained off, the whole to be subjected to strong vapour of chlorine.

The places submitted to chlorine vapours to remain closed up for at least six hours; after which they are to be exposed to a free current of air.

Fire proof objects to be submitted to a red heat.

Manure pits:—

1. To be disinfected with an abundant quantity of water containing carbolic acid, or if preferable, by means of chloride of lime.

2. By being ploughed in.

---

194. ROYAL DECREE of 8th December 1870, respecting the Prohibition of the Importation and Transit from Foreign Countries of Cattle, Sheep and Goats, Fresh Hides, Fresh and Salted Meat, Unmelted Fat, Manure, Unmanufactured Wool, Unmanufactured Hair, Hoofs and Horns, also of all Offal of the said Animals.

Article 1.—The importation and transit from foreign countries of cattle, sheep, and goats, and of fresh hides, fresh and salted meat, unmelted fat, manure, unmanufactured wool, unmanufactured hair, hoofs, horns, and of all other offal of the said animals are prohibited.

Article 2.—This prohibition does not apply to salted meat, wool, hair, horns, and hoofs, brought direct from countries beyond Europe.

Article 3.—Whenever any special cause shall render necessary any modification of the terms of this Decree, our Minister of the Interior is authorised to make such modifications, taking all necessary precautions against the transmitting of infection, and with the co-operation of our Minister of Finance.

Article 4.—This Decree will come into operation on the 1st January 1871.

---

42. ROYAL DECREE of the 28th May 1871, containing the Prohibition of the loading of Cattle on Board a Ship destined for Abroad, without a previous Inspection by a Veterinary Surgeon appointed thereto by the Government.—Taking into consideration, that in contravention of the 21st Article of the Law of the 20th July 1870, exportation of cattle suffering from lung disease, has taken place at Rotterdam, by steamboats destined for foreign countries, and that the inspection of outward-bound cattle before going on board is thus rendered necessary, we have willed and decreed as follows:—

Article 1.—It is prohibited to ship, or to offer for shipping, any cattle on board any vessel destined for foreign countries, without a previous inspection by a veterinary surgeon appointed thereto by the Government. The inspection shall take place by day only, between sunrise and sunset.

Article 2.—Our Decree shall come into operation on the fifth day after its publication in the Official Gazette.

---

104. ROYAL DECREE of the 19th October 1871, respecting the Transport of Cattle by Railway, and the disinfecting of Cattle-trucks.

Article 1.—The transport of cattle by railway may be effected only by means of trucks used exclusively for that purpose.

Article 2.—Cattle-trucks entering from foreign countries must be cleansed and disinfected at the frontier station, under the care of the railway company concerned, with observance of paragraphs 2 and 3 of the instructions appended to our decree of the 4th December 1870—(191).

Article 3.—Our present Decree shall come into operation on the fifth day after its publication in the Official Gazette.

ABSTRACT.

DECREE of the 30th of October 1872, stating which cattle diseases are to be considered contagious, and indicating which of the measures mentioned in the law of 20th of July 1870 are to be applied on the breaking out or threatening of each of such diseases.

Article 1.—The following are held to be contagious diseases of cattle:—

1. Cattle plague in ruminating animals.
2. Lung disease in horned cattle.
3. Malignant foot disease in sheep.
4. Glanders and in
5. Scab in horses and sheep.
6. Sheep-pox.
7. Splenitis in all cattle.
8. Rabies in all cattle.

Article 2.—Articles 13 and 14 of the Law of the 20th of July 1870 (Art. No. 131), are applicable to all the diseases mentioned in Article 1. Cattle suspected to be suffering from a contagious disease can be ordered by the burgomaster to be isolated after consultation with the district veterinary officer, his substitute, or in the absence of these, and in urgent cases, with a qualified veterinary surgeon.

Article 3.—Besides the notice and separation directed by Articles 13 and 14, the following measures are to be applied:—

Sect. 1. Cattle Plague.

Cattle suffering from or suspected of cattle plague shall be slaughtered, and afterwards burnt or buried.

The stable or building where cattle suffering from, or suspected of, cattle plague have been, shall be disinfected.

The manure on the farm or place shall be disinfected.

Dogs may be ordered to be detained.

Sect. 2. Lung Disease.

Cattle attacked by lung disease shall be slaughtered; the internal organs shall be burnt or buried; the hides of the animals slaughtered shall be disinfected.

The place in the stall, or the building where an animal which has been slaughtered or has died has stood, shall be disinfected.

Dogs may be ordered to be detained.

Our Minister of the Interior can suspend the slaughtering in particular districts, and for certain times, and can order the slaughtering of suspected animals.

Owners of cattle suffering from lung disease are authorised to slaughter such animals, after having given notice to the burgomaster, and under the direction of the police; they shall, notwithstanding, observe the remaining stipulations of the law referred to, and of this Decree.

Sect. 3. Malignant Foot Disease in Sheep.

Sheep suffering from this disease shall be separated from the others.

Sect. 4. Glanders.

Should the district veterinary officer consider it necessary, the animal attacked shall be slaughtered, and the body burned or buried.

The place in the stable or other building where the animal has been shall be disinfected.

Sect. 5. Scab.

Horses or sheep affected with scab shall be separated from the others.

Sect. 6. Sheep-pox.

In special cases where it may be considered necessary by the district veterinary authority, sheep suffering from sheep-pox may be slaughtered.

The body shall be burned or buried.

If slaughtering has not been applied, the sheep attacked shall be kept separate from the others.

The stable or other building in which a sheep suffering from sheep-pox has been, shall be disinfected after the termination of the last case.

Sect. 7. Splenitis.

Separation and disinfecting of the place.

Appendix, No. 9.

Sect. 8. Rabies.

Cattle attacked with rabies to be slaughtered, and the body burned or buried.
The place to be disinfected.
Dogs to be detained.

Article 4.—Cattle dying of a contagious disease shall be burned or buried by and at the cost of the owner.
The tar, petroleum, or quicklime necessary shall be provided by the burgomaster at the expense of Government.

Article 5.—Cattle considered as suspected according to the Law of the 20th July 1870, Article 22, remains in that condition.

For lung disease, 3 months.
For malignant foot disease in sheep, 15 days.
For glanders and , 30 days.
For scab in horses, 15 days; and for scab in sheep, 1 day.
For sheep-pox, 15 days.
For splenitis, 8 days.
For rabies in sheep, goats, and swine, 2 months.
For rabies of cattle and single-hoofed animals, 6 months.

To be reckoned from the termination of the last, by recovery, or from the death or slaughter.

* * * * * *

In the case of cattle suspected of lung disease, the period of three months can be diminished by one month, in case the district veterinary officer, or his deputy, shall declare in writing, that within eight days of its having been declared suspected, it has been successfully inoculated by a qualfied veterinary surgeon.

* * * * * *

---

135 ROYAL DECREE of the 3rd October 1873, containing provisions respecting the Inspection, making Returns and Removal of Cattle, and the Prohibition of Markets and Public Sales of Cattle, with the object of checking the Spread of Lung Disease in Cattle.

Article 1.—It is forbidden to remove horned cattle out of or into those communes or parts of communes which may be specified by our Minister of the Interior. This announcement is to be made generally known by publication in the Official Gazette.
In special cases, the burgomaster can grant permission for such removal, after taking the opinion of the district veterinary surgeon, and on the conditions which may be considered necessary by him.

Article 2.—The holding of markets and public sales of cattle, although allowed by communal regulations, is forbidden in these communes which may have been notified by our Minister of the Interior by publication in the Official Gazette. Public sales of cattle belonging to one owner or forming part of the estate of a deceased person are still permitted.

Article 3.—In the communes or parts of communes referred to in Article 1, all the horned cattle shall be registered by inspectors.
These inspectors shall be appointed or dismissed by our Minister of the Interior. Before entering upon their duties, the inspectors must take the following oath or declaration before the burgomaster of the commune, assigned to them as their place of residence:—
"I swear (or promise) that I will properly perform the duties belonging to the office of inspector of cattle. So truly help me God Almighty."

Article 4.—The inspector shall make, in duplicate, lists of the cattle belonging to each owner, in which lists the cattle shall be numbered and described. These lists must be signed by the owners, or in their absence, by the keepers or herdsmen in whose charge the cattle may be; one copy is to be sent to the burgomaster.

Article 5.—The owner or person in charge of the cattle must, within 24 hours, give notice, in accordance with the provisions of Article 1, to the burgomaster, of every change that may have taken place with regard to the number of the cattle specified in the lists, in consequence of calving, death, slaughtering, or removal from one place to another within the commune, or part of the commune, and the burgomaster make a note thereof on the copy of the list which has been deposited with him.

Article 6.—Immediately and within 12 hours after the death or slaughtering of any head of cattle, the owner, keeper, or herdsman in charge must give notice thereof to the inspector, who must examine the animal which has died, or which has been slaughtered within 24 hours after the notification.
Until this inspection has taken place, it is forbidden to detach the lungs or to remove any portion of the animal.

Article 7.—The inspectors are bound to examine at least once a week all the cattle mentioned in the lists made out by them, and to compare the cattle with those lists. All such

such changes as are mentioned in Article 5 shall be immediately noted on the lists, and signed by the owners, keepers, or herdsmen as having been shown to him. If the inspectors in the course of this examination, or that mentioned in Article 6, suspect that any head of cattle is, or has been suffering from long disease, or should they detect any unauthorised change in the total number, they shall in the first case give immediate notice to the burgomaster, who shall act as prescribed in the Law of the 20th July 1870, and in the last case, they shall draw up, on oath, a *procès-verbal* of the infraction.

The Law of the 20th July 1870 (Official Gazette No. 131), for the regulation of Government inspection of cattle and veterinary police. From Article 34 of this Law, resulted (*see* p. 51 of Veterinary Report of Privy Council)—

The Royal Decree of 30th October 1872 (Official Gazette, No. 105), stating the diseases which are to be considered contagious, and the measures to be adopted with respect thereto, according to Section 2. Sections 13 and 14 of No. 131 are applicable to all cattle diseases mention in Clause 1 of 165. Clauses 13 and 14 of 131 are to the effect that the owner shall give immediate notice of the appearance of any cattle disease to the burgomaster, and cattle (Article 14) shall be kept isolated until the measures decreed by that authority shall have been applied (these measures fixed by No. 105, Article 3).

Another result of the Law No. 131 (Article 31) is the Royal Decree of 4th December 1870, No. 191, pointing out the methods to be adopted for the destruction or disinfection of cattle slaughtered on account of contagious disease, and of other objects; and the disinfection of stables and other buildings, and the rendering inocuous of manure-pits; infected hay, straw, reeds, dry manure, wooden flooring (if in bad condition), old lattice-work, strongly-infected clothes, and other objects unsuitable for disinfection, to be burned, or if this should be dangerous, buried. Animals dying of, or slaughtered in consequence of, cattle plague, or sheep-pox more especially, to be burned, or, when the locality does not allow, of burial.

The things to be burned are collected together, with the upper layer of the road along which they have been brought, and are placed in a pit, and after having a sufficient quantity of pitch and petroleum poured over them, are set on fire. The ash or what may remain is buried to the depth of a meter.

In burying without burning, the cattle are cut open, the hide is rendered valueless by being slashed, it is then placed in a pit with pitch, petroleum, or with a layer of quick-lime at least one decimeter thick over it; on this are placed the manure, hay, and straw to be buried, and over all a layer of earth one meter thick; the place is, if necessary, surrounded by a thick fence sufficient to keep out all cattle, and is to be kept fenced in for one year.

In cases of *Lung Disease*, Article 3 Sect. 2 of 105, 30th October 1872, animals affected must be slaughtered; lungs and other internal parts to be burned or buried (for method, *see* above). The hides are disinfected; the place where an animal having had lung disease has been, to be disinfected.

Dogs can be detained.

By Decree of 3rd February 1877, No. 17 (repealing decree of 17th April 1874, mentioned in Veterinary Report, p. 53), it is directed that on an animal being attacked by lung disease, the owner is obliged to have all his cattle which may in consequence become suspected inoculated by a properly qualified veterinary surgeon; 50 cents. (10 *d.*) to be paid to cover the cost. Should the owner not immediately carry out this regulation, the inoculation to be done by the burgomaster; (further, the same as the repealed Decree of 17th April 1874). In addition, to many places, slaughtering of the whole herd, among which lung disease may have shown itself, has been resorted to; by this means the number of cases in Friesland and some other provinces has been much reduced. The return of lung disease for the four weeks, 22nd April to 19th May of this year, is as follows: in Guelderland, 4 cases; South Holland, 87; Friesland, 9; total, 100 cases. All the other provinces were free from the disease. It is hoped that by a more general application of this measure, coupled with inoculation and isolation, the disease may eventually be eradicated. The amount expended this year up to the 15th of May has been 416,967 *f.* (34,700 *l.*), namely, 51,244 *f.* 50 *c.* for affected animals, and 365,722 *f.* 50 *c.* for suspected animals. It is considered at the present moment that there is no herd affected with lung disease in the province of Friesland. In South Holland the slaughter of suspected animals has only been partially applied. In that part of the province where the disease is known to exist, there are at present 41 affected herds in the pastures, where they are entirely isolated, and may not be removed so long as they are to be considered to be in a suspected condition; that is to say, for a period of three months after the termination of the last case. (Article 5 of D., 30 October 1872, 105.) I may mention that the opinion expressed at page 11 of the Annual Report of the Veterinary Department for 1876, that pleuro-pneumonia is not spread by "mediate contagion," appears not to be shared by the veterinary body in the Netherlands, at all events not by the head of the Veterinary Department there; it is there considered that a person going from an affected herd to a healthy herd may convey the disease to the latter. This may lead to a modification of the opinion stated at page 22 of the Report, namely, that on this subject there are no doubtful points to be considered.

Appendix, No. 10.

PAPERS handed in by Mr. *C. L. Peel*, on behalf of the Swedish and Norwegian Consul General.

Appendix, No. 10. REGULATIONS for Importation and Export of Cattle adopted in *Sweden* with reference to Contagious Diseases in Domestic Animals.

SWEDEN, more than most other European countries, has been free from contagious diseases amongst domestic animals, or epizootic. With the exception of the epizootic, which between 1720 and 1740 raged amongst the cattle in the south of Sweden, and which at the time certainly was called cattle plague, but which, according to the descriptions extant was splenic apoplexy, the epizootic has only very rarely appeared, and then again only within very narrow limits, to which, through proper measures, it has been possible to confine it.

The disease which is now called cattle plague has *never* appeared in Sweden. Contagious pleuro-pneumonia of cattle has, after having been introduced from England, shown itself twice, namely, in 1847 and 1856, but through energetic measures it was stopped, so that no case has since happened.

Of the other infectious diseases some single cases of splenic apoplexy have appeared, as well as of sheep-pox and foot-and-mouth disease, the last mentioned having been introduced through cattle landed from a stranded ship; only few cases of disease or death therefrom have, however, happened before the disease has been stamped out.

The reasons for this favourable state of things are various. The frontiers of the country are in part consisting of uninhabited mountain districts, through which but few roads lead on which the traffic may very easily be controlled, but chiefly of the sea-shore. By this it has been possible to limit the importation of cattle to some few ports, a circumstance which again has made possible a careful inspection of the state of health of the imported animals. This importation, moreover, is very small, and consists chiefly of cattle for breeding purposes.

There are no roads in the country along which cattle can be transported in transit.

If these circumstances have already before been found of weight, this must still more be the case now, when suitable and severe laws, accompanied with regulations for their being adhered to, have of late years been made to prevent the introduction of cattle diseases from other countries, as well as to make possible that they are speedily stamped out and prevented from spreading, if, notwithstanding all precautions, they should break out in the country.

These laws are contained in—

I. Royal Decree of 30th May 1873; and

II. Royal Decree of 19th April 1875;

translations of which laws are given below.

In addition to this the Board of Health has published directions and advice, which have been distributed amongst the communes (parishes) and the veterinary and civil authorities in many thousands of copies.

III. Extract of this publication is also given below.

I.—ROYAL DECREE of 30 May 1873, concerning Importation of Cattle and various Goods.

Paragraphs, 1–3. As soon as it has been ascertained that cattle plague or any other infectious disease in domestic animals has appeared in any foreign country, public notice is to be given and circulated as widely as possible, to the effect that the country in question is *infected*.

The proper authorities are empowered to declare any country *suspected* in which no such disease is known to exist but through which it may be imported.

Paragraph 4. Importation by sea of oxen, sheep, &c., and of horses, must not take place except

except in places where authorised veterinary surgeons are found; at the commencement of each year lists shall be published of such places where the above-mentioned kinds of cattle may be imported.

Paragraph 5. All importations of any kind of cattle, either by sea or by land, from any foreign country or district which has been duly declared *infected* by cattle plague is absolutely prohibited.

Regarding the treatment of cattle which, although arriving from a healthy place, has within the last four months preceding the exportation been in contact with any infected place, *vide* paragraph 4.

Paragraph 6. Importation of cattle from foreign country or district, according to paragraph 3, has been declared *suspected* of being infected with cattle plague, is permitted only on the following conditions:—

(*a*) Every herd of cattle must be accompanied by a certificate, showing that within the last four months preceding the exportation, it has neither been attacked by cattle plague, nor been in contact with any place infected with malignant disease.

(*b*) On arriving to the Swedish place of importation every herd of cattle must, before being landed, be duly examined by an authorised veterinary surgeon, and declared free from any infectious disease.

In order to be valid the certificates above mentioned must be either issued or duly attested by the Consul for Sweden, or by some other public authority at the place of exportation.

Paragraph 7. If a country has been declared infected, not with cattle plague, but with some other infectious disease, importation of the kind of animals which suffer from that disease is allowed only if *every herd of animals* is supplied with a certificate issued by proper authority (*vide* paragraph 6), indicating the marks by which the individual animal may be recognised, and showing that it has not been suffering from the disease in question, or been near any infected place. A certificate delivered by a veterinary surgeon at the place of shipping, to the effect that the animals were healthy at the departure is also required, and, finally, the animals are to be inspected by an authorised veterinary surgeon before being landed.

If the foreign place from which the animals have arrived is declared infected with pleuro-pneumonia, splenitis, glanders, pox, foot-and-mouth disease, scab in sheep, or hydrophobia, the animals are to remain isolated from other domestic animals during the three next following months at the place of importation, or at the place of destination, and must be inspected by a veterinary surgeon once a month, or more, if necessary.

Paragraph 8. Any animal which at the inspection, mentioned in paragraphs 6 and 7, is found to be infected with cattle plague, pleuro-pneumonia, splenitis, glanders, pox, or hydrophobia, must be slaughtered immediately. Any other animal infected with some other malignant disease must also be slaughtered or re-exported without being previously brought on shore.

If, as above stated, any animal on its arrival is found suffering from some malignant disease, or if on board vessels carrying animals any case of such disease has happened during the voyage, all other animals which have arrived in the same vessel, and which are liable to suffer from the same disease, must be slaughtered or re-exported without being landed. Should, however, the disease not be the cattle plague the animals suspected of infection may, if their owner wishes it, and the veterinary surgeon does not consider it dangerous, be kept in an isolated locality near the place of unloading during a period of three months, under the special supervision of a veterinary surgeon, and with due observance of all other precautions necessary in order to prevent the spreading of the disease.

Should, at this inspection, symptoms appear which render the animals fairly suspected of being infected with any malignant disease, such animal, as well as others which have arrived in the same vessel and are liable to the same disease, must be immediately re-exported without being landed, unless the owner prefer to keep them at the place of unloading under the supervision of the veterinary surgeon, as above stated, or else to allow those animals which are considered specially suspected to be slaughtered, in order to ascertain their real state. Should these animals at the dissection be found free from infection, the other animals may be imported, on condition of being kept under veterinary supervision at the place of destination, as stated in paragraph 7. But should any of the animals slaughtered be found infected, all the others must be likewise slaughtered or re-exported without being landed.

Paragraph 9. (Concerning cases of illness occurring amongst animals placed under quarantine, according to paragraphs 7 and 8.)

Paragraphs 10–12. (Concerning notices of expected consignment of animals and removals from the harbour of arrival, &c.)

Paragraph 13. From any foreign country or district which has been duly declared infected with cattle plague all importation of fresh meat, unmelted tallow, entrails or blood of cattle, sheep, goats, and other ruminants; also of fodder (hay or straw), and of wool, hair, horn, hoofs, undressed hides and skins of the above-mentioned animals is absolutely prohibited.

This applies to the above-mentioned articles not only when exported directly from an infected place, but also when such merchandise arrives from a healthy place but has been produced at or sent from or through an infected one.

Appendix, No. 10.

Paragraph 14. Wool, hair, horn, hoofs, undressed hides and skins of ruminants produced at a healthy place, but transmitted through or sent from an infected one, may be imported on the following conditions :—

1st. That the importation by sea takes place in one of the following towns : Gothenburg, Halmstad, Hellingborg, Landskrona, Malmoe, Ystad, Solvesborg, Karlshamn, Karlskrona, Wisby, Kalmar, Oskarshamn, Westervill, Nowkoping, Gefle, Sundswale, Hernosaud, or Umeo;

2nd. That a certificate, issued according to the rules in paragraph 6, showing the place of production, is exhibited before the goods are unshipped ; and,

3rd. That the goods, before delivered to the owners, are submitted to some treatment calculated to annihilate any infection.

If wool, during the transit through or contact with any infected place, has remained packed in, so called, "original bales," or if merchandise of any of the above-mentioned kinds have been inclosed in wooden or tin cases, boxes, &c., which may be considered impenetrable to infection, or packed in bags or other sufficiently close material, which on the arrival are found quite undamaged, the merchandise itself need not be disinfected, but all the covers and packing must be subjected to disinfection.

Paragraph 15. (Concerning importation of wool, which, having been subjected to so-called factory washing, is supposed to have been disinfected thereby ; importation of such wool is permitted under certain strict conditions.)

Paragraph 16. All importations of fresh meat, unmelted tallow, entrails, or blood of any kind of ruminants ; also of hay, straw, and other fodder, from any foreign country or district declared suspected of cattle plague is absolutely prohibited. Importation of wool, hair, horns, hoofs, undressed hides and skins (*vide* paragraph 13) is permitted only by sea, in the towns enumerated in paragraph 14 ; on their arrival such merchandise must be accompanied by a certificate showing that the place of production is healthy, and that they have not been into contact with any place infected during the transit.

If not accompanied by such certificate, the merchandise are considered produced at an infected place, but the Board of Customs may decide on what condition the merchandise may be imported, if it can otherwise be rendered probable that they have been produced at a healthy place.

In the absence of a certificate showing that the merchandise during the transit from the place of production to the port of shipping has not passed through an infected place, the merchandise must be disinfected, as stated in paragraph 14.

These certificates (*vide* paragraph 6) must indicate the marks on the merchandise.

Exception from this rule is made for vessels with a cargo of wool, hair, horn, hoofs, undressed hides or skins from a trans-atlantic country, which, according to the ship journal, or other trustworthy evidence, have tendered only at such European ports which at the time of their stay there were considered healthy. Should this not be sufficiently proved, or should there be some special reason to suppose the merchandise to have been in contact with some infected place, they must be disinfected according to paragraph 14.

Paragraph 17. Before merchandise are disinfected great care must be taken that they are not brought into contact with animals susceptible to cattle plague, or with other merchandise of the kinds above stated; if disinfection cannot take place on board or immediately after the unloading, the merchandise must be kept isolated under the supervision of Customs officers.

Hay, straw, &c., in which any merchandise arriving from a place infected with cattle plague is packed, must be burnt or disinfected at the clearing in the Custom House. Should this not take place, the Customs officer should enjoin the owner or agent employed to destroy such hay or straw.

Paragraphs 18 and 19. (Concerning the arrangements for necessary supervision, disinfection, &c.)

Paragraph 20. If during the voyage of a vessel arriving at a Swedish port, cattle plague or other infectious disease has broken out amongst animals during the voyage, or if the vessel has a cargo of animals or merchandise of such a description that the above-mentioned measures for the prevention of infection are obligatory at their importation, the vessel must be disinfected at the expense of the master, according to the prescription of the veterinary surgeon; if the vessel carries infected animals, all persons on board, and also animals not liable to infection, must be disinfected before being landed; the vessel to remain in quarantine until such disinfection has taken place.

When ruminants or merchandise (*vide* paragraph 13) arrives from a healthy place in a vessel which *either* at the same time brings such animals or merchandise from an infected place, *or* has had such cargo within 60 days previously without having been disinfected, the merchandise from the healthy place is to be disinfected according to paragraph 14, and the animals from the healthy place, if no case of cattle plague on board is reported, to be landed on condition that they are kept in quarantine near the landing-place during 10 days veterinary supervision.

Should

Should any case of infection arise in the meantime, the matter is to be treated according to paragraph 9. When after this period the animals are reported healthy, they will be restored to their owner. Appendix, No. 10

Paragraphs 21–24. (Concerning special cases.)

II.—Royal Decree of 19 April 1875, concerning Infectious Diseases amongst the Home Stock of Domestic Animals.

Paragraph 1. This Decree applies to the following diseases in domestic animals: splenitis, cattle plague, pleuro-pneumonia, glanders, pox in sheep, malignant foot disease in sheep, scab in sheep, and hydrophobia.

Should other diseases amongst domestic animals appear to be so infectious and malignant as to be comparable to those above enumerated, the Government will decide whether this Decree shall also apply to such disease.

Paragraph 2. (Concerning arrangements for supervision.)

Paragraph 3. (Provides for slaughter and dissection of suspected animals.)

Paragraphs 4 and 5. (Concerning preliminary steps in case of an outbreak of one of those diseases.)

Paragraph 6. When domestic animals are attacked by a disease which is found or suspected to be amongst those mentioned in paragraph 1, their owners must take care, in accordance with the injunction of the veterinary surgeon, that such animals are kept separate from all healthy animals in properly isolated localities, and also kept away from common pastures and watering places. Persons attending on the infected animals must not be in contact with the healthy ones, and no person who is not concerned must be permitted to approach near the infected animals, or any objects which has been in contact with them.

Animals infected or suspected of infection must not be removed from the farm where they were attacked by the disease, unless it is done for the purpose of separating such animals from the healthy ones with the consent of the veterinary surgeon.

If the diseased animals are suspected of suffering from cattle plague, the above rules shall apply also to all such horned cattle, sheep, goats, &c. as shall have been kept in the same farmyard, or frequented the same watering places or pastures as the diseased ones within the last 10 days previously. But if the disease is supposed to be pleuro-pneumonia, these rules shall apply only to horned cattle which are in that case.

Paragraph 7. (Concerning hydrophobia.)

Paragraph 8. Cattle suffering from cattle plague or pleuro-pneumonia, and horses which by a licensed veterinary surgeon is declared infected with glanders, must immediately be slaughtered according to the directions of the veterinary surgeon. Horned cattle, sheep, goats, and other ruminants which within 10 days have been kept in the same farmyards, or used the same watering places or pastures as the animals infected with cattle plague, must be treated in the same way, and also horned cattle which within the said period has been in contact with animals infected with pleuro-pneumonia as above stated.

Owners of animals slaughtered as above stated are entitled to compensation from public funds. For a horse found to be infected with glanders when slaughtered the compensation is half the value, and for a horse found *not* to be infected with glanders when slaughtered, the compensation is the full value of the animal.

If the above-stated diseases should increase so much that the General Board of Health and Governors of Provinces under such circumstances consider that the disease cannot be stopped through the slaughtering of the animals, it must at once be referred to the Government whether the slaughtering is to be proceeded with or not.

Paragraph 9. (Concerning compensation to owners.)

Paragraph 10. Animals which have died from a contagious disease, or have been slaughtered as above stated, must be interred whole, at a quite isolated place, unless the veterinary surgeon does consider that some parts of it might be used. When animal is interred without being skinned the skin must previously be cut to pieces, or otherwise rendered useless. The interment must take place at once, at the expense of the owner. Should he not possess a place proper for the interment, or if it has not been ascertained to whom the animal belonged, the sanitary or the local board must take the steps necessary for the interment. Other measures to prevent the spread of the disease through the process of the interment will be prescribed by the veterinary surgeon, if the Governor of the Province has not already ordered them to be taken.

Animals found dead on shore, or in the fields, must be interred with the skin as found, if suspected to have died from an infectious disease.

Paragraph 11. As soon as the Governor of the Province has received the veterinary report on the outbreak of an infectious disease amongst the domestic animals, he shall, through notifications to be published in the newspapers, read in the churches, and placarded

Appendix, No. 10.

at all convenient places, inform the public in his Province, of the localities where the disease has broken out, and he shall also decide how large a part of the Province must be declared infected, which will depend on the intensity and the spread of the disease.

He will also, on the advice of the veterinary surgeon, have to order such steps and measures, as, through the special character of the disease, may be necessary for the isolation of the infected animals, for the disinfection of persons and objects which have been in contact with them, and for the interment of the dead animals; and to prescribe the conditions on which domestic animals may be transmitted through an infected district, or exportation of live stock, or of slaughtered animals, or of part of such, from an infected district, may be permitted, and, finally, the precautions to be observed when animals are slaughtered for food.

If the Governor should deem it necessary, in order to prevent spreading of the infection, he is empowered to order one or more herds of cattle infected, or suspected of infection, to be placed under veterinary supervision, in which case the above-stated rules concerning infected districts are to be observed in so far as applicable.

If cattle plague exists in a district the Governor will cause fairs and other public meetings to be postponed, or held at other places, if necessary and convenient.

Whenever an infected district shall have been declared healthy by the veterinary authorities, and when special supervision of domestic animals, which has been ordered in accordance with the above rules is removed, the fact must be published by the Governor in the manner stated.

Paragraph 12. At the outbreak of cattle plague the houses, pasture grounds, or other places where diseased animals are kept, and also the surrounding neighbourhood to the extent prescribed by the veterinary surgeon, must be guarded. Has the cattle plague spread over a larger district, the roads, and streets leading to, or near, the locality where the disease exists must be guarded, in order to isolate the district. No animals liable to be attacked by cattle plague must be brought into such districts, nor may any ruminants, nor hay, straw, or manure, be exported from them. The Governor may also order stringent measures regarding the communication with other places, but without stopping the traffic, unless necessary.

(Here follow detailed regulations for effecting the necessary isolation.)

If any of the diseases enumerated in Paragraph 1 has assumed a considerable intensity, and threaten to spread rapidly, the Governor shall, on the advice of a veterinary surgeon, order the infected district to be strictly guarded, according to circumstances.

Paragraph 13. All persons who have been in contact with infected animals, or with objects touched by them, must carefully disinfect themselves and the clothes used on those occasions. As soon as the disease has ceased at a place which has been infected with cattle plague or other contagious diseases amongst domestic animals, the owner must at once cause all open spaces, stables, farms, or other places where the infected animals have been kept, and especially all wooden structures and all kind of implements, harness, carriages, and similar objects, with which the infected animals have been in contact, and also all healthy animals which might spread the infection, to be properly disinfected. Fodder, manure, refuse, and all other objects which may spread contagion, but which cannot themselves be disinfected, must be burnt, interred, or otherwise rendered harmless, according to the orders given by the Governor or the veterinary surgeon, in each separate case.

The disinfection must take place under the supervision of the veterinary surgeon, the local authorities, or the chief of the police, and until then no objects which are to be disinfected must be used, nor any healthy animals allowed to get into such place.

It must be specially observed at places where the cattle plague has existed, that the disinfection must comprise dressed and undressed hides, skins, wool, hair, horse-hair, and similar articles; and that within 10 days after the slaughter of the animals which were kept in the place no approach is to be allowed to the places where such animals were kept except for the purposes of the disinfection, and that no healthy animals must be brought into the premises before 20 days have elapsed since the infected animals were slaughtered.

Paragraphs 14–21. (Concerning fees, fines, and administrative details.)

III.--EXTRACT of a Publication by the Royal Board of Health, conveying Advice and Instruction for Communal Authorities, Veterinary Surgeons, and Royal Officials, concerning the mode of carrying out the Measures which have been prescribed in the Royal Decree of 19th April 1875, for preventing and arresting Contagious Diseases amongst Domestic Animals.

These instructions, as to the mode of proceedings at the examination, isolation, and slaughtering of diseased animals, and particularly concerning disinfection of farmyards, stables, and other places where animals infected with a contagious disease have been kept; of manure, implements, railway trucks and vessels; of hay, straw, and other fodder; of pastures, roads, spaces where the animals have been slaughtered; of living animals; of undressed hides, skins, hair, horse-hair, and similar articles; of wool blankets (linen and woollen), garments, shoes; and of persons; being necessarily framed with special regard to

to the peculiar customs and arrangements in Sweden, it has not been considered necessary to reproduce them, excepting one or two paragraphs. Appendix, No. 10

In the first paragraph concerning the veterinary examination of domestic animals, it is stated—

When domestic animals suspected to be infected with a contagious disease, or attacked by such disease, are to be examined, the veterinary surgeon must act with great care, in order to prevent the further spreading of the contagion through his negligence.

When therefore a herd of cattle is to be examined, it is necessary to inspect first the animals which seem to be healthy, and then those who seem to exhibit symptoms of disease.

The report of the veterinary surgeon on such proceedings should mention the name and place of abode of the owner. With regard to each animal examined, the report is to state to what kind it belongs, its special marks, age, the box it occupies in the stable or farmyard, and (when necessary, in order to inquire into the origin and spreading of the infection) how long the animal infected has been the property of the same owner, the locality from where it has arrived, whether more animals than those examined have been kept at the place during or shortly before the outbreak of the disease, and if so, when they have been removed; whether other animals in the meantime have been kept in the same stable, or else in contact with the infected animals, &c.

Finally, the veterinary surgeon must thoroughly report on the state of health of the examined animals, and the special symptoms which may exist. He must also make a detailed description not only of the external parts of the animals, but also of the functions of their special organs mentioned in a certain order (concerning the dissection, and report thereon).

Concerning the Isolation and Nursing of the Infected Animals.

With regard to animals recognised to suffer from one of the diseases specified in the laws of 1875, it is specially enacted that—

At the outbreak of one of those contagious diseases all the infected animals must be isolated from the healthy ones, and kept in separate houses or places well enclosed, and far from common watering places or pastures.

(Detailed Instructions for carrying out this Isolation.)

Animals infected or suspected of infection must not be removed from the place where they were attacked unless it is done with the consent of the veterinary surgeon, and for the more effective isolation of such animals from the healthy ones.

Neither must healthy animals liable to infection be brought to a place where the disease exists, or in the district which by the authorities has been declared infected.

Domestic animals belonging to a herd in which the disease has appeared and which are liable to infection, must not be sold or removed before the disease has disappeared, or the district, if already it has been declared infected, is reported free from infection.

SPECIAL INFORMATION relative to Live Stock in *Norway*, the Exportation and Importation of Horses, Cattle, Sheep, Goats, and Swine, and the Acts and Orders for the Suppression of Virulent Contagious Diseases among Domestic Animals. Furnished by His Norwegian Majesty's Secretary of State for the Home Department.

Number of Live Stock in *Norway* at the expiration of 1875.

Horses	151,903	Goats	323,364
Cattle	1,016,595	Swine	101,351
Sheep	1,686,806		

Live Stock imported into *Norway* in—

	1871.	1872.	1873.	1874.	1875.
Horses	19	116	364	635	239
Cattle	1,926	1,730	1,941	3,218	3,260
Sheep	917	993	1,411	2,982	1,817
Swine	11,111	8,624	8,093	9,749	7,097

Total for the quinquennial term:—Horses, 1,373; Cattle, 12,075; Sheep, 8,120; Swine, 44,674.

Appendix, No. 10

Live Stock exported from *Norway* in—

	1871.	1872.	1873.	1874.	1875.
Horses - - - - -	406	733	50	38	40
Cattle - - - - -	1,094	1,417	2,096	1,130	263
Sheep - - - - -	3,128	5,078	2,769	154	9
Swine - - - - -	34	20	—	—	—

Total for the quinquennial term:—Horses, 1,267; Cattle, 6,000; Sheep, 11,138; Swine, 54. These figures do not include live stock exported to or *viâ* Sweden.

For goats there are no special returns; both the importation and exportation of these animals is, however, believed to have been exceedingly limited.

The proportion in which the exportation and importation of live stock was distributed between the different countries is shown in the annexed Statement from the Norwegian Central Statistical Bureau (Appendix I.), whence it appears that the bulk of the exportation went to Great Britain and Ireland; very few animals were, on the other hand, imported into Norway from those countries.

The statement likewise shows that the exportation of live stock during the last few years has experienced a great decline. The bad harvest of 1876 having necessitated a considerable reduction of stock throughout the country generally, it is probable that the exportation of animals for some time to come will almost cease.

There is no duty on live stock, imported or exported.

The chief regulations for the suppression of virulent contagious diseases amongst animals are comprised in the Act of the 27th February 1866, and that of the 26th May 1877 (Appendix II.). The diseases to which, in pursuance of this Act, attention is specially directed, are *anthrax* and *typhus*, attacking domestic animals generally, the *cattle plague*, *pleuro-pneumonia* (bovine animals), *glanders* and *farcy* (horses), *sheep-pox* and *foot-and-mouth disease* (sheep), and *hydrophobia*.

The cattle plague is not known to have ever been detected in Norway; no case of pleuro-pneumonia has been heard of in this country since the winter of 1860-61, when there was an outbreak on the farm of the State Agricultural School at Aas, near the town of Drobak, in Akershu's Amt, infected cattle having been imported from Scotland. By the immediate slaughter of the animals and timely adoption of other energetic measures, the disease was, however, speedily stamped out, and its further propagation fortunately prevented. A case of hydrophobia is not known to have occurred in Norway for many years past. The other diseases enumerated above have broken out from time to time, but by a strict enforcement of the protective measures they were generally prevented from spreading; the outbreak being confined to the first few cases that occurred.

Section 2 of the Act empowers His Majesty the King, in the event of any other disease amongst domestic animals assuming an exceptionally virulent character, to extend the provisions of the Act to that disease also. This proved necessary some years since, a peculiarly virulent form of catarrhal fever having broken out amongst cattle in one or two parishes of Nodre Bergenhu's Amt, and a Royal Decree, bearing date 17th June 1872, was accordingly issued.

In pursuance of Section 3, the Amtmand is authorised to engage, at the public expense, a veterinary surgeon, who shall attend all horse and cattle fairs or shows, and repair to any place where domestic animals are congregated, for the effectual enforcement of the precautionary measures, should contagious disease be detected amongst them; and the Amtmand is, moreover, empowered to have all domestic animals, of a kind that may at any time be specially threatened with contagious disease, examined by a veterinary surgeon. It is forbidden, under a penalty, to drive or convey an animal known to be suffering from virulent contagious disease to such localities, or to any market or place of sale, or to seek to dispose of it there.

The preventive regulations laid down by the Act in the event of an outbreak of any one of the diseases specified above, consist chiefly in immediately calling in a veterinary surgeon, or by reporting the case without delay to the police, isolating the sick animals, and thoroughly disinfecting everything with which they have been in contact; furthermore, if the disease be cattle plague or pleuro-pneumonia, in slaughtering the infected animals, and, should it be deemed necessary, the whole stock; if glanders or farcy, in slaughtering the horses attacked.

For the rest the Act leaves it with His Majesty the King, or whomsoever His Majesty shall see fit to appoint (at present the Director of the Department of Civil Medicine), to issue special orders for the suppression of each disease, such special orders having already been issued for glanders and farcy (Appendix III.), anthrax (Appendix IV.), and virulent forms of foot-and-mouth disease (Appendix V.).

Provisions relating to indemnities claimable from the public treasury by owners of animals slaughtered compulsorily, and to the defrayment of expenses entailed in carrying into effect the repressive regulations, are contained in Sections 6, 7, and 9.

To

To guard against the importation of infected stock, Section 8 of the Act empowers His Majesty the King to prohibit the importation from countries in which contagious disease amongst animals is known to exist of cattle, horses, and live stock generally, of all raw produce furnished from such animals, and of implements and fodder assumed to be infectable; and His Majesty the King is moreover empowered, in the event of absolute prohibition being deemed unnecessary, to adopt special precautions against the introduction of contagious diseases from foreign countries through the medium of infected animals and infectable things.

In pursuance of this provision of the Act, a Royal Mandate, bearing date 18th March 1871, together with the decree of the 21st August 1874, and Royal Mandates issued on the 19th January, 7th February, and 4th May respectively, prohibit, until further notice, the importation from—

1. Austrian ports, ports of the German Empire, and all Russian ports, except those situated on the shores of the Arctic Ocean and the White Sea, and all ports of Great Britain and Ireland, of

(*a.*) Horned cattle, sheep, goats, and other ruminants, and swine.

(*b.*) Raw produce of such animals, specially skins and hides (also when dried or salted), hair, bristles, wool, horns, hoofs, and bones, in an unmanufactured state, and fat when not melted.

(*c.*) Fodder, specially of grass, clover, hay, and straw.

(*d.*) Implements employed in tending live stock, if previously made use of.

The prohibition, however, not to extend to the importation of hides, horns, and wool, provided it be shown that such articles of produce merely passed in transit through one of the ports comprised in this prohibition.

2. From French Atlantic and Channel ports, of animals and produce specified under *a*, *b*, and *d*; and,

3. From Holland and Belgium, of horned cattle, sheep, and goats.

And it is furthermore prohibited, in pursuance of the said Section 8, by a Royal Mandate of the 14th of March 1870, to import horses from any of the Russian Baltic ports (including the ports of the Gulfs of Bothnia and Finland); and finally a Royal Mandate, bearing date the 18th May 1876, prohibits the importation of dogs from Denmark.

With regard to scab amongst sheep and goats, a disease which has been found to prevail in the south-western provinces of the kingdom, special provisions are contained in an Act of the 15th September 1851 (Appendix VI.). This Act empowers the Council of the Amt to issue, if needful, special protective orders, subject to the Royal sanction, and such orders have accordingly been issued for the Amts of Nedemes, Lister, and Mandal, Stavanger, Londre, Bergenhus, Romsdal, Buskerud, and Christian. A printed copy of the regulations laid down for one Amt is annexed (Appendix VII.). By a rigid enforcement of the provisions of the Acts and of the special protective measures adopted in conformity therewith, the disease has been, to a great extent, suppressed of late years.

Appendix, No. 10.

Appendix I.

From the Central Statistical Bureau.

Christiania, 18 June 1877.

In accordance with instructions received, the Central Statistical Bureau has the honour to submit a statement of the number of domestic animals in Norway at the close of 1875, and of the importation and exportation of live-stock during the quinquennial term extending from 1871 to 1875:—

I.—Number of Domestic Animals in *Norway* at the expiration of 1875.

Horses	151,903*	Goats	323,364
Cattle	1,016,595†	Swine	101,351

There being no special returns for goats, the Central Statistical Bureau is unable to give the importation and exportation of these animals; it is believed, however, to have been exceedingly limited.

The returns for 1876 have not yet been sent in.

Appendix, No. 10.

Appendix II.

ACT (27 February 1866 and 26 May 1877) for the Suppression of Virulent Contagious Diseases amongst Domestic Animals.

Sect. 1. All duly-qualified veterinary surgeons availing themselves of their right of practice shall forthwith report to the authorities any case of virulent contagious disease amongst domestic animals they may have treated or detected, stating what measures have been taken to counteract the disease and prevent its propagation. And at the close of every year they shall forward, through the Amtmand of their province, to the department of Government dealing with matters of civil medicine, a report, such as that department shall see fit to prescribe, of all cases of disease amongst domestic animals they may have observed or treated during the past year.

Sect. 2. The diseases to which the attention of the authorities is specially directed are: anthrax and syphus, attacking domestic animals generally; the cattle plague (as it is called), and virulent lung-disease amongst horned cattle; glanders and farcy, amongst horses; sheep-pox and virulent foot-and-mouth disease, amongst sheep; and hydrophobia.
Should any other contagious disease assume an exceptionally virulent character, His Majesty the King is empowered to extend the provisions of this Act to such disease also.

Sect. 3. The Amtmand may, at his discretion, engage a veterinary surgeon to attend all horse and cattle fairs or shows, and to repair to any place within the Amt where domestic animals are congregated, with the object of investigating whether any of the animals are suffering from virulent contagious disease; and it is strictly forbidden to drive or convey animals known to be infected with such disease to those localities, or to markets in the towns, or to seek to dispose of them there.
And the Amtmand is furthermore empowered to have all animals of a kind that may at any time be specially threatened with contagious disease examined by a veterinary surgeon; all examinations to be conducted in a manner not calculated to propagate the disease.

Sect. 4. In the event of an animal being attacked with any of the diseases enumerated in Section 2, or should there be suspicion of such being the case, the owner shall call in a qualified veterinary surgeon, or make report, in the towns, to the prefect of police, and in the country, to the Lensmand (parish bailiff).
If, on examination, the animal prove to be suffering from the disease, or should there be strong suspicion of such being the case, the infected animal shall be immediately isolated, and everything with which it has been in contact, so far as practicable, thoroughly disinfected.
If the animal attacked has been brought from some other locality, the prefect of police or the Lensmand there shall receive information of the outbreak.
His Majesty the King, or whomsoever he shall see fit to appoint, is empowered to issue such special orders as may be found necessary for the enforcement of the regulations providing for the perfect isolation of infected animals and for disinfection.

Sect. 5. When there is strong suspicion of the disease being the cattle plague, or pleuropneumonia, the Amtmand may order the compulsory slaughter of *one* or *two* animals, in order to ascertain with greater certainty, from a post-mortem examination by the veterinary surgeon, the nature of the disease.
All animals shall, at the command of the Amtmand, on the veterinary surgeon having pronounced them infected with either of the two diseases specified above, be immediately slaughtered, until such time as the department of Government mentioned in Section 1 may see fit to prohibit compulsory slaughter. And that department is moreover empowered, on an outbreak of the disease, to order the slaughter of the whole stock among which the disease has appeared. Horses pronounced by the veterinary surgeon to be suffering from incurable glanders or farcy shall be slaughtered.
Animals compulsorily slaughtered shall, in the event of the owner claiming compensation, be valued, previous to slaughter, by a police officer (in the country by the Lensmand), and two men nominated by him. The estimatad value of such animals to be what they might be assumed to be worth in a healthy state. From this sum shall be deduced the value of the carcase, if it may be utilised.
Of every animal slaughtered a post-mortem examination shall be made by a veterinary surgeon, who, through the Amtmand of his province, shall send in to the Department of Government before mentioned a carefully-drawn-up report of the nature and character of the disease, together with the details of the post-mortem examination.

Sect. 6. The owner is entitled, within the limits given below, to claim compensation for animals compulsorily slaughtered in pursuance of Section 5.
For animals which, after a post-mortem examination, show no traces of the diseases specified in Section 5, the indemnity to be the full amount at which they are valued in the manner prescribed above.
For animals which, after a post-mortem examination, are found to have been suffering from

from the cattle plague, or pleuro-pneumonia, the indemnity to be two-thirds of the amount at which they are valued in the manner prescribed above.

When the owner, by the importation of infected animals from foreign countries, or by violating the orders issued for the suppression of the disease, may be regarded as having himself occasioned the loss, no indemnity will be paid for animals compulsorily slaughtered.

For horses which, after a post-mortem examination, are found to have been attacked with glanders or farcy, no compensation can be claimed.

Sect. 7. All animals attacked with hydrophobia are to be killed.

Dogs or cats bitten by an animal suffering from hydrophobia shall also be destroyed; and every other animal shall in like case, pursuant to the provisions of Section 4 for animals suspected of being attacked with contagious disease, be kept confined in complete isolation.

For towns or country localities in or near which hydrophobia has broken out, the Amtmand may, by public notification, issue orders requiring all dogs within a certain specified district to be kept tied up and confined, or to be provided with a muzzle of a description specified in the notification. Should the disease assume an alarming character, the Amtmand shall, moreover, in such notification additionally enjoin that no dog, though duly provided with the muzzle prescribed, be permitted to go at large unless led by a grown-up person.

Dogs found in the public streets after the issue of such orders will be seized by the police, and, in conformity with the notification, either killed at once or after three days, unless the owner within that time appear to claim them and pay the expenses of their keeping.

All expenses attending the seizure, keeping, and killing of dogs to be defrayed by the amt, market-town, or ladested (small town where ships may take in, but not discharge their cargoes), (sholstan, nedennude son anmehung), provided such ladested have a municipal council.

For animals killed in pursuance of the provisions of this section no compensation will be given.

Sect. 8. His Majesty the King is empowered to prohibit the importation from countries where virulent contagious disease prevails of horned cattle, horses, and other domestic animals, of raw produce furnished from such animals (specially hides, wool, horns, hair, hoofs, fat when not melted, and meat), and of implements assumed to be infectable.

Should absolute prohibition of importation be deemed unnecessary, His Majesty the King will decide what preventive measures shall be taken to guard against the introduction of the contagion through the medium of infected animals and infectable things.

Sect. 9. All expenses entailed, pursuant to the provisions of this Act, in the tending, isolation, and disinfection of animals attacked or suspected of being attacked with contagious disease, in the disinfection of stalls, stables, cow-houses, implements, and the like, or in burying the carcases of slaughtered animals, &c., shall be borne by the owner.

Expenses occasioned by the valuations enjoined in Section 5, and the compensation due to owners of slaughtered animals in pursuance of Section 6, shall be defrayed, for such animals as, on examination, were found not to have been suffering from the diseases specified in that section, by the State; but for animals that were found to have been infected with the cattle plague or virulent lung-disease, half by the State, and half by the amt, market-town, or ladested, provided such ladested have a municipal council.

Sect. 10. On all persons violating the provisions of this Act, or the orders issued in pursuance thereof, fines will be imposed, and they will be cited to appear before the police court.

Sect. 11. The sale of an animal suffering from virulent contagious disease is not valid, though the person even from whom it has been purchased was ignorant of the fact.

Sect. 12. Veterinary surgeons acting for the public shall receive a daily stipend of four kroner, so long as their services are given; all journeys to be paid for at the rate fixed by the Act for the conveyance of travellers; for every post-mortem examination of a horse or head of cattle, they shall receive in addition a fee of 6 kroner; for post-mortem examinations of smaller animals, 3 kroner for every examination; the amount paid to a veterinary surgeon for post-mortem examinations performed in one day in no case, however, to exceed 20 kroner.

Travelling expenses are defrayed by the State; the payment of all other sums due to veterinary surgeons devolving upon the amt, market-town, or ladested, provided such ladested have a municipal council.

Sect. 13. Journeys undertaken by the Lensmaud to conduct the valuations enjoined in Section 5 shall be paid for at the rate fixed by the Act for the regulation of fees, Section 110.

The expenses of other journeys he may have to undertake in carrying out the provisions of this Act to be defrayed by the State, provided the distance to and from the place visited exceed half a Norwegian mile.

In the event of his assistance having been widely given in extirpating the diseases specified in this Act, His Majesty the King may grant him a commensurate remuneration out of the national exchequer.

Appendix, No. 10.

Sect. 14. The Decree of 28th November 1806, containing regulations respecting horses attacked with contagious disease, and the Act of the 15th April 1854, prohibiting the importation of horned cattle, horses, and other domestic animals from countries where contagious disease amongst animals may prevail, are hereby rescinded.

Appendix III.

Pursuant to Section 4 of the Act of the 27th February 1866, for the suppression of virulent contagious diseases amongst domestic animals, and a Royal Decree of the 7th March 1868, investing the Home Department with powers provided for in that Act, the following Regulations shall be observed respecting glanders or farcy amongst horses:

Sect. 1. So soon as a horse is found to be suffering from glanders or farcy (horse-pox), all horses that have been stabled with the infected animal, or that have been in contact with it, shall be subject to the inspection of the authorities, such inspection to continue for the space of six calendar months from the day when intercourse ceased with the horse attacked or suspected of being attacked with glanders or farcy.

Sect. 2. Every horse attacked or suspected of being attacked with glanders or farcy to be immediately isolated from the healthy animals.

Sect. 3. If the disease from which the horse is suffering be unquestionably glanders or farcy, the animal shall be forthwith killed, and a post-mortem examination made of the carcase, provided the services of a veterinary surgeon can be engaged for the purpose. Post-mortem examinations should be undertaken, too, of all horses subjected to the inspection of the authorities that may die of glanders or farcy.

Sect. 4. The hide of the infected animal may be utilised, provided it be laid in a lime-pit, or dried in some safe place, or straightway conveyed to a tannery in a manner not calculated to spread the contagion.

The flesh, when not in a mortified state, may be given to animals as food.

All parts of the carcase attacked by the disease to be buried.

Sect. 5. Every horse suspected of being attacked with glanders or farcy shall, in the event of the owner preferring not to have it killed, be kept in complete isolation from all other animals, and from strangers, until the veterinary surgeon has verified the disease.

The horse to be tended during such period by persons not coming in contact with the healthy horses, and who are provided with separate stable implements.

Sect. 6. All stables in which horses attacked or suspected of being attacked with glanders or farcy have been lodged are to be disinfected, first by being thoroughly swept and scrubbed with cold water, after which all wood and iron work has to be washed with boiling water (of a temperature not lower than + 60° R.), and, when dry, treated with a solution of 1 part of undiluted carbolic acid to 100 parts of water, or of 1 part of chloride of lime to 12 parts of water, or with some other disinfecting fluid pronounced by the veterinary surgeon to be equally efficacious. The masonry of the stable to be whitewashed after disinfection. The stable itself to be well ventilated for the space of three days, and not to be used till thoroughly dry.

Other articles, such as harness, and all stable implements that may have been in contact with the infected horse, to be disinfected, according to the nature of such articles, either by being washed with boiling water or soap-and-water, or by being treated with the prescribed solution of carbolic acid or chloride of lime, or some equally effective disinfectant, or to be subjected to the influence of heat (for instance, in a moderately heated baker's oven), the temperature not being lower than + 60° R.

Sect. 7. Horses apparently healthy, but which, in pursuance of Section 1 of these Regulations, have been subjected to the supervision of the authorities, must not, when worked, be brought in contact with other horses; for instance at posting-stations and resting-places generally, nor must they be stabled in strange localities, or permitted to graze on unenclosed land; such horses, too, must not be sold, unless the fact of their being under the supervision of the authorities be disclosed to the purchaser, and the veterinary surgeon of the district and prefect of police receive notice of the sale. These functionaries shall then report such sale to the police (or lensmand) of the town or locality where the new owner of the horse is domiciled.

Sect. 8. At the close of the term to which a horse under suspicion of being attacked with glanders or farcy has been subjected to the supervision of the authorities, the veterinary surgeon of the district shall give to the owner of the animal a certificate containing the name and address of the owner, an accurate description of the horse, as to sex, colour, conspicuous marks, age, height, condition, &c., together with a specification of the disease from which the horse was suspected to have been suffering, and a statement to the effect that the animal is not infected or suspected of being infected with such disease, so that danger is no longer to be apprehended. The veterinary surgeon to report the issue of the certificate to the police (or lendsmand).

Appendix IV.

Home Department, Christiania, 13 May 1868.

Pursuant to Section 4 of the Act of the 27th February 1866, for the suppression of virulent contagious diseases amongst domestic animals, and a Royal Decree of the 7th March 1868, investing the Home Department with powers provided for in that Act, the following Regulations shall be observed respecting *anthrax* (malignant pustule) amongst domestic animals :—

Sect. 1. So soon as any domestic animal is found to be attacked with anthrax, such animal to be removed from the healthy animals, if possible, immediately, and isolated from all other domestic animals, and from strangers.

When practicable, it is better to lodge the healthy animals in some other byre or stable, the infected animal being kept in the building where it sickened with the disease.

Small animals, such as swine, dogs, cats, poultry, and the like, must not only be prevented from coming in contact with the infected animals, but also with its excrements, with dead but unburied animals, or with articles contaminated with the blood, mucus, &c. of infected beasts.

Animals stalled or stabled with the infected animal should not be allowed for several days to graze in company with healthy animals.

All persons tending infected animals should not come in contact with other animals.

Sect. 2. Animals that have died from anthrax to be buried with the hides at a safe distance from dwelling-houses, roads, and pasture-grounds, in pits of a depth sufficient to admit of the carcases being at least two ells beneath the surface of the soil. Where lime can be procured it should be strewn into the pit.

The excrements, offal, and other refuse of the infected animals to be removed as soon as possible and buried.

Sect. 3. Stables, cow-houses, or other buildings in which infected animals have been lodged, and all articles with which they have been in contact, shall as soon as possible be thoroughly disinfected, and not used for other animals till after the lapse of several weeks.

Stables, cow-houses, and other buildings to be ventilated, thoroughly cleansed with hot water or lye, and the spot where the animal stood to be disinfected by being fumigated with chlorine-gas, or treated with a solution of carbolic acid (one part of carbolic acid to 100 parts of water), or with a solution of chloride of lime (one part of chloride of lime to 12 parts of water), or by being strewn with pulverised chloride of lime. All masonry to be white-limed. If enjoined by the veterinary surgeon, or by the authorities, the flooring where the animal stood shall be taken up and thoroughly disinfected in the manner prescribed above, previous to being replaced, or, when old and of trifling value, burnt, and new flooring laid down; earthen, gravel, or loam floors are to be dug up and removed, and new material filled in. All racks, mangers, vessels, and other utensils are to be washed with soap-and-water, and disinfected in the manner prescribed. Ironwork, such as cows' collars, should be heated to a red-heat.

Malignant pustule attacking men no less than animals, and with equally destructive effects, the following precautionary measures are appended, for the inhabitants of localities in which the disease may break out:—

Persons engaged in tending infected animals, burying the carcases, or disinfecting contaminated articles, should be duly warned and enjoined to take the greatest care when so occupied; they should avoid, if possible, all contact with blood, mucus, and other infectable matter, which is especially dangerous when introduced into sores and excoriations. Infectable matter should be immediately washed off the skin with *cold* water and soap, or, better still, with a solution of aqua-fortis or sulphuric acid (one part of the acid to 12 parts of water), or with vinegar. Should a human subject be attacked with the disease, no time ought to be lost in sending for medical assistance.

Appendix V.

From the Director of the Department of Civil Medicine.

Home Department, Christiania, 26 August 1870.

Pursuant to Section 4 of the Act of the 27th February 1866, for the suppression of virulent contagious diseases amongst domestic animals, and a Royal Decree of the 31st July 1875, investing the Director of Civil Medicine with powers provided for in that Act, the following Regulations shall be observed respecting foot-and-mouth disease amongst sheep:—

Sect. 1. So soon as a sheep is found to be attacked with foot-and-mouth disease, every animal in the flock shall be subjected to the inspection of the authorities, such inspection to continue till the veterinary surgeon appointed for the district shall declare the disease to have been eradicated, and the fold, or cot, has been thoroughly ventilated in the manner prescribed below.

Appendix, No. 10.

Sect. 2. Every animal to be carefully examined, and all showing symptoms of the disease to be removed to a building set apart for sick animals. The animals thus isolated shall not be allowed to graze in company with the healthy ones, or to make use of the same tracks.

Sect. 3. The examination to be repeated at least once a week, and sheep suspected of being attacked to be forthwith removed to the building set apart for sick animals.

Sect. 4. Animals apparently cured shall, previous to being taken back to the cot in general use, be lodged in some other building, where they shall continue under supervision for at least three weeks.

Sect 5. If the infected animals are slaughtered, the heads and feet shall be buried.

Sect. 6. To prevent the propagation of the disease amongst the animals not yet attacked, there shall be placed at the door of the cot a trough of sufficient dimensions, containing a solution of chloride of lime (1 lb. of chloride of lime to a bucket of water), four or five inches deep, which the sheep must pass by on entering and leaving the building.

Sect. 7. All persons engaged in tending sick animals not to come in contact with the healthy sheep until they have washed, and put on other or thoroughly disinfected clothing.

Sect. 8. On the suppression of the disease, the sheep-cot shall be disinfected in the following manner: The top layer of earthen floor to be dug up, and fresh earth filled in. All woodwork to be treated with hot lye, or a solution of chloride of lime; masonry to be whitewashed. Ventilation to continue for at least one week.

Sect. 9. All pasture-grounds on which the infected animals have grazed, and the tracks they have traversed, should not be used for some time to come.

Sect. 10. The sale of animals from a flock infected with foot-and-mouth disease is forbidden till after a period of three months from the time when the animal last attacked was pronounced to be cured.

ACT of the 15th of September 1851, for the Suppression of Scab amongst Sheep and Goats.

Christiania, 11 January 1876.

Sect. 1. In every Amt where scab may break out amongst sheep and goats, or where, on account of its proximity to the district or districts in which the disease prevails, there is good reason to apprehend an outbreak, the Council of the Amt is hereby empowered to issue orders for the suppression of the disease, together with regulations respecting the isolation, and, if necessary, compulsory slaughter of infected animals; the validity of such orders, however, to be dependent on the sanction of His Majesty the King.

Sect. 2. The violation of orders issued in pursuance of Section 1 of this Act shall entail a penalty of from one to ten specie dollars,* such penalty to be paid to the fund for the relief of the poor.

Sect. 3. All cases connected with the violation of orders, as specified in Section 2, to be adjudged by the Police Court, unless the party concerned agree to pay the fine imposed by the authorities. In such case, all particulars shall be entered in the Register of the Police Court, and fines, if necessary, recovered by distraint.

ORDERS issued for the Suppression of Scab amongst Sheep and Goats in Lister and Mandals Amt.

In every locality having a district council where scab is found to prevail amongst sheep, or in any locality where the disease may hereafter break out, or where, from its close proximity to the infected districts, there is reason to apprehend its existence, the district council shall elect from among the inhabitants of such locality, provided they possess the qualities requisite for filling parochial offices, a committee, on which shall devolve the duty of strictly enforcing the regulations laid down for the extirpation of the contagion: the number of members of which such committee shall consist to be fixed by the district council, commensurate with the local resources, and the extent to which the disease has spread—in no case, however, of less than three.

The members are not compelled to act for a longer period than two years, and every year half of their number shall retire.

The district council is empowered, where the local requirements call for such augmentation, to appoint several committees, a separate locality being assigned to each, the members of which shall be chosen from among the inhabitants of such locality.

Sect. 2.

---

* One specie dollar is equal to 4 kroner.

Sect. 2. The members of committees to be appointed in pursuance of the foregoing sections are entitled to a fee of one mark* per diem for the period their services are given.

Every committee to elect a president, and to make all necessary arrangements for the effective discharge of the duties devolving upon it, and the distribution of those duties amongst the members.

Sect. 3. So soon as scab, or evident symptoms of the disease, shall appear amongst sheep in any locality for which no committee of supervision has been appointed, all persons owning or having in their charge sheep attacked with the disease shall forthwith report the outbreak to the district council. In localities for which a committee of supervision has been appointed, report to be forthwith made to that committee.

Sect. 4. The committee of supervision shall, so soon as there is good reason to believe that the disease reported is actually scab, instruct the owner of the infected animals, or the person having them in his charge, within such time as the committee, according to the season of the year and other considerations, shall see fit to determine, either to slaughter the animals, or to isolate them, and to subject them to curative treatment. In the latter case, the person having the sheep in his charge must effect their isolation in such manner as the committee shall pronounce calculated not to spread the disease amongst the healthy animals, and proceed with their cure in the manner that has already been or may afterwards be prescribed by the authorities. And should the person having the sheep in his charge fail to effect their cure within the period determined by the committee of supervision, or whomsoever may be appointed by the authorities to cure the disease (the decision of the committee or such officially appointed person being final), he shall slaughter the infected animals, or must submit to their compulsory slaughter by order of the authorities (the committee of supervision, the person appointed for the cure of the disease, or the police).

Sect. 5. When sheep infected with scab are slaughtered, the skins shall be hung up in the open air till they are perfectly dry, and for not less than three weeks together; the wool, too, must be dipped in boiling water before being utilised.

Sect. 6. Should the committees of supervision, in carrying out the provisions of Section 4, or otherwise in the discharge of their duties, deem public notifications needful, such notifications to be issued in conformity with the custom of the locality.

Sect. 7. The committees of supervision shall be at liberty, in the event of a veterinary surgeon being appointed for the Amt, to avail themselves of his services as frequently as they may deem necessary, to verify the nature of a disease, supposed to be scab, that has broken out amongst sheep, or in other matters calling for the assistance of a competent veterinary surgeon.

Sect. 8. Should the Council of the Amt see fit to transfer the whole or some part of the duties devolving on the committees of supervision to veterinary surgeons, if necessary with appointed assistants, the report of an outbreak of scab disease, provided for in Section 3, shall be made to the Lensmand of the district; the Lensmand has forthwith to make it known to the veterinary surgeon, who shall as soon as possible examine the animals attacked, and take the necessary steps for the enforcement of the regulations laid down in Section 4.

The veterinary surgeon to be remunerated for services rendered in pursuance of the foregoing or present section from the treasury of the Amt, the Council of the Amt fixing the amount.

For journeys undertaken for the extirpation of the disease, he shall receive payment from the State for one horse; water-posting at the same rate.

The assistants mentioned in this section to receive such remuneration and compensation for expenses incurred as the Council of the Amt shall determine.

Sect. 9. The cost of medicine and drugs for the treatment of sheep infected with scab to be defrayed by the Amt; all other expenses attending their cure to be paid by the owner, or the person having them in his charge.

Sect. 10. Should a sheep infected with scab, whose owner is unknown or cannot be discovered in the neighbourhood, be found straying on another person's property, the committee of supervision may order it to be slaughtered, and the owner or person who had charge of it shall have no claim for compensation.

Sect. 11. All questions of indemnity for damage occasioned by the violation of this Act to be settled in conformity with the provisions regulating compensation in general.

Sect. 12. The orders now issued are valid only for Lister and Mandals Amt; but the inhabitants of other Amts are forbidden, in pursuance of the Act of the 15th September 1851, Section 2, to introduce sheep suffering from the scab into Lister and Mandals Amt, or to drive sheep suffering from scab to any grazing-ground, sheep-walk, or *chalét* situated within the boundaries of the Amt, or to any other locality where the inhabitants of this Amt are wont to pasture sheep.

* One mark is equal to 80 ore, or four-fifths of a krone.

Appendix, No. 11.

Appendix, No. 11. MEMORIAL put in, with the consent of the Committee, by the Borough of *Newcastle.*

To the Cattle Plague Committee of the House of Commons.

The humble MEMORIAL of the Cattle Trade Committee of the Borough of *Newcastle-upon-Tyne,*

Sheweth,

THAT the Cattle Market of Newcastle-upon-Tyne is held weekly, and is the market from which the requirements of the borough, having a population of 128,443 inhabitants, and of the borough of Gateshead, separated only from Newcastle by the breadth of the River Tyne, and having a population of 48,627; also the neighbouring boroughs of Sunderland, North and South Shields, with a total aggregate population of 359,589, together with all the numerous and densely populated villages surrounding and in the neighbourhood of these different boroughs, forming a population enormous in extent, are supplied.

That provision has been made in the Newcastle Cattle Market for the supply of this vast population, the number of animals brought into it being as follows:—

In the year 1876:

	Cattle.	Sheep.	Swine.
British - - -	62,994	296,307	33,020
Foreign - - -	41,882	46,021	3,080
TOTAL - - -	104,876	342,328	36,100

The trade is increasing with great rapidity, the number of foreign cattle imported this week being 1,000.

That without this importation of foreign cattle it would have been impracticable fully to provide food for the population of this extensive district, and that the supply has been attended not only with the greatest possible advantage to the inhabitants, but without materially or injuriously affecting the price of English cattle.

That your Memorialists, sensible of the reponsibility attaching to them in the providing suitable accommodation for a traffic so vast, have provided an extensive market for the sale of cattle at a cost of upwards of 25,000 *l.*; and having also regard to the necessity of the due examination and inspection of the foreign cattle, have erected suitable lairs for their isolation and inspection, at a cost of upwards of 22,000 *l.*, and which they are now increasing, at an estimated cost of 9,000 *l.*

That a regular line of steam-vessels has been established between this port and the continent for the conveyance of foreign cattle, and that the vessels engaged in this trade have been expressly built for its use, and are properly fitted up for the stowage of cattle and to protect them during the sea voyage, and that a very large capital has been invested in this trade.

That foreign cattle, on being landed, are taken direct under superintendence and to the avoidance of public roads to the lairs or sanatorium, and they there remain for twelve hours, and are not allowed to pass over the streets of the town or to the market until each animal has been carefully examined by the Government inspector, and that if any symptoms or suspicion of disease appear, the animals are either all slaughtered at the lairs or only released on their healthy condition having been ascertained.

That this system has worked well, and that your Memorialists are convinced it has been effectual, and that the introduction of disease amongst English cattle is not attributable to, and cannot be traced to, the importation into this port of foreign cattle.

The manure in the vessels accumulated during the voyage is mixed with quicklime, as is the manure bred at the lairs.

That your Memorialists earnestly deprecate any interference with a trade which has produced

duced such satisfactory and beneficial results, and the introduction of a system which might altogether fail to provide an adequate supply of food to meet the demands of a rapidly-increasing population, which might not ensure at all seasons a sufficient and regular supply, and to which foreign countries and agriculturists might or might not at their pleasure conform, but dedicate their pasturage to other objects and other countries, and which would neither furnish a supply of fresh meat nor afford perfect protection against the evils sought to be guarded against, inasmuch as the hides of animals slaughtered abroad would be brought into this country in enormous quantities, and so disease might notwithstanding be imported.

There are about 1,120 cows kept within the borough, a number which does not fully satisfy the requirements of the inhabitants, the deficiency being supplied from the country.

There is within the borough an open common of 1,300 acres, on which cows alone are depastured, and beyond this there also exists pasturage in other parts of it to a large extent.

These animals are not kept in heated byres, and do not spread disease, the livelihood of the keepers of these cows depending upon their healthy condition, which of itself necessarily leads to care and attention.

Your Memorialists, however, have not solely depended upon this.

There are herdsmen whose sole duty it is to inspect cows, who in their turn are superintended by a select body representing the parties entitled to the herbage.

Your Memorialists have also appointed an inspector of cows and byres, with assistants, who inspect the animals, more particularly in the summer, two or three times every week, and if any diseased or suspected animal is discovered it is immediately removed and isolated.

All the byres in the borough are carefully examined by the inspectors and the corporation medical officer of health. The measurement, ventilation, and drainage, and other particulars of every byre are ascertained, except of byres belonging to private gentlemen.

In the event of disease the animals are at once slaughtered, and the byre is disinfected with carbolic acid or chloride of lime, and lime-washed. If the animal be one of a number, the rest are confined in the byre for 30 days.

Your Memorialists, although deeply sensible of the importance of the question involved, and entertaining strong views of the inexpediency of the changes which have been suggested, have not felt themselves at liberty to discuss those changes in detail, but have confined themselves to a statement of facts relating to their district.

And your Memorialists will ever pray, &c.

Dated this 10th day of July 1877.

(signed) *Thos. Wilson*,
Chairman of the Cattle Trade Committee of
the Borough of Newcastle-upon-Tyne.

Appendix, No. 12.

PAPER handed in by Professor *Brown*, 19 July 1877.

Appendix, No. 12.

ORDERS OF COUNCIL.

At the Council Chamber, Whitehall, the 18th day of July 1877.

By the Lords of Her Majesty's Most Honourable Privy Council.

PRESENT:

Lord Chancellor. | Lord President.

THE Lords and others of Her Majesty's Most Honourable Privy Council, by virtue and in exercise of the powers in them vested under the Contagious Diseases (Animals) Act, 1869, and of every other power enabling them in this behalf, do order, and it is hereby ordered, as follows:

1. Words in this Order have the same meaning as in The Contagious Diseases (Animals) Act, 1869.

2. For the purposes of this Order that part of the Metropolis which is situate within the following boundaries shall be deemed to be the infected area:—

The River Thames on the south, the Regent's Canal on the east and north, and the westerly sides of Kingsland-road, Shoreditch High-street, Norton Folgate, Bishopsgate-street Without, Bishopsgate-street Within, Gracechurch-street, and King William-street.

3. No cow or heifer shall be moved alive out of the infected area.

4. No animal shall be moved alive out of a cowhouse or shed in the infected area.

5. The movement of cows and heifers within the infected area is hereby prohibited, except as follows:—

Any cow or heifer (not being in a cowhouse or shed in the infected area) may be moved for immediate slaughter to a slaughter-house in the infected area, with a license of an inspector of the local authority authorised to issue the same; and such license shall be available for 12 hours and no longer; and the license shall specify the slaughter-house to which the cow or heifer may be taken for slaughter, and it shall not be taken elsewhere.

6. If any animal is moved in contravention of the provisions of this Order, the owner thereof, and the person directing or permitting their removal, and the company or person removing or conveying them, shall each be deemed guilty of an offence against this Order.

C. L. Peel.

At the Council Chamber, Whitehall, the 18th day of July 1877.

By the Lords of Her Majesty's Most Honourable Privy Council.

PRESENT:

Lord Chancellor. | Lord President.

THE Lords and others of Her Majesty's Most Honourable Privy Council, by virtue and in exercise of the powers in them vested under The Contagious Diseases (Animals) Act, 1869, and of every other power enabling them in this behalf, do order, and it is hereby ordered, as follows:—

1. Words in this Order have the same meaning as in the Contagious Diseases (Animals) Act, 1869.

2. No cattle shall be moved from any place within that part of the Metropolis which is situate north of the River Thames to any place with that part of the Metropolis which is situate south of the River Thames.

3. If any cattle are moved in contravention of the provisions of this Order, the owner thereof, and the person directing or permitting their removal, and the Company or person removing or conveying them, shall each be deemed guilty of an offence against this Order.

C. L. Peel.

I N D E X.

[*N.B.*—In this Index the Figures following the Names of the Witnesses, and those in the Analysis of Evidence, refer to the Questions in the Evidence; the Figures following *App.* refer to the Pages in the Appendix; and the Numerals following *Rep.* to the Pages in the Report.]

B.

ABERDEENSHIRE. Large and increasing trade in dead meat from Aberdeen to London; excellent condition in which the meat arrives, and high prices realised, *Burkett* 6203–6214. 6340–6343——Room for improvement in the mode of transmission of the Aberdeen meat to London, *ib.* 6301–6307—— Expected continuance of the dead meat supply from Aberdeen, concurrently with that from America; relative increase in the former supply and in the live cattle supply from Scotland, *ib.* 6308–6312. 6340–9347.

Very little dead meat sent from Aberdeen to London in the summer; large losses incurred when the meat has been sent in hot weather, *Gillett* 6648, 6649. 6681, 6682.

Average of from sixty to seventy tons of dead meat sent from Scotland to London daily throughout the hot months, *Rudkin*, 9032, 9033. 9159, 9160.

Reference by the Committee to the large increase of late in the supply of dead meat from Aberdeen to London, *Rep.* vii.

AMERICAN CATTLE (IMPORT OF LIVE STOCK):

1. *Superior Breed and Quality of American Cattle; Way in which fed and fattened.*
2. *Condition on Arrival in England; Loss or Depreciation during the Voyage.*
3. *Extent and Prospects of the Trade.*
4. *Question of Restrictions on the Score of Disease.*

1. *Superior Breed and Quality of American Cattle; Way in which fed and fattened:*

Details of the mode of feeding cattle in America, and of the process of fattening those which are intended for the market; system of alternate feeding on Indian Corn and on grass, *Gillett* 2619. 2624. 2818–2821——Practice of feeding entirely on corn when the grass begins to weaken from the effects of frost, *ib.* 2619——Practice in the States as to the relative number of cattle, sheep, and pigs kept on farms; illustration in witness' case, *ib.* 2621–2626——Variation in quality as regards the cattle coming from different localities; best class of cattle exported to England, *ib.* 2632–2636.

Gradual improvement of the herds of cattle in America by crossing the native cattle with English shorthorns; opinion that the stoppage of importation from England will not have an injurious effect for the next three to five years, *Gillett* 2690, 2691. 2697. 2722–2733.

Good class of bullocks imported into England from America; opinion that they are nearly equal to English, *Lyon* 3251——Unquestionable superiority of the American stock as compared with the Continental; considerable pains which the Americans have taken to improve their breed by crossing them with some of our best animals, *ib.* 3270. 3321, 3322.

Superior quality of American cattle; high prices realised when imported alive, *Gebhardt* 5428, 5429. 5512. 5533. 5565–5569 —— Decidedly superior character of American cattle, *Wilson* 5013, 5014; *Burkett* 6440, 6441.

Report, 1877—*continued.*

American Cattle (*Import of Live Stock*)—continued.

2. *Condition on Arrival in England; Loss or Depreciation during the Voyage:*

Insignificant amount of depreciation in the value of live stock in transit from America; recent landing of two cargoes without the loss of a single animal on the passage, *Swan* 1669. 1770–1772——Greater risk in the transit of live cattle than of dead meat; that is, on account of the danger of loss in winter, *Gillett* 2734–2737. 2760–2765.

Reference to a cargo of live cattle landed at Thames Haven in June 1876 from America as having arrived in magnificent condition, *Hall* 2905–2909. 2939——Comparative cost of importing live animals and dead meat into England; admission that the cost is greater in the former case but the meat is much better, *ib.* 2911–2920——Argument that the profits of the import of live cattle from America are sufficiently large to cover the possible losses which occur in rough weather, *ib.* 2921, 2922. 2940–2942. 3007.

Variable condition of the live animals on arrival from America; occasional deterioration of the meat on account of the fatigue caused by the journey, *Lyon* 3257–3269. 3313–3318——Recent arrival of 1,500 American cattle of the best quality within seven days; comparison between the price of these cattle and of American dead meat selling at the same time in the Manchester market, *Lambert* 4003–4007. 4070–4075.

Very good condition in which the live cattle from America generally arrive at Glasgow, the meat being of excellent quality, *Hamilton* 4250–4258——Increasing import of American live cattle *viâ* Southampton; very fine quality and condition of these beasts and very high prices realised by them, *Gillett* 6510–6516. 6643. 6646. 6650, 6651. 6686–6690. 6708–6714.

Excellent condition in which the American cattle arrive at Liverpool; greater care taken and better accommodation in the American than in the Irish boats, *Luya* 7514–7523. 7637. 7678–7681. 7741–7746——High prices realised by the American cattle; comparison with the dead meat prices, *ib.* 7533-7537. 7653-7658. 7734–7738——Loss of some animals during the voyage from America, *ib.* 7678, 7679. 7739, 7740.——Belief that with increased experience live cattle may be brought from America in perfect safety throughout the winter, *ib.* 7746——Very good condition in which some American cattle have been landed at Hull, *Walker* 7904–7907; *Knowles* 9265–9273.

3. *Extent and Prospect of the Trade:*

Belief that within the next twenty years 20,000 cattle a day could be supplied to England if they were required, *Gillett* 2842——Growing character of the trade; belief that during the present year there will be 20,000 American cattle landed in England, *Hall* 2909, 2910——Efforts made to send live cattle from America on account of the uncertainty of the dead meat trade, *Gebhardt* 5428, 5429. 5565-5572. 5743, 5744.

Obstacle to the profitable import of American live stock during the winter, *Hamilton* 4252–4254——Doubt whether the live cattle trade can compete with the dead meat trade, *Burkett* 6442–6444——Recent origin of the American live cattle trade, *Luya* 7515, 7516. 7650–7652.

Considerable losses incurred in the live cattle trade from America, so that it is likely to be superseded by the dead meat trade, *Robinson* 8644–8646——Probability of some live cattle being still imported from America, concurrently with dead meat, *Read* 9556.

4. *Question of Restrictions on the Score of Disease:*

Explanation that witness does not propose to prohibit American import, but only to apply careful restrictions, *Wilson* 5013-5018. 5035. 5080-5082. 5108-5115——Liability to the import of pleuro-pneumonia by means of American cattle, *Gamgee* 6997——Grounds for the opinion that live cattle from America and Canada should be slaughtered at the port of landing, *Adams* 8013–8015. 8040——Opinion that the import should be prohibited, though the cattle doubtless arrive in good condition, *Robinson* 8702–8706.

Recent instances of suspected lung disease in some American cattle landed at Southampton; insufficient grounds for such suspicion, *Brown* 10010, 10011——Facility desirable to be given to the import of American and Canadian cattle, so long as there is no disease in those countries, *ib.* 10045-10047. 10258——Belief that there is not now any foot-and-mouth disease in the United States, *ib.* 10224–10226.

Report, 1877—*continued.*

American Dead Meat:

I. *Supply:*

1. Amount of Import hitherto of American Beef.
2. Prospects of increased Import; conflicting Views on this Point.
3. Very large available Supply in the States.

II. *Practice as to Slaughter before Shipment.*

III. *Arrangements before Shipment and on board Ship; Process of Refrigeration, and Effect thereof.*

IV. *Freight; relative Cost in the case of Dead Meat and Live Cattle.*

V. *Quality and Condition of American Beef:*

1. Adverse Evidence as to the Condition of the Meat on Arrival in this Country, especially in Hot Weather.
2. Favourable Testimony as to the Quality and Condition of the Meat, save under exceptional Circumstances.
3. Curing Properties of American Meat.
4. Quantity condemned as spoiled.

VI. *Storage and Transit in this Country.*

VII. *Price:*

1. In America.
2. In England.

VIII. *Extent and Character of the Demand in London and in the Provinces.*

IX. *Practice of Butchers as to the Sale of American Meat.*

X. *Pork and Mutton.*

XI. *Conclusions of the Committee.*

I. *Supply:*

1. Amount of Import hitherto of American Beef:

Considerable increase in the import of dead meat from America, though not so much in the summer months, *Brown* 1073-1077—Continued consignments of dead meat from America by witness' ships to Bristol, *Whitwell* 2006, 2007——Large development in the trade of dead meat from America since its commencement, *Gillett* 2629, 2630——Shipments to the extent of 1,400 animals weekly from New York, *ib.* 2780-2782——Statement that the trade in American meat to Liverpool has considerably fallen off, *Hall* 3053-3058.

Consignments of dead meat received by witness since October 1875; several cargoes of hogs also received by him from America, *Link* 3062-3065. 3142, 3143——Considerable increase of the trade since its commencement, *ib.* 3066. 3071. 3078. 3101-3103. 3035, 3036——Statement as to the quantity brought in weekly to the London market, *ib.* 3121-3123——Established rather than experimental character of the trade; statistics hereon as to its gradual increase since its commencement in October 1875, *Sheldon* 4504-4509.

Modified success of dead meat import from America, whilst but very little has as yet come from elsewhere, *Gebhardt* 5468. 5702, 5703——Approval of a fair trial being given to the American supply; large increase in the supply since the more stringent restrictions upon import from the Continent, *ib.* 5777-5781.

Witness (who is a salesman of American and English dead meat in the Metropolitan Meat Market) receives some large consignments of American meat, *Burkett* 6105-6108——Coutinued import of American meat, notwithstanding the losses, as there are outstanding contracts, *Giblett* 6747——Statement as to the American meat trade in Liverpool having greatly fallen off, though the quantity passing through the port into the country has increased, *Luya* 7570-7579. 7686-7689——Falling off in the dead meat trade at the present time (July 1877), *Brown* 10018.

2. Prospects of increased Import; conflicting Views on this Point:

Decided belief that if the importation of dead meat as well as live cattle were prohibited from Continental countries there would be an undiminished supply of dead meat from America, *Brown* 999——Information respecting the trade in dead meat from America to Glasgow; opinion that this source of supply is not one upon which we can rely, *Swan* 1652-1668. 1702. 1707-1722. 1782-1800. 1845-1849. 1859-1875.

Decided opinion that the trade in dead meat will continue to develop, there being no limit to the amount which America can provide, *Whitwill* 1901, 1902. 1971-1973——Undoubted opinion that the dead meat trade from America will become a permanent and regular business; belief that this meat can compete successfully with meat killed in this

Report, 1877—*continued.*

AMERICAN DEAD MEAT—continued.

I. *Supply*—continued.

2. Prospects of increased Import, &c.—*continued.*

country, *Gillett* 2669-2673. 2695-2697. 2703-2707. 2757-2759. 2802-2804. 2828, 2829. 2841, 2842. 2853.

Decided opinion that American meat will never be a substitute for English beef, *Hall* 2883——Dissent from the opinion of Mr. Gillett that the American dead meat trade will become established in England; decided preference for the live meat trade, *ib.* 2904——Considerations as to the effect upon the foreign supply of live cattle by a continuous supply of dead meat from America, *Lyon* 3537-3542.

Information in regard to the American dead meat trade with Manchester and Salford; opinion that in the hot weather this trade cannot be successfully carried on, *Lambert* 3817-3861. 3993-4002. 4012-4034. 4046-4048——Further statement that the importation of American dead meat will not succeed; more rapid decomposition of this meat than English meat, *ib.* 4096-4124. 4133-4140. 4163-4170.

Statement showing that it is intended to permanently continue the American dead meat trade with Glasgow, *Hamilton* 4235-4238. 4334-4339. 4385, 4386. 4416——Prospect of a very large increase in the import of American meat, the present prices being remunerative, *Sheldon* 4493-4506.

Comparative infancy of the American dead meat trade, it being difficult to say whether it will last, *Gebhardt* 5193-5197. 5468. 5702, 5703——Opinion that an exclusively dead meat trade could not be properly carried on even if American meat could be always supplied in good condition, without spoiling by keeping, *ib.* 5749-5753.

Evidence in support of the conclusion that the price of dead meat from America will increase, and that this supply cannot be depended upon in lieu of a live cattle supply from the Continent, *Pool* 5839-5895. 5960-5979. 6010-6034. 6082-6104.

Grounds for the conclusion that largely increased supplies of American beef in good condition may safely be calculated upon, *Burkett* 6236, 6237. 6261-6266. 6372-6376. 6415, 6416. 6445-6448——Very large increase anticipated in the dead-meat trade from America, especially if live cattle were excluded, *Stratton* 6799. 6805; *Robinson* 8643-8646.

Prospect of very large supples from America in good condition; great improbability however of the Continental live meat supply being superceded, *Rudkin* 9022. 9115, 9116. 9207——Expected permanence of the American meat trade, *Read* 9556.

3. Very large available Supply in the States:

Statement that the supply of meat from America may be considered to be practically unlimited, *Gillett* 2695-2699. 2751——Ample supplies of dead meat to be had from America in lieu of the foreign cattle supply, *Sheldon* 4574-4578. 4588-4592. 4601-4609.

Information relative to the total number of cattle, of sheep, and of pigs, in the States, and the number of each class available annually for slaughter; conclusion as to the very large surplus which may be spared for the supply of England, *Sheldon* 4440-4444. 4591, 4592. 4601-4609.

Immense supply of cattle in America (including some 10,000,000 in Texas) available for export to England in the form of dead meat, *Gamgee* 6989-6991——Question considered as to the accuracy of witness' computation that there are 10,000,000 cattle in Texas, *ib.* 7058-7060*——Large surplus supplies of cattle in the States, though there may be a slight rise in prices through the English demand, *ib.* 7156, 7157.

Great capabilities of Texas and other States, but not to supply an unlimited quantity, *Howard* 8391.

II. *Practice as to Slaughter before Shipment:*

Considerable distance which cattle have to travel in America before being slaughtered at the abattoirs in New York, *Whitwell* 1998-2002——Explanation of the reason for sending the live cattle to New York instead of killing them, and preparing them at Chicago, *Gillett* 2679-2689——Carriage of the meat some miles to the place of shipment from the slaughter-house, *ib.* 2775-2779——Bad appearance of the American meat, owing very much to the mode of slaughtering, *Read* 9546, 9547.

III. *Arrangements before Shipment and on board Ship; Process of Refrigeration, and Effect thereof:*

Information as to the means adopted in witness' steamers for carrying dead meat from America to Bristol; opinion that the meat, if properly cared for as regards temperature may be kept sound for an indefinite period, *Whitwell* 1877-1885. 1913-1926. 1989-1991——Description of the manner in which the meat chambers on the steamers are kept

Report, 1877—*continued.*

American Dead Meat—continued.

III. *Arrangemeats before Shipment and on board Ship, &c.*—continued.

kept at an even temperature; great importance of maintaining the required temperature without varlation, *Whitwell* 1882–1885. 1947–1950. 1965–1969. 1986–1988——Further description of the manner in which the temperature of the meat chamber on board ship is reduced; examination of the temperature by means of a thermometer let into the door, which is never opened until the vessel arrives, *ib.* 2004.

Information respecting the process of preparing the meat for shipment; great care necessary in the refrigerating practice, *Gillett* 2631. 2640–2652. 2714–2718. 2775–2779. 2837–2840. 2851–2853——Necessity for refrigerators equally in winter as in summer; the temperature must not be too low when the meat is cooling, *ib.* 2770. 2856——Further information relative to the refrigeration of the meat before shipment; supply of all necessary machinery and ice by the owner of the meat, *ib.* 2783–2792——Method adopted by the butchers in New York for preserving the meat for daily use, *ib.* 2830–2833.

Strong approval of the process by which the meat is brought over from America in a cold dry temperature, *Link* 3081, 3082——Impossibility for any smell to come from the meat-chambers on board the passenger ships, *ib.* 3124–3127——Adoption of the plan of having separate chambers on the vessel, so that part of the cargo can be dealt with at a time, *ib.* 3130–3132. 3137.

Practice of preparing the carcases on shore before shipment, there being sometimes an interval of two or three days; small cost of the process, *Sheldon* 4450–4455——Inspection by witness of the "dry air" process used in the conveyance of some of the meat cargoes from America; testimony to the perfect condition on arrival at Liverpool of the meat subjected to this process, *ib.* 4473–4485——Accidental defects owing to which some cargoes have arrived in bad condition; belief that these defects can be effectually provided against, *ib.* 4499–4502.

Authority for the conclusion that as a result of the refrigerating process the meat from America is perfectly capable of resisting heat and atmospheric changes, *Wilson* 4858–4867. 4870–4908——Probability of increased care in transmission with a view to the permanent establishment of a profitable trade, *Gebhardt* 5193–5197; *Luya* 7580–7588——Conclusion that by care in packing and by not placing too many quarters in the same chamber the good condition of the meat may be perfectly secured, and a remunerative price obtained, *Burkett* 6132–6142.

Particulars relative to experiments by witness, in Texas, in 1869, which resulted in the application of the dry, cold air process, since adopted in the American dead-meat trade, *Gamgee* 7020–7022.

IV. *Freight; relative Cost in the case of Dead Meat and Live Cattle:*

Examination respecting the cost of freight and transit generally from America to this country, *Whitwell* 1933–1938. 1945, 1946—— Difficulty in bringing a whole cargo of dead meat on account of the ship not being low enough in the water, *ib.* 1949, 1950——The proportion of dead meat to the live animals is at the rate of about a ton of dead meat to three bullocks, *ib.* 2674–2678——Absence of difficulty in the transit of meat so far as the sea passage is concerned, *ib.* 2712——Non-variation in the rates of shipment from New York to England since the commencement; convenience in carrying dead meat instead of live animals, *ib.* 2793–2804. 2861, 2862.

Explanation that the cost of freight, excluding all the machinery and appliances on board ship, is between 3 *l.* and 4 *l.* per carcase, *Link* 3098. 3104–3110.

Calculations as to the cost of rearing and feeding a bullock in the States, the cost up to the time of shipment to this country in the form of dead meat, and the cost of freight; aggregate of about 18 *l.*, *Sheldon* 4445–4466——Cost of about 7 *l.* for the freight of a live animal, and of 1 *l.* 12 *s.* for attendance and food on board, *ib.* 4467–4471——Estimate of about 30 *s.* per carcase as the cost of ocean transit, *ib.* 4456–4461——Very low freights at present; increase of price if the freights go up, *Pool* 5842. 5971. 6094, 6095.

V. *Quality and Condition of American Beef:*

1. Adverse Evidence as to the Condition of the Meat on Arrival in this Country, especially in Hot Weather:

Considerable variation in the condition of the meat which arrives at Glasgow in hot weather; belief that in hot weather the trade will inevitably decline, *Swan* 1659–1662. 1664, 1665. 1708. 1752–1784.

Unsatisfactory result of the importation of dead meat into Liverpool, especially with regard to supplies for shipping; statement that the action of the air upon this meat is highly prejudicial both to its appearance and quality, *Hall* 2866–2872. 2881–2883. 2889, 2890. 2901–2903. 2945–2953——Inferior condition of the meat resulting from the failure of ice on the vessels in hot weather, *ib.* 2879–2881. 2963–2966.

AMERICAN DEAD MEAT—continued.

V. *Quality and Condition of American Beef*—continued.

1. Adverse Evidence as to the Condition of the Meat, &c.—*continued.*

Statement that the ice used in the preservation of the meat is destructive to its flavour, *Hall* 2911. 3016, 3017——Belief that American meat can never be imported into England as sound and good as English beef, *ib.* 2998, 2999——Objection to the meat on account of its soft and moist appearance, *ib.* 3025–3031.

Inferior condition of the American meat caused by over-packing, and by bringing too much in proportion to the accommodation, *Lyon* 3264——Method adopted for trimming and cleansing the meat, which though sound and good is apparently in bad condition, *ib.* 3266——Reference to the taste of the American meat when cooked; opinion that it is not quite so good as English meat when cold, *ib.* 3380, 3381. 3395–3398. 3543——Instance in August, in the very hottest weather, of a cargo of meat arriving in capital condition; contention, however, that accidents will always render dead meat liable to deterioration in condition of price, *ib.* 3432–3442. 3449–3454——Considerable difficulties at present in the way of bringing meat from America in a throughly good and sound state, *ib.* 3548–3553.

Mixed quality of the meat which has come from America into Manchester, *Lambert* 3832–3835——Decided opinion that it is impracticable to move meat without deterioration after it has been subject to the influence of ice; impossibility of carrying on this trade unless the meat is sold within two days of its arrival, *ib.* 3853–3855.

Good condition and excellent quality of some American meat on arrival in this country, whilst on the other hand a large quantity is in very bad condition, is quite unfit for food, and is sold for about 1½ *d.* per pound, *Gebhardt* 5186–5192. 5250, 5251——Unreliable character of the American supply further adverted to; necessity moreover of submitting to a great reduction of price in order to sell the meat quickly, *ib.* 5418. 5422–5426. 5570——Further admission as to the excellent condition in which some of the American meat arrives, so that the whole supply may in time be placed on a satisfactory footing, *ib.* 5532–5539. 5774.

Unsatisfactory results of witness' experience as regards the condition in which several consignments of American meat have arrived; question considered whether the difficulties on this score may not be overcome in time, *Pool* 5847–5869. 5960–5970. 6033, 6034. 6057–6066. 6096–6099——Bad condition of two consignments sent under the dry air process, *ib.* 5852, 5853.

Extent and result of witness' experience in connection with dead meat from America; very indifferent condition in which several cargoes have arrived, and very low prices fetched as compared with the prices of American live stock, *Giblett* 6517–6555. 6691–6693——Grounds for the conclusion that dead meat will continue to be sent from America in large quantities during winter, but that in hot weather it cannot be sent without great loss, *ib.* 6543–6557. 6638–6649. 6691–6693. 6739–6744. 6756–6760——Excellent quality of the American meat, though it sometimes comes in very bad condition, and is only suitable for a winter trade, *ib.* 6740–6744.

Evidence in detail relative to the American dead meat trade with Liverpool, the quality of the meat, the price realised, &c.; adverse conclusions as to the success of this trade, though a large portion of the meat arrives in good condition, *Luya* 7560–7615. 7659. 7660——Deterioration of meat when much handled; reference hereon to the discoloured and repulsive appearance of some American meat, *ib.* 7561. 7579. 7602. 7659, 7660. 7694–7699. 7710–7712——Effect of the cold air process, and of subsequent exposure after landing, in prejudicially affecting the taste of the meat, *ib.* 7589–7594. 7602–7610.

Further examination upon the question whether American meat may not in time be brought over in a generally improved condition, so that the prejudice in Liverpool against the meat may be overcome, *Luya* 7707–7733.

Particulars relative to the American meat supplies to Leeds; very indifferent condition in which the meat has arrived, whilst the demand has greatly fallen off, witness believing that the trade cannot be maintained at a profit, *Walker* 7805–7817. 7821–7824. 7861–7879——Inferior condition of the meat on arrival at Leeds, as compared with meat from Scotland, *ib.* 7875–7880——Objectionable condition in which the "iced" meat, so called, frequently arrives at Hull, *Knowles* 9278. 9312–9316.

2. Favourable Testimony as to the Quality and Condition of the Meat, save under exceptional Circumstances:

Regular consignments of dead meat received at Bristol from America since last April, the condition being usually good; belief that every cargo might arrive in good condition if thorough care were taken, *Whitwell* 1925, 1926. 1953–1964. 1992–1995. 2006, 2007——Possibility of bringing this meat in hot weather as well as in cold, proved by the experience of last summer; expense of transit not greater in hot than in cold weather, *ib.* 2003, 2004.

Statement

American Dead Meat—continued.

V. *Quality and Condition of American Beef*—continued.

2. Favourable Testimony as to the Quality and Condition, &c.—*continued.*

Statement that hot weather is in no way prejudicial to the trade if it be properly prepared, *Gillett* 2659-2664——Deterioration of some of the earlier cargoes of meat not on account of the hot weather, but because the machinery for regulating the temperature broke down in one instance, whilst in two instances sufficient ice had not been taken, *ib.* 2706-2710——Assertion that the meat, if properly prepared, will keep longer than any other meat killed in the ordinary way, either English or American, *ib.* 2719-2721. 2759.

Preference for the dead meat trade to England as compared with the live stock trade; great risk attendant upon the latter during the winter, *Gillett* 2734-2737. 2760-2765——Favourable experience as to the condition of the cargoes of dead meat shipped to Liverpool; certainty, when the means of transit are more perfect, of delivering meat in Liverpool as fresh as when it was killed in New York, *ib.* 2752-2759——Explanation with reference to several cargoes lately arrived in England in bad condition; defective preparation in America the real cause of this failure, *ib.* 2766-2771. 2847-2850. 2854-2856.

Information respecting the shipments received by witness from America, and the generally good condition of the meat, *Link* 3069——Statement that the American meat will keep longer than English beef fresh from the slaughter-house; great importance of the meat being chilled right through before being shipped, *ib.* 3086, 3087. 3092-3095. 3099, 3100. 3128-3131. 3137.

Consumption of some American beef by Her Majesty, by clubs, and other West End customers, who have expressed high approval of its quality; impossibility of distinguishing the meat from Scotch beef, *Link* 3088, 3089. 3114. 3133, 3134——Explanation that some meat condemned in the London market became bad on account of the vessel being longer out than usual, and the ice running short, *ib.* 3112, 3113.

Large dealings of witness at Glasgow in dead meat from America, as consigned to Messrs. Bell & Sons; very good condition in which this meat arrives, whilst it will keep nearly as long as home-killed meat, though it losses colour, *Hamilton* 4213-4247. 4277-4279. 4304-4315. 4325, 4326——Necessity on only one occasion of selling a cargo of dead meat at a reduced price on account of its condition on arrival at Glasgow, *ib.* 4363-4365.

Practical trial given by witness to some beef brought over in the "Celtic" in March last; excellence of the quality, both hot and cold, whilst it was kept for several days before it was cooked, *Sheldon* 4486-4494——Belief that the meat can come just as well in hot weather as in cold, *ib.* 4510-4513——Opinion as to the good quality of the American dead meat sent to this country, and as to the excellent condition in which it arrives, *Wilson* 4853-4857.

Excellent condition as a rule of Mr. Link's consignments on arrival in London, though of late there have been some exceptions; peculiarly good condition of a cargo which came in extremely hot weather, *Burkett* 6109-6117. 6130-6135——Excellent quality of American beef, when it arrives in good condition; it is, in fact, surpassed only by Aberdeen beef, *ib.* 6149-6151. 6227-6235——Very good condition of some of Mr. Gillett's consignments of American meat, *ib.* 6152-6159.

Particulars as to the keeping properties of American meat in hot and cold weather; it will keep better than English meat, but not so well as that from Aberdeen, *Burkett* 6160-6170. 6267-6270. 6301, 6302——Very bad condition of some American meat sold by Mr. Pool, as agent; negligence to which owing, *ib.* 6171-6176——Better quality of American than of Continental dead meat, so that the latter can hardly stand competition with the former, *ib.* 6227-6230——Very large quantity sent by Mr. Eastman, the quality being excellent, *ib.* 6237, 6238——Very good condition of some American meat sent from Glasgow to the London market, *ib.* 6240-6245.

Excellent condition in which meat arrives from America in hot weather, *Stratton* 6799-6805——Admirable condition in which the meat may be brought under proper arrangements, *Robinson* 8644.

Exceedingly good condition in which some American meat has recently come to London, *viâ* Liverpool; very fine quality of this meat, which realised 7*d.* per pound, *Rudkin* 9006-9011——Belief that the bad condition in which the meat sometimes arrives is due to bad packing, and to the slaughter of the animals in America before they have cooled down after their journey from the interior; facility of correcting these defects, *ib.* 9016-9021. 9117, 9118. 9194-9196——Long period for which American meat will keep if it arrives in good condition, *ib.* 9183, 9184.

Excellent condition in which cargoes of American meat have arrived, even in hot weather; bad condition, on the other hand, of some cargoes through imperfection in the process adopted, or from other causes which are remediable, *Read* 9444-9555.

Report, 1877—*continued.*

AMERICAN DEAD MEAT—continued.

V. *Quality and Condition of American Beef*—continued.

3. Curing Properties of American Meat:

Fitness of the American dead meat for curing, *Hamilton* 4314-4317——Result of witness' experience that American meat will take salt perfectly, *Rudkin* 9022, 9023.

Statement that American meat will not salt, so that the sailors at Hull will not use it, *Knowles* 9250-9252. 9307-9311.

4. Quantity condemned as Spoiled:

Statement that since the commencement of the trade 7 per cent. would represent the loss by bad meat on the total shipments, *Gillett* 2810-2813——Seizure in London during the present week of thirty tons of Canadian and American meat, *Hall* 2899-2901. 3033-3035.

Statistical information in regard to the importation of American dead meat into London during the present year; within the last week many tons of this meat were condemned as being unfit for food, *Lyon* 3158-3163. 3260-3263. 3382-3394——Variable character of the meat when put upon the market; large losses which have occurred through the meat becoming bad on account of delay in transit, through bad weather, and other causes, *ib.* 3175-3177. 3245-3248. 3310——Belief that in the week in which so large a quantity of meat was condemned, there could not have been a less loss than 20,000*l.*; sale of some of this meat on the 1st June at the rate of 1*s.* 8*d.* per stone, *ib.* 3245-3248. 3310, 3311. 3505-3510——British beef occasionally condemned in the London markets as well as American, *ib.* 3476, 3477.

Necessity of daily boiling down a considerable quantity of the meat, *Gebhardt* 5190. 5250——Condemnation of some American meat in Liverpool, but not in hot weather especially, *Luya* 7608-7610.

Condemnation of about forty-nine tons of American meat by the city authorities in the first six months of 1877, *Rudkin* 9012-9015.

VI. *Storage and Transit in this Country:*

Opinion that the meat will bear transit from the port of arrival to other markets, without fear of deterioration from being exposed to a higher temperature than that of the refrigerator; this is conditional on the meat being properly prepared at first, *Gillett* 2642-2647. 2649-2652—— Absence of necessity for dead meat stores specially prepared for carrying on the trade in the English markets, *ib.* 2657, 2658.

Mode of conveying the meat from Liverpool to London by train; specially constructed trucks for this purpose, *Link* 3067. 3083-3085. 3145——Facilities of butchers by means of refrigerated storehouses for keeping large supplies of American meat for about a week, and so regulating the market, *Burkett* 6167-6170. 6179-6181. 6398-6401.

Facility for making improved arrangements for the storage and transit of dead meat on arrival from America, *Gumgee* 7095-7103. 7120-7126. 7217——Improved arrangements required both in England and America in connection with the dead meat trade; these are quite feasible, *ib.* 7217-7222——The trade can be carried on as well (with proper arrangements) in summer as in winter, *ib.* 7217.

Steps being taken in Liverpool for providing cool stores in which to keep dead meat until it is wanted for use, *Luya* 7595-7607——Importance of cool stores in which to keep the meat on arrival; steps being taken to provide these on a large scale, *Read* 9550-9553.

VII. *Price:*

1. In America:

Average price of meat in American towns about half that in England, *Brown* 363, 364——Rise in price in America on account of the increased demand in England, *Whitwell* 2004-2007—— Statement that 6*d.* is the average price for prime beef in New York, *Gillett* 2742.

Tendency to a rise in the price of cattle in America; reference hereon to the margin of profit between the price of dead meat in New York and in London, *Pool* 5971-5979. 6010-6020——Increasing price of cattle in the United States and Canada, *Gillett* 6546-6550. 6591-6595. 6654-6656. 6739.

2. In England:

Information in regard to the price at which the meat has been put upon the market at Bristol; absence of fluctuation in price for good meat, *Whitwell* 1906-1912. 1927-1931. 1975-1986. 1996, 1997. 2008, 2009——Examination with reference to the price at which it will be necessary to sell the meat so as to make the trade remunerative; possibility of going as low as 5½*d.* a pound, *Gillett* 2637-2639. 2693, 2694. 2700-2702. 2738-2744. 2760-2765. 2772-2774. 2814-2817. 2843-2846——Argument that the fall in

AMERICAN DEAD MEAT—continued.

VII. *Price*—continued.

2. In England—*continued.*

in price of American meat in English markets is due, not to deterioration of quality, but to the fact that the market was over-stocked, *Gillett* 2654-2656.

Statement that the price of large quantities of this meat in London has been as low as 2 *d.* and 3 *d.* a pound; the highest price has been 7 *d.*, but that was on account of the great scarcity of meat at the time, *Hall* 2877, 2878. 2934. 2957, 2958. 2991-2997. 3010-3015. 3036-3038. 3041. 3049——Comparison of the price of live stock from America with that of dead meat; advantage as regards cheapness in favour of the latter, *ib.* 2970-2972——Dead loss to the importer of the meat which is selling at the present low prices, *ib.* 3000-3006.

High price at which the meat is sometimes sold in London, *Link* 3070, 3071. 3090, 3091——Low price at which the American meat can be sold in London; fluctuation in price dependent upon the character of the meat, *Lyon* 3172-3175. 3264, 3265——Calculation by the importers of dead meat that it cannot be remunerative at a lower price than 6½ *d.*; argument that the meat which has already come to London must have been a great loss as it has realised nothing like this price, *ib.* 3235-3238. 3245-3248. 3253-3256. 3369-3373.

Somewhat lower price realised at Glasgow by American than by home-killed meat, the former being readily bought by the public, *Hamilton* 4232, 4233. 4309-4313. 4421-4431——Liability to great variation in the price of American dead meat in Glasgow, *ib.* 4331-4340——Large margin of profit in sending dead meat instead of live cattle, *Sheldon* 4472——Profitable character of the present prices in the American trade; improbability of any material increase of price, *ib.* 4593-4600.

Gradual reduction from 7 *d.* to 2 *d.* per pound realised by a recent cargo of American meat, whilst a considerable quantity had to be destroyed, *Gebhardt* 5423, 5424. 5570——Belief that but for the American supply meat would have been much dearer in Manchester and other towns, *ib.* 5642. 5646——Examination as to the relative price at which dead meat from America and cattle from the Continent can be sold to the public at a profit, and as to the extent of margin in favour of the former; doubt as to the American trade paying at 6 *d.* per pound, *ib.* 5735-5768.

Average of about 4¾ *d.* per pound realised by the American meat sold by witness in London; examination hereon to the effect that witness does not believe the trade is a remunerative one, notwithstanding its immense increase, *Pool* 5857-5860. 5870-5880. 6010-6032. 6095.

Average of about 6¾ *d.* in the pound realised by Mr. Link's consignments from January to May last; average of about 5¼ *d.* as the price fetched by American meat in the previous four months, *Burkett* 6118-6130. 6277-6285——Lower price by about 1¼ *d.* per pound of the best American beef than of English beef, whilst it is about 2 *d.* cheaper than Aberdeen beef, *ib.* 6271, 6272.

Sale of the meat in Liverpool at prices varying from 4 *d.* to 6½ *d.* a pound, *Luya* 7613-7615——Calculation to the effect that American meat will bring a profit at any price over 4½ *d.* a pound, *Robinson* 8644. 8697, 8698——Great boon to the public if the American supply came over in such quantity as to supersede the live cattle supply from the Continent, and to reduce the price of meat, *Rudkin* 9025-9030.

VIII. *Extent and Character of the Demand in London and in the Provinces:*

Absence of any difficulty in finding markets for the meat on its arrival in Liverpool; supply occasionally sent to Manchester or Birmingham on account of its obtaining a better price, *Gillett* 2805-2809——Admission that the introduction of American meat has been a great boon to the poor people, who would have suffered greatly without it; opinion on the other hand that the richer classes would not touch it on account of its insipidity and want of flavour, *Hall* 2881-2883. 2998. 3008, 3009. 3038-3040.

Circumstances under which witness declined to supply American meat to steamers at Liverpool; instances in which some steamers took their business away from him in consequence, and afterwards returned to him with larger orders for English meat, *Hall* 2896-2899. 2945-2949. 2978-2980. 3022-3024——Unwillingness of the owners of vessels to give the American meat to their own crews or passengers, *ib.* 3019-3024——Supply of passenger ships by witness with American meat for consumption on board, *Link* 3116-3119. 3132, 3133.

Explanation that the large quantities in the metropolis in some weeks are to be accounted for by the meat not being good enough for the provinces, so that it has been sent up to London; very low prices realised by some meat, which was mouldy and apparently in bad condition, *Lyon* 3160-3163. 3266-3269. 3308-3311. 3388-3390. 3431——Admission as to the great advantage to this country on account of the introduction

Report, 1877—*continued.*

American Dead Meat—continued.

VIII. *Extent and Character of the Demand in London, &c.*—continued.

of American meat; extensive sale of the meat by London butchers, *Lyon* 3164, 3165. 3229. 3306. 3336. 3339-3344. 3353-3355. 3374-3379. 3402-3406. 3433-3439.

Dislike of American meat in Birmingham and Manchester, so that it does not enter into competition with other meat as regards price, *Gebhardt* 5771-5776 — Prejudice against American beef on account of the bad colour, though not really any symptom of inferior quality; comment upon its exclusion from Government establishments and from workhouses, *Burkett* 6233-6233. 6296-6300. 6320-6328——Objection in the provinces to the use of American meat in summer, the colour being against it, *ib.* 6377-6382.

Belief that the majority of those who try American dead meat have a distaste for it, *Giblett* 6536, 6537——Very bad appearance of the meat; statement hereon as to its being objected to by the army and navy, and by prison and workhouse authorities, *ib.* 6538-6542——Advantage of supplies of American meat in the winter as an auxiliary to the live cattle supply, *ib.* 6652, 6653.

Public dislike of American dead meat in Hull, so that there is no demand for it, *Knowles* 9274-9277——Comment upon the exclusion till lately of American dead meat from Government contracts, *Read* 9558-9560.

IX. *Practice of Butchers as to the Sale of American Meat:*

Stores opened in Liverpool for the sale of this meat, which though at first successful have been closed on account of the sale falling off; many of the ordinary butchers subsequently took up this trade and sold the American meat besides their own, *Hall* 2873-2876. 2926-2929. 2954-2956. 2959-2962——Further examination with reference to the sale of American meat in Liverpool; instance of a butcher in Manchester buying tough and lean old cows and selling them for American meat in order to discredit the trade, *ib.* 2930-2933. 3032.

Extensive purchases of American meat in London by West End butchers, *Link* 3069 ——Probable sale by the London butchers of American meat as British or Scotch meat; doubt as to any complaint being made with reference to this meat by the consumers, *Lyon* 3465-3467. 3544-3547——Comment upon the practice of butchers in selling American for English meat and charging English prices, *Gebhardt* 5421, 5422. 5678, 5679.

Purchase of Mr. Link's consignments by the best butchers when it arrives in good condition, *Burkett* 6143-6151. 6234, 6235. 6286-6288 — Sale of American beef to the public as Scotch beef; large profits thereby to the butchers, *Rudkin* 9024. 9109-9113 ——Comment upon the opposition at first of the London butchers to the consumption of American meat; they now buy it very readily, *ib.* 9114. 9185.

X. *Pork and Mutton:*

Possibility of sending pork and mutton from America in large quantities in the same way as beef, *Gillett* 2823-2827. 2858-2860.

XI. *Conclusions of the Committee:*

Importance attached to the American supply in connection with the proposal that foreign cattle be slaughtered at the port of debarkation, *Rep.* viii——Prospect of the supply being continued throughout the year, with improved arrangements during the summer months, *ib.*——The trade is, however, at present in too uncertain and experimental a condition to justify reliance upon it for an unfailing supply, *ib.*

Animals Order of 1875 (*Privy Council*). Contents of this Order; regulations therein as to the mode of dealing with various diseases, as to the arrangements for the transit of cattle, &c., *App.* 521-539.

Ash, Mr. Belief that Mr. Ash, manager of the Piston Freezing Company, is the inventor of the cold air process as applied to dead meat; great value of this invention, *Sir C. A. Wood* 7363. 7366.

Australia. Statement that it is proposed by Australia to continue the prohibition on the import of cattle until the year 1880; opinion that if this country were in the meantime declared free from disease the trade to Australia would be resumed, *Booth* 2272. 2282. 2285-2288.

Belief that some meat sold as Australian, and objected to on the score of its appearance, was not really Australian, *Burkett* 6289-6296——Expected success of the experiment in the conveyance of refrigerated dead meat on board the "Northam" from Sydney, *Odams* 8002-8004.

Information relative to the stringent regulations enforced in Australia for the suppression and prevention of scab in sheep, and other diseases; success with which attended, *Melvin* 8783-8795——Very large number of live stock in Australasia, there being about 70,000,000

Report, 1877—*continued.*

Australia—continued.

70,000,000 sheep and 7,000,000 cattle, *Melvin* 8830, 8831——Attempts made and being made to import dead meat from Australia; good prospect of success, *ib.* 8832-8836.

Prohibition in Australia upon the import of live cattle from England through fear of disease; importance on this score of freedom from disease at home, as causing improved breeds to be sent to Australia, whence improved and enlarged supplies may be returned to this country, *Melvin* 8837-8843. 8865-8867.

Aylesbury Dairy Company. See *Dairies and Cowsheds.*

B.

Bedfordshire. Very heavy losses of witness, in Bedfordshire, from foot-and-mouth disease and pleuro-pneumonia, *Howard* 8152. 8160, 8161——Very many animals attacked by these diseases in the county about 1872, and heavy losses in consequence; immunity from cattle plague, *ib.* 8156-8165.

Stringent regulations adopted for stamping out the outbreaks; prohibition of fairs and markets temporarily, *Howard* 8166-8174——Speedy re-introduction of foot-and-mouth disease, *ib.* 8175, 8176——Healthy state of the county and of England generally, at the present time, *ib.* 8330, 8331. 8354-8359.

Behr, The Baron Fr. Von. (Analysis of his Evidence.)—Is a large landed proprietor in Germany, and has come to England in consequence of the present inquiry on the subject of cattle plague, 2464, 2465. 2536, 2537. 2539-2541——Great interest taken in this question by the German farmers, 2466, 2467.

Large import of German cattle and sheep into England; statement that the best sheep and probably the best cattle, are selected for exportation to England, 2467-2471. 2556-2559——Extract from a work by Her Von Bunsen showing the advantage of establishing free trade in cattle; great anxiety on the part of German farmers with reference to any restrictions on the export of cattle to England, 2469-2471.

Impossibility of exporting dead meat from Germany into England on account of the cost of transit; inability to compete with America in this trade as regards cheapness of price, 2472-2480. 2575-2577——Decided opinion that to send offal to England fit for food would be impracticable, 2475-2477——Approval by the German farmers of the existing stringent regulations for the prevention of cattle plague, 2481. 2485, 2486.

Compensation paid by the Imperial Government to the extent of the whole value of slaughtered cattle in the case of rinderpest; expediency of the Empire paying one-half, and the province the other half, 2481. 2527, 2528. 2595-2597——Intention of the Government to make their restrictions more severe; strong opinion of witness in favour of increased severity of regulations, 2482-2484. 2500-2505. 2547-2551.

Information respecting the measures adopted by the German Government for the purpose of stamping disease out of the country; severe punishments inflicted in the case of cattle smuggling into Germany, 2483-2494. 2498-2511. 2547-2551——Regulations with reference to the dangerous boundaries of Russia, 2484-2490. 2560——Local authorities in Germany directed to dispatch to England immediate information of any outbreak of disease, 2490, 2491. 2493——Desire on the part of the Government to meet the wishes of England in regard to any restrictive measures having reference to cattle diseases, 2492. 2510, 2511. 2517——Decided conviction that cattle plague is now completely stamped out in Germany; opening of the boundaries of neighbouring countries in consequence of this freedom from disease, 2495-2497——Great difficulty for the German Government to prevent occasional smuggling somewhere on their extended frontier, 2499-2504. 2598-2600.

Suggestions as to the means to be adopted in England to avoid the importation of disease; desirability of appointing English veterinary inspectors at Continental ports, with instructions to telegraph information of shipment of infected animals, 2512-2516. 2552-2555. 2566-2568. 2593-2594——Expediency of making the law of disinfecting ships an Imperial law, applicable to the whole of Germany, 2517-2519.

Difficulty of arriving at the best means of dealing with pleuro-pneumonia; divided opinion in Germany as to whether the disease has been imported or is indigenous, 2520-2529. 2563. 2569——Unimportance of foot-and-mouth disease in Germany; opinion that this disease is more severe in highly fed than in poor cattle, 2530-2532. 2538. 2542-2544. 2570-2574. 2585-2587——Assertion that cattle plague is the only disease in Germany of permanent importance; insignificance of all other diseases in comparison, 2533-2535. 2563-2565.

Large numbers of English cattle purchased for breeding purposes in Germany, 2537, 2538. 2578-2584——Dissent from the opinion that cattle plague is introduced into England from Germany; difficult mission of the latter country to protect the whole of

Report, 1877—*continued.*

Behr, The Baron Fr. Von. (Analysis of his Evidence)—*continued.*

Europe against the introduction of the plague from Russia, 2560, 2561——Effect of foot-and-mouth disease upon the milk of cows, 2572, 2573——The price of meat in Germany is, on the average, 7 *d.* a pound for the best parts, 2575-2577.

Decided opinion that the loss which the prohibition of import from England would cause to Germany would not be a tenth part of the loss suffered from a prohibition of the export from Germany to England, 2581–2584——Further statement that it would be impracticable to send dead meat from Germany to England, even if it were wholly packed in ice, 2588–2590.

Desirability of classifying German cattle in the same schedule as French and Spanish cattle, 2591, 2592——Great advantage possessed by England as regards immunity from cattle diseases on account of its insular position, 2601——Wish on the part of the German farmers to co-operate with the English farmers with the object of conquering the frightful disease of cattle plague, 2603.

Belgium. Reference to the prohibition placed upon the import of cattle, meat, and hides from Belgium upon the ground chiefly of Belgium being a country of transit, *Brown* 93, 94——Conclusion as to the necessity, in reference to cattle plague, of prohibiting the import of cattle from Belgium, *Brown* 315-317. 976-978; *Simonds* 1147. 1190, 1191. 1217.

Very little import from Belgium proper, save that some sheep come from that country, *Robinson* 8548, 8549——Non-adoption in Belgium of any special restrictions in reference to pleuro-pneumonia, *Read* 9769——Import of disease from Belgium at times when it was not reported as existing in that country, *Brown* 10054.

Recommendation by the Committee for the prohibition of import of cattle from Belgium, *Rep.* vi. ix.

See also *Cattle Plague. Foot-and-Mouth Disease. Foreign Cattle. Pleuro-pneumonia.*

Birmingham. Admission as to the entire efficiency of local action at Birmingham in dealing with cattle diseases, *Brown* 10153. 10170.

Booth, Thomas Christopher. (Analysis of his Evidence.)—Large experience of witness as a breeder of cattle in Yorkshire for many years; high pedigreed shorthorns bred by him, 2234-2242——Very great losses of witness from foot-and-mouth disease; his herd has been reduced more than one half by this disease, 2243–2249. 2267–2271. 2313, 2332–2334. 2341, 2342——Undoubted opinion that foot-and-mouth disease was introduced into the herd by means of strange cattle driven along roads passing through witness' farm, 2246–2248. 2313.

Information respecting the restrictions at present existing with regard to the movement of cattle in Yorkshire; undoubted opinion that the advantages of these stringent restrictions far outweigh the disadvantages, 2250-2261. 2266. 2272–2289. 2296-2300. 2303–2322. 2337——Statement that the present severe restrictions considerably enhance the price of meat; large increase in price within the last ten or fifteen years, 2256. 2308. 2315, 2316. 2320, 2321. 2327–2331.

Great loss to breeders and also to consumers on account of the prohibition of foreign exportation; stoppage also of the Irish trade at the present time, 2257–2261. 2272. 2274. 2284——Large exportation of shorthorns to Ireland by witness and his family during the last sixty years; considerable increase in the value of Irish cattle from this exportation, 2260, 2261. 2343, 2344.

Favourable opinion of witness as to the probable success of the dead meat trade; belief that this trade will eventually usurp the whole of the trade in cattle, 2262-2264. 2293–2295. 2323–2326. 2361. 2423——Desirability for perfect free trade as regards cattle between one part of England and the other, 2265. 2364——Statement that it is proposed to continue the prohibition on the import of cattle into Australia until the year 1880; opinion that if this country were in the meantime declared free from disease, the trade to Australia would be resumed, 2272. 2280. 2285–2288.

Disapproval of permitting in all cases the movement of animals from an infected district with a pass from a qualified inspector; discretion necessary in the local authority, 2299–2302——Recommendation that the Government should take the question of restriction entirely into their own hands and supersede the local authorities; expediency of the cost of inspection throughout the country being borne by Imperial instead of local funds, 2302. 2430–2437.

Willingness of witness and of the farmers generally to submit to severe restrictions in order to stamp out pleuro-pneumonia and foot-and-mouth disease, 2314. 2340. 2363. 2411-2413. 2418, 2419. 2421, 2422. 2462——Expediency of prohibiting the importation into this country of live stock, even if there were no such disease as cattle plague; grounds for this opinion, 2322. 2326. 2335. 2361, 2362. 2376–2380. 2386–2391. 2424, 2425.

Anticipated

Report, 1877—*continued.*

Booth, Thomas Christopher. (Analysis of his Evidence)—*continued*

Anticipated outbreak of foot-and-mouth disease averted by means of the existing restrictions in consequence of the cattle plague; belief that it would be quite possible to stamp out this disease in England, 2335-2337. 2340. 2345, 2346. 2350-2356. 2367——Monetary loss by witness from foot-and-mouth disease to the extent of 30,000 *l.* or 40,000 *l.*, 2341, 2342.

Increase of cattle in Ireland in the last twenty-five years to the extent of about four times its value, 2344——Decided opinion that if we were free from disease we could produce a great deal more meat than we do, 2347–2349 ——Further evidence respecting the restrictions for the suppression of the cattle plague in England; recommendation that importation be totally prohibited, and failing this, that importation be prohibited from any country in which there exists any disease whatever, 2350–2355. 2361. 2376–2379. 2428-2430. 2459-2461.

Considerable freedom of this country from foot-and-mouth disease at the present time, 2357-2460——Desirability of treating Ireland, as regards movement of cattle, exactly the same as England; belief that foot-and-mouth disease is not generated in Ireland, 2365, 2366——Inexpediency of stamping out foot-and-mouth disease by slaughter; opinion that the stoppage of movement in infected districts would be sufficient, 2367–2375. 2442–2446——Belief that pleuro-pneumonia and foot-and-mouth disease are foreign diseases, notwithstanding that they may, to a certain extent, have become acclimatised in England, 2381-2385. 2420.

Unsatisfactory character of the inspection of foreign animals; probability that a larger number of diseased animals escape detection than those that are discovered, 2392–2400 ——Suggestions as to the regulations for stamping out foot-and-mouth disease, 2401–2408——Argument that pleuro-pneumonia should come under the same regulations as foot-and-mouth disease or cattle plague, 2409, 2410. 2414-2417.

Further statement that cattle plague, pneumonia, and foot-and-mouth disease undoubtedly came to this country from the Continent, and that if importation was strictly prohibited from infected countries we should get rid of these diseases eventually, 2438–2441——Advantageous effect upon the price of meat of the total prohibition of live cattle from infected countries, 2449-2454——Diseases in this country which induce foreign countries to prohibit the importation of our cattle, 2455-2458.

Breconshire. Prevalence of much foot-and-mouth disease in Breconshire, introduced by Irish cattle, *Sir C. A. Wood* 7412. 7474-7476.

Breeding Stock. See *Calves. Cows. Home Breeding. Store Cattle.*

Bristol. Explanation that Bristol is a prohibited port as regards import of live cattle from the Continent, *Whitwell* 1942.

Statement as to the Government inspectors at Bristol having nothing to do with sheep or pigs from Ireland, whilst the local inspector does not inspect on landing, and is paid only by half the fines when disease is detected in the market, *Lord Fitzhardinge* 5263–5268. 5289-5293——Bad condition of some sheep and pigs recently landed at Bristol from Ireland, *ib.* 5294, 5295. 5322-5326.

Recent landing of a large quantity of cattle, sheep, and pigs at Bristol, the latter having been affected with foot-and-mouth disease, and all having been driven away together, *Peters* 5346-5358. 5363-5381——Presence of two Government inspectors on the foregoing occasion; statement as to these having merely the power of reporting to the local authorities, *ib.* 5353, 5354. 5366-5371. 5380, 5381. 5390-5403——Recent landing of sheep suffering severely from foot-and-mouth disease, *ib.* 5381–5383.

Considerable improvement in the arrangements at Bristol for the landing of animals from the Irish boats, and for their subsequent removal or distribution, *Brown* 9955–9957 ——Practice at Bristol as regards diseased pigs from Ireland being given in charge of a policeman for slaughter, *ib.* 9947–9950.

Further particulars as to the present process of inspection at Bristol; its insufficiency as a protection against the import of disease, *Brown* 9965–9967. 10111, 10112.

See also *Ireland, and Irish Cattle.*

Brown, Professor George Thomas. (Analysis of his Evidence.)—Is the professional officer of the Veterinary Department of the Privy Council Office, 1——Summary of the measures adopted by the department relative to the cattle plague since the outbreaks in 1865, 1866, and 1867; reference more especially to the Contagious Diseases (Animals) Act, passed in 1869; 2. 8——Pleuro-pneumonia and foot-and-mouth disease defined as contagious diseases for the first time in the Act of 1869; 2.

Enumeration in this Act of countries, termed "scheduled countries," from which animals could only be imported for the purpose of slaughter; certain countries included in the schedule under this Act, 3-8. 25-32——Grounds for the withdrawal of Schleswig-Holstein from the schedule in 1872; this arrangement made on account of the introduction

Report, 1877—*continued.*

Brown, Professor George Thomas. (Analysis of his Evidence)—*continued.*

duction of cattle plague from Germany into England by means of Russian cattle, 8–12. 27–32.

Information as the introduction of cattle plague into England in 1869 and 1872, and the circumstances which caused it to spread in the latter year; preventive measures taken, and effect thereof, 10–17——Statement as to the disease having been introduced in 1869, 1872, and 1877, without official information from the country whence the cattle were imported, 10–13——Explanation of the term "Mediate Contagion;" great difficulty experienced by the authorities in preventing the extnseion of disease by this means, especially as regards cattle plague, 14, 15. 41–48.

Opinion that the authorities should have power, as in Germany, to slaughter in any case in which they may be advised that it is necessary; conviction that if they had had this power in 1872, the disease in East Yorkshire would have been stamped out at the time it appeared, 14–19. 142——Prohibition of the importation of cattle from Russia before the outbreak at Hull, in consequence of information as to the existence of cattle plague in that country, 20–23.

Statement that the danger of introducing cattle plague by means of sheep is so slight, it is not necessary to insist upon their slaughter at the landing places, 26——Establishment of regulations for the purpose of procuring early information as to outbreaks of cattle plague on the Continent; inefficiency of this information in every case, 33–35. 55–64. 269.

Precautions taken at landing places as to separating the defined from the undefined parts of the port; unfavourable opinion as to some of the arrangements at the ports, 36–40——Great defects in the present system in regard to the want of control over the landing of cattle; absence of means for stopping the movement of vessels or persons on board vessels, 41–43.

Non-existence of the danger of mediate contagion as regards pleuro-pneumonia and foot-and-mouth disease; illustration in support of this theory, 43–48——Opinion that the present system of inspection is sufficient to guard against foot-and-mouth disease, by reason of the short period of incubation; belief that the inspection is conscientiously performed, 49, 50——Occasional failure of detection of foot-and-mouth disease in the case of swine, inasmuch as they no not show the disease so markedly as other animals, and are more difficult to examine, 49, 50.

Statement that the incubation period of cattle plague varies from four to seven days, 51——Impossibility, by any system of quarantine or inspection, to guard against pleuro-pneumonia on account of the long period which elapses before development, 52–54.

Explanations in detail relative to the recent outbreak of cattle plague, the origin thereof, its spread, and the remedial meaaures adopted, 55 *et seq.*——Information with reference more especially to the cattle brought to Deptford in the present year in the "Castor," all of them having been affected with cattle plague; action taken at Deptford in regard to these cattle, 62–89——Absence of any official notification as to an outbreak in Germany upon the occasion of the arrival of the "Castor" from Hamburg, 64–71——Precautions taken at Hull as regards a similar cargo of diseased cattle brought over in the "Hansa," 87.

Orders and circulars issued from the veterinary department immediatey upon the discovery of the cattle plague in London and Hull; prohibition of fairs and markets in the East Riding under an Order of the Privy Council, 88. 117–125. 169–172——Appearance of the cattle plague in widely different quarters, subsequent to its discovery at Deptford, 98–102. 106, 107. 112–114. 116. 119–122. 126–128. 132–142. 197–205. 211–228——Great danger of propogating disease by the habitual purchase of hay and straw from the cattle ships by the dairymen in Hull; statement that the outbreak in Hull was solely in the dairies, 126–131.

Considerable difficulty experienced by local authorities in enforcing the Order as to the disinfection of persons who have been in connection with diseased animals; inability of the local authorities to carry out these and like arrangements with the present limited staff, 143–153——Suggested improvements in the existing state of things, especially having reference to the duties of the local authorities; admission that these sugestions would entail a large increase in the present staff, 154. 166–168.

Communication of cattle plague by particles of dead animals, and also by meat which has been affected by the disease; impossibility under certain conditions of detecting meat which comes from a diseased animal, 154–158. 180–185——Absolute necessity for the destruction of the manure of diseased animals; recommendation that it be rendered harmless by mixing it with its own weight of quick lime, 159–165.

Desirability of the central authority having the appointment of all inspectors throughout the country, 168——Instructions given to the inspectors in the London district in regard to their visits to dairies; few instances in which objections were made by the owners to these visits, 172–179. 186–191——Directions given to the inspector to prevent any persons

Report, 1877—*continued.*

Brown, Professor George Thomas. (Analysis of his Evidence)—*continued.*

sons leaving infected premises unless they submit to a process of disinfection; instance of a person who refused to submit to this process, and who is being prosecuted by the Treasury, 173–177.

Statement that in some particulars the instructions given to the inspectors were more stringent than were necessary, in order to make sure of preventing the spread of the disease, 178, 179——Description of the meat of animals that have been slaughtered when the disease has been very far advanced, 180–183——Reference to the danger of spreading the disease by people moving about in their several trades connected with cattle, 211–222.

Information respecting a cattle disease in the Isle of Man in 1865, which eventually proved to be a non-contagious affection, 228–232——Statement that a post-mortem examination is not always infallible in determining the existence of disease; difference of opinion between witness and Mr. Duguid upon this point, 233–236——Course pursued by Mr. Duguid in the Hull outbreak; slaughter of the whole herd upon his decision formed in a single case, 237–243.

Possibility of an outbreak of cattle plague occurring six weeks after a place has been declared free, without any palpable evidence of communication being obtainable, 241——Total inability to trace the cause of the outbreak in Lincolnshire, either by the introduction of animals or by people who had been in contact with the Hull infected district, 244–254——Firm conviction of witness that he has in several past cases slaughtered animals unnecessarily upon such evidence as he would not now be satisfied with, 258–268.

Detailed information respecting the progress of the cattle plague in Germany; sheep attacked by the plague at Emden, 269–278——Extensive attacks of the disease in sheep in England; remarkable fact that it has never been introduced into this country by sheep, 277, 278——Absence of doubt that the disease has been stamped out in Germany by means of severe regulations; the regulations in Germany are, in fact, far more severe than would be tolerated in this country, 279–284. 290——Entire stoppage of movement throughout Germany; adoption, also, of a system of declaring a place infected for twenty kilometres round the seat of the disease, 283, 284——Restrictions in Germany as to the movement of people out of the infected circles, 285–290.

Grounds for believing that all the diseases in question have been introduced into England from the Continent, 291–300——Decided opinion that slaughter at the place of landing has not been a sufficient protection against cattle plague, in consequence of the facility at the same time for mediate contagion, 301, 302——Belief that the prevalence of pleuro-pneumonia and foot-and-mouth disease in this country has nothing to do with its introduction from abroad, 303–308——Suggestions for the prevention of the introduction of those diseases into England, 309–313. 335–344.

Argument that the only way of dealing with cattle plague is to prohibit the importation of live cattle from those countries where cattle plague has been certified to exist; necessity, also, of prohibiting meat and all animal products which might be likely to convey the disease, 314–344——Expediency of permitting the introduction of certain animal products on account of the exigencies of important trades in this country, 346, 347.

Examination as regards the importation into England of dead meat; opinion that meat can be so brought at any season of the year, 348–375. 385——Large quantities of meat condemned in hot weather as unfit for food, 358——Average price of meat in American towns about half that in England, 363, 364.

Grounds for the opinion that meat could not be sent to England from the Continent at the same low price as from America, 365–371——Belief that from Germany we should get a very small proportion of dead meat as compared with the quantity of meat represented by live cattle, 375–379——Expediency of permitting sheep and swine to come from Germany without further restrictions than exist at present; the introduction of cattle plague has not been traced to these animals, 380–384.

[Second Examination.]—Additional information respecting the outbreak at Hull, which it is believed was not an instance of cattle plague, 501–503. 798–801. 879, 880——Statement that several recent cases in the metropolis have turned out not to be cattle plague, 504——Explanation that the measures now in force are those contained in the Order in Council of 16th April, the Privy Council taking the action of the local authority from that date, 505——Three Orders passed on the 27th April with a view to preventing the spread of cattle plague from the metropolis, 505, 506.

Fallacy of the statement that the continued importation of foreign animals is the cause of the introduction of pleuro-pneumonia and foot-and-mouth disease, 507, 508——Proposal in reference to cattle plague (which is undoubtedly introduced by live animals from abroad), that the importation from Germany and Belgium should be unconditionally

Report, 1877—*continued.*

Brown, Professor George Thomas. (Analysis of his Evidence)—*continued.*

ally prohibited; belief that the loss to this country would be compensated by the amount of dead meat imported, 509-513.

Necessity, in the case of pleuro-pnemomia and foot-and-mouth disease, of accompanying the prohibition of importation of foreign stock with stringent regulations at home; as long as free movement in this country continues it will be impossible to get rid of these diseases, 513-516. 545-548. 558——Introduction of 30,000 animals affected with foot-and-mouth disease in the years 1875 and 1876; 517-520——Pleuro-pneumonia more frequently introduced than foot-and-mouth disease, on account of the impossibility of the disease being detected in the stage of incubation, 517-522.

Further suggestions as to the means to be adopted for stamping out both pleuro-pneumonia and foot-and-mouth disease; necessity for giving larger and more elastic powers to the Privy Council, 523-526. 530-548. 552-555. 650. 785-791——Advantage of employing the police throughout the country as inspectors under the local authority, 524-526——Opinion that the increased cost caused by these proposals would be insignificant as compared with the amount of loss which is sustained by the ravages of contagious disease, 527-529. 559-561.

Expediency of preventing the landing of "Surplus Ships' Stores," as was recommended by the Committee of 1873; 530-533——Desirability of enforcing obedience to the proposed regulations by means of severe penalties in the Act in the case of infringement, 538, 539——Conviction that foreign store stock, with very few exceptions, are not required in England at all; considerable restrictions necessary in the case of admitting any dairy or store stock whatever, 540-544. 727-731.

Statement that pleuro-pneumonia and foot-and-mouth disease will inevitably continue in this country quite irrespective of the importation of fresh animals from abroad, 548. 555——Decided opinion that the cowsheds in all the large towns are the chief centres of contagious disease, chiefly pleuro-pneumonia; difficulty in abolishing these centres of infection, 549-553.

Approval of slaughtering without hesitation all animals that show any evidence of pleuro-pneumonia, 554——Advocacy of inoculation in the case of animals that show no sign of the disease, but have been in association with those that have had it, 554——Proposal as to the prohibition of import into Ireland, 556, 557. 861——Great importance of developing the dead meat trade; impossibillty of dealing effectively with contagious diseases, unless this trade very largely takes the place of traffic in live animals, 562-565.

Further information respecting the position held by witness in the Veterinary Department, 567, 568——Recommendations made by the Committee of 1873, and extent to which carried out; non-adoption of the recommendation that the regulations in Great Britain and in Ireland should be similar, 569-573. 581-595. 616-628——Certain recommendations of the Committee which could only have been carried out by means of an Act of Parliament, 571-573.

Statement that the recent outbreak of cattle plague has undoubtedly confirmed the opinion of witness that there should be power to order the slaughter of animals; grounds for the belief that if the authorities had had this power the disease might have been extinguished in less than a month, 574-579. 671-679——Opinion that the time during which the pleuro-pneumonia rules should be applied to premises in which the disease has been discovered should be extended from thirty days to two months; necessity for an Act of Parliament to make this change, 589-593.

Orders issued by the Privy Council in relation to the foot-and-mouth disease to the effect that the action should be the same all through the country, 595-606——Power for the local authority to pay compensation in the case of pleuro-pneumonia to the extent of three-fourths of the value of the animal, 607-609——Compensation in the case of cattle plague to the extent of one-half the value of diseased animals, and three-fourths of the value of animals which have been herded with them but are not actually diseased, 610-615——Great disadvantage that the regulations with regard to the stoppage of disease are varying or permissive, 616, 617.

Expediency of giving to the local authorities the power of entry into premises where the disease is suspected to exist, 619, 620——Steps taken by the Irish Government to inspect animals at Irish ports, 625——Revocation of the Orders made in furtherance of the recommendation of the Committee of 1873 in regard to foot-and-mouth disease, 629——Impression that the information respecting the outbreak of cattle plague in 1872 was given by one of the importers of the diseased animals; manner in which the plague was stamped out in that year, 630-636.

Statement that notwithstanding forty-eight carcases were washed ashore on the Lincolnshire coast in 1872 there was no disease in consequence, 637——Circumstances under which the cattle plague came to us from the Continent in 1872; belief that in this case the movement of Russian troops had no influence upon the outbreak, 638-648——Remarkable

Brown, Professor George Thomas. (Analysis of his Evidence)—*continued.*

——Remarkable fact that the cattle plague does not affect Russian cattle in the same serious way that it affects English cattle, 649.

Further expression of opinion that the stockowners in England would not comply with the stringent regulations necessary to get rid of foot-and-mouth disease, 651–665——Readiness with which foot-and-mouth disease could be stamped out if it were the only disease we had to deal with, 656–659—— Difficulty in stamping out pleuro-pnemonia, on account of the impossibility of detecting it in its earliest stages, 666-670.

Impossibility of making a satisfactory computation of the proportion that the import of cattle bears to the consumption in England; belief that the introduction of dead meat does not in any way affect the calculation, 680–692——Absence of definite information regarding the importation of dead meat into England; advantage of a dead meat trade as diminishing the risk of conveying disease, 693–698. 864–850.

Additional recommendations as to the means to be adopted for preventing the introduction of cattle plague into England; necessity for entirely shutting out cattle, but not sheep, from Germany, 699–714. 722–724. 834–845. 853–856. 862–867——Existing regulations for the interchange of information with Germany respecting cattle plague, 715–721——Desirability, from a sanitary point of view, of sending all imported cattle to Deptford, or of establishing arrangements for slaughtering at Thames Haven, 725, 726 ——Approval of dealing with fat stock from Spain, Portugal, and Denmark, in the same manner as with animals in this country, 732–735.

Order in force at present that if one animal in a foreign cargo is found affected with foot-and-mouth disease, the whole of such cargo shall be slaughtered, 736–742——Further information as to the advantage of international engagements in regard to importation of cattle, 743–752—— Explanation with regard to the limitation of ports where foreign animals are allowed to be landed, as recommended by the Committee of 1873; 753–762 ——Expediency of adopting uniformity of action by means of Government inspection, 763–770. 802.

Desirability for the authorities being empowered to make regulations for preventing the conveyance of disease by mediate contagion in the event of slaughter at the port of debarkation, 775, 776——Considerable falling off in the supply of foreign meat to the Metropolitan Market, 779–784——Impossibility of establishing a practical system of quarantine, 792–797—— Greater danger of conveying cattle disease than pleuro-pneumonia by mediate contagion, 803–808.

Additional information regarding the origin of the several cattle diseases in this country, 811–820. 851, 852——Necessity for severe measures if it be determined to eradicate these diseases, 820–826 ——Successful result of the late severe restrictions as regards cattle plague; direct loss of 10,000*l.* or 12,000*l.*; 827–833——One-third of 1,000,000 of cattle destroyed by the last great outbreak, 857–860——Difficulty in instituting any system of inspection at the port of embarkation, 868–878.

[Third Examination.]—Further expression of opinion that the recent case of disease in London was not cattle plague, 881–883——Circumstances respecting the very mild outbreak which occurred in Ireland in 1866; non-spreading of the disease in that country due to the prompt and energetic action of the Irish Government, 884–888—— Conclusion further expressed as to the absolute necessity of prohibiting the importation of cattle from those countries in which cattle plague exists, 889, 890. 976–978. 1022. 1068–1070.

Information relative to the total amount of losses during the outbreak from 1865 to 1867, and the cost of dealing with the outbreak; belief that a large amount of these losses would have been saved if we had adopted the continental system of stamping out the disease instead of trying experiments as to treatment, 891–895. 903–905.–989–994 ——Probable increase in the price of meat which would result from the stoppage of the importation of live stock, 896, 897——Absence of any scarcity of milk notwithstanding the prevalence of fatal diseases among dairy cows, 906–912.

Additional statement that foot-and-mouth disease is not generally conveyed by means of mediate contagion, and that it is less infectious than cattle plague; the prevalence of this disease throughout the country is principally owing to the indiscriminate movement of diseased and infected animals, 913–921——Argument that the trade in dead meat, as in all other articles of commerce, will find its own level, and be adopted where it pays; prospect of increase in the American trade if live cattle be excluded, 922–926 979–983. 999–1005.

Questionable advantage in the system of inspection at the ports as carried out at present; greater importance of detecting the disease at its centre of origin by means of inspectors, and preventing the movement of diseased animals from those centres, 927–933. 940–942——Further explanation with reference to the introduction of diseased animals on board the "Castor" from Hamburg, 934–939. 1022—— Expediency of a

Brown, Professor George Thomas. (Analysis of his Evidence)—*continued.*

short Act of Parliament in lieu of the present Act, giving the Privy Council power to make the necessary regulations in the various districts, 943, 944.

Decided opinion that pleuro-pneumonia and foot-and-mouth disease are naturalised in this country, and that they would continue without the aid of foreign supply, 945, 946 ——Non-existence of the cattle plague in this country, unless when introduced from Germany and Russia, 947, 948. 1023——Undoubted possibility of conveying cattle plague by means of dead meat, but in a slighter degree than by the living animal; character of the supervision exercised over the meat sent into the market from animals which have had the disease in its earlier stage, 949-955——Disease not communicable by means of the milk of an animal in which disease was incubating, 956.

Further observations in support of giving the Privy Council power to slaughter animals within a certain radius, which, though not in contact with diseased animals, have nevertheless been exposed to infection, 957-962. 1078, 1079——Expediency of full compensation, chiefly with the object of inducing owners to give notice of disease; possibility, in the event of increasing the compensation, of the Privy Council taking more stringent measures to restrict the movement of animals, 963, 964. 973, 974——Importance attached to disisfection of the manure of diseased animals, 965——Movement of animals suffering from foot-and-mouth disease permitted under certain circumstances under an Order of the Privy Council, 966——Large extent to which the dead meat trade in London has grown since it was first established, 967-972.

Further expression of opinion that in the event of a fresh outbreak of cattle plague, the Privy Council should be empowered to supersede the local authorities in all cases; though in such case the cost would be greater, it would be compensated by the saving in the number of cattle, 984-988——Belief that the Texan cattle disease could not be imported by means of dead meat, 995-998——Decided belief that if the importation of dead meat as well as live cattle were prohibited from affected countries there would be an undiminished supply from America, 999. 1073-1077.

Additional explanation relative to the outbreak at Hull and the subsequent arrangements which have been adopted at that port; numbers of the annual import of foreign cattle into Hull during the year 1876; 1006-1021. 1024-1026. 1084-1093. 1101, 1102 ——Belief that the proposed restrictions in regard to vessels and crews would probably enhance freights, but would not drive vessels out of the cattle trade altogether, 1027-1030——Expectation that vessels would be provided for cattle exclusively, 1030, 1031 ——Examination upon the question whether the poor would not suffer from the loss of offal through the cattle being slaughtered at the port of debarkation or at the port of shipment, 1032-1035. 1094-1100. 1103, 1104.

Belief that in future there will be no serious loss from cattle plague on account of the efficient precautions to be adopted, 1036-1038——Further consideration of the recommendations made by the Committee of 1873; those which required legislation referred principally to cattle plague and pleuro-pneumonia, 1040-1060——Reasons for not carrying out the recommendation of the Committee with regard to glanders; difficulty which would arise in compensating for the slaughter of horses affected with glanders, 1049, 1050.

Enumeration of the ports which have been closed, and those which have been left open for the debarkation of cattle, 1053-1056——Increased inspection since 1874 of animals imported from Ireland, 1061. 1064-1067——Similar treatment of Irish cattle as of English in regard to compulsory slaughter for pleuro-pneumonia, 1061-1067.

Unimportant effect, at present, of the stoppage of the German trade, as during this period of the year very few German cattle are imported, 1071, 1072——Opinion that the small risk of introducing the Texan cattle disease into England would not be sufficient reason for stopping the importation of live cattle from America, 1080-1083——Explanation that witness contemplates the landing of cattle from Schleswig-Holstein at Hull for slaughter, 1099-1100.

[Fourth Examination.]—There is no case of cattle plague now in this country (6th July 1877), 9873——Important effect of the cattle plague regulations and restrictions in diminishing the amount of foot-and-mouth disease throughout the country; particulars hereon, 9874-9885——Conviction of witness that this disease will increase when the regulations now in force over the country, and the cordon round the metropolis, are removed, 9883.

Further conviction that, in order to eradicate foot-and-mouth disease from England, the necessary restrictions must continue in force for a considerable time, 9886-9890——Conclusion, also, that a prohibition of import would not suffice for the disappearance of the disease, unless accompanied by stringent precautions at home, 9890-9894.

Statement to the effect that pleuro-pneumonia has not been diminished by the restrictions in force in reference to cattle plague, 9895, 9896——Doubt as to any practicable means of extirpating pleuro-pneumonia in six months, 9897. 9901, 9902——Effect of the restrictions enforced in Holland, as regards the suppression of pleuro-pneumonia, 9897-

Report, 1877—*continued.*

Brown, Professor George Thomas. (Analysis of his Evidence)—*continued.*

9901——Very severe restrictions necessary in order to stamp out this disease throughout the country; belief that farmers would not willingly undergo the great inconvenience involved, 9901-9905.

Further expression of the opinion that protection can best be secured against cattle plague by prohibiting the import of cattle from Germany and Belgium, and also from France, unless she adopts the required precautions for guarding her frontier, 9906, 9907.

Much larger import of diseased animals but for the system of inspection at the port of arrival, 9908——Explanation in reference to a complaint by Mr. Robinson that a cargo of cattle had been passed at Harwich, in March 1874, before the twelve hours' daylight detention had expired, 9908-9915——Explanation also as regards a statement by Mr. Robinson that some cattle landed at Harwich, in October 1874, had been passed after sunset, 9916, 9917.

Information as to the results of an official inquiry made in consequence of a complaint that the inspector at Harwich did not stop animals which would be stopped in London; the same practice was in reality pursued at both ports, 9918-9925——Grounds for the conclusion that it would be very unwise for the Privy Council to appoint inspectors at the port of embarkation abroad, 9926-9929.

Security to be obtained by having special cattle ships, coming to particular ports, and by carefully disinfecting the vessels and the men in charge of the cattle, 9930-9932——Further security by a longer detention of animals before they are landed, 9932, 9933——Explanation of the delay before the Privy Council interfered with the local authorities on the last outbreak of cattle plague, 9934-9937. 10164-10166.

Statement to the effect that the Government inspectors at ports, such as Bristol, where Irish cattle are landed, are empowered merely to report disease to the local authority, and to the Privy Council, without compelling immediate slaughter of the diseased animals, 9938-9954——Practice, at Bristol, in regard to diseased pigs from Ireland being given in charge of a policeman for slaughter, 9947-9950——Considerable improvement in the arrangements at Bristol for the landing of animals from the Irish boats, and for their subsequent removal or distribution, 9955-9957.

Fairly satisfactory arrangements on board the Irish boats which come to Bristol; good condition in which some recent cargoes have arrived, whilst there was only death one on the voyage, 9957-9959. 10112. 10132——Improvement if vessels were used and fitted for cattle exclusively; difficulty on the score of expense, 9960-9964——Particulars as to the present process of inspection at Bristol; its insufficiency as a protection against the import of disease, 9965-9967. 10111-10112.

Want of increased powers in the Privy Council for dealing with inclosed spaces, or railway pens, where animals are placed before removal by rail; that is, on the score, more especially, of disinfection, and of watering the animals, 9968-9975. 10113-10117——Expediency of the ports or places of landing for Irish cattle being defined, so that inspection may not be evaded, 9976-9978.

Importance of the regulations of the Privy Council being applicable to the United Kingdom, so that Ireland and Scotland, as well as England, may be bound by them, 9978-9983——Prohibition by the Privy Council of the acceptance by their inspectors of any portion of the fines on conviction, 9984-9985.

Further argument that the severe home restrictions required for stamping out pleuro-pneumonia and foot-and-mouth disease would not be submitted to by farmers without very strong opposition, 9986-9988. 10070-10074. 10081, 10082——Diminution of foot-and-mouth disease by means of local restrictions, though when the disease is prevalent over the whole country, more extensive and stringent regulations are necessary, 9989, 9990——Importance of the Privy Council having full powers, through their inspectors, to act at once in requiring the slaughter of animals, without referring the matter to the local authority, or the local inspectors; case in point, 9991-9996.

Grounds for the conclusion that certain statistics, as to the total loss of cattle in this country from disease, are quite unreliable; estimate of 1½ per cent. as the total annual deaths from diseases of all kinds, 9997-10003. 10098. 10142-10149——Frequent presence of foot-and-mouth disease in Islington market, and in fairs and markets generally, 10004-10006——Difficulty in ensuring the subsequent slaughter of animals sold at Islington, although they might be branded for slaughter, 10007-10009.

Recent instances of suspected lung disease in some American cattle landed at Southampton; insufficient ground for such suspicion, 10010, 10011——Conclusion further expressed as to the necessity of excluding cattle from Germany and Belgium, in reference to cattle plague, 10012, 10013. 10028——Further argument also that, in order to extirpate pleuro-pneumonia and foot-and-mouth disease, it is essential to slaughter all foreign cattle, sheep, and pigs at the port of debarkation, 10016-10019. 10045.

Belief as to the facility of carrying on a permanent dead-meat trade, all foreign cattle being slaughtered at the ports, 10018-10021. 10039, 10040——Notice required to be

Report, 1877—*continued.*

Brown, Professor George Thomas. (Analysis of his Evidence)—*continued.*

given before applying restrictions as to slaughtering at the ports generally; expediency of this being done by Act, rather than by Order in Council, 10020, 10021. 10040, 10041. 10204, 10205——Grounds for the opinion that dead meat, as well as live animals, should be excluded from any country where there is cattle plague, 10022–10024.

Better check, doubtless, as regards cattle plague, if there were immediate and direct telegraphic communication from any locality abroad where it may be detected, 10025–10028——Inaccuracy of a certain statement as to the Privy Council having been remiss in taking action in the case of the "Castor," 10025, 10026——Grounds for the conclusion that offal may be imported from the Continent in good condition, 10029–10033.

Effect of the total prohibition of the import of live stock in increasing the price of meat; that is, until arrangements were made for a dead meat trade, in conjunction with slaughtering, at the ports, 10034. 10037–10040——Belief that the price of meat is never likely to fall to 5*d.* or 6*d.* per pound, as a result of the entire exclusion of foreign cattle, 13034–10036——Denial given by salesmen to a statement as to their charging a different commission for foreign and English cattle, 10042, 10043.

Opinion that absolute security against the introduction of disease cannot be obtained by any precautions, however strict, 10045——Approval of the present facilities of import from the Channel Islands, the animals being detained for some time at the landing-place, 10045–10049. 10105, 10106. 10258. 10260——Facility to be given also to the import of American and Canadian cattle, so long as there is no disease in those countries, 10045–10047. 10258.

Reference to the cessation of the official returns of foot-and-mouth disease as having been due solely to the expense involved, 10050, 10051——Exception taken to a suggestion for the appointment of a staff of travelling inspectors, 10053, 10054——Import of disease from Belgium and Germany at times when it was not reported as existing in those countries, 10054.

Explanation that witness does not propose slaughtering at the port of debarkation, in reference to foot-and-mouth disease, unless certain stringent measures be also enforced as regards movement of cattle at home, and the holding of fairs and markets, 10056–10058. 10080. 10101, 10102. 10248, 10249——Expediency also of certain restrictions as to the slaughtering of home cattle, in contact with others, having foot-and-mouth disease, 10059–10063——Importance attached to the cordon round London; question as to the relaxations desirable, 10064–10066. 10107–10110.

Summary of the home restrictions desirable in reference to pleuro-pneumonia, in conjunction with a system of slaughtering at the ports, 10067–10069. 10101, 10102——Suggestions for a trial of inoculation as a preventive in cases of pleuro-pneumonia; difficulty at present in forming conclusions as to the success of this treatment, 10067. 10122–10126——Conclusion as to the serious interference with trade by a system of quarantine of Dutch cows, 10075–10079. 10198.

Belief further expressed that both pleuro-pneumonia and foot-and-mouth disease are originated only by infection, 10083, 10084——More fatal results from pleuro-pneumonia, though foot-and-mouth disease is more prevalent, 10085, 10086——Opinion that if the necessary restrictions were not thwarted by the farmers, foot-and-mouth disease might be obliterated in twelve months, 10087–10092. 10229——Witness repeats that the farmers would probably throw great difficulties in the way of severe restrictions; instance in Lincolnshire, 10091. 10096, 10097. 10103, 10104——Necessary lapse of some years before the country could be pronounced free from pleuro-pneumonia; experience of Holland to this effect, 10093. 10267–10271.

Inadequacy of inspection as a means of preventing the import of diseased animals, 10094, 10095——Very rare import of foreign stock into Ireland, the disease in that country being introduced by English stock, 10118–10121. 10242–10244——Further argument that Ireland should be treated as part of the United Kingdom, and not as a foreign country, 10127, 10128. 10140, 10141——Amended system of inspection desirable as regards railway-borne cattle from Scotland, 10120–10122.

Comparatively small number of sheep and swine imported from Ireland with foot-and-mouth disease, whilst the Irish cattle are now free from the disease, 10133–10136——Beneficial effect of the exclusion of dairy sheds from large towns, though this could hardly be effected in London, on account of the opposition that would arise, 10137–10139.

Examination in further support of the proposal that the central authority should have power to require their regulations being carried out by the local authorities, 10150–10184——Frequent instances of negligence on the part of local authorities to carry out the necessary regulations; denial that the Privy Council is equally open to this charge, 10152–10181. 10220, 10221——Admission as to the entire efficiency of local action at Birmingham, 10153–10170——Explanation that witness does not propose to supersede the local authorities, or to deprive them of the power of appointing inspectors, 10182–10185.

Report, 1877—*continued.*

Brown, Professor George Thomas. (Analysis of his Evidence)—*continued.*

Information as to the action of the Privy Council in reference to the cleansing of cattle trucks by the railway companies; obstacles thereto, 10186–10195——Approval of additional power in the local authorities as to the control of cow-sheds, 10196——Difficulty as to the local authorities being empowered to inspect premises in reference to glanders or farcy, 10197.

Opinion that the dairies can be well supplied by cows bred at home, if the import of Dutch cows be prohibited, except for slaughter, 10198–10203——Belief as to the facility of arranging for slaughtering at the port of Newcastle, and for carrying on a dead meat trade with the adjacent districts, 10206–10217——Opinion that, in course of time, the price of meat would be diminished, rather than increased, by prohibition upon the import of live stock, 10218, 10219. 10228.

Expediency of sufficient time for disinfection before a cattle ship from Ireland takes a return cargo of cattle, 10222, 10223 ——Belief that there is not now any foot-and-mouth disease in the United States, 10224–10226——Great boon to the consumer in this country, as well as to the former, by an eradication of foot-and-mouth disease, 10227–10228.

Explanation that, whilst advocating compulsory slaughter at the port, witness would admit store cattle from countries where no disease exists, provided such cattle be subjected to careful restrictions, 10230–10232. 10256, 10257 —— Limitation to be placed on the number of ports, unless proper slaughtering arrangements be made, 10233, 10234 —— Probability of a better class of animals being sent from abroad if slaughter on arrival be compulsory; effect upon the price of meat to the lower classes, 10235–10241. 10245–10247.

Necessity not only of ample slaughtering accommodation at the ports, but of approved arrangements for cooling the carcases, as in America, 10250–10255——Objection to import from Spain, unless the cattle be slaughtered on arrival, 10259——Doubt as to foot-and-mouth disease having died out naturally in some countries where restrictions have not been enforced, 10261–10263.

Belief as to the number of dairy cows in London having diminished in recent years, 10264–10266——Proposed limitation of home restrictions to those localities in which disease exists; if disease were general, the restrictions should be applied to the whole country at the same time, 10272–10274——Relative prevalence of pleuro-pneumonia and of foot-and-mouth disease in May 1877; 10274, 10275. 10281.

Further statement as to the Privy Council not having attempted to enforce the powers of their inspectors as regards interference with the local authority; expediency of means being provided for the enforcement of such powers by the central department, 10276–10280.

[Fifth Examination.]—Particulars in connection with a recent outbreak of cattle plague (detected on the 14th July) in Bethnal Green, within less than half a mile of previous outbreaks on 17th May and 17th March; inquiries made and action taken by the Privy Council, but without being able yet to trace the origin of the outbreak, 10282–10295. 10300–10311. 10342–10378.

Considerable difficulty in some cases as to the inspectors' entry upon premises; instructions issued to them in consequence, 10292–10297 —— Unsatisfactory character of the present inspection of dairy sheds; information proposed to be obtained in future by means of the police, 10298, 10299. 10316. 10318.

Belief that in the recent case of cattle plague the owner did not intend to give information; intention of prosecuting him for not giving notice, 10300-——Advantage if compensation were not given where information is withheld by the owner, 10300 ——Way in which the recent outbreak in Bethnal Green was discovered, 10300, 10301——Effectual steps taken for stamping out the disease, and for preventing infection, 10302.

Further consideration of the question as to the origin of the recent outbreak; difficulties in the way of a definite conclusion on the subject, 10303–10311. 10342–10378. 10462, 10463——Probability that the disease was introduced into the dairy shed by a cow brought in by a man named Plummer, 10305–10311. 10355–10360. 10378. 10462.

Information as to the mode in which cows are now supplied to the London dairy sheds and are removed from one shed to another; peculiar facilities for the spread of disease under this system, 10312–10315——Insufficiency of the compensation as an inducement to owners to give notice of disease; that is, on account of the great interruption of business necessarily entailed by the restrictions, 10315. 10379–10381. 10423——Conclusion as to the necessity of applying more stringent regulations, and an improved inspection, to the London dairy sheds, 10316–10318.

Explanation in connection with two Orders issued by the Privy Council since the last outbreak of cattle plague in Bethnal Green; particulars more especially as to the establishment of an "infected area" by the Order now in force, and as to the advantages of this mode of restricting movement, 10319–10329——Prohibition of movement from the

Report, 1877—*continued.*

Brown, Professor George Thomas. (Analysis of his Evidence)—*continued.*

north of the metropolis to any places south of the Thames, 10325, 10326——Question considered whether the Privy Council has power to establish "infected areas" throughout the country, as well as in the metropolis; expediency of amended and enlarged powers in the matter, 10330–10341. 10401–10403.

Grounds for the conclusion that cattle plague has existed for the last few months in certain dairies in London, though it has not been known to exist; hence the recent outbreak, 10347–10352. 10390. 10404–10411. 10421, 10422——Expediency of arrangements for keeping cats out of slaughter-houses, and out of contact with diseased carcases, 10370–10372. 10399, 10400——Belief that by proper precautions an effectual and constant inspection may be applied to the London dairies, without danger of disease being conveyed by means of the inspectors from one dairy to another, 10382–10389.

Frequent evasion of the regulations as to movement of cows in the metropolis under license, 10391. 10397. 10453——Several instances of unlicensed dairies; amendment desirable on this score, 10392, 10393. 10429–10431——Power of entry of sanitary officers into dairies; these officers are of little use in the detection of disease, 10394–10396——Difficulties in the way of a registration of the cows in dairies, as a check upon movement, 10397, 10398.

Conviction of witness that the last outbreak of cattle plague did not arise spontaneously; nor was it directly imported, 10404–10413. 10421, 10422——Doubt as to the advantage of a power to examine on oath, in order to better ascertain the origin of any outbreak, 10413–10420——Approval of full compensation where animals are slaughtered for cattle plague, 10423——Difficulty in enforcing penalties for concealment of facts; amendment desirable in this respect, 10424–10426. 10458–10461.

Undoubted introduction of cattle plague by the cargo landed at Deptfort, though it has been found impossible to trace any of the outbreaks as directly coming from Deptford, 10427, 10428——Advantage if the dairies were (like the slaughter-houses) under the control of the Metropolitan Board of Works, with a view to improved structural and sanitary arrangements, 10432–10434. 10454–10457——Question considered as to the power of the local authorities to stop animals when being moved in contravention of the Animals Order of 1877; 10435–10437.

Witness further submits that import should be entirely prohibited from Germany and Belgium, and that cattle from other countries should be slaughtered at the port of landing, as the only means of effectually keeping contagious diseases out of the country, 10438–10440——Contemplated maintenance of the cordon round London till the end of 1877; approval of the cordon being permanently continued if cattle from Germany be allowed to come in, 10441–10444——Practical difficulty in keeping up the cordon; modification suggested, 10445, 10446.

Value attached to the services of the police in aid of the inspection, both in London and the country, 10447, 10448——Importance of a staff of competent professional men for the prompt identification of disease throughout the country, before any action is taken, 10449–10452.

Buckinghamshire. Action taken by the local authority of the county under the Cattle Plague Order of January 1877; *App.* 562, 563.

Burkett, Josiah. (Analysis of his Evidence.)—Is a salesman of American and English dead meat in the Metropolitan Meat Market; receives some large consignments of American meat, 6105–6108——Excellent condition, as a rule, of Mr. Link's consignments on arrival in London, though of late there have been some exceptions; peculiarly good condition of a cargo which came in extremely hot weather, 6109–6117. 6130–6135——Average of about $6\frac{3}{4}d.$ in the pound realised by Mr. Link's consignments from January to May last; average of about $5\frac{1}{4}d.$ as the price fetched by American meat in the previous four months, 6118–6130. 6277–6285.

Conclusion that by care in packing, and by not placing too many quarters in the same chamber, the good condition of the meat may be perfectly secured, and a remunerative price obtained, 6132–6142——Purchase of Mr. Link's consignments by the best butchers when it arrives in good condition, 6143–6151. 6234, 6235. 6286–6288——Excellent quality of American beef, when it arrives in good condition; it is, in fact, surpassed only by Aberdeen beef, 6149–6151. 6227–6235.

Very good condition of some of Mr. Gillett's consignments of American meat, 6152–6159——Particulars as to the keeping properties of American meat in hot and cold weather; it will keep better than English meat, but not so well as that from Aberdeen, 6160–6170. 6267–6270. 6301, 6302——Facilities of butchers, by means of refrigerated storehouses, for keeping large supplies of American meat for about a week, and so regulating the market, 6167–6170. 6179–6181. 6398–6401.

Very bad condition of some American meat sold by Mr. Pool, as agent; negligence to which owing, 6171–6176——Practice of some butchers as to daily purchases of dead meat;

Report, 1877—*continued.*

Burkett, Josiah. (Analysis of his Evidence)—*continued.*

meat; advantage taken by them of a glut in the market, 6177-6181——Increasing purchases of dead meat in the central market, many butchers having given up slaughtering, and relying less upon live animals, 6181-6194. 6313-6315. 6335-6337.

Immense trade carried on at Tallerman's stores, chiefly in American meat, the price to the public having been fixed for three months certain; loss at times through the necessity of falling back on Scotch meat, 6195-6202. 6316-6319——Large and increasing trade in Aberdeen dead meat; excellent condition in which it arrives in London, and high price realised, 6203-6214. 6340-6343——Contemplated import of dead meat from Vienna; belief that no serious difficulty would be experienced, 6215-6218. 6329-6332.

Considerable supplies of dead meat from Denmark and Tonning; facility in transmission, without any refrigerating process, 6219-6226——Better quality of American than of Continental dead meat, so that the latter can hardly stand competition with the former, 6227-6230——Prejudice against American beef, on account of the bad colour, though not really any symptom of inferior quality; comment upon its exclusion from Government establishments and from workhouses, 6231-6233. 6296-6300. 6320-6328.

Grounds for the conclusion that largely increased supplies of American beef, in good condition, may safely be calculated upon, 6236, 6237. 6261-6266. 6372-6376. 6415, 6416. 6445-6448——Very large quantity sent by Mr. Eastman, the quality being excellent, 6237, 6238——Very good condition of some American meat sent from Glasgow to the London market, 6240-6245.

Belief that regular and sufficient supplies of dead meat might be had, in the absence of any import of live cattle, 6246-6249. 6254——Necessity of the continued import of sheep; obstacle to the import of mutton in good condition, 6250-6253. 6368-6371——Effect of the restriction upon import of live stock in raising the price of common or contractors' meat, 6254-6260——Lower price, by about 1½*d.* per pound, of the best American beef than of English beef, whilst it is about 2*d.* cheaper than Aberdeen beef, 6271, 6272.

Tendency to reduction of price by stopping the import of live cattle, if dead meat came in increased quantities from the Continent and from America, and if there be increased breeding of English cattle, 6273-6276. 6333, 6334. 6449-6459——Belief that some meat sold as Australian, and objected to on the score of its appearance, was not really Australian, 6289-6295——Room for improvement in the mode of transmission of the Aberdeen meat to London, 6301-6307——Expected continuance of the dead meat supply from Aberdeen, concurrently with the American supply; relative increase in this supply, and in the live cattle supply from Scotland, 6308-6312. 6340-6347.

Doubt as to a dead meat supply being likely to come from Ireland, the quality not being sufficiently good, 6338, 6339. 6348-6352——Inferior character of the dead meat from Denmark; unsatisfactory condition in which it sometimes arrives, 6353-6359——Increase in the price of meat if the import of live cattle be prohibited, unless dead meat should be substituted for the live supply; difficulty as to such substitution permanently in the case of the Continent but not of America, 6361-6367. 6412-6439. 6445-6479.

Objection in the provinces to the use of American meat in summer, the colour being against it, 6377-6382——Facility of bringing dead meat in good condition from the Continent, 6383-6392——Good condition in which offal may be brought from the Continent as well as from America, 6393-6397.

Examination with further reference to the probable effect upon the price by diminishing the supply, as by prohibiting the import of live cattle; question on the other hand, whether this may not be counterbalanced by increased import of dead meat, 6404-6439. 6445-6479——Superior character of American cattle; difficulty in importing them profitably, except in the form of dead meat, 6440-6444.

Butchers. Preference of butchers for a live cattle trade, the "fifth quarter" never being accounted for, *Sir C. A. Wood* 7487——Depressed state of the butchers' trade at the present time; less profit on American meat than on foreign cattle slaughtered at home, *Walker* 7888-7895——Room for much improvement in the system of butchering in this country, *Read* 9553, 9554.——*See* also *American Dead Meat*, ix.

C.

Calves. Comment upon the premature killing of home-bred cattle, instead of the calves being kept for stores, *Giblett* 6644. 6671-6674. 6766, 6767.

Canada. Expediency of treating Canada as part of the United Kingdom so long as no disease exists there, *Hall* 2923——Improbability of any danger from the import of live stock from Canada; witness would prefer, however, to prohibit all import, *Gamgee* 6996, 6997. 7003, 7004.

Report, 1877—*continued.*

Carcases (*Diseased Animals*). Particulars relative to the meat of animals that have been slaughtered for cattle plague; difficulty in detecting any symptom of disease unless it has been very far advanced, *Brown* 180-183——Circumstances under which an animal suffering from pleuro-pneumonia may be fit for food, *Lyon* 3320——Belief that, except the lungs, the carcase is fit for food, in the case of an animal killed in the early stages of pleuro-pneumonia, *Wilson* 4814——Wholesome character of the meat of animals slaughtered for pleuro-pneumonia, *Read* 9582-9587——Comment upon the practice in Ireland of not using for food the carcases of animals attacked with pleuro-pneumonia, *ib.* 9582-9584.

Expediency of diseased carcases being buried, instead of boiled down, *Gebhardt* 5162-5164—— Difficulty as to the burial of diseased carcases in London, so that they are boiled down, *Brown* 10289——Probable conveyance of disease by cats who have fed on the carcases, *ib.* 10289. 10370-10372—— Want of arrangements for keeping cats out of slaughter-houses, and out of contact with diseased carcases, *ib.* 10370-10372. 10399, 10400.

Regulations in the Animals Order of 1875 as to the mode of dealing with carcases, *App.* 524, 525.

"*Castor*," *The.* See *Cattle Plague*, 2. 5-7.

Cattle Dealers. Grounds for advising that cattle dealers be licensed, *Howard* 8237-8239. 8242; *Read* 9758——Exception taken to the compulsory licensing of dealers in Scotland, *Melvin* 8850-8852.

Cattle Drovers. Decided improvement if all cattle drovers were licensed, *Sir C. A. Wood* 7407, 7408. 7447, 7448; *Read* 9758——Inconvenience if all drovers in Scotland were required to be licensed, *Melvin* 8850-8852——Suggestion that drovers at fairs and markets be licensed; proposed exemption of labourers on individual farms, *Howard* 8240-8242. 8291-8293.

11. *Suggestions on the Subject of Prohibition of Import.*
12. *Full Powers and Prompt Action necessary as regards the Slaughter of Diseased Animals.*
13. *Action taken by Local Authorities.*
14. *Conclusions of the Committee.*

1. *Introduction of Cattle Plague into England from Abroad; Immunity otherwise:*

Non-existence of cattle plague in this country, unless when introduced from Germany and Russia, *Brown* 947, 948. 1023——Cattle plague undoubtedly introduced into England from Russia, *Simonds* 1122, 1123.

Dissent from some of the statements made by Professor Brown in connection with cattle plague, and its introduction into England from Germany, *Müller* 1454-1463——Existence, at the present time, of cattle plague in Poland; certainty of its existing in Roumania, because it follows the Russian army, *ib.* 1479-1491——Great advantage possessed by England as regards immunity from disease, on account of its insular position, *Baron Von Behr* 2601.

Very little cattle plague in England since the great outbreak of 1865; *Rea* 3674——Introduction of the first outbreak of the disease from abroad, *ib.* 3683-3685.

Exception taken to the view that the cattle plague in England, about 100 years ago, originated at home, *Sheldon* 4548-4556——Conclusion that rinderpest was brought into England in the last century, *Gamgee* 7187-7192——There is no case of cattle plague now in this country (6th July 1877); *Brown* 9873.

2. *Particulars*

Report, 1877—*continued.*

Cattle Plague—continued.

2. *Particulars in connection with recent Outbreaks in January and July* 1877:

Information as to the outbreak early in 1877, and the circumstances which caused it to spread, and the protective measures adopted; belief that the infection was spread by mediate contagion, *Brown* 55–90. 145–148. 192–232. 244–267——Particulars with reference more especially to the cattle brought to Deptford in the "Castor," all of them having been affected with cattle plague; action taken at Deptford in regard to these cattle, *ib.* 62–89——Appearance of the cattle plague in widely different quarters subsequent to its discovery at Deptford, *ib.* 98–102. 106, 107. 112–114. 116. 119–122. 126–128. 132–142. 197–205. 211–228.

Statement that several recent cases in the metropolis have turned out not to be cattle plague, *Brown* 504——Further expression of opinion that some recent cases of disease in London were not cattle plague, *ib.* 881–883.

Further explanation with reference to the introduction of diseased animals on board the "Castor," from Hamburg, *Brown* 934–939. 1022.

Information respecting the diseased cattle which were brought to England in the "Castor"; superficial examination made by the veterinary inspector in Germany, for which he has since been severely punished, *Müller* 1421, 1422. 1469–1476. 1525–1534. 1556–1562.

Way in which cattle plague was probably introduced by means of the "Castor," *Odams* 8074——Delay in the disinfection of the "Castor"; belief that the disease did not break out from Deptford Market, but was conveyed by the ship to Limehouse, *Read* 9489. 9524, 9525. 9727.

Particulars in connection with a recent outbreak of cattle plague (detected on the 14th July) in Bethnal Green, within less than half-a-mile of previous outbreaks on 17th May and 17th March; inquiries made and action taken by the Privy Council, but without being able yet to trace the origin of the outbreak, *Brown* 10282–10295. 10300–10311. 10342–10378——Way in which the recent outbreak in Bethnal Green was discovered, *ib.* 10300, 10301——Probability that the disease was introduced into the dairy shed by a cow brought in by a man named Plummer, *ib.* 10305–10311. 10355–10360. 10378. 10462.

Further consideration of the question as to the origin of the recent outbreak; difficulties in the way of a definite conclusion on the subject, *Brown* 10303–10311. 10342–10378. 10462, 10463——Grounds for the conclusion that cattle plague has existed for the last few months in certain dairies in London, though it has not been known to exist; hence the recent outbreak, *ib.* 10347–10352. 10390. 10404–10411. 10421, 10422——Conviction of witness that the last outbreak did not arise spontaneously; nor was it directly imported, *ib.* 10404–10413. 10421, 10422.

Undoubted introduction of cattle plague by the cargo landed at Deptford, though it has been found impossible to trace any of the outbreaks as directly coming from Deptford, *Brown* 10427, 10428.

Witness submits particulars in connection with the dairy shed in Bethnal Green in which cattle plague has recently appeared; he supplied two cows to this shed, but they were perfectly healthy, and he cannot account for the origin of the outbreak, *Payne* 10466–10488. 10499–10522. 10534–10541——Witness has seen the shed, which holds about a dozen cows; it is airy, and seems well ventilated, *ib.* 10477–10481. 10536–10538.

Paper showing the number of places where the disease appeared in 1877, the number of animals attacked, the number slaughtered, &c., *App.* 510.

3. *Outbreaks in* 1865 *and* 1872:

Appearance of the cattle plague in England in June 1865, it not having been finally extinguished till 1867; summary of measures adopted during this period, *Brown* 2.

Explanations in connection with the outbreak in 1872, and the effect of the measures adopted in that year, *Brown* 10–17——Impression that the information respecting the outbreak of cattle plague in 1872 was given by one of the importers of the diseased animals; manner in which the plague was stamped out in that year, *ib.* 630–636——Statement that notwithstanding forty-eight carcases were washed ashore on the Lincolnshire coast in 1872, there was no disease in consequence, *ib.* 637——Circumstances under which the cattle plague came to us from the Continent in 1872; belief that in this case the movement of Russian troops had no influence upon the outbreak, *ib.* 638–648.

Information relative to the total amount of losses during the outbreak from 1865 to 1867, and the cost of dealing with the outbreak; belief that a large amount of these losses would have been saved if we had adopted the continental system of stamping on the disease instead of trying experiments as to treatment, *Brown* 857–860. 891–895.

CATTLE PLAGUE—continued.

3 *Outbreaks in* 1865 *and* 1872—continued.

903-905. 989-994——One-third of a million of cattle destroyed by the last great outbreak of cattle plague in 1865-67; enormous loss represented, *Brown* 857-860.

Information in regard to the great losses suffered by the country on account of cattle plague between the years 1865 and 1867; the loss in 1872 was very much less, *Simonds* 1183-1189. 1192. 1258-1265. 1292-1296.

Paper submitted by Professor Brown showing the number of places where the disease appeared in 1872, the number of animals attacked, the number slaughtered, &c., *App.* 510.

4. *Outbreak in Ireland in* 1866:

Circumstances respecting the very mild outbreak which occurred in Ireland in 1866; non-extension of the disease in that country due to the prompt and energetic action of the Irish Government, *Brown* 884-888.

5. *Measures adopted by the Privy Council, and effect thereof; several Orders in Council on the Subject:*

Summary of the measures adopted by the Veterinary Department of the Privy Council since the outbreak in 1865-66, *Brown* 2-8——Orders and circulars issued from the Veterinary Department immediately upon the discovery of the cattle plague in London and Hull; prohibition of fairs and markets in the East Riding under an order of the Privy Council, *ib.* 88. 117-125. 169-172——Three orders passed on the 27th April 1877, with a view to preventing the spread of cattle plague from the metropolis, *ib.* 505. 506——Explanation that the measures now in force are those contained in the Order in Council of 16th April, the Privy Council taking the action of the local authority from that date, *ib.*

Satisfactory regulations which at present exist with reference to the importation of fat animals; belief that the last introduction of cattle plague was mainly due to the neglect of the Corporation of London in not carrying out the orders for immediate slaughter of infected animals, *Lyon* 3212-3220.

As clerk of the Privy Council, witness submits the orders and regulations having reference to the outbreak of cattle plague in the present year, *Peel* 2604-2611; *App.* 544 *et seq.*——Orders of Council which have been passed since the Committee of 1873; these Orders represent a complete history of the action of the Privy Council in regard to cattle plague, *Peel* 3809-3813; *App.* 512 *et seq.*

Satisfactory regulations now adopted by the Privy Council for the prevention of cattle plague in London; prompt action necessary, *Lyon* 3346-3349——Undue delay, after the arrival of the "Castor" at Deptford, before they were killed and destroyed; dilatory and defective course pursued in boiling down the bodies, *Gebhardt* 5143, 5144. 5162-5170——Improved practice in stamping out cattle plague, *Odams* 8076, 8077.

Explanation of the recent action of the Privy Council, and of the orders now in force in the country and in the metropolis, in reference to cattle plague, &c.; cordon still maintained round the metropolis pending the re-stocking of the infected dairies, *Peel* 9865-9870.

Recapitulation of the circumstances connected with the recent introduction of cattle plague by means of the cargo of the "Castor"; undue delay on the part of the Privy Council in exercising their powers under the Act of 1869, *Read* 9489-9498.

Explanation of the delay before the Privy Council interfered with the local authorities on the last outbreak of cattle plague, *Brown* 9934-9937. 10164-10166——Inaccuracy of a certain statement as to the Privy Council having been remiss in taking action in the case of the "Castor," *ib.* 10025, 10026——Effectual steps taken in reference to the recent outbreak at Bethnal Green, in July, for stamping out the disease, and for preventing infection, *ib.* 10302.

Orders of Council dated 31st January 1877, relative to the measures to be taken for the suppression of cattle plague in the metropolis, *App.* 544——Subsequent Orders submitting regulations for the country as well as the metropolis, *ib.* 544 *et seq.*

Orders of Council of 18th and 19th July 1877, imposing restriction upon movement in the metropolis, in view of the further outbreak of cattle plague, *App.* 604, 605.

6. *Arrangements for obtaining Information from Abroad; amended Regulations required:*

Instances, in 1869, 1872, and 1877, of the disease having been introduced from abroad, without official information from the country whence the cattle were imported, *Brown* 10-13——Establishment of regulations for the purpose of procuring early information as to outbreaks of cattle plague on the Continent; insufficiency of this information in every case, *ib.* 33-35. 55-64. 269——Absence of any official notification as to an outbreak in Germany upon the occasion of the arrival of the "Castor" from Hamburg, *ib.* 64-71.

Explanation

Report, 1877—*continued.*

Cattle Plague—continued.

6. *Arrangements for obtaining Information from Abroad, &c.*—continued.

Explanation of the delay in transmitting from Germany to England information in regard to the late outbreak of cattle plague; in future the Prussian Government will telegraph to England by means of every local authority, and not by the central authority only, *Müller* 1403-1409. 1421.

Advantageous arrangements made between the Governments of England and Holland as to telegraphic communication on any outbreak of disease, *May* 2068-2073.

Undue delay on the part of the authorities of Hamburg in telegraphing information as to the outbreak of cattle plague in reference to the cargo of the "Castor"; prohibition of the landing of these cattle if a telegram had been sent direct to the Privy Council, *Gebhardt* 5135-5142. 5147——Importance of direct telegraphic communication from the inspector abroad to the Privy Council in reference to outbreaks of cattle plague, *ib.* 5137-5142. 5146, 5147.

Better check, doubtless, as regards cattle plague, if there were immediate and telegraphic communication from any locality abroad where it may be detected, *Brown* 10025-10028.

7. *Difficulty in obtaining prompt Information from Owners in this Country:*

Belief that in the recent case of cattle plague the owner did not intend to give information; intention of prosecuting him for not giving notice, *Brown* 10300——Doubt as to the advantage of a power to examine on oath, in order the better to ascertain the origin of any outbreak, *ib.* 10413-10420.

8. *Infectious Nature of the Disease:*

Communication of cattle plague by particles of dead animals, and also by meat which has been affected by the disease; impossibility of detecting meat which comes from a diseased animal, *Brown* 154-158. 180-185——Danger of spreading the disease by people moving about in their several trades connected with cattle, *ib.* 211-222——Possibility of an outbreak of cattle plague occurring six weeks after a place has been declared free, without any probable evidence of communication being obtainable, *ib.* 241.

Undoubted possibility of conveying cattle plague by means of dead meat, but in a slighter degree than by the living animal; character of the supervision exercised over the meat sent into the market from animals which have had the disease in its earlier stage, *Brown* 949-955——Disease not communicable by means of the milk of an animal in which cattle plague was incubating, *ib.* 956.

Belief that calves born from a mother that had cattle plague during pregnancy are insusceptible of disease; scientific explanation of this immunity, *Simonds* 1143. 1199-1202. 1205, 1206.

Great difficulty experienced in discovering the first cases of disease in the markets; opinion that it is more easily discovered in the living animal than in the dead carcase, *Müller* 1396-1399. 1612-1616—— Infrequency of cattle plague being carried by mediate contagion; possibility of carrying it by means of manure adhering to the feet, *ib.* 1551-1555. 1570-1578——Frequent instances in Germany of the cattle plague being communicated by means of dead meat, *ib.* 1613-1616.

9. *Period of Incubation:*

The incubation period of cattle plague varies from four to seven days, *Brown* 51.

10. *Losses from Cattle Plague:*

Successful result of the late severe restrictions as regards cattle plague, so that the direct loss has been only 10,000 *l.* or 12,000 *l.*, *Brown* 827-833——Belief that in future there will be no serious loss from cattle plague on account of the efficient precautions to be adopted, *ib.* 1036-1038.

Prejudicial effect on the meat trade and food supply of the country when there is an outbreak of the cattle plague, *Lyon* 3184, 3185. 3445, 3446——Opinion that cattle plague is more to be dreaded by the farmers than pleuro-pneumonia, *Rea* 3699-3703.

Belief that the indirect loss to the country by the cattle plague in 1865 was double the direct loss, the latter being estimated at 5,000,000 *l.*, *Wilson* 4736-4738——Reduced losses from cattle plague by reason of the prompt remedies applied for its suppression, *Gamgee* 6976-6982.

11. *Suggestions on the Subject of Prohibition of Import:*

Argument that the only way of dealing with cattle plague is to prohibit the importation of live cattle from those countries where cattle plague has been certified to exist; necessity also of prohibiting meat and all animal products which might be likely to convey the disease, *Brown* 314-344——Proposal in reference to cattle plague that the importation from Germany and Belgium should be unconditionally prohibited; belief that the loss to this country would be compensated by the amount of dead meat which they would send us, *ib.* 509-513.

Report, 1877—*continued.*

CATTLE PLAGUE—continued.

11. *Suggestions on the Subject of Prohibition of Import*—continued.

Additional recommendations as to the means to be adopted for preventing the introduction of cattle plague into England; necessity for entirely shutting out cattle, but not sheep from Germany, *Brown* 699-714. 722-724. 834-845. 853-856. 862-867——Conclusion further expressed as to the absolute necessity of prohibiting the importation of cattle from those countries in which cattle plague exists, *ib.* 889, 890. 976-978. 1022. 1068-1070.

Grounds for the belief that it would be exceedingly difficult under any circumstances to protect this country from the introduction of cattle plague, *Simonds* 1124-1129——Concurrence with Professor Brown's opinion that if it be desired to effectually stamp out cattle plague in England, the importation from Germany and Belgium must be absolutely prohibited, *ib.* 1147. 1190, 1191. 1217——Insufficient protection by means merely of slaughter at the port of debarkation, *Simonds* 1197. 1208; *Wilson* 4701. 4704——Inexpediency of prohibiting the importation of cattle merely from any single place, *Simonds* 1208-1210.

Evidence as to the expediency of admitting cattle without restriction from countries free from disease, and absolutely prohibiting their import alive in the event of cattle plague breaking out, *Swan* 1650, 1651. 1683-1690. 1730-1732——Proposals respecting the restrictions for the suppression of the cattle plague in England; recommendation that importation be totally prohibited, and failing this, that importation be prohibited from any country in which there exists any disease whatever, *Booth* 2350-2355. 2361. 2376-2379. 2428-2430. 2459-2461.

Suggestions as to future precautions to protect the ports from any introduction of cattle plague; necessity for treating as scheduled countries only those in which cattle plague exists, or where there is a probability of its breaking out, *Lyon* 3220-3228——Absence of danger of an outbreak of cattle plague by the continued import of cattle from the Continent, inasmuch as the animals are only brought from countries where the disease does not and never did exist, *ib.* 3303.

Preference for total prohibition of import in view of the liability of Germany to cattle plague from Russia, *Wilson* 4976——Approval of a strict prohibition of import from any country from which cattle plague may be brought, *Giblett* 6566-6568. 6588. 6719.

Advocacy of a prohibition upon the import of live stock, whilst there should be but little restriction upon the home trade, *Gamgee* 6940 *et seq.*; 7033-7036. 7056, 7057. 7085-7103——Disease and scarcity in the period from 1714 to 1770, cattle plague having been imported, whilst from 1770 to 1840 (when there was no import of foreign cattle) the home supply greatly increased and the price of meat was much cheaper, *ib.* 6999.

Examination upon the question whether in the reign of George 2 an Act was not passed prohibiting import on account of the cattle plague in the country; denial that there was complete exclusion of foreign cattle previously to the outbreak in former times, *Gamgee* 7181-7196. 7236-7238——Reference to an Act of Charles 2 prohibiting the import of foreign cattle, as having been passed irrespectively of the cattle plague, *ib.* 7236-7238.

Opinion that the import of cattle should be stopped from any country where cattle plague has been known to exist, *Soulby* 7258-7260. 7265. 7268, 7269——Approval of absolute prohibition of import from any country where there is cattle plague, *Rudkin* 8982.

Explanation that witness would entirely prohibit import from all countries where there is any chance of cattle plague, including not only Germany but Belgium, *Read* 9577-9579. 9649-9659. 9724-9727. 9759.

Further expression of the opinion that protection can best be secured against cattle plague by prohibiting the import of cattle from Germany and Belgium, and also from France unless she adopts the required precautions for guarding her frontier, *Brown* 9906, 9907. 10438-10440.

12. *Full Powers and prompt Action necessary as regards the Slaughter of Diseased Animals:*

Opinion that the authorities should have full power as in Germany to slaughter in any case in which they may be advised that it is necessary; conviction that if they had had this power in 1872, the cattle plague in East Yorkshire would have been stamped out at the time it appeared, *Brown* 14-19. 142——Firm conviction of witness that he has in several past cases slaughtered animals unnecessarily upon such evidence as he would not now be satisfied with, *ib.* 258-268.

Statement that the recent outbreak of cattle plague has undoubtedly confirmed the opinion of witness that there should be power to order the slaughter of animals; grounds for the belief that if the authorities had had this power the disease might have been extinguished in less than a month, *Brown* 574-579. 671-679.

Furthe

Report, 1877—*continued.*

CATTLE PLAGUE—continued.

12. *Full Powers and prompt Action necessary as regards the Slaughter, &c* —cont^d.

Further evidence in favour of giving the Privy Council power to slaughter animals within a certain radius, which though not in contact with diseased animals have nevertheless been exposed to infection, *Brown* 957-962. 1078, 1079.

Recommendation that animals suffering fron cattle plague should be at once slaughtered and buried; expediency of slaughtering all cattle in the same herd (though not infected) and sending the meat to market, *Lyon* 3217, 3218. 3225-3227.

13. *Action taken by Local Authorities:*

Total of thirty-six counties and twenty-nine boroughs in which there are restrictions in force as regards cattle plague, *Wilson* 5129.

14. *Conclusions of the Committee:*

Considerable improvement required in the existing regulations, *Rep.* iii——Conclusion that with proper regulations cattle plague might be stamped out in a short time without its becoming as destructive as it was in 1865, *ib.*——Constant risk of the importation of cattle plague from Germany, *ib.*——Necessity of foreign governments generally imposing stricter regulations as to their export trade in live stock, *ib.*

Full powers necessary as to the slaughter of animals on premises adjoining those actually infected; recommendation to this effect, *Rep.* iii. ix.

Conclusions arrived at in favour of prohibition of import from Russia, Germany, and Belgium, *Rep.* vi. ix.

Cattle Salesmen. Larger profit obtained by salesmen in Scotland from the sale of imported dead meat than from the sale of imported live stock, *Swan* 1734-1739——Larger commission paid upon dead meat than upon live animals, *Hall* 2942-2944——The commission upon the sale of carcases is double that for selling live stock, *Lambert* 4082-4085.

Very large business of witness in the live cattle trade exclusively; if this were abolished he could enter into the dead meat trade, *Gebhardt* 5456, 5457. 5523-5531——Injury to witness' business by excluding foreign cattle; explanation thereon that he advocates the interests of importers in the matter, and not of salesmen, *Giblett* 6752-6755.

Direct interest of Mr. Giblett and other cattle salesmen in upholding the import of live cattle, and in opposing development of the dead meat made; twice as much commission is charged for the sale of a foreign bullock as of an English bullock, *Gamgee* 7228-7235——Relative charges of salesmen for the sale of foreign and of English bullocks, *Odams* 8109, 8110——Interested motives by which cattle salesmen are actuated in opposing restrictions upon the import of live stock, *Rudkin* 9104, 9105.

Denial given by salesmen to a statement as to their charging a different commission for foreign and English cattle, *Brown* 10042, 10043.

Improvement if cattle salesmen were licensed, *Read* 9758.

CATTLE SHIPS:

Belief that the proposed restrictions in regard to vessels and crews would probably enhance freights, but would not drive vessels out of the cattle trade altogether, *Brown* 1027-1030——Importance of ships for cattle exclusively; prospect of such vesssls being provided, *ib.* 1030, 1031. 1090-1093.

Information relative to the fittings of the ships in which live stock are imported from America into Scotland, *Swan* 1801-1808——Loss of weight by live cattle coming from abroad; the loss would be less when transported a shorter distance by rail, *Lambert* 4049-4055. 4077-4081.

Suggestion that cattle ships be specially fitted and ventilated, be licensed to carry only a certain number, and be used for cattle exclusively, *Wilson* 4822-4825. 4947——Admission as to the virtual prohibition upon the import of live cattle from America if the vessels were not allowed to carry any other freight; witness proposes the latter restriction only as regards the Continent, *ib.* 5027-5035.

Somewhat similar arrangements in the Irish and American boats for the separation of the cattle, *Luya* 7765-7770——Belief as to the constant development of disease in the holds of vessels, *Odams* 7937. 7946. 8030——Conclusion as to the deterioration of live cattle on board steamers, *ib.* 7979-7981——Expediency of foreign store cattle being transported on deck, *ib.* 8030, 8131. 8138, 8139——Improved arrangements for the disinfection of cattle ships, *ib.* 8075.

Report, 1877—*continued.*

CATTLE SHIPS—continued.

Use of ships for cattle exclusively from some countries, whilst from others cattle come with other cargoes, *Robinson* 8554——Opinion that the arrangements in the boats for cattle exclusively are not any better than in the cargo boats, *ib.* 8555-8558——Grounds for the opinion that contagious diseases are not engendered on board ship, *Melvin* 8781, 8782.

Security to be obtained by having special cattle ships, coming to particular ports, and by carefully disinfecting the vessels and the men in charge of the cattle, *Brown* 9930-9932——Improvement if vessels were used and fitted for cattle exclusively; difficulty on the score of expense, *ib.* 9960-9964.

Regulations in the Animals Order of 1875 as to the cleansing and disinfection of cattle ships, *App.* 523.

See also *Ireland, and Irish Cattle*, 1-3.

Central Chamber of Agriculture. Recommendations made by the Central Chamber of Agriculture to the Privy Council with reference to foreign import, slaughter at the port port of debarkation, quarantine, home restrictions, &c., *Stratton* 6788——Explanation that the Central Chamber would prefer slaughter at the port of embarkation, though asking only for slaughter on landing in England, *ib.* 6876-6879. 6902-6910.

As representing the Central Chamber of Agriculture, witness submits that all foreign cattle coming in the holds of vessels should be slaughtered at the port of debarkation, *Odams* 7934 *et seq.*——The Central Chamber comprises some forty-eight chambers from different parts of the country, *ib.* 7960, 7961.

Views of the Privy Council authorities in reference to the measures advocated in memorial from the Central Chamber of Agriculture and the farmers' club, *App.* 566, 567.

Resolutions adopted at a council meeting of the Central Associated Chambers of Agriculture as to the stringent measures necessary as regards foreign cattle, *App.* 568.

Channel Islands. Doubt as to the necessity of slaughtering or quarantining cattle sent from the Channel Islands to Southampton; advantage of inspection before shipment, *Read* 9712-9716. 9748, 9749——Approval of the present facilities of import from the Channel Islands, the animals being detained for some time at the landing place, *Brown* 10045-10049. 10105, 10106. 10258. 10260.

Recommendation by the Committee that the restrictions applicable to Great Britain should be extended to the Channel Islands, or else that ports should be specified to which alone importation of live animals from the Channel Islands should be lawful, the animals not being permitted to be taken inland unless examined and passed by a Privy Council inspector at the port of debarkation, *Rep.* v. viii. ix.

COMPENSATION (*COMPULSORY SLAUGHTER*):

Power in the local authority to pay compensation in the case of pleuro-pneumonia to the extent of three-fourths of the value of the animals, *Brown* 607-609——Compensation in the case of cattle plague to the extent of one-half the value of diseased animals, and three-fourths of the value of animals which have been herded with them, but are not actually diseased, *ib.* 610-615.

Expediency of full compensations chiefly with the object of inducing owners to give notice of disease; possibility in the event of increasing the compensation of the Privy Council taking more stringent measures to restrict the movement of animals, *Brown* 963, 964. 973, 974.

Grounds for the conclusion that the full value should be paid as compensation for diseased animals or animals in contact with diseased animals slaughtered upon information given by the owner; certificate to be given in each case by the local inspector, *Wilson* 4805-4818——Allowance to be made (in awarding compensation) for the value of the carcase as food, *ib.* 4814-4817——Opinion that compensation should be defrayed from Imperial rather than from local sources, *ib.* 4819-4821——Facility of settling the amount of compensation for cattle slaughtered by order of the Privy Council, *ib.* 4923, 4924.

Opinion that three-fourths of the value should be given as compensation when an animal is slaughtered for cattle plague as for pleuro-pneumonia, *Soulby* 7285-7288——Question of compensation considered; opinion that the public should pay to prevent concealment of disease, *Howard* 8229-8234.

Suggestions for the payment of compensation out of the Consolidated Fund in respect of animals slaughtered for cattle plague, *Read* 9493. 9499, 9500——Opinion that half the value might be given in the case of animals attacked with cattle plague, but that the full value should be given for animals slaughtered that have been associated with those actually attacked, *ib.* 9500.

Advantage

Report, 1877—*continued.*

Compensation (Compulsory Slaughter)—continued.

Advantage if compensation were not given where information is withheld by the owner, *Brown* 10300——Insufficiency of the compensation as an inducement to owners to give notice of disease; that is, on account of the great interruption of business necessarily entailed by the restrictions, *ib.* 10315. 10379–10381. 10423——Approval of full compensation where animals are slaughtered for cattle plague, *ib* 10423.

Opinion of the Committee that the full value, up to 40 *l.*, should be paid in cases of slaughter for suspected cattle plague; recommendation to this effect, *Rep.* iv. ix.

Grounds upon which the Committee recommend that all compensation for animals slaughtered in respect of cattle plague should be defrayed from Imperial funds, *Rep.* iii. x.

Recommendation that in the case of pleuro-pneumonia the compensation for the slaughter of animals, whether suspected or diseased, should be at the same rate as in the case of cattle plague, but should be payable out of local funds, *Rep.* ix.

Concealment of Disease. See *Cattle Plague*, 7. *Compensation. Penalties.*

Contagious Diseases (Animals) Act. Passing of this Act in August 1869, it being still in force, *Brown* 2——Pleuro-pneumonia and foot-and-mouth disease defined as contagious diseases for the first time in the Act of 1869, *ib.*——Power under the Act to define the limits of ports, whilst certain countries were enumerated from which animals could only be imported for the purpose of slaughter, *ib.* 3.

Beneficial operation on the whole of the Act of 1869, *Howard* 8177, 8178.

Continental Supply. See *Foreign Cattle.*

Cork. Very good cattle depôt at Cork belonging to the Cork Steam Ship Company, *Sir C. A. Wood* 7397–7399——Consideration and approval of the detailed arrangements at the port of Cork up to the point of shipment of live stock for England, *Robinson* 8661–8673.——See also *Ireland, and Irish Cattle.*

Cows. Means of dispensing with the import of Dutch cows for dairy purposes, *Wilson* 5120-5123——Non-objection to the import of dairy cows into London, provided they are not sent to Islington Market, *Gebhardt* 5704–5710——Consideration of the extent to which cows with pleuro-pneumonia are imported from Holland into the London dairy sheds, *Pool* 5905–5914; *Robinson* 8610-8617——Careful restrictions under which dairy cows might be imported, *Adams* 8054; *Read* 9504, 9505. 9513.

Import of from 8,000 to 10,000 cows yearly, mainly from Holland, this being practically the only import of store cattle, *Robinson* 8607–8609——Inferiority of the Danish cows to the Dutch cows; relative prices of these and of English and Scotch cows, *Melvin* 8879. 8908. 8920–8922——Belief as to its being impracticable to exclude disease unless Dutch cows be excluded, *ib.* 8909, 8910.

Practice of witness to quarantine any new cows on his farm for at least three weeks; he has had an immunity from disease, *Rudkin* 8995–9000——Quarantine necessary for foreign milch cows if allowed to be imported, *Rudkin* 9170–9172. 9211, 9212; *Tisdall* 9363, 9364——Sufficient supply of good milch cows at home without any import, *Rudkin* 9173, 9174. 9212.

Recommendation by the Metropolitan Dairymen's Society, that all milch cows from abroad should undergo a quarantine of fourteen days, *Tisdall* 9363, 9364.

Existences of pleuro-pneumonia and foot-and-mouth disease amongst witness' cows, though only to a limited extent since he has given up buying in the London market; reference hereon to the modes of introduction of these diseases, *Tisdall* 9376-9388——Decided preference of witness for English shorthorns as compared with Dutch cows; conclusion as to the former being the better milkers, *ib.* 9390–9395. 9445–9452. 9470–9472——Personal opinion of witness that the advantage as regards Dutch cows does not compensate for the risk of disease, *ib.* 9407–9412. 9477–9481——Comparatively small import of store cattle into London, so that the supply could be dispensed with without increasing the price of milk, *ib.* 9483–9485.

Conclusion as to dairy cows coming under the definition of store stock, *Read* 9728——Opinion that the dairies can be well supplied by cows bred at home, if the import of Dutch cows be prohibited, except for slaughter, *Brown* 10198–10203——Large number of cows which pass through witness' hands; he never buys Dutch cows unless they have been in the country for a year or two, *Payne* 10523–10530.

Cows—continued.

Regulations laid down by the Privy Council in June 1875, in reference to the import of milch cows, *App.* 532.

Recommendation by the Committee that store and dairy animals remain in quarantine for fourteen days, and be then placed under inspection for two months, *Rep.* vi. ix.

Cowsheds. See *Dairies and Cowsheds.*

D.

DAIRIES AND COWSHEDS:

1. *Prevalence of the Disease in the Dairies and Cowsheds in London and in large Towns generally.*
2. *Evidence in favour of prohibiting Dairies in the Metropolis and in large Towns.*
3. *Exception taken to the foregoing Proposals.*
4. *Inspection and Control; amended Regulations suggested.*
5. *Disinfection.*
6. *Proposed Quarantine of Dairy Cows from Abroad.*
7. *Conclusions of the Committee.*

1. *Prevalence of Disease in the Dairies and Cowsheds in London and in large Towns generally:*

Decided opinion that the cowsheds in all the large towns are the chief centres of contagious disease, chiefly pleuro-pneumonia; difficulty in abolishing these centres of infection, *Brown* 549–553——Dairies near the large towns in Germany are hot beds of pleuro-pneumonia, *Müller* 1599–1601——Concurrence in the conclusion that dairies in towns are hot beds of infection, more especially as regards pleuro-pneumonia, *Swan* 1693–1696; *Lambert* 3932–3939; *Wilson* 4833–4835. 4851, 4852. 4983.

Way in which the London cowsheds operate in spreading pleuro-pneumonia, *Gebhardt* 5438–5440——The London dairies are as much infected as they were in 1850 and 1851, *Gamgee* 6945——Statement as to the London cowsheds having long been a fruitful source of disease, *Rudkin* 8995——Information as to the mode in which cows are now supplied to the London dairy sheds, are removed from one shed to another; peculiar facilities for the spread of disease under this system, *Brown* 10312–10315.

Constant shifting of the cows in the London dairies; practice, in some cases, of supplying cows without payment on delivery, though witness never adopts this plan, *Payne* 10482–10495. 10530–10533.

2. *Evidence in favour of prohibiting Dairies in the Metropolis and in large Towns generally:*

Conclusion as to the expediency of prohibiting dairies in large towns, *Swan* 1693–1696. 1699. 1723–1725——Witness submits that dairies should be removed from towns altogether; particulars hereon as to the extensive operations of the Aylesbury Dairy Company, and the successful system of refrigeration adopted by the company, *Wilson* 4840–4852. 4893–4898. 5019–5023. 5036. 5067, 5068.

Approval of a prohibition of cowsheds in London, it being feasible to supply all the milk required from the country, *Gebhardt* 5441–5443——Further statement as to the advantage of excluding cows from London dairies on the score of liability to pleuro-pneumonia, *ib.* 5627–5629——Conclusion that it would be much better if all large towns were supplied with milk by means of suburban dairies, *Gamgee* 7012–7014. 7017.

Supply by the London dairies of only fifteen per cent. of the milk used in the metropolis, witness submitting that the whole supply could be much better obtained from the country, and that the London cowsheds should be closed altogether, *Rudkin* 8995, 8996——Concurrence as to the advantage of London and other large towns being supplied with milk entirely from the country, *Tisdall* 9483–9485; *Read* 9698–9702.

Beneficial effect of the exclusion of dairy sheds from large towns, though this could hardly be effected in London on account of the opposition that would arise, *Brown* 10137–10139——Belief as to the number of dairy cows in London having diminished in recent years, *ib.* 10264–10266.

3. *Exception*

Report, 1877—*continued.*

DAIRIES AND COWSHEDS—continued.

3. *Exception taken to the foregoing Proposals:*

Evidence as to the advantage of well-conducted cowsheds or dairies in London, on account of the fecility thereby for supplying milk in a fresher and sweeter condition for the use of nurseries than when the milk has to come from the country, *Tisdall* 9428–9438——Probable supply of one-third or one-fourth of the milk used in London from town dairies, *ib.* 9439, 9440.

4. *Inspection and Control; amended Regulations suggested:*

Instructions given to the inspectors in the London districts in regard to their visits to dairies; few instances in which objections were made by the owners to these visits, *Brown* 172–179. 186–196——Approval of the cowsheds in London being under the local authority, *Lyon* 3350–3352——Necessity for more stringent regulations governing the inspection of dairy stock, 3932–3939.

Great want of further restrictions upon the movement of cows in and out of town dairies, *Wilton* 4834. 4838–4840——Approval of inspection before an animal is removed from a dairy shed, *Pool* 5915, 5916——Expected readiness of dairymen in the metropolis to submit to strict regulations for the suppression of lung disease, *Gamgee* 7008. 7017–7019—— Stringent regulations desirable as regards the London cowsheds, *Adams* 8005–8008.

Expediency of placing town dairies under stringent regulations, instead of abolishing them altogether, *Melvin* 8847–8849. 8876–8878. 8906, 8907——Want of a thorough inspection of all cowsheds in London and elsewhere, *Rudkin* 9001, 9002——Approval of increased facilities for the entry of inspectors into dairy yards, *Tisdall* 9400–9403.

Approval of additional power in the local authorities as to the control of cowsheds, *Brown* 10196——Unsatisfactory character of the present inspection of dairy sheds; information proposed to be obtained in future by means of the police, *ib.* 10298, 10299. 10316–10318—— Conclusion as to the necessity of applying more stringent regulations and an improved inspection to the London dairy sheds, *ib.* 10316–10318.

Belief that by proper precautions an effectual and constant inspection may be applied to the London dairies, without danger of disease being conveyed by means of the inspectors from one dairy to another, *Brown* 10382–10389——Several instances of unlicensed dairies; amendment desirable on this score, *ib.* 10392, 10393. 10429–10431——Power of entry of sanitary officers into dairies; these officers are of little use in the detection of disease, *ib.* 10394–10396——Difficulties in the way of a registration of the cows in dairies, as a check upon movement, *ib.* 10396, 10397.

Advantage if the dairies were (like the slaughter-houses) under the control of the Metropolitan Board of Works, with a view to improved structural and sanitary arrangements, *Brown* 10432–10434. 10454–10457.

Approval of an inspection of the dairies, in conjunction with strict regulations as to movement, *Payne* 10496–10498.

5. *Disinfection:*

Twofold disinfection of the infected dairies in London, which are all under inspection; that is, in connection with the recent outbreak of cattle plague, *Payne* 9866, 9867.

6. *Proposed Quarantine of Dairy Cows from Abroad:*

Necessity of quarantining foreign milch cows, if admitted at all, *Rudkin* 9170–9172. 9211, 9212——Meeting held by the Metropolitan Dairymen's Society in March last, at which it was recommended that all live stock and milch cows from abroad should undergo a quarantine of fourteen days, *Tisdall* 9363, 9364.

7. *Conclusions of the Committee:*

Recommendation as regards store and dairy animals that they remain in quarantine for fourteen days, and afterwards be placed under inspection for two months, *Rep.* vi. ix.

Conclusion as to the prevalence of disease in the dairies in London and other large towns, *Rep.* viii——Evidence submitted to the Committee as to the feasibility of superseding town dairies by milk from the country, *ib.*

Opinion that in the metropolis and large towns dairy and cattle sheds should be subject to registration, inspection, and regulations as to movement; recommended legislation to this effect, *Rep.* viii, ix.

See also *Cows.* *Quarantine.*

Danneskiold-Samsoe, The Count C. F. (Analysis of his Evidence.)—Represents the Agricultural Society of Denmark, 386, 387——Non-existence of cattle plague in Denmark since the year 1772; outbreak in Holstein in 1813 and 1814; 388-390——Visitation of pleuro-pneumonia in 1848, which was localised to the farm where it originated; sufficient precautions taken to prevent the spread of the disease, 391–393.

Report, 1877—*continued.*

Danneskiold-Samsoe, The Count, C. F. (Analysis of his Evidence)—*continued.*

More frequent instances of foot-and-mouth disease in Denmark than of other cattle diseases; effectual means taken to stamp out this disease, 394-399——Statement that in consequence of the large outbreak in 1875 the Danish Government placed the disease under the same severe rules as pleuro-pneumonia, 396-399——Historical account of the laws and measures adopted in Denmark with reference to these diseases; preparation of a translation for the information of the Committee, 400–415.

Sheep-pox and sheep-scab subject in Denmark to the same rules as govern pleuro-pneumonia, 400, 401——Strict laws enforced as regards the exportation of cattle from Denmark; close examination of all cattle shipped for Great Britain, 416-426. 437-439——Information respecting the numbers of cattle and sheep exported from Denmark between 1866 and 1876; increase in the numbers exported to England, 427-436——Desire on the part of the Danish people to continue the export of cattle to England, 441, 442.

Impossibility of establishing a dead-meat trade with England; the chief difficulty would be the want of ice for preservation in hot weather, 443–447. 458-460. 463-469. 473-478——Precautions taken to disinfect empty vessels upon their return to Denmark, 448——Importation of cattle into Denmark chiefly from Sweden and England; that from Russia totally prohibited since 1869; 450–452. 455–457.

Custom in Denmark to kill the calves before the trade with England sprung up, 453, 454——Reasons for the increase of importation of cattle into England since 1870; 461, 462.

Opinion that it would entail a loss if the cattle exported from Denmark were obliged to be slaughtered at the port of landing in England, 466, 467. 488, 489——English ports to which cattle are shipped from Denmark at the present time; average time in transit, 470–472. 493.

Belief that if the export of live cattle from Denmark were stopped, the farmers would revert to the dairy system rather than enter into a dead-meat trade, 478——Information respecting the export of cattle from Denmark to Schleswig-Holstein, 479–487——Careful manner in which cattle are shipped and cared for on their passage to England, 490–494——Further information as regards the means used to stamp out the outbreak of foot-and-mouth disease in 1875; 495–500.

Dead Meat:

1. *Evidence favourable to the Development of a large Dead-meat Trade between the Continent and England, Live Cattle being excluded; Prospects of successful Import throughout the Year.*
2. *Evidence at variance with the foregoing Conclusions.*
3. *Degree of Difficulty on the Score of Ice Supplies for Refrigeration.*
4. *Question of Introduction of Disease by means of Dead Meat.*
5. *Question of Competition with the Home Producer.*
6. *Amount of Import hitherto.*
7. *Means of Distribution from London throughout the Country.*
8. *Facilities of Conveyance from the Country to London; extensive Traffic already carried over the Great Western and other Railways.*
9. *Increased Purchases of Dead Meat by London Butchers.*
10. *Conclusions of the Committee.*

1. *Evidence favourable to the Development of a large Dead-meat Trade between the Continent and England, Live Cattle being excluded; Prospects of successful Import throughout the Year:*

Examination to the effect that a dead-meat supply may be obtained from abroad throughout the year, though in hot weather a considerable quantity has hitherto been condemned, *Brown* 348–375. 385——Great importance of developing the dead-meat trade; impossibility of dealing effectively with contagious diseases unless this trade very largely takes the place of the traffic in live animals, *ib.* 562–565. 693–698. 846–850——Argument that the trade in dead meat, as in all other articles of commerce, will find its own level, and be adopted where it pays; prospect of increase in the trade of live cattle be excluded, *ib.* 922–926. 979–983. 999–1005.

Favourable opinion of witness as to the probable success of the dead-meat trade; belief that this trade will eventually usurp the whole of the trade in cattle, *Booth* 2262–2264. 2292–2295. 2323–2326. 2361. 2423——Belief that if the importation of live cattle from the Continent were stopped, a sufficient supply of dead meat would come in its place, *Rea* 3689–3698. 3752–3758——In cold weather meat can be kept for a fortnight or so, and in hot weather for about a week, *Hamilton* 4329, 4330.

Contemplated import of dead meat from the Continent, as well as from America, in lieu of live stock, and in aid of the home supply; belief that a dead-meat supply from the Continent would speedily be forthcoming, and would be a profitable trade, *Sheldon* 4523–4531. 4675–4679——Belief that the proposed restrictions upon the import of foreign cattle

DEAD MEAT—continued.

1. *Evidence favourable to Development of a large Dead Meat Trade, &c.*—continued.

cattle would eventuate in a permanent dead-meat trade, and in a reduction of price to the consumer, *Sheldon* 4579–4588. 4615, 4616——Examination in further support of the conclusion that it would be more profitable to foreign exporters to send dead meat than live stock to this country, *ib.* 4617–4644.

Explanation that witness looks to a dead-meat supply as fully meeting the wants of the country, the import live stock being prohibited, *Wilson* 4733–4735——Great importance attached to the dead-meat trade, in the interests of the public, *ib.* 4868. 4873–4876——Prospect of an increased development of the dead-meat trade in substitution of live animals for daily slaughter, *ib.* 4871–4876. 4906–4912. 4921, 4922.

Further evidence in support of the conclusion that dead meat can be imported in full substitution for the live-cattle import, the import required being only about seven per cent. of the whole consumption, *Wilson* 4902–4917. 4921, 4922——Prospect of a dead-meat supply from the Continent as well as from America, *Wilson* 4921, 4922; *Gamgee* 7115–7117.

Contemplated import of dead meat from Vienna; belief that no serious difficulty would be experienced, *Burkett* 6215–6218. 6329–6332——Belief that regular and sufficient supplies of dead meat might be had in the absence of any import of live cattle, *ib.* 6246–6249. 6254—— Facility of bringing dead meat in good condition from the Continent, *ib.* 6383–6392——Belief that there would be a large and immediate dead-meat trade with the Continent if live cattle were excluded, *Stratton* 6881–6885.

Views expressed by witness in 1869 and 1873 as to the feasibility of a dead-meat trade from abroad by means of a refrigeration process; part taken by him in leading to the subsequent development of this trade, *Gamgee* 6951–6954. 6957. 6983. 7020–7022.

Very large dead-meat supply expected, not only from America but from the Continent, if live cattle be entirely excluded, *Gamgee* 6983–6992——Evidence in support of the conclusion that there is much more deterioration and waste in the transportation of live animals than of dead meat, *ib.* 7126–7135. 7137. 7216. 7221. 7228.

Advantage of a dead meat over a live cattle trade on the score of cost of transit, *Odams* 7975, 7976——Belief that commercial enterprise and science will soon develop a dead-meat trade throughout the country, *ib.* 7977, 7978. 7982, 7983. 8056, 8057——Facility of establishing cook stores or chambers in connection with a largely extended dead-meat trade, *ib.* 7993–8000.

Examination in approval of the dead-meat trade; belief that cattle are brought over in better condition dead than alive, *Howard* 8204–8210. 8306–8312. 8326–8329. 8381–8386. 8419, 8420——Advantage of the import of dead meat in lieu of live stock, *Smith* 8430. 8432–8435. 8459. 8463–8470——Successful conduct of a dead-meat trade by sea between Sydney and Melbourne several years ago, *Melvin* 8796–8802.

Belief that the establishment of a dead-meat supply would be an immense boon to the public, *Rudkin* 8968——Further statement as to the facilities and advantages of an extensive dead-meat trade, *ib.* 9177–9185——Opinion that a dead-meat trade is the safest and best, and that such trade will gradually increase so as to eventually supersede the import of live cattle, *Read* 9515, 9516.

Belief as to the facility of carrying on a permanent dead-meat trade, all foreign cattle being slaughtered at the ports, *Brown* 10018–10021, 10039, 10040——Necessity not only of ample slaughtering accommodation at the ports, but of approved arrangements for cooling the carcases, as in America, *ib.* 10250–10255.

2. *Evidence at Variance with the foregoing Conclusions:*

Grounds for the conclusion that a large and regular dead meat trade between the Continent and England cannot be successfully carried out, *Swan* 1666–1668. 1749–1753. 1796–1798; *Lyon* 3166–3183. 3271, 3272. 3292–3302. 3323–3335. 3358–3360. 3403–3418. 3443–3448——Comparison of value between shipments of live stock and shipments of carcases; larger price given by the butchers for live animals than for meat which is killed on the other side, *Swan* 1670–1672. 1637. 1755–1762. 1812–1814. 1824–1845. 1853–1858——Statement that home killed meat would keep better than imported dead meat, *ib.* 1873–1875.

Difficulties in the way of excluding the trade in dead meat, especially during the summer months, *Simonds* 1160–1166——Decided opinion that in the event of the importation of live cattle from Germany and Belgium being prohibited, it would not be possible for a dead meat trade to take the place of live import; grounds for this conclusion, *ib.* 1167–1170. 1245–1251. 1304–1313.

Impossibility of exporting dead meat from Germany into England on account of the cost of transit; inability to compete with America in this trade as regards cheapness of price, *Baron von Behr* 2472–2480. 2575–2577——Further statement that it would be

DEAD MEAT—continued.

2. *Evidence at Variance with the foregoing Conclusions*—continued.

impossible to send dead meat from Germany to England even if it were wholly packed in ice, *Baron von Behr* 2588–2590.

Assertion that Continental meat, though fetching in the London market 8 *d.* a pound alive, would not fetch as much as 6½ *d.* a pound as dead meat, *Lyon* 3294–3301——Necessity for killing the Continental cattle immediately upon their arrival, and selling the meat quickly, as otherwise it loses its bloom and is depreciated in value, *ib.* 3473–3475——Very large increase necessary in the importation of dead meat into London before it would make up for the loss of live import, *ib.* 3481–3483——Obstacles to the dead meat supply becoming a permanent trade and competing with the trade in live animals killed in this country, *Lambert*, 3861.

Grounds for the conclusion that it would never pay to send dead meat from the Continent to England, the import of live cattle being prohibited, *Gebhardt*, 5202–5212——Belief that a dead meat supply in lieu of the foreign live cattle supply is not practicable; great uncertainty of a dead meat trade, the market being sometimes glutted and prices most uncertain, *ib.* 5248. 5251. 5414–5433. 5570–5572. 5589——Question whether dead meat could not be brought from St. Petersburg and other Russian ports at a profit, *ib.* 5480–5482.

Belief further expressed that a dead meat supply from the Continent could not be calculated upon in lieu of the live animal supply, *Gebhardt* 5514–5516. 5617–5623——Grounds for dissenting from the view that it would be feasible so to regulate a dead meat trade as to prevent a glut in the market at some times and a scarcity at other times, *ib.* 5609 5616. 5730, 5731——Smaller size of Continental than American beasts, so that it would be more difficult to send the former in good condition as dead meat, *ib.* 5618. 5620——Less price to be realised by dead meat from the Continent than from America, *ib.* 5621–5624——Full approval of the import of dead meat as one means of supply, *ib.* 5716.

Opinion that a dead meat trade exclusively would not suit the wants of the retail butchers; reference hereon to the extent of purchases in the Metropolitan Dead Meat Market, *Pool* 5884–5895——Examination as to the relative loss or deterioration in the case of dead meat cargoes and of live cattle cargoes, *ib.* 5960–5970. 6022. 6045–6049——Probable gluts in the market if supplied entirely by foreign dead meat; impractibility of regulating the supply, *ib.* 6080, 6081. 6100–6104.

Undue stringency by requiring the slaughter of foreign animals at the port of embarkation, with a view to a dead meat supply exclusively, *Robinson* 8567——Obstacles to the successful conduct of a large dead meat trade from the Continent throughout the year, *ib.* 8707–8710.

3. *Degree of Difficulty on the Score of Ice Supplies for Refrigeration:*

Obstacle on the score of ice supply, as well as on other grounds, to a large dead meat trade between the Continent and England, *Swan* 1636–1668. 1749–1753; *Lyon*, 3166 *et seq.*——Expected removal of the difficulty as regards ice supplies on the Continent, *Sheldon* 4629–4632.

Facility of artificially producing ice in sufficient quantities for refrigeration of meat as well as of milk; limited expense involved, *Wilson* 5036–5038. 5061–5068. 5074——Belief that ice can be manufactured at the same cost per ton as the cost of coals per ton, *ib.* 5036. 5038.

Difficulty as to supplies of ice for refrigerating meat from the Continent, *Gebhardt* 5203–5206. 5618. 5620. 5717–5720. 5726–5729; *Pool* 5981–5987——Facility of artificially producing ice on board dead meat ships, *Gamgee* 7197–7199.

4. *Question of Introduction of Disease by means of Dead Meat:*

Doubt whether the importation of dead meat need be prohibited from countries from which the importation of live animals is stopped, *Simonds* 1195–1198——Disapproval of slaughter at the port of embarkation; belief that such a system would not give effectual security, as it is quite possible for cattle plague to be introduced by dead meat, *ib.* 1235–1238. 1319–1325——Very great risk of importing partially diseased meat into England, if the importation of live stock be prohibited, *Hall* 2989, 2990.

Improbability of disease being imported by means of dead meat, *Rea* 3680–3682. 3738–3744; *Wilson* 4991, 4992——Doubt as to diseased dead meat being capable of spreading disease, *Gebhardt* 5198–5201.

Greater difficulty in detecting disease in dead meat than in the live animal, *Luya* 7552–7554——Opinion that dead meat may be safely imported from countries where there is cattle plague, *Read* 9651, 9652——Grounds for the opinion that dead meat as well as live animals should be excluded from any country where there is cattle plague, *Brown* 10022–10024.

5. *Question*

DEAD MEAT—continued.

5. *Question of Competition with the Home Producer:*

Readiness of witness to face the competition of a dead-meat import, if it will free him from the risk of disease, *Wilson* 5002–5012. 5078, 5079.

Effect of an extensive dead-meat trade in ruining the home trade; injury especially to the British farmer if the London market were no longer open to him, *Gebhardt* 5418–5420. 5430–5433. 5685–5695.

6. *Amount of Import hitherto:*

Number of beasts represented by the import of dead meat into London; effect thereof in keeping down the price of meat, *Gebhardt* 5469–5472 ——Considerable supplies of dead meat from Denmark and Tonning; facility in transmission, without any refrigerating process, *Burkett* 6219–6226——Decided tendency to an increase of the dead-meat trade, the chief difficulty being when the weather is hot, *Giblett* 6736–6738.

Activity in the foreign dead-meat trade during the restrictions upon import in 1865, *Gamgee* 6986——Limited extent to which the dead-meat import took the place of the live-cattle import, when the latter was restricted in 1865, *ib.* 7040–7042.

The import of dead meat from the Continent practically ceases from April to the end of September, *Robinson* 8710.

7. *Means of Distribution from London throughout the Country:*

Advantage in being able to distribute foreign live cattle throughout the country, the distribution of dead meat not being feasible, as it will not keep, *Swan* 1763–1768; *Gebhardt* 5414–5417. 5429. 5671–5673——Explanation as to a great deal of comparatively inferior meat going from London into the country; effect of the dead-meat supply on this score, *Gebhardt* 5494, 5495. 5648–5654——Further statement as to the difficulties in sending dead meat throughout the year from London into the country, *ib.* 5581–5587. 5655–5657.

Facility in the distribution of dead meat from Deptford throughout the country; advantage on this score of direct railway communication with the market, *Sir C. A. Wood* 7434, 7435; *Odams* 7971–7974. 8000; *Howard* 8274–8278; *Robinson* 8602–8604; *Rudkin* 8972–8975. 9040–9042. 9106–9108. 9133–9136——Advantage if fat cattle were not moved into the country, save in the form of dead meat, *Read* 9743–9747.

8. *Facilities of Conveyance from the Country to London; Extensive Traffic already carried over the Great Western and other Railways:*

Result of witness' experience that arrangements may readily be made for the successful conveyance of dead meat in very large quantities by railway from the country to London and other towns, and *vice versâ;* considerable quantity now conveyed over the Great Western Railway, *Sir C. A. Wood* 7360–7381. 7383–7392——Special dead-meat vans being constructed for use on the Great Western line; good prospect of their success in the hottest weather, *ib.* 7363–7368. 7376–7378.

Information relative to the large fish trade from Kinsale over the Great Western Railway, and the rates charged; conclusion that dead meat may be carried with equal success, *Sir C. A. Wood* 7383–7392; *App.* 571–575——Better rates for the conveyance of dead meat than live stock, *Sir C. A. Wood* 7471——Increasing dead-meat trade from the West of England to London, *ib.* 7486.

Great advantage of animals being slaughtered where they are fed; superiority of country-killed meat to that killed in London, whilst under the former plan there is a saving of some five per cent. in absolute weight, *Rudkin* 8968–8971. 9046–9049. 9056. 9175, 9176. 9186——Gradual diminution of the live-cattle supply to London, and gradual increase of the dead-meat supply, *ib.* 9031–9035. 9119–9122. 9159–9161——Large supplies of dead meat received from Scotland, the West of England, and Ireland, even in the hottest weather, *ib.* 9032–9034. 9159, 9160. 9180–9182.

Denial that there is any loss of weight through cattle being sent from the country for slaughter in London, *Knowles* 9299.

Successful transmission of large quantities of dead meat from Norfolk to London in hot as well as cold weather, *Read* 9561–9566.

9. *Increased Purchases of Dead Meat by London Butchers:*

Large extent to which the dead meat trade in London has grown since it was first established, *Brown* 967–972——Practice of some butchers as to daily purchases of dead of dead meat; advantage taken by them of a glut in the market, *Burkett* 6177–6181——Increasing purchases of dead meat in the central market, many butchers having given up slaughtering and relying less upon live animals, *ib.* 6181–6194. 6313–6315. 6335–6337.

Report, 1877—*continued.*

DEAD MEAT—continued.

10. *Conclusions of the Committee:*

Conclusion adverse to the proposal for requiring all foreign cattle to be slaughtered abroad, so that dead meat, exclusively, should be imported, *Rep.* vi——Weight of evidence adverse to the proposal for requiring the slaughter of foreign cattle at the port of embarkation, *ib.*

Grounds upon which the Committee conclude that an extensive dead meat trade throughout the country would result from compulsory slaughter at the port of debarkation, *Rep.* vii.

DENMARK:

1. *Extent to which Cattle Plague, Pleuro-pneumonia, and Foot-and-Mouth Disease have existed in Denmark; Preventive Measures taken by Government.*
2. *Export of Cattle to Great Britain and other Countries; Precautions against Disease.*
3. *Question of requiring the Slaughter of Cattle from Denmark at the Port of Arrival in England.*
4. *Question of a Dead Meat Import from Denmark.*

1. *Extent to which Cattle Plague, Pleuro-pneumonia, and Foot-and-Mouth Disease have existed in Denmark; Preventive Measures taken by Government:*

Non-existence of cattle plague in Denmark since the year 1772; outbreak in Holstien in 1813 and 1814; *Count Danneskiold-Samsoe* 388–390——Visitation of pleuro-pneumonia in 1848 which was localised to the farm where it originated; sufficient precautions taken to prevent the spread of the disease, *ib.* 391–393. 415——More frequent instances of foot-and-mouth disease in Denmark than of other cattle diseases; effectual means taken to stamp out this disease, *ib.* 394–399.

Statements that in consequence of the large outbreak of foot-and-mouth disease in 1875 the Danish Government placed the disease under the same severe rules as pleuro-pneumonia, *Count Danneskiold-Samsoe* 396–399——Historical account of the laws and measures adopted in Denmark with reference to these diseases; preparation of a translation for the information of the Committee, *ib.* 400–415——Sheep-pox and sheep-scab subject to the same rules as govern pleuro-pneumonia, *ib.* 400, 401——Importation of cattle into Denmark chiefly from Sweden and England; that from Russia totally prohibited since 1869, *ib.* 450–452. 455–457——Further information as regards the means used to stamp out the outbreak of foot-and-mouth disease in 1875, *ib.* 495–500.

Existence of pleuro-pneumonia in Denmark in recent years, whilst in former times cattle plague came to this country from Denmark, *Gamgee* 6998–7002.

Government Order, dated 29th December 1857, laying down instructions as to the steps to be taken in cases of contagious diseases of different kinds, *App.* 503–505.

General Order, under date 20th September 1858, for the treatment of infectious diseases in domestic animals, *App.* 505, 506——Regulations to be observed with regard to pleuro-pneumonia (as laid down in Decree of 28th September 1858), *ib.* 506, 507.

Decree, dated 10th April 1875, concerning foot-and-mouth disease, *App.* 507——Regulations, issued 16th October 1875, with further reference to the steps to be taken as regards foot-and-mouth disease, *ib.*

Order, dated 16th January 1877, laying down the measures to be adopted against importation of cattle plague from Germany, *App.* 508.

Circular issued to the prefects, dated 10th February 1877, in view of an eventual importation of cattle plague, *App.* 509.

2. *Export of Cattle to Great Britain and other Countries; Precautions against Disease:*

Strict laws enforced as regards the exportation of cattle from Denmark; close examination of all cattle shipped for Great Britain, *Count Danneskiold-Samsoe* 416–426. 437–439——Information respecting the numbers of cattle and sheep exported from Denmark between 1866 and 1876; increase in the numbers exported to England, *ib.* 427–436——Desire on the part of the Danish people to continue the export of cattle to England, *ib.* 441, 442.

Precautions

Report, 1877—*continued.*

DENMARK—continued.

2. *Export of Cattle to Great Britain and other Countries, &c.*—continued.

Precautions taken to disinfect empty vessels upon their return to Denmark, *Count Danneskiold-Samsoe* 448——Custom in Denmark to kill the calves before the trade with England sprung up, *ib.* 453, 454——Reasons for the increase of importation of cattle into England from Denmark since 1870, *ib.* 461, 462.

English ports to which cattle are shipped from Denmark at the present time; average time in transit, *Count Danneskiold-Samsoe*, 470–472. 493——Information respecting the export of cattle from Denmark to Schleswig-Holstein, *ib.* 479–487——Careful manner in which cattle are shipped and cared for on their passage to England, *ib.* 490–494.

Statement as to the proportion of store cattle imported into England from Denmark, Sweden, and Norway; large number of cattle introduced from Denmark for dairy purposes, *Swan* 1673–1682. 1740–1747——General freedom from disease in regard to the cattle imported from Denmark, *ib.* 1748——Increase lately in the import from Denmark to Glasgow, *Hamilton*, 4205, 4206.

Import of a cargo of cattle from Denmark with foot-and-mouth disease, whereas that country is said to be free from the disease, *Gebhardt* 5451–5455.

Order, dated 26th February 1876, concerning the measures to be adopted with regard to export of domestic animals to Great Britain, *App.* 508, 509——Authority given to Government in February 1876 for preventing the export of diseased animals, *ib.* 508.

Return showing the export of cattle and of sheep and lambs to Great Britain and to Schleswig and Holstein in each of the years 1866–76, *App.* 509.

3. *Question of requiring the Slaughter of Cattle from Denmark at the Port of Arrival in England:*

Opinion that it would entail a loss if the cattle exported from Denmark were obliged to be slaughtered at the port of landing in England, *Count Danneskiold-Samsoe* 466, 467. 488, 489——Belief that if the export of live cattle from Denmark were stopped, the farmers would revert to the dairy system rather than enter into a dead meat trade, *ib.* 478.

Proposed exception in the case of Denmark as regards prohibition with reference to pleuro-pneumonia and foot-and-mouth disease, *Wilson* 4977. 5086——Objection to import from Denmark, notwithstanding the precautions in that country against disease, *Gamgee* 7150–7155——Opinion that cattle from Denmark should be slaughtered at the port of debarkation, although that country is pretty free from disease, *Robinson* 8582–8585; *Rudkin* 9085. 9164.

4. *Question of a Dead Meat Import from Denmark:*

Impossibility of establishing a dead meat trade with England; the chief difficulty would be the want of ice for refrigeration in hot weather, *Count Danneskiold-Samsoe*, 443–447. 458–460. 463–469. 473–478.

Inferior character of the dead meat imported from Denmark; unsatisfactory condition in which it sometimes arrives, *Burkett*, 6353–6359.

DEPTFORD MARKET:

1. *Number of Animals sent to the Market.*
2. *Effect of the Restrictions as to Slaughter upon the Supply and upon Prices.*
3. *Increased and Regular Supply and better Competition if all Foreign Cattle coming to London were Slaughtered at Deptford.*
4. *Exceptions taken to the foregoing Proposal.*
5. *Provision of Slaughter-houses.*
6. *Sanitary Condition.*
7. *Inconvenience in Deptford and Islington Markets being held on the same Day.*
8. *Corporation Charges.*
9. *Arrangements for the Distribution of Dead Meat from the Market; Advantage of Direct Railway Communication.*
10. *Mode of treating the Carcases of Diseased Animals.*

1. *Number of Animals sent to the Market:*

Statement of the number of cattle, calves, sheep, and pigs that have come to Deptford Market in the first six months of 1877; large decrease of cattle owing to the restrictions upon import from Germany, whilst there has been an enormous increase of sheep, *Rudkin*, 8931–8935——Gradual increase since 1871 in the number of animals sent to Deptford, *ib.* 9050–9054——Doubt as to any English cattle going to Deptford, *ib.* 9208, 9209.

Report, 1877—*continued.*

DEPTFORD MARKET—continued.

2. *Effect of the Restrictions as to Slaughter upon the Supply and upon Prices:*

Objection of those interested in the cattle trade in Holland to the limited trade at Deptford as compared with the larger market at Islington, *May* 2051, 2052——Examination in regard to the loss experienced by sending cattle to Deptford Market; grounds for the opinion that many buyers avoid Deptford, *Lyon* 3485-3495. 3498-3501. 3558, 3559. 3564, 3565.

Necessity of slaughtering at Deptford all the forrign cattle coming to London; belief that they must be slaughtered within ten days, *Gebhardt* 5540-5543. 5610——Several respects in which compulsory slaughter at Deptford tends to restrict the trade and to lessen the import, *ib.* 5544-5551. 5589. 5594-5601——Probability of an increased number of buyers at Deptford if all the cattle coming into London went there to be slaughtered, *ib.* 5597-5601.

Considerable falling off in the supply of foreign animals at the Deptford Market, the present supply from Holland and France being very small, *Pool* 5790-5813——Very few buyers and very little competition at Deptford, the retail butchers not having slaughter-houses there; prejudicial effect as regards the supply from abroad, *ib.* 5791. 5796-5805. 6072-6077——Conclusion that Deptford Market should be abolished altogether, *ib.* 6008, 6009. 6072-6077.

Way in which compulsory slaughter at Deptford has a very deterrent effect upon foreign import; great dislike of buyers to attend the market, *Giblett* 6627-6635. 6733-6735.

Doubt as to their being much difference between the prices at Deptford Market and at the Metropolitan Market; disadvantage of the former in not having direct railway communication, *Odams* 7965-7970. 7973, 7974. 8033. 8095-8102——Dissent from certain statements as to the loss incurred by sending cattle to Deptford to be slaughtered. *Robinson* 8585. 8604. 8639——Prejudice to the market through the practical exclusion of Government contractors, *ib.* 8659——Inaccuracy of certain evidence as to the prices at Deptford being much lower than at Islington, *Rudkin* 8960-8966. 9030.

Uncertainty of the supply to Deptford Market, and paucity of buyers, under the existing regulations, *Rep.* vii.

3. *Increased and Regular Supply and better Competition if all Foreign Cattle coming to London were Slaughtered at Deptford:*

Regularity of supply and increase of competition at Deptford if there were improved accommodation and if all foreign cattle were slaughtered on landing, *Odams* 7967-7970. 8016——Evidence as to the want of improved arrangements in connection with the market, *ib.* 7971-7974. 8095-8102.

Advantage of all foreign cattle being slaughtered at Deptford, and of direct railway communication with the market, *Howard* 8274-8278——Regular and ample supply at Deptford if there were compulsory slaughter of all foreign animals landed in the port of London; disadvantages of the present uncertainty of supply in the market, *Robinson* 8579. 8586-8590. 8604-8606. 8626, 8627. 8649-8654. 8715, 8716.

Great detriment to trade, and to the usefulness of Deptford Market, by the uncertainty of the regulations as to the import and slaughtering of foreign cattle, *Rudkin* 8955-8957. 9085-9091——Stability of trade at Deptford and abundance of competition, if there were a permanent and compulsory system of slaughtering at the port, *ib.* 8959, 8960. 8967, 8968. 9086-9091. 9146-9148. 9210——Advantage of a separate market at Deptford for all foreign stock, *Read* 9522-9524. 9530-9532.

Considerable improvement expected by the Committee under a system of compulsory slaughter at the port, *Rep.* vii.

4. *Exceptions taken to the foregoing Proposal:*

Greatly diminished supply if all foreign cattle coming in future to London had to be slaughtered at Deptford, *Thomsen* 2170-2174——Evidence strongly opposed to a permanent system whereby all foreign cattle should be obliged to go to Deptford for slaughter; great injury thereby to foreign exporters, who would, in fact, shun the market as much as possible, *Gebhardt* 5483-5493——Decided objection to an extended system of compulsory slaughter at Deptford, *Pool* 5838, 5839. 6001-6009. 6039-6044. 6072-6081.

5. *Provision of Slaughter-houses:*

Greater expense in slaughtering at Deptford than on the butchers' premises, *Gebhardt* 5519, 5520. 5547——Increase of slaughter-houses at Deptford and increasing practice of butchers to buy dead meat instead of slaughtering at home, *Robinson* 8588, 8589. 8652-8654.

Increased supply of slaughter-houses at Deptford if slaughtering of all foreign cattle were compulsory, *Rudkin* 9137. 9165——Advantage in an increased use of slaughter-houses

at

Report, 1877—*continued.*

Deptford Market—continued.

Provision of Slaughter-houses—continued.

at Deptford by retail butchers throughout London; decided tendency in this direction, *Rudkin* 9165–9168. 9177-9179——Uncertainty of the supply at Deptford; a very large business is, however, transacted and more slaughter-houses are being built, *Read* 9523, 9524.

6. *Sanitary Condition:*

Exceedingly objectionable character of Deptford Market; the smells are abominable, and moreover witness hates covered markets, *Giblett* 6585–6587. 6633–6635. 6702. 6734, 6735.

Witness submits that the sanitary condition of the market is as good as is practicable; exceedingly offensive smell, however, from the carbolic acid used in disinfection, *Rudkin* 8942–8946.

7. *Inconvenience in Deptford and Islington Markets being held on the same Day:*

Considerable inconvenience to salesmen and buyers through the markets being held on the same day at Deptford and Islington, *Giblett* 6770-6773; *Read* 9523.

8. *Corporation Charges:*

Comment upon the heavy rent charged by the Corporation for the market, and upon the charge of 5*s.* for each bullock landed, *Odams* 8103-8108.

Explanation relative to the much higher charges of the Corporation for each bullock, sheep, and calf in Deptford Market than at Islington, *Rudkin* 9055–9074. 9080-9083——Statement showing that the importer has to pay quite as much to get his beast to Islington Market as to Deptford, *ib.* 9068. 9075–9079.

9. *Arrangements for the Distribution of Dead Meat from the Market: Advantage of direct Railway Communication:*

Great convenience in the distribution of dead meat from Deptford Market if the railway were extended directly into the market, *Sir C. A. Wood* 7434, 7435; *Howard* 8274-8278——Increased dead-meat trade from Deptford to the provinces if there were direct railway communication, *Odams* 7971–7974. 8000—— Facility in the transmission of dead meat to the provinces, *Robinson* 8602–8604——Improvement much required in the mode of carting dead meat from Deptford, *ib.* 8699.

Facility in carrying on a large dead-meat trade between Deptford and the country; very large number of sheep carcases sent from Deptford to Wales and other distant parts, some of which came back again to London, *Rudkin* 8972-8975. 9133–9135. 9138, 9139. 9158. 9162——Facility, also, in providing direct railway accommodation with the market, *ib.* 9040-9042. 9106–9108. 9136.

10. *Mode of treating the Carcases of Diseased Animals:*

Particulars as to the course pursued at Deptford in getting rid of 39 cases of diseased animals in the present year; prompt action taken whilst disinfection was carefully carried out, *Rudkin* 8947–8954——Provision of a "digester" in each of the four compartments of the market, each digester being capable of boiling down eight carcases at one process, *ib.* 8948——Impossibility of disposing of the carcases by burying them under the market; advantage if there were an available space for the purpose outside the market, *ib.* 8950, 8951. *See* also *Cattle Plague*, 4. *France.*

Disease, Origin and Extent of. See *Cattle Plague. Dairies and Cowsheds. Foot-and-mouth Disease. Foreign Cattle. Germany. Holland. Ireland and Irish Cattle. Pleuro-pneumonia. Russia, Spain, and Portugal.*

Disinfection. Considerable difficulty experienced by local authorities in enforcing the order as to the disinfection of persons who have been in connection with diseased animals; inability of the local authorities to carry out these and like arrangements with the present limited staff, *Brown* 143–153——Directions given to the inspector to prevent any persons leaving infected premises unless they submit to a process of disinfection; instance of a person who refused to submit to this process, and who is being prosecuted by the Treasury, *ib.* 173–177.

Regulations laid down in the Animals Order of 1875 as to the cleansing and disinfection of cattle ships, railway trucks, &c., *App.* 523, 524.

See also *Cattle Ships. Dairies, &c.* 5.

Dublin. Considerable improvement in the arrangements in Dublin for the shipment of cattle, *Sir C. A. Wood* 7400. 7445.

Dutch Cows. See *Cows. Dairies and Cowsheds. Holland.*

Report, 1877—*continued.*

E.

Edinburgh. Considerable increase in the supply of cattle used in Edinburgh since 1866; *Swan* 1642—— Material increase in the import from Denmark during the same period, *ib.*——Increase of prices concurrently with the introduction of a larger supply of cattle, *ib.* 1643, 1644.

Entry upon Premises. Expediency of giving to the local authorities the power of entry into premises where the disease is suspected to exist, *Brown* 619, 620——Considerable difficulty in some cases as to the inspectors' entry upon premises; instructions issued to them in consequence, *ib.* 10292–10297.

Export of Cattle. Witness has occasionally taken prize cattle to America, the freight being from 15 *l.* to 20 *l.* for each animal, *Whitwell* 1939–1941——Diseases in this country which induce foreign countries to prohibit the importation of our cattle, *Booth* 2455–2458.

Large numbers of English cattle purchased for breeding purposes in Germany, *Baron von Behr* 2537, 2538. 2578–2584——Decided opinion that the loss which the prohibition of imports from England would cause to Germany would not be a tenth part of the loss suffered from a prohibition of the export from Germany to England, *ib.* 2581–2584.

Effect of the prevalence of contagious diseases in this country in preventing export of English stock, though much wanted abroad for improving the breed of foreign stock, *Stratton* 6820–6822. 6829–6833.

See also *Australia.*

F.

Fairs and Markets. Absence of pleuro-pneumonia on witness' farm on account of his keeping away from the markets when that disease was prevalent, *Rea* 3589–3591—— Opinion that where foot-and-mouth disease is prevalent in any district the fairs and markets should be closed; approval of compulsory orders from the Privy Council on this subject throughout the kingdom, *ib.* 3650–3654. 3662, 3663. 3798.

Advantage of markets specially for Irish stock after arrival in England, *Sir C. A. Wood* 7426. 7472, 7473—— Introduction of foot-and-mouth disease and pleuro-pneumonia through fairs, *Howard* 8153–8155——Separate markets advisable for home and foreign cattle sent to London, *ib.* 8273–8275.

Advantage of separate markets for fat stock and lean stock; reference more especially to lean stock from Ireland, *Melvin* 8911–8916——Expediency of a distinct separation between store markets and fat-stock markets, *Tisdall* 9404, 9405.

Suggestions as to the restrictions to be imposed as regards fairs and markets, &c., *Read* 9671–9679: *Brown* 10056–10058. 10080. 10101, 10102. 10248——Frequent presence of foot-and-mouth disease in Islington Market and in fairs and markets generally, *Brown* 10004–10006.

Restriction in force in the metropolis (6th July 1877), but not in the country, as regards fairs and markets, *Peel* 9868, 9869.

Orders of Council in January 1877, and subsequently, placing various restrictions upon the movement of cattle and upon the holding of fairs and market, *App.* 544 *et seq.*

Action taken by various local authorities in closing markets, &c. in their districts, *App.* 561.

Conclusion of the Committee as to the restrictions necessary in regard to fairs and markets, if certain restrictions be imposed on the foreign trade, *Rep.* v, ix, x. *See* also *Movement of Cattle.*

Farmers:

Opinion that the stock owners in England would not comply with the stringent regulations necessary in order to get rid of foot-and-mouth disease, *Brown* 651–665—— Stringent regulations absolutely necessary if cattle diseases are to be extirpated in England; belief that such regulations would not be submitted to by the people of this country, *Simonds* 1158, 1159. 1216, 1217. 1252–1257. 1266–1274. 1297–1299.

Willingness of witness and of farmers generally in Yorkshire to submit to severe restrictions in order to stamp out pleuro-pneumonia and foot-and-mouth disease, *Booth* 2314. 2340. 2363. 2411–2413. 2418, 2419. 2421, 2422. 2462——Opinion that the farmers throughout the country would be quite willing to submit to any restrictions having the object of stamping out disease effectually; readiness to submit even to such stringent regulations as were in force in regard to the cattle plague, *ib.* 3599–3601. 3637–3642. 3686, 3687. 3716–3724. 3731. 3745. 3789.

Readiness

Report, 1877—*continued.*

FARMERS—continued.

Readiness of farmers to submit to stringent restrictions, if thereby foot-and-mouth disease can be permanently stamped out, *Sheldon* 4538–4540. 4613, 4614——Expected willingness of farmers to conform to the proposed restrictions upon movements, if these are enforced through the Privy Council, *Wilson* 4772–4781——Willingness of witness to be confined to a dead-meat trade, if it were necessary in his case for preventing the spread of disease, as by means of foreign import, *ib.* 5002–5012. 5078, 5079——Entire readiness of the farmers in Gloucestershire to conform to stringent regulations for stamping out foot-and-mouth disease and pleuro-pneumonia, *Lord Fitzhardinge* 5277–5281. 5285. 5314, 5315.

Grounds for the conclusion that there is a very general unanimity among farmers in favour of more stringent regulations as regards the home trade, *Stratton* 6789, 6790. 6810, 6811. 6823–6825. 6911-6916. 6933, 6934——Arbitrary and unequal restrictions enforced when the cattle plague first appeared, so that the farmers naturally complained, *ib.* 6888–6892.

Readiness of farmers in Yorkshire to submit to severe restrictions for the stamping out of cattle plague, *Soulby* 7270–7272——Opinion that in Yorkshire the farmers would object to a general prohibition upon movement, or to the stoppage of fairs and markets for a year, as a means towards the suppression of pleuro-pneumonia, *ib.* 7276–7284. 7293. 7320, 7321.

Entire willingness of farmers to submit to almost any restrictions, in order that losses from disease may be prevented; good grounds of witness for this statement, *Odams* 7957–7964. 8058–8066——Opinion of witness, as representing the Farmers' Club, that farmers would submit to more stringent regulations for the suppression of disease, but that it would soon be re-introduced unless foreign cattle were excluded, *Howard* 8188–8190. 8197–8199. 8398–8400.

Statement as to the willingness of the farmers in Scotland to conform to very stringent regulations at home, in conjunction with a system of slaughtering of foreign cattle at the port of debarkation, *Melvin* 8821–8829——Entire readiness of dairymen and farmers to submit to stringent regulations as regards inspection and movement of cattle, so that they may be secured against disease, *Tisdall* 9396–9400. 9406. 9424–9426——Result of witness' experience that the farmers of England would readily conform to the restriction necessary for stamping out disease, *Read* 9604–9607. 9626. 9679.

Very severe restrictions necessary in order to stamp out pleuro-pneumonia throughout the country; belief that farmers would not willingly undergo the great inconvenience involved, *Brown* 9901–9905.

Further argument that the severe home restrictions required for stamping out pleuro-pneumonia and foot-and-mouth disease would not be submitted by farmers without very strong opposition, *Brown* 9986–9988. 10070–10074. 10081, 10082——Difficulty experienced in applying the cattle plague restrictions in 1875, *ib.* 10070–10074. 10081.

Witness repeats that the farmers would probably throw great difficulties in the way of severe restrictions in Lincolnshire, *Brown* 10091. 10096, 10097. 10103, 10104——Large preponderance of evidence before the Committee, to the effect that farmers generally would readily conform to the necessary restrictions on movement, &c., *Rep.* v, vi.

See also *Central Chamber of Agriculture.* *Compensation.* *Home Supply.* *Loss from Disease.* *Scotland.*

Farmers' Club. Views of witness, as representing the Farmers' Club, in favour of all fat cattle being slaughtered at the port of entry, *Howard* 8200, 8201. 8251–8255. 8269, 8270. 8313–8325. 8405–8410——Suggestions, on behalf of the Farmers' Club, as to the regulations and restrictions desirable as regards both the home and foreign trade, *ib.* 8211 *et seq.*

Views of the Privy Council authorities in reference to the measures advocated in memorial from the Central Chamber of Agriculture and the Farmers' Club, *App.* 566, 567.

Fitzhardinge, The Right Honourable Francis William, Baron. (Analysis of his Evidence.)—Explanation in connection with an order passed a few months ago by the quarter sessions in Gloucestershire, on the motion of witness, prohibiting the import of Irish cattle into the county, 5256–5263. 5327–5337. 5340–5343——Great want of an efficient Government inspection at places in the Severn, other than Bristol, where cattle, sheep, and pigs are landed from Irish boats; particular instances in illustration, 5260–5276. 5294–5313. 5338, 5339. 5344——Instance of a cargo of Irish cattle landed several miles above Bristol, without inspection, 5261–5264. 5296–5300.

Statement as to the Government inspectors at Bristol having nothing to do with sheep or pigs, whilst the local inspector does not inspect on landing and is paid only by half the fines when disease is detected in the market, 5263–5268. 5289–5293——Extensive

Report, 1877—*continued.*

Fitzhardinge, The Right Hon. Francis William, Baron. (Analysis, &c.)—*continued.*

dairy district between Gloucester and Bristol, heavy losses being sustained by the farmers from foot-and-mouth disease imported by Irish cattle, 5271–5274. 5287, 5288.

Willingness of the farmers in Gloucestershire to conform to stringent regulations for stamping out disease, 5277–5281. 5285. 5314, 5315——Reluctance of farmers to buy pigs for fattening through fear of foot-and-mouth disease, 5281–5284——Bad condition of some sheep and pigs recently landed at Bristol from Ireland, 5294, 5295. 5322–5326.

Foot-and-Mouth Disease:

1. *Origin of the Disease in this Country; its Infectious Character.*
2. *Extensive Import of Diseased Animals.*
3. *Losses from the Disease.*
4. *Suggestions as to the Restrictions to be enforced; Good Effect of the Cattle Plague Regulations.*
5. *Orders of the Privy Council.*
6. *Amount of Disease at the present Time.*
7. *Conclusions of the Committee.*

1. *Origin of the Disease in this Country; its Infectious Character:*

Conclusion that foot-and-mouth disease is not generally conveyed by means of mediate contagion, and that it is less infectious than cattle plague; the prevalence of this disease throughout the country is principally owing to the indiscriminate movement of diseased and infected animals, *Brown* 43–48. 913–921. 10083, 10084——Evidence at variance with the view that the continued importation of foreign animals is the cause of the introduction of foot-and-mouth disease, *ib.* 291, 292. 303–308. 507, 508. 548. 555——Existence of the disease in this country previously to foreign import, *ib.* 290, 291——Decided opinion that the disease is naturalised in this country, and would continue without aid of foreign supply, *ib.* 945, 946.

Possibility of the foot-and-mouth disease having been originally introduced by means of surplus ships' stores; conclusion that it was not spontaneously generated in this country, *Simonds* 1116–1119——Belief that the disease is atmospherical, and may be generated in this country, *Swan* 1773–1779.

Undoubted opinion that the foot-and-mouth disease was introduced into witness' herd by means of strange cattle having been driven along roads passing through his farm, *Booth* 2246–2248. 2313——Belief that the disease is foreign, though it has to some extent become acclimatised in England, *Booth* 2381–2385. 2420; *Sheldon* 4541–4563.

Contagious character of foot-and-mouth disease, *Hamilton* 4265, 4266——Witness submits that the disease is the direct result of cruelty and ill-usage, more especially on board the Irish boats, *ib.* 4273. 4280–4303. 4346–4351.

Doubt as to the disease originating otherwise than by contagion, *Wilson* 4984–4989——Witness contends that pleuro-pneumonia and foot-and-mouth disease are home diseases and are not imported, *Gebhardt* 5172–5178. 5674. 5677. 5713–5715——Consideration of exceptions taken to witness' view that foot-and-mouth disease occurs in this country, irrespectively of foreign import, *ib.* 5552–5561.

Conviction of witness that foot-and-mouth disease is atmospheric, *Pool* 5951, 5952. 6041——Prevalence of foot-and-mouth disease in England long before any foreign cattle were imported, *Giblett* 6567. 6576, 6577. 6698–6700——Witness submits that the disease is as much native as foreign, and that animals do not die from it, *ib.* 6719, 6720. 6727, 6728——Belief that the disease can only be conveyed by contagion, and that it was first introduced into England from abroad, *Stratton* 6816–6819. 6845–6849. 6862–6864. 6927–6932; *Howard* 8191–8196. 8411–8413.

Peculiarly contagious and infectious character of foot-and-mouth disease, the import of one or two diseased animals contaminating very large numbers, *Gamgee* 6959–6965——Witness contends that the disease was first introduced from abroad, although this conclusion may be at variance with the reports of the Veterinary Department of the Privy Council, *ib.* 7169–7173. 7208–7215. 7227——The disease was first called the epidemic; that is, in 1840–41, *ib.* 7172——Explanation as to the continuance of the disease in Ireland, though foreign cattle are not imported, *ib.* 7177–7180.

Witness is positive the disease does not arise spontaneously, *Read* 9619, 9620. 9664, 9665——Impression as to the disease being communicable to human beings, *ib.* 9703, 9704.

2. *Extensive Import of Diseased Animals:*

Introduction of 30,000 foreign animals affected with foot-and-mouth disease in the years 1875 and 1876, *Brown* 517–520——Large number of cargoes landed in the last three years which have been affected with the disease, *Wilson* 4701.

Very large number of cases of foot-and-mouth disease detected at the ports, these cases being dealt with in a variety of ways instead of under a uniform system, *Tisdall*

Report, 1877—*continued.*

FOOT-AND-MOUTH DISEASE—continued.

2. *Extensive Import of Diseased Animals*—continued.

9427, 9428——Import of many animals from Belgium and Holland with foot-and-mouth disease in 1875 without any official intimation from those countries, *Read* 9574-9576. 9668-9670. 9761.

3. *Losses from the Disease:*

Monetary loss by witness from foot-and-mouth disease to the extent of 30,000 *l.* or 40,000 *l.*, *Booth* 2341, 2342——Prejudicial effect of foot-and-mouth disease upon the milk of cows, *Baron von Behr* 2572, 2573——Very heavy losses of witness from the disease, *Rea* 3592-3594——Serious loss to farmers when their beasts are attacked with foot-and-mouth disease; average of more than 2 *l.* per head, and of 4 *l.* in some cases, *Sheldon* 4532-4537.

Severe losses from foot-and-mouth disease subsequently to the removal of the cattle-plague restrictions in 1865-1866; comment hereon upon the action of Government at the time in ceasing to furnish returns of the losses from disease, *Wilson* 4746-4750. 4754. 5095-5098——Particulars as to the serious losses of witness from foot-and-mouth disease and pleuro-pneumonia, those animals suffering most from the latter which had previously suffered from the former, *ib.* 4785-4798——Considerable loss of witness through an outbreak of foot-and-mouth disease among his ewes before lambing, *ib.* 4798——Illustration of the great loss to the country as well as to owners when cattle are attacked with the disease, *ib.* 4878-4885——Greater loss from foot-and-mouth disease than from pleuro-pneumonia or cattle plague, *ib.* 4886-4890. 4975.

Reference to certain calculations as to the enormous annual loss when foot-and-mouth disease is rife, as compared with the value of the total annual import of cattle, *Wilson* 5044-5051.

Representations in detail as to the exceedingly heavy losses incurred by farmers in Wiltshire by foot-and-mouth disease among cattle, sheep, and pigs; statistics hereon for the years 1872 and 1875, *Stratton* 6774-6783——Much greater loss by depreciation in value than by death; average of not less than 2 *l.* per head, whilst the loss on milch cows in summer is as much as 5 *l.* per head, *ib.* 6778, 6779. 6834-6836——Excessive prevalence of foot-and-mouth disease in other counties as well as in Wiltshire in 1872 and 1875, *ib.* 6865, 6866.

Serious loss of witness from foot-and-mouth disease in 1871 and 1873; average depreciation of 2 *l.* per head of cattle attacked, *Melvin* 8735-8741——Statement as to foot-and-mouth disease being far more infectious and destructive than pleuro-pneumonia, *Tisdall* 9473-9476.

Reference to the cessation of official returns of foot-and-mouth disease as having been due solely to the expense involved, *Brown* 10050, 10051——Great boon to the consumer in this country as well as to the farmer, by an eradication of foot-and-mouth disease, *ib.* 10227, 10228.

4. *Suggestions as to the Restrictions to be enforced; Good Effect of the Cattle Plague Regulations:*

Concurrence in the view as to the expediency of strict regulations at home with reference to the movement of animals, *Brown* 309. 313. 335-344. 513-516. 545-548. 820-826; *Wilson* 4764-4781; *Read* 9621-9626. 9671-9679——Proposed prohibition of movement from any centre where the disease is discovered, *Brown* 310——Readiness with which foot-and-mouth disease could be stamped out if it were the only disease we had to deal with, *ib.* 656-659——Movement of animals suffering from foot-and-mouth disease permitted under certain circumstances under an Order of the Privy Council, *ib.* 966.

Anticipated outbreak of foot-and-mouth disease averted by means of the existing restrictions in consequence of the cattle plague; belief that it would be quite possible to stamp out the disease in England, *Booth* 2335-2337. 2340. 2345, 2346. 2350-2356. 2367——Suggestions as to the regulations desirable, *ib.* 2367-2375. 2401-2408——Inexpediency of stamping out foot-and-mouth disease by slaughter; opinion that the stoppage of movement in infected districts would be sufficient, *ib.* 2367-2375. 2442-2446——Approval of more stringent restrictions in the case of this disease; suggested closing of local fairs and markets, *Rea* 3595 *et seq.* 3630-3636. 3646-3655. 3662, 3663.

Impossibility of stamping out foot-and-mouth disease, *Lambert* 3910. 3978. 4039, 4040——Expediency of the disease being unrestricted, with the exception of travelling on the high road, and being shown at store fairs; necessity of a heavy penalty to prevent this, *ib.* 3972. 3975. 4036. 4063. 4175-4177. 4181, 4182——Complaint as regards foot-and-mouth disease that the law in regard to it is harassing and vexatious in every way; argument that the remedy of stamping it out is worse than the disease, *ib.* 3954-3984. 4008-4011. 4036-4040. 4063-4069. 4126-4129.

Report, 1877—*continued.*

FOOT-AND-MOUTH DISEASE—continued.

4. *Suggestions as to the Restrictions to be enforced, &c.*—continued.

Approval of strict regulations for stamping out cattle plague and pleuro-pneumonia, but not foot-and-mouth disease, *Hamilton* 4268–4273. 4299–4303——Facilities desirable for the removal of cattle suffering from foot-and-mouth disease to slaughter-houses, *ib.* 4274-4276.

Considerations as to the severe restrictions desirable in order to exterminate foot-and-mouth disease, *Sheldon* 4662–4674——Doubt as to the necessity of so long a period as six years for stamping out the disease, *Wilson* 4775-4778. 5077——Dissent from the conclusions of the Select Committee of 1873 as to the modified restrictions desirable, *ib.* 5099, 5100.

Existence of this disease in nearly every country, as well as England, witness strongly disapproving of the restrictions in reference to the import of cattle affected with the disease, *Giblett* 6570. 6576-6579. 6615-6625. 6725-6728.

Statement showing the beneficial effect of the cattle-plague restrictions in stamping out foot-and-mouth disease, *Stratton* 6812–6815. 6935-6937——Expediency of the proposed continuance of restrictions with a view to stamping out foot-and-mouth disease and pleuro-pneumonia, *ib.* 6826-6833. 6845-6849——Expediency of the compulsory slaughter of all animals affected with foot-and-mouth disease; satisfaction to be given to farmers thereby, *ib.* 6917-6920.

Conclusion as to the facility of stamping out this disease by stopping foreign import; the disease would in such case die out, *Gamgee* 6966-6970. 7025——Modified restrictions necessary if foreign cattle be excluded, *ib.* 6993–6996. 7024——Further statement that the disease will promptly die out, if foreign cattle be excluded, *ib.* 7080. 7087. 7108–7111.

Suggestions for an improved system of isolation in cases of foot and mouth disease; objection of the farmers to a stoppage of any general movement or of markets on account of the disease, *Saulby* 7289–7302. 7320, 7321. 7336, 7337——Conviction of witness that disease should be dealt with immediately, and stamped out by strict measures, which he considers quite feasible, *Howard* 8282–8286. 8390. 8394–8407. 8414–8418——Suggested prohibition of movement for one month out of any area in which foot-and-mouth disease has occurred, *Melvin* 8818, 8819.

Tendency of the disease to die out after a time; belief that if not re-imported it could be very easily suppressed throughout the country, *Read* 9600-9603. 9660-9667——Great loss caused more especially by foot-and-mouth disease, so that effectual measures should be adopted for its isolation and suppression, *ib.* 9750–9752——Proposed localisation of the restrictions upon movement, *ib.* 9754.

Important effect of the cattle-plague regulations and restrictions in diminishing the amount of disease throughout the country; particulars hereon, *Brown* 9874–9885——Conviction of witness that the disease will increase when the regulations now in force over the country, and the cordon round the metropolis are removed, *ib.* 9883.

Further statement that in order to eradicate foot-and-mouth disease from England the necessary restrictions must continue in force for a considerable time, *Brown* 9886–9890——Suggestions as to the restrictions necessary in reference to movement from localities where disease exists, *ib.* 9890–9894. 10056, 10057. 10101, 10102. 10270-10274——Conclusion that a prohibition of import would not suffice for the disappearance of the disease, unless accompanied by stringent precautions at home, *ib.* 9890–9894.

Diminution of foot-and-mouth disease by means of local restrictions, though when the disease is prevalent over the whole country more extensive and stringent regulations are necessary, *Brown* 9989, 9990——Expediency restrictions as to the slaughtering of home cattle in contact with others having foot-and-mouth disease, *ib.* 10059-10063——Opinion that if the necessary restrictions were not thwarted by the farmers, the disease might be obliterated in twelve months, *ib.* 10087–10092. 10229——Doubt as to the disease having died out naturally in some counties where restrictions have not been enforced, *ib.* 10261–10263.

5. *Orders of the Privy Council:*

Orders issued by the Privy Council in relation to the foot-and-mouth disease, to the effect that the action should be the same all through the country, *Brown* 595–606——Order in force at present that if one animal in a foreign cargo is found affected with the disease the whole of such cargo shall be slaughtered, *ib.* 736–742.

Regulations laid down in the various Orders of Council since August 1873, on the subject of foot-and-mouth disease, *App.* 512 *et seq.*

Form of movement license prescribed by the Animals Order of 1875, *App.* 533.

6. *Amount*

Report, 1877—*continued.*

Foot-and-Mouth Disease—continued.

6. *Amount of Disease at the present Time:*

Considerable freedom of this country from foot-and-mouth disease at the present time, *Booth* 2357-2360——In May last there were twenty-four counties in England subject to the disease, *Brown* 10281.

7. *Conclusions of the Committee:*

Reference by the Committee to the great losses entailed by the disease, *Rep.* iv——Conclusion as to the home restrictions necessary in reference to the disease; suggestion that absolute prohibition of movement be enforced against infected farms for twenty-eight days, *ib.* v. ix, x.——Summary of the regulations and restrictions proposed, *ib.* ix, x.

Foreign Cattle:

I. *As to the Import of Live Cattle:*

1. Advocacy of Prohibition of Import, in view of the Liability to Cattle Plague and other Diseases.
2. Evidence in Defence of continued Facilities of Import.
3. Amount of Import hitherto.
4. Orders and Regulations of the Privy Council.

II. *As to the Slaughtering of Foreign Cattle at the Port of Debarkation:*

1. Evidence favourable to an Extended System of Compulsory Slaughter of Foreign Cattle.
2. Evidence adverse to the foregoing Proposal.
3. Notice necessary before Application of the Proposal.
4. Orders and Regulations of the Privy Council.

III. *As to the Import of Disease by means of Foreign Cattle; conflicting Evidence on the Subject.*

IV. *Conclusions and Recommendations of the Committee.*

I. *As to the Import of Live Cattle:*

1. Advocacy of Prohibition of Import, in view of the Liability to Cattle Plague and other Diseases:

Concurrence of evidence in favour of prohibition of import of live cattle, in view of the danger of importing cattle plague, *Brown* 314-344. 509-513. 699 *et seq.*; 889, 890. 976-978. 1068-1070. 9906, 9907. 10438-10440; *Booth* 2350 *et seq.*; *Wilson* 4976; *Giblett* 6566-6568; *Gamgee* 6940 *et seq.*; *Soulby* 7258-7266. 7268, 7269; *Rudkin* 8982; *Read* 9577-9579. 9649-9659. 9724-9727——Opinion that slaughter at the port of debarkation would not be a sufficient protection against the cattle plague, *Simons* 1197. 1208.

Expediency of prohibiting the importation into this country of live stock, even if there were no such disease as cattle plague; grounds for this opinion, *Booth* 2322. 2326. 2335. 2361, 2362. 2376-2380. 2386-2391. 2424, 2425——Argument that cattle plague, pneumonia, and foot-and-mouth disease undoubtedly came to this country from the Continent, and that if importation were strictly prohibited from infected countries we should get rid of these diseases eventually, *ib.* 2381-2385. 2438-2441.——Expediency of prohibiting the importation of cattle from Russia, where cattle plague has always existed, *Lyon* 3303.

Expediency of prohibiting the import of cattle from abroad in conjunction with severe restrictions at home; legitimate complaint which the farmers would have if severe restrictions were imposed at home, without dealing with the fountain-head of the disease, which is importation from the Continent, *Rea* 3607-3612. 3660-3664. 3669. 3675-3679. 3704-3715. 3734-3736. 3764. 3770-3782. 3790-3796——Decided opinion that the prohibition of the importation of foreign cattle would be a benefit and not a loss to the country, *ib.* 3803-3805.

Opinion that the importation of live cattle from the Continent should be entirely prohibited as a security against cattle plague chiefly, and as a protection also against pleuro-pneumonia and foot-and-mouth disease, *Sheldon* 4514-4522. 4563-4573. 4579-4581——Explanation that witness would not exclude animals from any country distinctly proved to be absolutely free from disease, *ib.* 4569-4572——Difficulty in applying sufficient

FOREIGN CATTLE—continued.

I. *As to the Import of Live Cattle*—continued.

1. Advocacy of Prohibition of Import, &c.—*continued.*

precautions for preventing the import of foot-and-mouth disease and pleuro-pneumonia short of absolute prohibition of all import of live cattle, *Sheldon* 4860–4684.

Resolution passed by the Council of the Agricultural Society in March last in favour of the total prohibition of the import of live stock from European ports, this resolution having led to the present inquiry, *Wilson* 4692–4695——Necessity of stringent regulations at home concurrently with prohibitory regulations as to foreign import, *ib.* 5116, 5117.

Witness gave evidence before the Select Committee of 1873, and fully adheres to the conclusions and recommendations then expressed by him upon the questions at issue, *Gamgee* 6940–6956——Confirmation of witness in his former opinion that the import of live cattle should be prohibited in conjunction with a system of slaughtering at the port of debarkation, and of quarantine in the case of store cattle, *ib.* 6949, 6950. 6955, 6956. 7004–7006. 7023–7025.

Statement as to the improved position of the farmer previously to the import of foreign cattle in 1840, *Gamgee* 6999. 7104–7107——Comment upon the omission of the governing authorities to be guided by the experience of the past as regards the exclusion of foreign cattle, *ib.* 6999.

Further argument that the import of live cattle should be at once absolutely stopped, and that a largely increased dead-meat trade will immediately arise, *Gamgee* 7033–7036. 7085–7103. 7112–7120——Entire dissent from Mr. Giblett's evidence as to the advantages of a live cattle-trade over a dead-meat trade, *ib.* 7216, 7217. 7228.

Disapproval of import from any country where cattle plague is known to exist, *Soulby* 7258–7260——Approval, however, of import from Denmark, Spain, and any other countries if it can be proved that no risks are incurred thereby, *ib.* 7261–7267. 7332.

Evidence in support of the conclusion that an improved system of inspection and increased restrictions generally on the part of Germany and other foreign countries cannot be relied upon as sufficient precaution against the export of diseased animals to England, *Read* 9567–9576. 9682, 9683. 9761–9763.

Witness further submits that import should be entirely prohibited from Germany and Belgium, and that cattle from other countries should be slaughtered at the port of landing, as the only means of effectually keeping contagious diseases out of the country, *Brown* 9906, 9907. 10438–10440.

2. Evidence in Defence of continued Facilities of Import:

Grounds for the opinion that if the importation of cattle in England from any part of the world were absolutely prohibited it would be a very serious calamity to the public, *Hall* 2981–2986——Decided opinion that the introduction of live cattle from abroad is absolutely material to the supply of London; argument that to shut them out would be very unwise policy, *Lyon* 3153. 3156. 3303. 3400. 3447——Expediency of bringing over all continental meat supplies in the shape of live animals; great importance to this country of the continental supply of live cattle, *ib.* 3167–3169. 3337, 3338. 3399–3401. 3440. 3447. 3511–3536——Inexpediency of stopping the importation of live cattle into England; belief that such a measure would be a great public disadvantage, *Lambert* 4059–4062.

Conclusion as to the inexpediency of further restrictions upon import as regards pleuro-pneumonia and foot-and-mouth disease; strict regulations in force at the foreign port, *Gebhardt* 5182–5185——Importance of a continued supply of the comparatively inferior cattle taken from London for country and mining districts; explanation that the meat is sound and good, though the animals are small, *ib.* 5494, 5495. 5648–5654——Existence of foreign import for about thirty-five years, whilst the American supply is comparatively untried; expediency of trade being allowed to regulate itself as between the two modes of supply, *ib.* 5510–5513. 5677–5684. 5769, 5770. 5777, 5778——Desire further expressed by witness for a modification of the present restrictions upon import as soon as they can be safely relaxed, *ib.* 5745–5748.

Belief that cattle epidemics cannot be prevented by stopping foreign import, *Pool* 5837——Opinion that foreign import should be entirely stopped from all countries which cannot show a clean bill of health, but not from healthy countries, *ib.* 5838. 6001, 6002——Interest of witness in the import of live cattle, though he would not allow them to come if there were real danger of disease thereby, *ib.* 5953–5959.

Conviction of witness that an entire exclusion of foreign cattle would never answer, *Giblett* 6680, 6681.

3. Amount

Report, 1877—*continued.*

FOREIGN CATTLE—continued.

I. *As to the Import of Live Cattle*—continued.

3. Amount of Import hitherto:

Impossibility of making a satisfactory computation of the proportion that the import of cattle bears to the consumption in England; belief that the introduction of dead meat does not materially affect the calculation, *Brown* 680-692.

Total of 75,430 foreign beasts, and 77,150 English beasts sold in the Islington market in the five months, July to November 1876, *Gebhardt* 5215, 5216——Few foreign cattle sold in the first six months of 1877, import from Germany being prohibited, *ib.* 5224.

Sale of 81,480 British cattle, and of only 32,640 foreign cattle in the first six months of 1876, *Gebhardt* 5410——Total of about 158,000 English, and 108,000 foreign cattle sold in eleven months in 1876, *ib.* 5412, 5413.

Exception taken to certain statistics as to the comparatively small import of foreign cattle in relation to the home supply generally; large import of the former into London, *Giblett* 6715-6718. 6763-6765.

Different period of the year at which cattle are imported from Denmark, Germany, Holland and other countries, *Robinson* 8548-8553——Doubt as to the amount of import of live stock in proportion to the total consumption, *Lyon* 3356. 3366-3368.

4. Orders and Regulations of the Privy Council:

Regulations and restrictions under various Orders of Council since August 1873, in reference to import from different foreign countries, *App.* 512 *et seq.*

II. *As to the Slaughtering of Foreign Cattle at the Port of Debarkation:*

1. Evidence favourable to an extended System of Compulsory Slaughter of Foreign Cattle:

Desirability from a sanitary point of view of sending all imported cattle to Deptford, or of making arrangements for slaughtering at Thames Haven, *Brown* 725, 726——Suggestious as to the countries which should be scheduled in regard to importation of cattle, *Simonds* 1218-1223. 1266-1274. 1278-1291.

Insufficiency of inspection and slaughter at the port of debarkation as a means of preventing the spread of cattle plague, so that the Agricultural Society were constrained to recommend total prohibition of import, *Wilson* 4701. 4704——Alternative proposition that prohibition of import be confined to those countries in which disease is known to exist, or into which diseased animals are introduced, and that import be allowed from other countries provided the cattle be slaughtered at the port of debarkation, *ib.* 4719-4725. 5083-5086——Limited risk of the spread of disease if the animals be slaughtered on landing, *ib.* 4827, 4828——Less severe restrictions required as to slaughter in the case of pleuro-pneumonia than of cattle plague, *ib.* 4890-4892.

Recommendations by the Central Chamber of Agriculture on the subject of slaughter at the port of debarkation, *Stratton* 6788.

Concurrence of evidence in favour of the compulsory slaughter at Deptford of all foreign cattle coming into the Port of London, *Stratton* 6853; *Odams* 7967-7970; *Howard* 8274-8278; *Robinson* 8579. 8586-8590. 8604-8606. 8949-8654; *Rudkin* 8955-8960. 8967, 8968. 9086-9091. 9146-9148.

Explanation of witness' views in favour of the total prohibition of the import of fat animals, save for slaughter, *Gamgee* 6949, 6950. 6955, 6956. 7004-7006. 7023-7025.

Witness recommended in 1873, and still considers, that all foreign fat cattle coming in the holds of vessels should be slaughtered at the port of debarkation; that is, on the score chiefly of the proved failure of inspection, *Odams* 7934-7946. 8006-8017. 8026, 8027. 8040-8043. 8052-8055. 8071-8074. 8137——Advocacy of the slaughtering of all foreign fat cattle at the port of entry, *Howard* 8200, 8201. 8251-8255. 8269, 8270. 8313-8325. 8405-8410.

Conclusion that cattle from all foreign countries should be slaughtered at Deptford; objection to any exception in favour of Denmark, or any other country comparatively free from disease, *Robinson* 8579-8601. 8656-8660——Opinion that neither from America, Spain, Denmark, nor any other country, should cattle be admitted for circulation in England, but should be slaughtered at the port of landing, *Melvin* 8868-8875.

Conclusion, reluctantly arrived at, that all foreign cattle should be necessarily slaughtered at the port of landing, there being defined ports for the purpose, *Rudkin* 8958, 8959. 8981. 9085, 9086. 9140-9148. 9163, 9164. 9219——Objection to an absolute prohibition

Report, 1877—*continued.*

FOREIGN CATTLE—continued.

II. *As to the Slaughtering of Foreign Cattle, &c.*—continued.

1. Evidence favourable to an extended System, &c.—*continued.*

of the import of live animals into London; probable effect for some time in raising the price of meat, *Rudkin* 9099-9103. 9205, 9206——Belief that compulsory slaughter at Deptford would not have the effect of discouraging the import of live animals from abroad, *ib.* 9144-9148——Statement that the Corporation of London is actuated solely by public considerations in advocating slaughter at Deptford, *ib.* 9151-9153.

Approval of a cordon round other large towns as well as London, so that foreign cattle might be admitted within the cordon for slaughter, *Rudkin* 9202, 9203.

Strong advocacy of the slaughtering of all foreign fat cattle at the port of debarkation, as recommended by the Cattle Plague Commission in February 1866, *Read* 9517, 9518. 9521. 9641, 9642. 9647, 9648. 9724-9727. 9759-9764.

Argument also that in order to extirpate pleuro-pneumonia and foot-and-mouth disease it is essential to slaughter all foreign cattle, sheep, and pigs at the port of debarkation, *Brown* 10016-10019. 10045.

2. Evidence adverse to the foregoing Proposal:

Disapproval of slaughter at the port of debarkation as regards protection to the health of the stock in this country; argument that there should be no restriction as to cattle from countries where the plague does not exist, *Swan* 1650, 1651. 1683-1690.

Belief that if all the cattle imported to Deptford had to be slaughtered at the port of debarkation the production would greatly diminish, *Thomsen* 2170-2174.

Importance of continuing the importation of live cattle into England, and of not depending wholly upon dead meat; absolute necessity for a butcher to have live animals on his premises so as to slaughter them as his trade requires, *Lyon* 3153 *et seq.* 3511-3536.

Opinion that the regulations as to slaughter at the port should be relaxed, and that we should return to the regulations in force before the last outbreak of cattle plague, *Gebhardt* 5434-5437——Decided objection to an extended system of compulsory slaughter at Deptford, *ib.* 5483-5493——Limited inconvenience through the uncertainty whether any cargo may not be ordered to Deptford on the score of disease, *ib.* 5486-5489—— Heavy penalty upon foreign dealers in the loss incurred when they ship diseased animals which are subsequently slaughtered, *ib* 5659, 5660.

Expediency of complete free trade with all healthy countries, the cattle being allowed to go to a public market instead of being slaughtered at Deptford, *Pool* 5838, 5839. 6001-6009. 6039-6044. 6072-6081——Approval of foreign cattle being freely imported from all countries save where there is cattle plague, without any restriction as to slaughtering at the port, *Walker* 7825, 7826. 7908, 7909——Effect of compulsory slaughter in diminishing the imports, *Knowles* 9247. 9280.

3. Notice necessary before Application of the Proposal:

Fairness in at least giving due notice to the foreigner before import is prohibited or compulsory slaughter at the port is required, *Gebhardt* 5677. 5769, 5770——Long notice necessary before applying a system of compulsory slaughter of foreign animals, *Rudkin* 9205, 9206——Notice required to be given before applying restrictions as to slaughtering at the ports generally; expediency of this being done by Act other than by Order of Council, *Brown* 10020, 10021, 10040, 10041. 10204, 10205.

4. Orders and Regulations of the Privy Council:

Directions of the Privy Council in sundry Orders of Council since August 1873 on the subject of slaughter at the port of debarkation, *App.* 512 *et seq.*

III. *As to the Import of Disease by means of Foreign Cattle; conflicting Evidence on the Subject:*

Information in detail respecting the origin of the several cattle diseases in this country; conclusion that pleuro-pneumonia and foot-and-mouth disease arise irrespectively of foreign import, *Brown* 291, 292. 333-308. 507, 508. 548-555. 811-820. 851, 852. 945, 946——Belief that both pleuro-pneumonia and foot-and-mouth disease are originated only by infection, *ib.* 913-921. 10083, 10084.

Considerations as to the effect of importation upon the introduction of cattle disease into England, *Simonds* 1110 *et seq.*——Opinion that contagious diseases of cattle are never originated spontaneously in Western Europe, but that they are spread by contagion, *Müller* 1591.

Concurrence in the view that pleuro-pneumonia and foot-and-mouth disease are native as well as foreign, *Swan* 1773-1779; *Gebhardt* 5172-5178, 5552-5561. 5713-5715; *Pool* 5951, 5952; *Giblett* 6567. 6576, 6577. 6698-6700. 6719, 6720——Opinion that

cattle

Report, 1877—*continued.*

FOREIGN CATTLE—continued.

III. *As to the Import of Disease by means of Foreign Cattle, &c.*—continued.

cattle plague is an imported disease, but that pleuro-pneumonia and foot-and-mouth disease can be generated in this country without either contagion or infection from abroad, *Swan* 1773-1776.

Concurrence of evidence to the effect that pleuro-pneumonia and foot-and-mouth disease owe their existence in this country to the import of foreign cattle, *Booth* 2381–2385; *Sheldon* 4541–4563; *Stratton* 6816-6819. 6845-6849. 6927-6932; *Gamgee* 7169 *et seq.*; *Howard* 8191–8196; *Read* 9619, 9620. 9664, 9665——Belief that not only cattle plague but pleuro-pneumonia and foot-and-mouth disease came originally into this country from abroad, though the latter two diseases may since have become indigenous, *Booth* 2381–2385. 2420; *Sheldon* 4541–4563.

Decided opinion as to the generally healthy state of the Schleswig-Holstein, the Danish and the Spanish cattle; occasional instances of pleuro-pneumonia in Dutch cattle, *Lyon* 3187-3189. 3194-3196. 3287–3289——Less amount of foot-and-mouth disease in foreign than in home cattle; opinion that the health of foreign cattle contrasts favourably with that of our own, *ib.* 3502. 3554–3557. 3560-3563——Result of witness' experience that continental cattle have much less disease than English cattle, *Giblett* 6616–6622.

Witness does not consider Professor Brown an authority on contagious cattle diseases: witness' views on the subject have on the other hand invariably proved correct, *Gamgee* 7088–7090——Evidence purporting to show that pleuro-pneumonia, foot-and-mouth disease, cattle plague, and certain other diseases, were originally imported into this country from abroad, *ib.* 7169–7173. 7204–7215. 7227——Several diseases indigenous to the cattle of this country, *ib.* 7204, 7205.

Belief in the germ theory, as regards the production of contagious diseases, *Howard* 8190. 8196. 8260. 8360, 8361. 8389——Grounds for the conclusion that pleuro-pneumonia and foot-and-mouth disease are not produced spontaneously in England, but come from abroad; neither of these diseases in this country formerly, *ib.* 8191–8196. 8411–8413——Diseases attributed to foreign import, *Smith* 8457; *Melvin* 8777.

IV. *Conclusions and Recommendations of the Committee:*

Proposed addition to the list of scheduled countries, all fat cattle imported therefrom to be slaughtered at the port of debarkation, *Rep.* vi. ix.

Recommendation that as a statutory arrangement the importation of all animals from Russia, and of cattle from Germany (except Schleswig-Holstein) and Belgium, be prohibited, and these last two countries as to other animals, and the rest of Europe as to all animals, should be added to the last of scheduled countries, with power to the Privy Council to forbid the importation of animals from other countries if they think fit, *Rep.* vi. ix.

Considerable improvement expected from a system of compulsory slaughter at Deptford, *Rep.* vii.

Proposal that the commencement of the change be postponed for a time sufficient to enable the necessary preparations to be carried out, *Rep.* vii.

See also *American Cattle. Australia. Belgium. Canada. Cattle Plague. Cattle Salesmen. Cattle Ships. Dead Meat. Denmark. Deptford Market. Farmers. Foot-and-Mouth Disease. France. Free Trade. Germany. Glasgow. Holland. Home Supply. Inspection. Liverpool. Metropolitan Cattle Market. Pleuro-pneumonia. Ports. Price of Meat. Quarantine. Russia. Schleswig-Holstein. South America. Spain and Portugal. Store Cattle. Sweden and Norway.*

France. Discontinuance of import from France since the necessity of slaughtering at Deptford, *Gebhardt* 5735–5738——Tendency to reduction of price in France if foreign cattle be excluded from England: question whether this might not induce foreign producers to send dead meat to this country, *Pool* 6050–6056.

Great falling off in the consignments of French cattle to witness since the restrictions in force as to slaughtering at Deptford, *Giblett* 6483–6497. 6624. 6733——Considerable amount of foot and mouth disease among cattle from France: belief that this is largely engendered at Deptford, *ib.* 6701–6707——Greatly diminished supply from France since the late war, *Robinson* 8549, 8550.

Free Trade. Interference with free trade by barring the import of foreign cattle: approval of competition by means of a dead meat supply, *Gebhardt* 5240. 5254, 5255——Witness submits that there should be free trade and an open market, except for cattle from countries where there is contagious disease, *Pool* 5838, 5839. 6001–6009. 6035–6044. 6078, 6079. 6072–6081——Decided opinion that every facility should be given to the import both of live cattle and dead meat, *Giblett* 6524. 6569. 6769.

Report, 1877—*continued.*

Free Trade—continued.

Cheerful acceptance of free trade by English farmers: natural desire, however, for security against disease, *Howard* 8202, 8203. 8371. 8392, 8393——Advocacy of free trade, but not of free trade in cattle disease, *Melvin* 8904, 8905——Opinion that there should be free trade alike in dead meat and live cattle, but not in the import of disease, *Rudkin* 9031. 9037-9039. 9099, 9100. 9163. 9204.

Freights. Relative cost of freight of live cattle and of dead meat; obstacle on this score to the profitable import of live cattle, save from America, *Hamilton* 4377-4384. 4397-4403——Much cheaper freight in the case of dead meat than of live stock, *Sheldon* 4594-4598.

Less cost in the transmission of dead meat than of live stock; objection, however, to free trade in the matter, *Wilson* 4998-5001——About equal cost in bringing a live animal from Hamburg and a carcase from America, *ib.* 5069-5073——Conclusion as to the higher freight when an animal comes as dead meat from Hamburg or Holland to Hull than when it comes alive, *Knowles* 9286-9290. 9329-9332.

See also *American Dead Meat*, III. *Cattle Ships. Ireland, &c.*, 1-3.

G.

Gamgee, Professor John. (Analysis of his Evidence.)—Has devoted many years to the exclusive study of cattle diseases, and the means of exterminating them, 6938, 6939——Gave evidence before the Select Committee of 1873, and fully adheres to the conclusions and recommendations then expressed by him upon the questions at issue, 6940-6956.

Confirmation of witness in his former opinon that the import of live cattle should be prohibited, in conjunction with a system of slaugtering at the port of debarkation, and of quarantine in the case of store cattle, 6949, 6950. 6955, 6956. 7004-7006——Views expressed by witness in 1869 and 1873 as to the feasibility of a dead-meat trade from abroad by means of a refrigeration process; part taken by him in leading to the subsequent development of this trade, 6951-6954. 6957. 6983. 7020-7022——Calculation that from 70 to 75 per cent. of the total mortality of cattle in this country is due to international or foreign disease, 6958-6960.

Peculiarly contagious and infectious character of foot-and-mouth disease, the import of one or two diseased animals contaminating very large numbers, 6959-6965——Conclusion as to the facility of stamping out this disease by stopping foreign import; the disease would in such case die out, 6966-6970. 7025——Positive and definite character of the restrictions required as regards pleuro-pneumonia, the stoppage of import being essential, 6971-6975——Reduced losses from cattle plague by reason of the prompt remedies applied for its suppression, 6976-6982.

Very large dead-meat supply expected not only from America but from the Continent, if live cattle be entirely excluded, 6983-6992——Activity in the foreign dead-meat trade during the restrictions upon import in 1865; 6986——Immense supply of cattle in America (including some 10,000,000 in Texas) available for export to England in the form of dead meat, 6989-6991——Disapproval of severe restrictions upon inland movement of cattle as not necessary in regard to foot-and-mouth disease if foreign cattle be excluded, 6993-6996——Expediency of a minimum of interference with the home trade generally, 6994. 7024——Improbability of any danger from the import of live stock from Canada; witness would prefer, however, to prohibit all import, 6996, 6997. 7003, 7004—— Liability to the import of pleuro-pneumonia by American cattle, 6997.

Existence of pleuro-pneumonia in Denmark in recent years, whilst in former times cattle plague came to this country from Denmark, 6998-7002——Disease and scarcity in the period from 1714 to 1770, cattle plague having been imported, whilst from 1770 to 1840 (when there was no import of foreign cattle), the home supply greatly increased, and the price of meat was much cheaper, 6999——Comment upon the omission of the governing authorities to be guided by the experience of the past as regards the exclusion of foreign cattle, *ib.*

Reluctant approval of a system of quarantine for store cattle; very stringent regulations desirable in connection therewith, 7006-7011——Expected readiness of dairymen in the metropolis to submit to strict regulations for the suppression of lung disease, 7008. 7017-7019——Conclusion, however, that it would be much better if all large towns were supplied with milk by means of suburban dairies, 7012-7014. 7017——Reduced supply and increased price of milk in towns (as in Dublin) since the introduction of disease, 7014-7016.

Particulars relative to experiments by witness in Texas, in 1869, which resulted in the application of the dry cold air process, since adopted in the American dead-meat trade, 7020-7022.

Further explanation of witness' present views in favour of the total prohibition of the import of live animals, save for slaughter, or under quarantine in the case of store cattle, 7020-7025.

[Second

Report, 1877—*continued.*

Gamgee, Professor John. (Analysis of his Evidence)—*continued.*

[Second Examination.]—Prevalence of cattle diseases in Schleswig-Holstein at different periods, 7028–7032——Further advocacy of a prohibition upon the import of live stock, whilst there should be but little restriction upon the home trade, 7033–7036. 7056, 7057——Expediency of stopping import from Spain and Portugal, though the cattle are naturally healthy, 7037–7039. 7141–7144.

Limited extent to which the dead meat import took the place of the live cattle import when the latter was restricted in 1865; 7040–7042——Examination as to the data for witness' conclusion that some 70 per cent. of the cattle mortality in England was due to imported diseases; reference more especially to the very large mortality from pleuro-pneumonia, 7043–7055. 7061–7074——Necessity of isolation and other preventive home measures for pleuro-pneumonia, but only for a time, 7056, 7057.

Question considered as to the accuracy of witness' computation that there are 10,000,000 cattle in Texas, 7058–7060*——Much greater liability of England than of Ireland to be affected with international diseases, 7075–7079——Spread of disease mainly from the large towns, 7079——Further statement that foot-and-mouth disease will promptly die out, if foreign cattle be excluded, 7080. 7087. 7108–7111——Infection of Holland through having imported foreign cattle, or through mediate contagion, 7081–7085. 7109, 7110.

Further argument that the import of live cattle should be at once absolutely stopped, and that a largely increased dead-meat trade will immediately arise, 7085–7103. 7112–7120——Witness does not consider Professor Brown an authority on contagious cattle diseases; witness' views on the subject have, on the other hand, invariably proved correct, 7088–7090——Facility for making improved arrangements for the storage and transit of dead meat on arrival from America, 7095–7103. 7120–7126. 7217.

Belief that the price of meat would not be affected to the extent of one farthing a pound by at once excluding foreign cattle, 7099, 7100. 7112–7115——Further statement as to the improved position of the farmer previously to the import of foreign cattle in 1840; 7104–7107——Facility in establishing a dead-meat trade from the Continent as well as from America, 7115–7117——Perfectly sound state in which the offal may be imported, 7118.

Belief that prices will in time be much lower by the adoption of witness' proposals, 7124. 7136——Evidence in support of the conclusion that there is much more deterioration and waste in the transportation of live animals than of dead meat, 7126–7135. 7216. 7221. 7228——Steps taken in the establishment of a tinned-meat trade from South America, as well as from Australia, 7138–7140.

Further objection to the import of live stock from Holland, notwithstanding the precautions in that country against disease, 7145–7149——Similar objection in the case of Denmark, 7150–7155——Large surplus supplies of cattle in the States, though there may be a slight rise in prices through the English demand, 7156, 7157.

Doubt as to the expediency of preventing the import of offal and hides and dead meat on account of the risk of import of disease thereby, 7158–7165. 7223–7226——Approval of the exclusion of live sheep as being liable to communicate foot-and-mouth disease, 7166——Facility in the transport of sheep in the form of dead meat; practical experience of witness to this effect, 7167. 7200–7202——Opinion that Ireland should be treated as part of England, 7168——Prejudicial effect upon trade by the system of scheduling different foreign countries at different times, *ib.*

Further evidence purporting to show that pleuro-pneumonia, foot-and-mouth disease, cattle plague, and certain other diseases were originally imported into this country from abroad, 7169–7173. 7204–7215. 7227——Conclusion that in a very limited period of time, such as six months, pleuro-pneumonia might be stamped out, 7174–7176——Explanation as to the maintenance of foot-and-mouth disease in Ireland, though foreign cattle are not imported, 7177–7180.

Examination upon the question whether in the reign of George II. an Act was not passed prohibiting import on account of the cattle plague in the country; denial that there was complete exclusion of foreign cattle previously to the outbreaks in former times, 7181–7196. 7236–7238——Facility of artificially producing ice on board dead-meat ships, 7197–7199——Several diseases indigenous to the cattle of this country, 7204, 7205.

Witness repeats that foot-and-mouth disease was first introduced from abroad, although this conclusion may be at variance with the reports of the Veterinary Department of the Privy Council, 7208–7215. 7227——Entire dissent from Mr. Giblett's evidence as to the advantages of a live cattle trade over a dead-meat trade, 7216, 7217. 7228——Improved arrangements required both in England and America in connection with one dead-meat trade; these are quite feasible, 7217–7222.

Direct interest of Mr. Giblett and other cattle salesmen in upholding the import of live cattle, and in opposing the development of the dead-meat trade; twice as much commission is charged for the sale of a foreign bullock as of an English bullock, 7228–7235——Reference to an Act of Charles II., prohibiting the import of foreign cattle as having been passed irrespectively of the cattle plague, 7236–7238.

Report, 1877—*continued.*

Gebhardt, Herrman. (Analysis of his Evidence.)—Long and extensive experience of witness in connection with the import of foreign cattle; he was examined on the subject before the Select Committees of 1868 and 1873; 5130–5134.

Undue delay on the part of the authorities of Hamburg in telegraphing information as to the outbreak of cattle plague in reference to the cargo of the "Castor"; prohibition of the landing of these cattle if a telegram had been sent direct to the Privy Council, 5135–5142. 5147—— Undue delay also, after the arrival of the cattle at Deptford, before they were killed and destroyed; dilatory and defective course pursued in boiling down the bodies, 5143, 5144. 5162–5170 —— Facility of obtaining prompt information from Germany whenever cattle plague brakes out, so that any vessel on the route might be stopped in time, 5145–5147.

Belief that if the increased restrictions proposed in Germany be properly carried out, cattle plague could never escape out of the country, 5148–5150——Special interest of Germany in the suppression of cattle plague, oxen being used for ploughing, 5151–5154 ——Stringent powers in the hands of the central authority in Germany, 5154, 5155. 5165, 5166——Importance of the regulations in this country being entirely under the control of the Privy Council, instead of their being enforced by local authorities, 5155–5161. 5171——Expediency of diseased carcases being buried instead of boiled down, 5162–5164.

Practical experience upon which witness concludes that pleuro-pneumonia and foot-and-mouth disease arise spontaneously, and cannot be stamped out by restrictions, 5172–5178——Reported outbreak of pleuro-pneumonia in Cornwall, said to have come from Ireland, 5178–5181——Conclusion as to the inexpediency of further restrictions upon import as regards pleuro-pneumonia and foot-and-mouth disease; strict regulations in force at the foreign port, 5182–5185.

Good condition and excellent quality of some American meat on arrival in this country, whilst on the other hand a large quantity is in very bad condition, is quite unfit for food, and is sold for about 1½*d.* per pound, 5186–5192. 5250, 5251——Probability of increased care in transmission with a view to the permanent establishment of a profitable trade, 5193–5197——Doubt as to diseased dead meat being capable of spreading disease, 5198–5201.

Grounds for the conclusion that it would never pay to send dead meat from the Continent to England, the import of live cattle being prohibited, 5202–5212——Difficulty as to supplies of ice for refrigerating meat from the Continent, 5203–5206——Large decrease of late in the supply of cattle from Germany, 5213.

Statement showing that in the five months, July to November 1876, there were 73,940 more foreign sheep than English sheep sold in the London market, 5214–5223——Total of 75,430 foreign beasts and 77,150 English beasts sold in the Islington market in the foregoing five months, 5215, 5,216——Very large import of foreign sheep in the first six months of 1877; 5223——Few foreign cattle sold, import from Germany being prohibited, 5224.

Considerable diminution in the export of sheep to England since France has opened her frontier; better price obtainable in Paris than at Deptford Market, 5225–5234—— Great demand for foreign sheep throughout the provinces; lower price by 1½*d.* or 2*d.* per pound realised by foreign than by English sheep, 5228——Strong objection to the restrictions as to the slaughter of foreign sheep at Deptford, 5230. 5235, 5236.

Opinion that there is no scope for a large increase in the home supply of cattle, foreign cattle being excluded, 5237–5239——Interference with free trade by barring the import of foreign cattle; approval of competition by means of a dead meat supply, 5240. 5254, 5255——Grounds for the conclusion that it is impracticable to establish a trade in the import of offal, as well as of dead meat, 5241–5247——Doubt as to the continued success of a dead-meat supply exclusively; probability of much of the supply being at times unfit for use, 5248–5251——Much higher price of meat but for the import from America, 5252, 5253.

[Second Examination.]—Official statistics in corroboration of former statement as to the greater number of foreign than of English sheep sold in the Islington Market from 1st July to 30th November 1876; 5404–5409——Sale of 81,480 British cattle and of only 32,640 foreign cattle in the first six months of 1876; 5410——Sale of 489,600 English as against 353,150 foreign sheep in the first six months of the year, 5410, 5411 ——Total of about 800,000 English and 750,000 foreign sheep sold in eleven months in 1876; 5412——Total of about 158,000 English and 108,000 foreign cattle sold in the same period, 5412, 5413.

Belief that a dead-meat supply in lieu of the foreign live cattle supply is not practicable; great uncertainty of a dead-meat trade, the market being sometimes glutted, and prices most uncertain, 5414–5433. 5570–5572. 5589——Advantage in being able to distribute foreign live cattle throughout the country, the distribution of dead meat not being feasible, as it will not keep, 5414–5417. 5427. 5429. 5671–5673——Unreliable character of the American supply further adverted to; necessity, moreover, of submitting

to

Gebhardt, Herrman. (Analysis of his Evidence)—*continued.*

to a great reduction of price in order to sell the meat quickly, 5418. 5422-5426. 5570.

Effect of an extensive dead-meat trade in ruining the home trade; injury especially to the British farmer if the London market were no longer open to him, 5418-5420. 5430-5433. 5685-5695——Comment upon the practice of butchers in selling American for English meat and charging English prices, 5421, 5422. 5678, 5679——Gradual reduction from 7*d.* to 2*d.* per pound in the price realised by a recent cargo of American meat, whilst a considerable quantity had to be destroyed, 5423. 5424. 5570——Efforts made to send live cattle from America on account of the uncertainty of the dead-meat trade, 5428, 5429. 5565-5572. 5743, 5744.

Opinion that the regulations as to slaughter at the port should be relaxed, and that we should return to the regulations in force before the last outbreak of cattle plague, 5434-5437——Way in which the London cow-sheds operate in spreading pleuro-pneumonia, 5438-5440——Approval of a prohibition of cow-sheds in London, it being feasible to supply all the milk required from the country, 5441-5443.

Frequency of foot-and-mouth disease spreading through means of the lairs in the Islington market, 5444——Suggestion that Islington maket be limited to fat cattle, and that no animals be moved thence into the country save under a killing license, 5444-5450. 5521, 5522. 5659——Import of a cargo of cattle from Denmark with foot-and-mouth disease, whereas that country is said to be free from the disease, 5451-5455.

Very large dealings of witness in foreign cattle before the import was stopped, 5456, 5457——Impression that there is a much larger consumption of beef than mutton in London, 5458-5461——Small size of the sheep imported from Germany as compared with English sheep, 5462-5466——Good size of the home-bred beasts obtained from Schleswig-Holstein, whilst the Jutland store beasts are small, 5467.

Comparative infancy of the American dead-meat trade, it being difficult to say whether it will last, 5468——Number of beasts represented by the import of dead meat into London; effect thereof in keeping down the price of meat, 5469-5472——Belief that the price in London and all over England would be raised if all live cattle from the Continent were excluded, 5473, 5474——Slight difference in price which would divert foreign sheep and cattle to Paris instead of to London, 5475-5479——Question whether dead meat could not be brought from St. Petersburgh and other Russian ports at a profit, 5480-5482.

Evidence strongly opposed to a permanent system whereby all foreign cattle should be obliged to go to Deptford for slaughter; great injury thereby to the foreign exporters, who would, in fact, shun the market as much as much as possible, 5438-5493——Limited inconvenience through the uncertainty whether any cargo may not be ordered to Deptford on the score of disease, 5486-5489——Explanation as to a great deal of inferior meat going from London into the country; effect of the dead-meat supply on this score, 5494, 5495.

Estimate that about half the supply of foreign beasts and sheep sold at Islington go into the country, 5496. 5499——Practice of selling on Monday the beasts which arrive on Saturday or in good time on Monday, 5498——Injurious effect of a cordon round London beyond which cattle could not be sent out of London; enhanced price of meat outside the cordon, 5500-5507.

Considerable margin at present for a reduction of prices, as by an increased import of American meat, 5508, 5509——Existence of foreign import for about thirty-five years whilst the American supply is comparatively untried; expediency of trade being allowed to regulate itself as between the two modes of supply, 5510-5513. 5677-5684. 5769, 5770. 5777, 5778——Advantage in importing inferior cattle in order to meet the demand of the lower classes, 5513——Belief further expressed that a dead-meat supply from the Continent could not be calculated upon in lieu of the live animal supply, 5514-5516. 5617-5623.

Statement to the effect that offal cannot be sent from London into the country in hot weather, 5517, 5518——Greater expense in slaughtering at Deptford than on the butcher's premises, 5519, 5520. 5547——Very large business of witness in the live-cattle trade exclusively; if this were abolished he could enter into the dead-meat trade, 5523-5531——Further admission as to the excellent condition in which some of the American meat arrives, so that the whole supply may in time be placed on a satisfactory footing, 5532-5539. 5774.

Necessity of slaughtering at Deptford all the foreign cattle coming to London; belief that they must be slaughtered within ten days, 5540-5543. 5610——Several respects in which compulsory slaughter at Deptford tends to restrict the trade and to lessen the import, 5544-5551. 5589. 5594-5601——Consideration of exceptions taken to witness'

Report, 1877—*continued.*

Gebhardt, Herrman. (Analysis of his Evidence)—*continued.*

view that foot-and-mouth disease occurs in this country, irrespectively of foreign import, 5552-5561.

Tendency of slaughter at the port to increase the price in England and to reduce it in France and Germany, 5562-5564. 5570-5580. 5590-5596——Very high prices realised by American beasts sent over alive, 5565-5569——Effect of slaughtering at Deptford in making meat dearer in the country, and, for a time, cheaper in London, 5573-5576. 5581-5589. 5689-5692. 5754. 5773.

Further statement as to the difficulties in sending dead meat throughout the year from London into the country, 5581-5587. 5655-5657——Probability of an increased number of buyers at Deptford if all the cattle coming into London went there to be slaughtered, 5597-5601——Explanation in further reference to the proposal that Islington market be used only for fat animals, and that all animals moved thence into the country should go under a killing license, 5602-5608.

Grounds for dissenting from the view that it would be feasible so to regulate a dead-meat trade as to prevent a glut in the market at some times and a scarcity at other times, 5609-5616——Smaller size of continental than American beasts, so that it would be more difficult to send the former in good condition as dead meat, 5618. 5620——Difficulty as to ice supplies on the Continent further adverted to, 5615. 5620. 5717-5720. 5726-5729——Difficulty also through the inability to dispose of the offal at the port of export, such as Tonning, 5618, 5619. 5721-5725——Less price to be realised by dead meat from the Continent than from America, 5621-5624.

Further statement as to the advantage of excluding cows from London dairies on the score of liability to pleuro-pneumonia, 5627-5629——Conclusion as to the better quality of country milk than of London milk, 5630-5632——Examination upon the question whether the price in Birmingham and other provincial towns has really been enhanced through the necessity of slaughtering foreign cattle at Deptford; tendency of the American supply to check increased prices, 5633-5647. 5696-5700.

Further reference to the comparatively inferior cattle taken from London for country and mining districts; explanation that the meat is sound and good, though the animals are small, 5648-5654——Doubt whether dead meat can be sent profitably from the west of Ireland to London, 5658——Heavy penalty upon foreign dealers in the loss incurred when they ship diseased animals which are subsequently slaughtered, 5659, 5660——Check by means of quarantine and inspection in England, as well as by inspection at the foreign port upon the introduction of cattle plague, 5660-5662.

Good meat supplied by the cattle imported from Prussia and Bavaria which have been used for ploughing, 5663-5666. 5711, 5712——Much lower price at which the poorer classes can buy offal than American meat, 5668, 5669——Due precautions now taken in Germany against the export of animals with cattle plague; sufficient security against its re-introduction into England, 5674-5677——Witness further contends that pleuro-pneumonia and foot-and-mouth disease are home diseases and are not imported, 5674. 5677. 5713-5715——Fairness in at least giving due notice to the foreigner before prohibiting import, 5677. 5769, 5770.

Modified success of dead meat imported from America, whilst but very little has yet come from elsewhere, 5702, 5703——Non-objection to the import of dairy cows into London, provided they are not sent to Islington market, 5704-5710——Full approval of the import of dead meat as one means of supply, 5716——Dissent from the view that gluts in the market may be obviated by certain precautions in connection with an extended dead-meat trade, 5730, 5731.

Expected import of cattle chiefly from Schleswig-Holstein in the summer months, 5732-5741——Large import of cattle and sheep to be obtained from Germany in the first six months of the year, 5733, 5734. 5739-5741——Discontinuance of import from France since the necessity of slaughtering at Deptford, 5735-5738.

Desire further expressed by witness for a modification of the present restrictions upon import as soon as they can be safely relaxed, 5745-5748——Opinion that an exclusively dead-meat trade could not be properly carried out even if American meat could be always supplied in good condition, without spoiling by keeping, 5749-5753.

Examination as to the relative price at which dead meat from America and cattle from the Continent can be sold to the public at a profit, and as to the extent of margin in favour of the former; doubt as to the American trade paying at 6 *d.* per pound, 5735-5768——Dislike of American meat in Birmingham and Manchester, so that it does not enter into competition with other meat as regards price, 5771-5776.

Approval of a fair trial being given to the American supply; large increase in the supply since the more stringent restrictions upon import from the Continent, 5777-5781——Probable reduction for a time in the price of meat by an increased import from America concurrently with the import of live stock, 5782-5785.

GERMANY:

Report, 1877—*continued.*

GERMANY:

1. *As to the Existence of Cattle Plague in Germany and the Restrictions enforced by the Imperial Government and the Local Authorities.*
2. *Arrangements for the prompt Transmission of Information to England.*
3. *Inspection.*
4. *Compensation and Cost of restrictive Measures.*
5. *Amount and Character of the Export to England.*
6. *Sheep.*
7. *Price of Cattle and Meat.*
8. *Pleuro-pneumonia and Foot-and-Mouth Disease.*
9. *Question of prohibiting Import of Live Cattle from Germany.*
10. *Recommendation by the Committee in favour of Prohibition.*

1. *As to the Existence of Cattle Plague in Germany and the Restrictions enforced by the Imperial Government and the Local Authorities:*

Detailed information respecting the progress of the cattle plague in Germany between January and March 1877; practical extirpation of the disease by 12th March, *Brown* 269–279——Conclusion that the disease has been certainly stamped out by means of severe regulations; the regulations are in fact far more severe than would be tolerated in this country, *ib.* 279–284. 290——Entire stoppage of movement throughout Germany; adoption also of a system of declaring a place infected for twenty kilometres round the seat of the disease, *ib.* 283, 284——Restrictions also as to the movement of people out of the infected circles, *ib.* 285–290.

Regulations now in force in Prussia with reference to the prevention of the introduction of cattle plague; prohibition by the German authorities of any treatment for cattle plague on account of the belief that no measure answers except stamping out, *Müller* 1349–1370. 1477. 1478. 1492–1498. 1509, 1510. 1530–1538. 1620–1624——Statement that the outbreak in Germany in the year 1872 was caused by smuggling diseased animals over the frontier to Breslau; considerable risk of this smuggling in Upper Silesia, *ib.* 1350–1354. 1371–1377. 1605–1611. 1623–1628——Total prohibition of importation of cattle from Russia into Germany; prohibition also of grey or steppe cattle from Austria, *ib.* 1351–1354.

Increased vigilance on the part of the German authority after the outbreak of 1872; appointment thereupon of veterinary inspectors and armed policemen, *Müller* 1358——Establishment of a census of cattle throughout the districts; the restriction as to movement of cattle, with reference to this census, confined only to cases of cattle plague, *ib.* 1358–1360. 1581–1588——Special permit required for the transmission of cattle by railway from certain border stations to the interior, *ib.* 1365–1368.

Export of cattle from all markets in Germany stopped when the central authority has been informed of a case of cattle plague in the border districts; opinion as to the efficacy of this arrangement, *Müller* 1368, 1369——Absence of restrictions upon the movement of store cattle throughout Germany, *ib.* 1370——Means adopted for the suppression of cattle plague when discovered; slaughter of all diseased animals, and of those which have come in contact with them, *ib.* 1386. 1388–1389. 1392, 1393——Diseased animals when slaughtered buried to the depth of two metres, *ib.* 1386. 1388, 1389.

Military cordon drawn round the Polish or Austrian frontiers when cattle plague exists in those districts, *Müller* 1392, 1393——Intention of the German authorities to construct slaughtering establishments on the frontier, and there to permit the slaughter of Austrian cattle under veterinary inspection, *ib.* 1401, 1402.

Severity of the last outbreak of cattle plague in Germany, *Müller* 1466–1468——Admittance permitted to the Berlin market of all cattle, though none are allowed to be moved away alive, *ib.* 1497, 1498 1564——Rinderpest unknown in Prussia except when introduced by foreign cattle, *ib.* 1524——Explanation of the danger which exists in Germany in regard to the great markets for slaughtering, *ib.* 1565.

Approval by the German farmers of the existing stringent regulations for the prevention of cattle plague, *Baron von Behr* 2481. 2485, 2486——Intention of the Government to make their restrictions more severe; strong opinion of witness in favour of increased severity of regulations, *ib.* 2482–2484. 2500–2505. 2547–2551——Information respecting the measures adopted by the Government for the purpose of stamping disease out of the country; severe punishments inflicted in the case of cattle smuggling into Germany, *ib.* 2483–2494. 2498–2511. 2547–2551.

Desire on the part of the Government to meet the wishes of England in regard to any restrictive measures having reference to cattle diseases, *Baron von Behr* 2492. 2510, 2511. 2517——Decided conviction that cattle plague is now completely stamped out in Germany; opening of the boundaries of neighbouring countries in consequence of the freedom from disease, *ib.* 2495–2497——Great difficulty for the German Government to prevent occasional smuggling somewhere on their extended frontier, *ib.* 2499–2504. 2598–2600——Expediency of making the law of disinfecting ships an Imperial law, applicable to the whole of Germany, *ib.* 2517–2519.

GERMANY—continued.

1. *As to the Existence of Cattle Plague in Germany, &c.*—coutinued.

Assertion that cattle plague is the only disease in Germany of paramount importance; insignificance of all other diseases in comparison, *Baron von Behr* 2533-2535. 2563-2565——Dissent from the opinion that cattle plague is introduced into England from Germany; difficult mission of the latter country to protect the whole of Europe against the introduction of the plague from Russia, *ib.* 2560, 2561——Wish on the part of the German farmer to co-operate with the English farmer with the object of conquering the frightful disease of cattle plague, *ib.* 2603.

2. *Arrangements for the prompt Transmission of Information to England:*

Existing regulations for the interchange of information with Germany respecting cattle plague; advantage of international arrangements on the subject, *Brown* 715-721. 743-752——Necessity for excluding German cattle from England, unless international arrangements can be made with Germany that her frontier will be closed against the introduction of Russian cattle; desirability of obtaining information as to the approach of the disease towards the German frontier, *Simonds* 1135-1139. 1145-1147.

Local authorities in Germany directed to dispatch to England immediate information of any outbreak of disease, *Baron von Behr* 2490, 2491. 2493.

Admission as to the decreased danger through the better telegraphic information promised from Germany, *Wilson* 4708-4714—— Facility of obtaining prompt information from Germany whenever cattle plague breaks out, so that any vessel on the route might be stopped in time, *Gebhardt* 5145-5147.

3. *Inspection:*

Information as to the composition of the veterinary staff in Germany; the most trustworthy of this staff are employed upon the Eastern frontier, from Memel on the Baltic to Upper Silesia, in consequence of that frontier being the most liable to the outbreak of cattle plague, *Müller* 1341-1348.

Further information as to the inspectors acting under regulations from the Central Department in Germany; in cases of pleuro-pneumonia they act under the authority of their own state, and not under the laws of the empire, *Müller* 1602-1604.

4. *Compensation and Cost of restrictive Measures:*

Compensation paid by the German Government to the full value of all the cattle slaughtered on account of cattle plague; less amount paid as compensation in the case of animals affected with pleuro-pneumonia, *Müller* 1379-1385. 1390, 1391. 1433-1438. 1511-1516 —— Cost of carrying out the regulations in regard to the suppression of cattle plague borne wholly by the Imperial Government, *ib.* 1379. 1395——Estimate of the expenses borne by the Government on account of the last outbreak of cattle plague; inclusion in this estimate of all cost of destruction of buildings and cost of burying, *ib.* 1410-1418.

Compensation paid by the Imperial Government to the extent of the whole value of slaughtered cattle in the case of rinderpest; expediency of the empire paying one half and the province the other half, *Baron von Behr* 2481. 2527, 2528. 2595-2597.

5. *Amount and Character of the Export to England:*

Unimportant effect at present of the stoppage of the German trade, as during this period of the year very few German cattle are imported, *Brown* 1071, 1072——Largest exports to England from Schleswig-Holstein, Oldenburg, and Madgeburg, in Saxony, *Müller* 1489—— Prohibition of importation of cattle to England from Germany at the present time; destination of the German cattle which would otherwise be sent to England, *ib.* 1539-1542.

Large import of German cattle and sheep into England; the best sheep, and probably the best cattle, are selected for exportation to England, *Baron von Behr* 2467-2471. 2556-2559.

Large decrease of late in the supply of cattle from Germany, *Gebhardt* 5213—— Good meat supplied by the cattle imported from Prussia and Bavaria which have been used for ploughing, *ib.* 5663-5666. 5711, 5712——Large import of cattle and sheep to be obtained from Germany in the first six months of the year, *ib.* 5733, 5734-5739-5741.

6. *Sheep:*

Statement as to sheep having been recently attacked with cattle plague, *Brown* 275-277—— Expediency of permitting sheep and swine to come from Germany without further restrictions than exist at present; the introduction of cattle plague has not been traced to these animals, *ib.* 380-384.

Considerable export of sheep from Germany to France, *Müller* 1542——Belief that if Germany were unscheduled the import of sheep to England would be very much increased, *ib.* 1563.

Small

GERMANY—continued.

6. *Sheep*—continued.

Small size of the sheep imported from Germany as compared with English sheep, *Gebhardt* 5462-5466——Enormous increase in the import of sheep from Germany for sale at Deptford, *Rudkin* 8933.

7. *Price of Cattle and Sheep:*

The price of meat in Germany is on the average 7 *d.* a pound for the best parts, *Baron von Behr* 2575-2577——Twofold increase in the value of land and live stock in North Germany in the last fifteen years, *Gebhardt* 5516.

8. *Pleuro-pneumonia and Foot-and-Mouth Disease:*

Pleuro-pneumonia dealt with in Prussia in the same way as cattle plague; prohibition of importation of cattle from the Netherlands, where this disease is rife, *Müller* 1426-1432. 1439-1444. 1499-1501.

Absence of stringent regulations for stamping out foot-and-mouth disease, inasmuch as the necessary measures would entail a greater loss than the disease itself; regulations now in force as to this disease, *Müller* 1445-1450. 1502. 1517-1519.

Difficulty of arriving at the best means of dealing with pleuro-pneumonia; divided opinion in Germany as to whether the disease has been imported or is indigenous, *Baron von Behr* 2520-2529. 2563. 2569——Unimportance of foot-and-mouth disease in Germany; opinion that this disease is more severe in highly fed than in poor cattle, *ib.* 2530-2532. 2538. 2542-2544. 2570-2574. 2585-2587.

9. *Question of prohibiting Imports of Live Cattle from Germany:*

Conclusion as to the necessity of excluding cattle from Germany in reference to cattle plague, *Brown* 314-344. 509-513. 699 *et seq.*; *Simonds* 1124-1129. 1147. 1190, 1191——Belief that from Germany we should get a very small proportion of dead meat as compared with the quantity of meat represented by live cattle, *Brown* 375-379.

Grounds for the belief that the exportation of live cattle from Germany to this country may be continued without peril, for slaughtering purposes, *Müller* 1421-1425. 1543-1548. 1617, 1618——Expediency of placing Germany in the same state as regards export of cattle to England, as she was before the outbreak of cattle plague, *ib.* 1543-1548.

Extract from a work by Herr von Bunsen showing the advantage of establishing free-trade in cattle; great advantage on the part of German farmers with reference to any restrictions on the export of cattle to England, *Baron von Behr* 2469-2471——Desirability of classifying German cattle in the same schedule as French and Spanish cattle, *ib.* 2591, 2592.

Liability to the import of cattle plague by Germany from Russia, and by England from Germany, in spite of the increased restrictions and precautions adopted, or professed to be adopted, by the latter country, *Wilson* 4701-4715——Further statement in favour of prohibiting import from Germany and Schleswig-Holstein in view of the existence of disease in those countries, *ib.* 4993 4997. 5007-5009.

Belief that if the increased restrictions proposed in Germany be properly carried out cattle plague could never escape out of the country, *Gebhardt* 5148-5150——Special interest of Germany in the suppression of cattle plague, oxen being used for ploughing, *ib.* 5151-5154——Stringent powers in the hands of the central authority, *ib.* 5154, 5155. 5165, 5166——Due precautions now taken in Germany against the export of animals with cattle plague; sufficient security against its re-introdnction into England, *ib.* 5674-5677.

Very little faith of witness in the restrictions imposed in Germany, *Odams* 7939. 7941——Little reliance to be placed on promised restrictions and precautions in Germany, *Read* 9567-9571. 9574——Import of disease from Germany at times when it was not reported as existing there, *Brown* 10054.

10. *Recommendation by the Committee in favour of Prohibition:*

Constant risk in the case of import from Germany on account of its long exposed frontier, *Rep.* iii——Recommended prohibition of import of cattle from Germany (except Schleswig-Holstein), *ib.* vi. ix.

See also *Cattle Plague. Dead Meat. Foot-and-Mouth Disease. Foreign Cattle. Hamburg. Hull. Manchester and Salford. Pleuro-pneumonia. Schleswig-Holstein.*

Giblett, John. (Analysis of his Evidence.)—Long experience and large business of witness as a cattle salesman; very large consignments to him from France, Portugal, snd other countries, 6480-6483——Great falling off in the consignments of French cattle to witness since the restrictions in force as to slaughtering at Deptford, 6483-6497. 6624.

Report, 1877—*continued.*

Giblett, John. (Analysis of his Evidence)—*continued.*

6733——Large import of live cattle from Spain and Oporto; particulars as to the very superior and healthy quality of these cattle, and as to the good prices realised, 6498-6504. 6564, 6565.

Grievance in the compulsory slaughter of Spanish and Portuguese cargoes at Deptford when one or two animals are reported as suffering from foot-and-mouth disease, 6505-6509, 6621. 6623. 6725, 6726——Increasing import of American live cattle *viâ* Southampton; very fine quality of these beasts and very high prices realised by them, 6510-6516. 6643, 6646. 6650, 6651. 6686-6690. 6708-6714——Extent and result of witness' experience in connection with dead meat from America; very indifferent condition in which several cargoes have arrived, and very low prices fetched as compared with the prices of American live stock, 6517-6555. 6691-6693.

Decided opinion that every facility should be given to the import both of live cattle and dead meat, 6524. 6569, 6769——Belief that the majority of those who try American dead meat have a distaste for it, 6536, 6537——Very bad appearance of the meat; statement hereon as to its being objected to by the army and navy and by prison and workhouse authorities. 6538-6542.

Grounds for the conclusion that dead meat will continue to be sent from America in large quantities during winter, but that in hot weather it cannot be sent without great loss, 6543-6557. 6638-6649. 6691-6693. 6739-6744. 6756-6760——Increasing price of cattle in the United States and Canada, 6546-6550. 6591-6595. 6654-6656. 6739——Great obstacles to a profitable trade in dead meat from Spain and Portugal, 6558-6563. 6666.

Approval of a strict prohibition of import from any country from which cattle plague may be brought, 6566-6568. 6588. 6719——Prevalence of foot-and-mouth disease in England long before any foreign cattle were imported, 6567. 6576, 6577. 6698-6700——Existence of this disease in nearly every country as well as in England, witness strongly disapproving of the restrictions in reference to the import of cattle affected with the disease, 6570. 6576-6579. 6615. 6626. 6725-6728——Belief as to the foot-and-mouth disease being atmospherical, 6570. 6679. 6683-6685. 6722-6724——Objection also to the prohibition of import from any country on the score of pleuro-pneumonia, 6571-6576. 6615.

Expediency of all regulations and restrictions resting with the Privy Council, 6579, 6580—— Concurrence in Mr. Gebhardt's suggestion that all animals moved from Islington Market into the country be marked for slaughter, 6581-6584. 6589, 6590——Exceedingly objectionable character of Deptford Market; the smells are abominable, and moreover witness hates covered markets, 6585-6587. 6633-6635. 6702. 6734, 6735.

Considerable and continuous rise in the price of meat, the increase of population and of demand being one cause, and the restrictions upon import of live stock another cause, 6596-6604. 6694. 6721——Effect of the increased price in inducing import of cattle and also of dead meat, 6605-6611——Belief that the total exclusion of foreign cattle would make meat fabulously dear, 6612-6614. 6752——Result of witness' experience that continental cattle have much less disease than English cattle, 6616-6622.

Way in which compulsory slaughter at Deptford has a very deterrent effect upon foreign import; great dislike of buyers to attend the market, 6627-6635. 6733-6735——Difficulty in the disposal of offal at Deptford, 6636, 6637——Excellent arrangements for bringing cattle from Oporto, 6640-6642——Statement as to the premature killing of home-bred cattle, instead of the calves being kept for stores, 6644. 6671-6674. 6766, 6767—— Very little dead meat from Aberdeen in the summer, 6648, 6649. 6681. 6682.

Advantage of supplies of American meat in the winter as an auxiliary to the live cattle supply, 6652, 6653——Uncertain profit realised by cattle from the Continent, 6657-6660——Advantage in importing cattle rather than dead meat from Holland, 6660-6663——Value of the live cattle from Spain and Portugal for the supply of army contracts, 6664-6670——Room for a large increase of home breeding; doubt as to this being checked by fear of disease being imported, 6671-6674. 6766-6769.

Good price obtained by the English farmer, notwithstanding the effect of the American meat supply, 6675-6678—— Conviction of witness that an entire exclusion of foreign cattle would never answer, 6680, 6681——Effect of the losses from rinderpest and other diseases in limiting the supply of cattle and in enhancing the price, 6695-6697——Considerable amount of foot-and-mouth disease among cattle from France; belief that this is largely engendered at Deptford, 6701-6707.

Exception taken to certain statistics as to the comparatively small import of foreign cattle in relation to the home supply generally; large import of the former into London, 6715-6718. 6763-6765——Reference to the total and heavy loss from cattle diseases, witness submitting, however, that foot-and-mouth disease is quite as much a native as a foreign complaint, and that animals do not die from it, 6719, 6720. 6727, 6728——

Effect

Report, 1877—*continued.*

Giblett, John. (Analysis of his Evidence)—*continued.*

Effect of the charges of salesmen, middlemen, and others, in adding to the price of meat, 6729-6732.

Decided tendency to an increase of the dead-meat trade, the chief difficulty being when the weather is hot, 6736-6738——Further reference to the excellent quality of the American meat, though it sometimes comes in very bad condition, and is only suitable for a winter trade, 6740-6744——Depression in the prices of live cattle when dead meat comes in very large quantities, 6745, 6746——Continued import of American meat, notwithstanding the losses, as there are outstanding contracts, 6747.

Great importance of supplies of offal for the poorer classes, whereas offal cannot be imported in good condition, 6748-6751——Injury to witness' business by excluding foreign cattle; explanation hereon that he advocates the interests of importers in the matter, 6752-6755——Considerable inconvenience to salesmen and buyers through the markets being held on the same day at Deptford and Islington, 6770-6773.

Gillett, Murillo H. (Analysis of his Evidence.)—Large experience of witness as a farmer and cattle breeder in America; he is now engaged as an American meat exporter, 2613-2618. 2627-2629——Details of the mode of feeding cattle in America which are intended for the market, 2619. 2624. 2818-2821——Average number of cattle which have passed through witness' hands annually in the States, 2621-2626.

Large development in the trade of dead meat from America since its commencement, 2629, 2630——Information respecting the process of preparing the meat for shipment; great care necessary in the refrigerating practice, 2631. 2640-2652. 2714-2718. 2775-2779. 2837-2840. 2851-2853——Manner of disposing of the offal of the cattle; hearts and livers only sold for food, 2631. 2665-2667. 2745-2750——Variation in quality as regards the cattle coming from different localities; best class of cattle exported to England as meat, 2632-2636.

Examination with reference to the price at which it will be necessary to sell the meat so as to make the trade remunerative; possibility of going as low as 5½ *d.* a pound, 2637-2639. 2693, 2694. 2700-2702. 2738-2744. 2760-2765. 2772-2774. 2814-2817. 2843-2846——Opinion that the meat will bear transit from the port of arrival to other markets without fear of deterioration from being exposed to a higher temperature than that of the refrigerator; this is conditional on the meat being properly prepared at first, 2642-2647. 2649-2652.

Argument that the fall in price of American meat in the English markets is due, not to deterioration of quality, but to the fact that the market was overstocked, 2654-2656——Absence of necessity for dead-meat stores, specially prepared, for carrying on the trade in the English markets, 2657, 2658——Statement that hot weather is in no way prejudicial to the meat, if it be properly prepared, 2659-2664.

Undoubted opinion that the dead-meat trade from America will become a permanent and regular business; belief that this meat can compete successfully with meat killed in this country, 2669-2673. 2695-2697. 2703-2707. 2757-2759. 2802-2804. 2828, 2829. 2841. 2842. 2853——The proportion of dead meat to the live animal is at the rate of about a ton of dead meat to three bullocks, 2674-2678——Explanation of the reason for sending the live cattle to New York instead of killing them and preparing them at Chicago, 2679-2689.

Gradual improvement of the herds of cattle in America by means of crossing the native cattle with English short-horns; opinion that the stoppage of importation from England will not have an injurious effect for the next three to five years, 2690, 2691. 2697. 2722-2733——Statement that the supply of meat from America may be considered to be practically unlimited, 2695-2699. 2751——Deterioration of some of the earlier cargoes of meat not on account of the hot weather, but because the machinery for regulating the temperature broke down in one instance, whilst in two instances sufficient ice had not been taken, 2706-2710.

Absence of difficulty in the transit of meat so far as the sea passage is concerned, 2712——Assertion that the meat if properly prepared will keep longer than any other meat killed in the ordinary way, either English or American, 2719-2721. 2759——Preference for the dead-meat trade to England as compared with the live stock trade; great risk attendant upon the latter during the winter, 2734 2737. 2760-2765.

Statement that 5 *d.* is the average price for prime beef in New York, 2742——Favourable experience as to the condition of the cargoes of dead meat shipped to Liverpool; certainty when the means of transit are more perfect of delivering meat in Liverpool as fresh as when it was killed in New York, 2752-2759——Sale of the offal in New York at an average price of 6 *s.* per bullock, 2761-2765.

Explanation with reference to several cargoes lately arrived in England in bad condition; defective preparation in America the real cause of this failure, 2766-2771. 2847-2850. 2854-2856——Necessity for refrigerators equally in winter as in summer; the temperature must not be too low when the meat is cooling, 2770. 2856——Carriage of

Report, 1877—*continued.*

Gillett, Murillo H. (Analysis of his Evidence)—*continued.*

the meat ten miles to the place of shipment from the slaughter-house, 2775-2779——Large shipments, to the extent of 1,400 animals weekly, from New York, 2780-2782.

Further information relative to the refrigeration of the meat before shipment; supply of all necessary machinery and ice by the owner of the meat, 2783-2792——Non-variation of the rates of shipment from New York to England since the commencement of the dead-meat trade; the convenience for carrying dead meat is much greater than in the case of live animals, 2793-2804. 2861, 2862——Absence of any difficulty in finding markets for the meat on its arrival in Liverpool; meat occasionally sent to Manchester or Birmingham on account of its obtaining a better price, 2805-2809.

Statement that since the commencement of this trade seven per cent. would represent the loss by bad meat on the total shipments, 2810-2813——Possibility of sending pork and mutton in large quantities in the same way as beef, 2823-2827. 2858-2860——Method adopted by the butchers in New York for preserving the meat for daily use, 2830-2833.

Glanders. Reasons for not carrying out the recommendation of the Committee of 1873 with regard to glanders; difficulty which would arise in compensating for the slaughter of horses affected with the disease, *Brown* 1049, 1050——Compensation in the case of horses slaughtered for glanders in Germany, paid by the local authority to the amount of half the value, *Müller* 1451-1454——Difficulty as to the local authorities being empowered to inspect premises in reference to glanders or farcy, *Brown* 10197.

Regulations in the Animals Order of 1875 as to the course to be pursued in reference to glanders and farcy, *App.* 526, 527.

Glasgow. Great change in the trade in Glasgow since the cattle plague of 1865; large dead-meat market now in operation, *Hamilton* 4202. 4210-4212——Small proportion of the Glasgow supply, which consists of foreign cattle; the latter do not come at all in the winter months, *ib.* 4203-4207——Good condition in which the foreign cattle arrive, *ib.* 4208, 4209.

Undue detention of foreign cattle on board ship in Glasgow before their removal to feeding grounds, *Hamilton* 4249. 4259-4260——Necessity of live cattle as well as dead meat for the supply of the town; the former cannot be calculated upon in bad weather, *ib.* 4341-4344. 4357, 4358. 4375, 4376. 4392. 4404-4406——Estimate of the American dead meat supply at Glasgow as one-seventh of the whole supply, *ib.* 4352-4355.

See also *American Cattle*, 2. *American Dead Meat*, I., 2. V.

Gloucestershire. Explanation in connection with an order passed a few months ago by the quarter sessions in Gloucestershire, on the motion of witness, prohibiting the import of Irish cattle into the county, *Lord Fitzhardinge* 5256-5263. 5327-5337. 5340-5343——Extensive dairy district between Gloucester and Bristol, heavy losses being sustained by the farmers from foot-and-mouth disease imported by Irish cattle, *ib.* 5271-5274. 5287, 5288.

Circumstance of a cargo of Irish cattle having been landed at Sharpness Point twenty miles above Bristol, and afterwards driven to Bristol for sale, *Peters* 5359-5362. 5371-5374. 5384, 5385.

Action taken by the local authority of the county under the Cattle Plague Order of January 1877, *App.* 562.

See also *Bristol.*

Great Eastern Railway. Unduly high charges for carriage of dead meat over the Great Eastern Railway, *Read* 9561.

Great Western Railway. Details relative to the arrangements of the company for the carriage of dead meat, and the success thereof, *Sir C. A. Wood* 7360 *et seq.*——Large fish traffic from Kinsale conveyed successfully over the Great Western line, *ib.* 7383-7392.

Papers explanatory of the rates for fish traffic frrom Kinsale over the Great Western Railway from New Milford, *App.* 571-575.

See also *Dead Meat*, 8.

H.

Hall, Richard. (Analysis of his Evidence.)—Is a wholesale butcher in Livverpool largely interested in the supplying of shipping; also has large consignments of Canadian cattle, 2863-2865——Disapproval of the importation of American dead meat, especially with regard to supplies for shipping; statement that the action of the air upon this meat is highly prejudicial both to its appearance and quality, 2866-2872. 2881-2883. 2889, 2890. 2901-2903. 2945-2953.

Report, 1877—*continued.*

Hall, Richard. (Analysis of his Evidence)—*continued.*

Stores opened in Liverpool for the sale of this meat, which though at first successful have been closed on account of the sale falling off; admission that many of the ordinary butchers subsequently took up this trade and sold the American meat beside their own, 2873-2876, 2926-2929. 2954-2956. 2959-2962——Statement that the price of large quantities of this meat in London has been as low as 2 *d.* and 3 *d.* a pound; the highest price has been 7 *d.*, but that was on account of the great scarcity of meat at the time, 2877, 2878. 2934. 2957, 2958. 2991-2997. 3010-3015. 3036-3038. 3041-3049.

Inferior condition of the meat resulting from the failure of ice in the vessels in hot weather, 2879-2881. 2963-2966——Admission that the introduction of this meat has been a great boon to the poor people who would have suffered greatly without it; opinion on the other hand that the richer classes would not touch it on account of its insipidity and want of flavour, 2881-2883. 2998. 3008, 3009. 3038-3040——Decided opinion that American beef will never be a substitute for English beef, 2883.

Evidence as to the advantage of live animals, in providing offal for the use of the poor; belief that offal can never be brought to this country from abroad and sold for consumption, 2885-2888. 2891-2895. 2973-2977. 2988——Circumstances under which witness declined to supply American meat to steamers; instances in which some steamers took their business away from witness on account of his adopting this course, and afterwards returned to him with larger orders for English meat, 2896-2899. 2945-2949. 2978-2980. 3022-3024.

Seizure in London, during the present week, of thirty tons of Canadian and American meat, 2899-2901. 3033-3035—— Dissent from the opinion of Mr. Gillett that the American dead meat trade will become established in England; decided preference for the live meat trade, 2904——Cargo of live cattle landed at Thames Haven in June 1876 from America, per the "Temperley" in magnificent condition; belief that there will be 20,000 imported into the United Kingdom in the present year, 2905-2910. 2939.

Comparative cost of importing live animals and dead meat into England; admission that the cost is greater in the former case, but the meat is much better, 2911-2920—— Statement that the ice used in the preservation of the meat is destructive to its flavour, 2911. 3016, 3017——Argument that the profits of the import of live cattle from America are sufficiently large to cover the possible losses which occur in rough weather, 2921, 2922. 2940-2942. 3007—— Expediency of treating Canada as a part of the United Kingdom, so long as no disease exists there, 2923.

Further examination with reference to the sale of American meat in Liverpool; instance of a butcher in Manchester buying tough and lean old cows and selling them for American meat in order to discredit the trade, 2930-2933. 3032——Larger commission paid upon dead meat than upon live animals, 2943, 2944——Comparison of the price of live stock from America with that of dead meat; advantage as regards cheapness in favour of the latter, 2970-2972.

Grounds for the opinion that if the importation of cattle into England from any part of the world were absolutely prohibited, it would be a very serious calamity, 2981-2986 ——Very great risk of importing partially diseased meat into England, if the importation of live stock be prohibited, 2989, 2990——Belief that American meat can never be imported into England as sound and good as English beef, 2998, 2999.

Dead loss to the importer of the meat which is selling at the present low prices, 3000-3006——Unwillingness of the owners of vessels to give the American meat to their own crews or passengers, 3019-3024——Objection to the meat on account of its soft and moist appearance, 3025-3031——Explanation as to the relative prices of meat sold wholesale and retail, 3043-3048——Further statement that the trade in American meat has considerably fallen off, 3053-3058.

Hamburg. Statement that the veterinary department at Hamburg is not under the control of the veterinary department at Berlin; regulations in Hamburg precisely the same as those in Prussia, *Müller* 1588-1590——Illustration of the laxity of inspection at Hamburg, *Read* 9570, 9571.

Hamilton, Archibald. (Analysis of his Evidence.)—Long experience and large business of witness as a flesher in Glasgow; he has been deputed to represent the United Association of Fleshers in Glasgow, 4198-4201. 4304-4306.

Great change in the trade in Glasgow since the cattle plague of 1865; large dead meat market now in operation, 4202. 4210-4212——Small proportion of the Glasgow supply which consists of foreign cattle; the latter do not come at all in the winter months, 4203-4207——Good condition in which the foreign cattle arrive, 4208, 4209.

Large dealings of witness in dead meat from America, as consigned to Messrs. Bell & Sons; very good condition in which this meat arrives, whilst it will keep nearly as long as home-killed meat, though it loses colour, 4213-4247. 4277-4279. 4304-4315. 4325, 4326——Somewhat lower price realised by American than by home-killed meat, the former being readily bought by the public, 4232, 4233. 4309-4313. 4421-4431——

Report, 1877—*continued.*

Hamilton, Archibald. (Analysis of his Evidence)—*continued.*

Statement showing that it is intended to permanently continue the American dead meat trade, 4235-4238. 4334-4339. 4385, 4386. 4416.

Undue detention of foreign cattle on board ship in Glasgow before their removal to feeding grounds, 4249. 4259, 4260——Very good condition in which the live cattle from America generally arrive at Glasgow, the meat being of excellent quality, 4250-4258——Obstacle to the profitable import of American live stock during the winter, 4252-4254.

Decided objection to the present restrictions in reference to foot-and-mouth disease, witness submitting that this disease is the direct result of cruelty and ill-usage, more especially on board the Irish boats, 4261-4273. 4280-4303. 4346-4351——Contagious character of foot-and-mouth disease, 4265, 4266——Approval of strict regulations for stamping out cattle plague and pleuro-pneumonia, but not foot-and-mouth disease, 4268-4273. 4299-4303——Facilities desirable for the removal of cattle suffering from foot-and-mouth disease to slaughter-houses, 4274-4276.

Particulars as to the crowded state of the Irish boats, and the defective arrangements generally for the care of the cattle, though some improvements have been made in the last few years; these boats are, in witness' opinion, the chief propagators of foot-and-mouth disease, 4280-4298. 4318-4324. 4346-4351. 4417-4420.

Fitness of the American dead meat for curing, 4314-4317——In cold weather meat can be kept for a fortnight or so, and in hot weather for about a week, 4329, 4330——Liability to great variation in the price of American dead meat in Glasgow, 4331-4340.

Necessity of live cattle as well as dead meat for the supply of Glasgow; the former cannot be calculated upon in bad weather, 4341-4344. 4357, 4358. 4375, 4376. 4392. 4404-4406——Estimate of the American dead meat supply at Glasgow as one-seventh of the whole supply, 4352-4355——Advantage in giving some rest and feeding to foreign cattle on arrival, before slaughtering them, 4359-4362——Necessity on only one occasion of selling a cargo of dead meat at a reduced price on account of its condition, 4363-4365.

Loss in importing dead meat instead of live cattle from Ireland, 4366-4373——Lower price, by 1 *d.* or 1½ *d.* per pound, of dead meat than of live cattle, 4368-4372. 4387-4396. 4407-4416——Relative cost of freight of live cattle and of dead meat; obstacle on this score to the profitable import of live cattle, save from America, 4377-4384. 4397-4403.

"*Hansa,*" *The.* See *Hull.*

Harwich. Complaint as to the laxity of the inspection at the port of Harwich, the inspector there not stopping animals which would be stopped in London, *Robinson* 8560-8566——Practice also in passing one or more cargoes before the expiration of twelve hours, *ib.* 8561.

Information as to the results of an official inquiry made in consequence of a complaint that the inspector at Harwich did not stop animals which would be stopped in London; the same practice was, in reality, pursued at both ports, *Brown* 9918-9925——Explanation in reference to a complaint that a cargo of cattle had been passed at Harwich in March 1874 before the twelve hours' daylight detention had expired, *ib.* 9908-9915——Explanation also as regards a statement by Mr. Robinson that some cattle landed at Harwich in October 1874, had been passed after sunset, *ib.* 9916, 9917.

Hides. Means of rendering the hides of diseased animals perfectly harmless by a preliminary process of dressing, instead of absolutely prohibiting their removal, *Brown* 178.

Highland Agricultural Association. Extracts from a recent memorial of the Association to the Privy Council advocating increased restrictions on the import of foreign cattle, *Smith* 8430, 8431——Importance attached by the Association to the establishment of a dead meat trade, *ib.* 8430.

Views of witness as representing the Association, to the effect that all foreign cattle should be slaughtered at the port of debarkation, and that store stock should be excluded, *Smith* 8433-8441. 8460-8488. 8490-8495.

HOLLAND:

1. *Regulations and Restrictions for the Suppression of Cattle Plague, Pleuro-Pneumonia, and Foot-and-Mouth Disease.*
2. *Amount of Disease in the Country; Question of prohibitting Import into England.*
3. *Question of a Dead Meat Trade.*
4. *Number and Class of Cattle in Holland.*
5. *Practice as to Compensation in cases of Cattle Plague.*

1. *Regulations and Restrictions for the Suppression of Cattle Plague, Pleuro-Pneumonia, and Foot-and-Mouth Disease:*

Information as to the laws and regulations in Holland with respect to the cattle plague; the legislation is founded chiefly on the law of the 20th July 1870, which corresponds with

Report, 1877—*continued.*

HOLLAND—continued.

1. *Regulations and Restrictions for the Suppression of Cattle Plague, &c.*—contd.

with the Contagious Diseases (Animals) Act of this country, *May* 2012-2028. 2037-2040. 2074-2079. 2093, 2094. 2109-2112. 2120——Summary of the measures adopted when cattle plague breaks out, *ib.* 2016——Regulations for prohibiting the importation and movement of cattle through the country; dispensatory power given to the Minister of the Interior to modify these regulations when necessary, *ib.* 2017. 2116-2119.

Disinfection of the railway trucks used in the conveyance of cattle entering Holland from foreign countries, *May* 2018——Practice as to the inspection of cattle before being shipped for foreign countries, *ib.* 2020. 2054-2058. 2076——Closing of the markets upon the outbreak of cattle plague in Germany in 1873; *ib.* 2024, 2025——Entire prohibition of the import of cattle into Holland at the present time; military forces sent to the frontier to enforce this regulation, *ib.* 2026, 2027.

Explanation of the course adopted in Holland with reference to pleuro-pneumonia; treatment of this disease by means of inoculation, the cost of which is borne by the State, *May* 2028-2036. 2053-2058. 2086-2092. 2099-2105. 2119. 2121-2127——Considerable diminution in the number of cases of pleuro pneumonia since the adoption of the slaughter of suspected animals; strong hopes that this disease will be effectually stamped out, *ib.* 2033-2036. 2048. 2138.

Measures applicable to foot-and-mouth disease; statement that this disease is not looked upon with the same alarm as it is in England, *May* 2075-2079. 2095-2098. 2106-2108. 2110, 2111. 2139-2143.

More effectual system lately adopted in Holland for suppressing pleuro-pneumonia, *Read* 9765-9769——Effect of the restrictions enforced in Holland as regards the suppression of pleuro-pneumonia, *Brown* 9897-9901.

Sundry decrees and other papers submitted by Mr. May explaining in detail the regulations adopted from time to time in the Netherlands in reference to pleuro-pneumonia, foot-and-mouth disease, &c., *App.* 578-585.

2. *Amount of Disease in the Country; Question of prohibiting Import into England:*

Holland should be scheduled until quite free from disease, *Brown* 822——Extent of import of disease into London by means of cows from Holland, *Pool* 5905-5914——Infection of Holland through having imported foreign cattle, or through mediate contagion, *Gamgee* 7081-7085. 7109, 7110——Objection to the import of live stock from Holland, notwithstanding the precautions in that country against disease, *ib.* 7145-7149.

Prevalence of pleuro-pneumonia in Holland, *Odams* 8029——Expediency of restricting rather than prohibiting the import of Dutch cows, *Odams* 8054; *Read* 9504, 9505. 9513——Liability to the import of pleuro-pneumonia and foot-and-mouth disease by means of Dutch cows; very strict quarantine required, *Robinson* 8610-8617.

Belief as to the impracticability of guarding against the import of disease with Dutch cows; expediency of excluding them altogether, *Melvin* 8909, 8910; *Tisdall* 9376 *et seq.*——Very unsatisfactory experience of witness as regards Dutch store cattle; very few of these now in Norfolk, *Read* 9774, 9775.

Number of cases of pleuro-pneumonia in each of the years 1871-76; great decrease since the former year, *App.* 511.

3. *Question of a Dead Meat Trade:*

Impression that it would be extremely difficult to establish a dead meat trade with the Netherlands, because of the extra expense to which the senders would be put, *May* 2059-2065——Statement as to the markets to which cattle would be sent from the Netherlands if the exportation to England were prohibited, *ib.* 2128-2130——Advantage in importing cattle rather than dead meat from Holland, *Giblett* 6660-6663.

Particulars as to the dead meat trade from Holland during the restrictions upon import of live stock in 1866; much smaller import of dead meat than of live animals, when the latter were not prohibited, *Robinson* 8567-8578——Occasional deterioration in the dead meat formerly brought from Holland; no ice was then used, *ib.* 8690-8692——Saving in the freight of dead meat, as compared with live cattle, from Holland, *ib.* 8696.

4. *Number and Class of Cattle in Holland:*

Returns of the numbers of cattle in Friesland as compared with the rest of the country, *May* 2046-2048——Occasional importation of breeding bulls for the purpose of improvement of stocks, *ib.* 2131——Decided opinion that if the import of live stock from the Netherlands were entirely prohibited, it would tend materially to diminish the raising of stock in that country, *ib.* 2065-2067. 2113, 2114.

Total of about 1,500,000 as the whole stock of cattle in the country, *Read* 9501.

HOLLAND—continued.

4. *Number and Class of Cattle in Holland*—continued.

Return of the number of cattle, sheep, swine, &c., in each of the provinces of the Netherlands in 1875, *App.* 511.

5. *Practice as to Compensation in cases of Cattle Plague:*

Compensation in respect of cattle plague paid out of the Imperial Treasury; compensation in the case of suspected animals given to the full value, and in that of diseased animals half value, *May* 2041–2045. 2080–2085.

See also *Cattle Plague.* *Cows.* *Dairies and Cowsheds.* *Dead Meat.* *Foot-and-Mouth Disease.* *Foreign Cattle.* *Hull.* *Quarantine.*

HOME SUPPLY:

Very large increase anticipated in the home supply in substitution for the foreign supply, if live cattle from abroad be prohibited; great scope for such increase, *Booth* 2347–2349; *Stratton* 6799-6804. 6808. 6837, 6838; *Odams* 8009. 8010. 8083–8091——Tendency of the fear of disease to keep down the home stock, and consequently the supply of meat to the country; illustration in witness' case, *Rea* 3588. 3591. 3602–3606. 3783–3787——Belief that if foreign import be stopped it will be quite possible to supply the deficiency by home produce, *ib.* 3607 *et seq.*; 3759–3763. 3799. 3800.

Effect of the cattle plague of 1865 upon witness' occupation as a breeder of cattle; in the absence of proper steps to protect the farming interest from cattle plague, witness will stock more with sheep than with cattle, *Rea* 3313–3329. 3806–3808——Argument that the outbreak of cattle plague has affected the supply of cattle in the future as well as at the present time, on account of the loss of breeding cows, *ib.* 3656–3659.

Calculation that there are a million less cattle in the country than before the outbreak of 1865, *Wilson* 4738–4741. 4970, 4971——Very prejudicial effect of the risk of disease in preventing or checking the breeding of stock in the country; illustration on this point, *ib.* 4799-4803. 4933–4936——Respects in which the farmer, as well as the nation, will be much better off for the stoppage of foreign import and the avoidance of disease; tendency to a large increase of breeding and of store cattle, *ib.* 4918–4920. 4925–4930. 4960, 4961——Degree of loss to the consumer; that is, through the decreased supply of cattle in the country, *ib.* 4970–4974.

Opinion that there is no scope for a large increase in the home supply of cattle, foreign cattle being excluded, *Gebhardt* 5237–5239——Belief that the grazing power of the country is already fully taxed, *ib.* 5237–5339——Less dependence on foreign supplies if farmers in England had increased their stocks, instead of growing so much corn and other produce, *Pool* 5835–5838——Room for a large increase of home breeding; doubt as to this being checked by fear of disease being imported, *Giblett* 6671-6674. 6766–6769.

Tendency to an increase of home stocks in the districts round Leeds, *Walker* 7918–7922——Considerable decrease in the amount of stock in this country, owing very much to the apprehension of disease, *Odams* 7947-7956——Progressive increase expected in the stock of cattle in England, but for the risk of disease, *ib.* 8083–8091.

Effect of disease in discouraging cattle breeding among English farmers; advantage to Irish farmers in proportion, *Howard* 8177–8180. 8334. 8339. 8422——Capacity of the country for, and probability of more extensive breeding, if security against disease were greater, *ib.* 8184–8187. 8335–8339.

Considerable decrease since 1865 in the number of English cattle and sheep sent to London, whilst the foreign supply has largely increased, *Rudkin* 8937–8941——Increase of home breeding and probable reduction of price, if foreign cows were excluded, *Tisdall* 9416–9418——Grounds for the conclusion that a much larger number of cattle would be bred in England if there were security against the import of disease, *Read* 9756, 9757.

Conclusion of the Committee as to the large increase of home breeding, if there were immunity from pleuro-pneumonia and foot-and-mouth disease, *Rep.* iv.

See also *Calves.* *Cattle Plague.* *Dead Meat.* *Farmers.* *Metropolitan Cattle Market.* *Price of Meat.*

Howard, James. (Analysis of his Evidence.)—Has been deputed to represent the Central Farmers' Club; farms his own property in Bedfordshire, and has for many years taken a great interest in the subject of cattle diseases, 8145–8151. 8211.

Very heavy losses of witness from foot-and-mouth disease and pleuro-pneumonia, 8152. 8160, 8161——Introduction of foot-and-mouth disease and pleuro-pneumonia through fairs, 8153–8155——Very many animals attacked by these diseases in Bedfordshire about 1872, and heavy loss in consequence; exemption from cattle plague in the county, 8156–8165——Stringent regulations adopted for stamping out the outbreak; prohibition

Report, 1877—*continued.*

Howard, James. (Analysis of his Evidence)—*continued.*

prohibition of fairs and markets temporarily, 8166–8174——Foot-and-mouth disease soon re-introduced, 8175, 8176.

Benefit derived from the Contagious Diseases (Animals) Act, 1869; 8177, 8178——Effect of disease in discouraging cattle breeding among English farmers; advantage to the Irish in proportion, 8177–8180. 8334. 8339. 8422——Preference of farmers for production of wool and mutton; 10,000,000 or 11,000,000 home produced sheep slaughtered last year, 8181–8183——Capacity of the country for, and probability of, more extensive breeding if security against disease were greater, 8184–8187. 8335–8339.

Opinion of witness, speaking on behalf of the Farmers' Club, that farmers would submit to more stringent regulations with a view to stamping out disease, but that it would be re-introduced unless foreign cattle were excluded, 8188–8190. 8197–8199. 8398–8400.——Belief in the germ theory, 8190. 8196. 8260. 8360, 8361. 8389——Grounds for the conclusion that pleuro-pneumonia and foot-and-mouth disease are not produced spontaneously in England, but come from abroad; neither of these diseases in this country formerly, 8191–8196. 8411–8413.

Examination as to the scheduling system; evidence in favour of all fat cattle being slaughtered at the port of entry, 8200, 8201. 8251–8255. 8269, 8270. 8310–8325. 8405–8410——Free trade principles cheerfully accepted by English farmers; natural desire, however, for security from disease, 8202, 8203. 8371. 8392, 8393.

Views of witness as regards the dead meat trade; grounds for the conclusion that cattle are brought over in better condition dead than alive, 8204–8210. 8306–8312. 8326–8329. 8381–8386. 8419, 8420——General consideration of the means by which disease may best be restricted; various regulations suggested by witness on the part of the Farmers' Club, for both home and foreign stock, 8211 *et seq.*

Advisability of uniformity in local regulations and of Privy Council Orders being imperative, 8212. 8222, 8223. 8226–8228. 8236. 8287–8290. 8297——Proposal that the borough and county police should administer the Act and be constituted inspectors, with liberty to obtain veterinary aid; veterinary inspectors unnecessary, 8213–8221. 8224–8227.

Question of compensation considered; opinion that the public should pay to prevent concealment of disease, 8229–8234——Grounds for advising that cattle dealers be licensed, and also drovers at fairs and markets; proposed exemption in favour of labourers on individual farms, 8237–8242. 8291–8293.

Discussion of the measures desirable as regards cattle imported from Ireland; regulations suggested by witness to be enforced there as well as in England, 8243 *et seq.*——Foot-and-mouth disease regularly introduced from Ireland; Irish beasts depreciated in consequence, 8249. 8380.

Quarantining discussed; suggestion that store stock be not sent into the country until quarantined for two months, 8256–8272. 8294–8296. 8314. 8373–8377——Separate markets advised for home and foreign cattle; they should be easily accessible, whereas Deptford needs much improvement in this respect, 8273–8278——Reasons for altogether stopping the importation of store stock into this country from Ireland, whenever diseases exist there; the Irish would then take vigorous measures to stamp them out, 8279–8281. 8340, 8341. 8379.

Conviction of witness that disease should be dealt with immediately, and stamped out by strict measures, which he considers might be easily done, 8282–8286. 8390. 8394–8407. 8414–8418——Witness would let Ireland continue to have power to shut her ports against English cattle, 8298, 8299——No pleuro-pneumonia or foot-and-mouth disease in certain parts of Ireland and Scotland; that is, where cattle are exported only without any import, 8303–8305.

Reduction of price and considerable benefit to the community, if increased quantities of dead meat be imported from America, 8307–8309——Numbers of pigs bred by witness and exported to the Continent and Ireland in order to improve the breeds for the London market, 8313——Healthy state of the county of Bedford, and of England generally at the present time, 8330, 8331. 8354–8359.

Reasons for concluding that small farmers in Ireland would not be much interfered with by the proposed restrictions, 8342–8351——Possibility of smuggling being resorted to in the event of special restrictions; no practical danger on this score, 8367–8372——Necessary defects of inspection from its being so brief, 8378——Great capabilities of America to supply meat, though not in unlimited quantity, 8391.

HULL:

Explanations in connection with the outbreak of cattle plague consequent upon the cargo landed at Hull from Russia in July 1872, although all the animals were slaughtered, *Brown* 14, 15——Improved arrangements contemplated by the authorities at Hull; omission hitherto at this port to remedy certain defects, *ib.* 37–40.

Report, 1877—*continued.*

HULL—continued.

Precautions taken at Hull as regards the cargo of diseased cattle brought over in the "Hansa," *Brown* 87——Discovery of cattle plague in the dairies at Hull on the 17th February 1877; difficulty in tracing this outbreak, *ib.* 119–122——Action of the Privy Council and of the local authorities, the disease having been finally suppressed in the dairies on the 22nd March, *ib.* 123–129——Great danger of propogating the disease by the habitual purchase of hay and straw from the cattle ships by the dairymen in Hull; the outbreak of February was solely in the dairies, *ib.* 126–131.

Comment upon the course pursued by Mr. Duguid in the reported outbreak at Hull, in May 1877, and the conclusions drawn by him; slaughter of a herd of five cows upon his decision formed in a single case, witness greatly doubting whether there was any cattle plague at all, *Brown* 222–228. 237–243——Additional information respecting the alleged outbreaks of cattle plague; examination in reference to the measures adopted, *ib.* 501–503. 798–801. 879. 880. 1012–1026.

Further admission as to the important improvement proposed in the arrangements at the port; readiness shown by the authorities to adopt the suggestions made by the Privy Council, *Brown* 1006–1011. 1084–1087.

Very large import of cattle, sheep, and swine into Hull, *Brown* 1088, 1089——Improvement if cattle did not come in the same ships with passengers, *ib.* 1090–1093.

Great falling off in the import of foreign cattle into the port since the restrictions imposed in January 1877, witness and other Leeds butchers no longer obtaining supplies from the Hull market, *Walker* 7774–7788. 7896–7902——Diversion of trade to Newcastle since the restrictions at Hull, *Walker* 7781. 7843; *Knowles* 9233. 9352.

Witness submits that the prohibition of import of live cattle from Germany and Holland into Hull has caused great inconvenience and injury, not only to that port, but to Sheffield, Leeds, and other large towns previously supplied with live animals from Hull, *Knowles* 9226 *et seq.*——Very few cattle imported from Denmark, *ib.* 9228, 9229. 9295.

Calculation that there is an extra expense or loss of about 1 *l.* on each bullock sent from Hull to Leeds or Sheffield in the form of dead meat, instead of alive, *Knowles* 9237–9246. 9296–9302. 9343–9347——Difficulty as to the supply of dead meat from abroad to the large fleet of fishing smacks at Hull, *ib.* 9248–9254.

Claim on the part of Hull to the same privileges in regard to import from Schleswig-Holstein as are allowed in the case of Deptford Market; examination hereon relative to the markets at Hull and the steps taken, or being taken, to satisfy the requirements of the Privy Council, *Knowles* 9255–9264. 9282, 9283. 9317–9328. 9355–9359.

Very few Dutch cows lately imported into Hull, *Knowles* 9783–9785——Effect of the restrictions at Hull in raising the price of middle-class meat, on account of German cattle being excluded; difficulty especially as to supplies to shipping, *ib.* 9333–9342. 9348–9354.

Comment on the action of the local authorities in Hull in reference to precautions against the spread of disease, *Read* 9525–9529.

Infected Areas. Explanation in connection with two Orders issued by the Privy Council since the last outbreak of cattle plague in Bethnal Green; particulars more especially as to the establishment of an "infected area" by the Order now in force, and as to the advantages of this mode of restricting movement, *Brown* 10319–10329——Question considered whether the Privy Council has power to establish "infected areas" throughout the country as well as in the metropolis; expediency of amended and large powers in the matter, *ib.* 10330–10341. 10401–10403.

Recommendation by the Committee that in case of pleuro-pneumonia and foot-and-mouth disease breaking out, the Privy Council should have power to fix the limits of the district which is to be treated as infected, *Rep.* ix.

Report, 1877—*continued.*

Inoculation. Advocacy of inoculation in the case of animals that show no sign of pleuro-pneumonia, but have been in association with those that have had it, *Brown* 554—— Entire failure of inoculation for the prevention of cattle plague, *Simonds* 1200——Unfavourable opinion of witness as to inoculation as a prevention of pleuro-pneumonia, notwithstanding that many men of high standing approve of the system, *Müller* 1441, 1442.

Explanation in regard to the adoption of inoculation in Holland as a preventive of pleuro-pneumonia; belief that an animal which once has had this disease will not take it again, *May* 2086–2092. 2099–2105. 2121–2124——Decided opinion that inoculation should be compulsory when pleuro-pneumonia breaks out in a dairy stock, *Lambert* 3945–3950. 4035.

Suggestions for a trial of inoculation as a preventive in cases of pleuro-pneumonia; difficulty at present in forming conclusions as to the success of this treatment, *Brown* 10067. 10122–10126.

INSPECTION:

1. *Operation of the present System of Inspection, in reference to Cattle Diseases; its Efficiency, or otherwise.*
2. *Question of Inspection at the Port of Embarkation.*
3. *Staff: Question of Appointment by Government, or by Local Authorities.*
4. *Suggested Employment of the Police.*
5. *Conclusions of the Committee.*

1. *Operation of the present System of Inspection, in reference to Cattle Diseases; its Efficiency, or otherwise:*

Opinion that the present system of inspection is sufficient to guard against foot-and-mouth disease, by reason of the short period of incubation; belief that the inspection is conscientiously performed, *Brown* 49, 50——Statement that in some particulars, the instructions given to the inspectors were more stringent than were necessary, in order to make sure of preventing the spread of disease, *ib.* 178, 179.

Questionable advantage in the system of inspection at the ports as carried out at present; greater importance of detecting the disease at its centre of origin by means of inspectors, and preventing the movement of diseased animals from the centres, *Brown* 927–933. 940–942.

Unsatisfactory character of the inspection of foreign animals; probability that a larger number of diseased animals escape detection than are discovered, *Booth* 2392–2400 ——Doubt as to the value of inspection before the vessel comes into port, *Wilson* 4826—— Check by means of quarantine and inspection in England, as well as by inspection at the foreign port, upon the introduction of cattle plague, *Gebhardt* 5660–5662.

Reference to the case of the "Castor" as illustrating the inefficiency of inspection, *Adams* 7938. 8071–8074—— Statement as to foot-and-mouth disease having been detected in some Danish cattle landed at Newcastle after they had been passed a first inspection, *ib.* 7941–7943. 8078–8082——Necessary defects of inspection from its being so brief, *Howard* 8378.

Evidence purporting to show the entire inadequacy of inspection as a protection against the import of cattle with foot-and-mouth disease, *Robinson* 8559–8562——Complaint as to the uncertain and unequal character of the inspection at different ports; laxity at Harwich, *ib.* 8560–8566——Greater stringency in London than at the outports, *ib.* 8560.

Little, if any, reliance to be placed upon inspection, whether local or central, as a means of guarding against the import of disease, *Read* 9495–9497.

Much larger import of diseased animals but for the system of inspection at the port of arrival, *Brown* 9908—— Statement to the effect that the Government inspectors at ports, such as Bristol, where Irish cattle are landed, are empowered merely to report disease to the local authority, and to the Privy Council, without compelling immediate slaughter of the diseased animals, *ib.* 9938–9954——Opinion that absolute security against the introduction of disease cannot be obtained by any precautions, however strict, *ib.* 10045—— Inadequacy of inspection as a means of preventing the import of diseased cattle, *ib.* 10094, 10095.

2. *Question of Inspection at the Port of Embarkation:*

Grounds for the conclusion that it would be very unwise for the Privy Council to appoint inspectors at the port of embarkation abroad, *Brown* 868–876. 9926–9929—— Concurrence in the view that it is not desirable to appoint inspectors at the ports of embarkation, *Rea* 3471, 3742; *Wilson* 4830–4832.

Suggestions as to the means to be adopted in England to avoid the importation of disease; desirability of appointing English veterinary inspectors at Continental ports with instructions to telegraph information of shipment of infected animals, *Baron von Behr* 2512–2516. 2552–2555. 2566–2568. 2593, 2594.

Inspection—continued.

3. *Staff; Question of Appointment by Government or by Local Authorities:*

Advantage of the central authority having the appointment of all inspectors throughout the country, *Brown* 168——Proposed division of the whole country into districts, an inspector being placed in charge of each, who should be in constant communication with the central department, *ib.* 309, 310——Expediency of adopting uniformity of action by means of Government inspection, *ib.* 763-770. 802.

Recommendation that the Government should take the question of restriction entirely into their own hands and supersede the local authorities; expediency of the cost of inspection throughout the country being borne by Imperial instead of local funds, *Booth* 2302. 2430–2437——Belief as to the willingness of the local authorities to concur in the appointment of inspectors by the central authority, *Wilson* 4761–4763. 4941——Comparatively small increase of charge for inspection in order to apply more efficient precautions, *ib.* 5075, 5076.

Suggestions by the Central Chamber of Agriculture on the subject of local and itinerant inspection, *Stratton* 6788.

Entire readiness of the local authorities to submit to a system of Government inspection; considerations as to the source of payment of the increased staff required, *Stratton* 6791-6798. 6867——Contemplated appointment of local inspectors by the local authorities, *Soulby* 7248–7253; *Brown* 10182–10185——Sufficient powers already of the Privy Council as to the appointment of inspectors in case of need, *Soulby* 7254, 7255——Suggestion that the cost of inspection be borne by Imperial funds, *Smith* 8477–8479.

Suggested appointment of travelling inspectors for the supervision of the local arrangements, *Melvin* 8809–8811—— Contemplated appointment of the local inspectors by the local authorities, *ib.* 8811——Opinion that the appointment of inspectors should rest with the central authority, *Tisdall* 9421–9423.

Objection to the local inspectors being appointed by the Privy Council, *Read* 9610. 9631, 9632. 9752—— Advantage of travelling Government inspectors for seeing that the local authorities do their duty, *ib.* 9609-9611. 9613, 9614. 9631, 9632. 9752.

Exception taken to a suggestion for the appointment of a staff of travelling inspectors, *Brown* 10053, 10054——Importance of a staff of competent professional men for the prompt identification of disease throughout the country before any action is taken, *ib.* 10449. 10452.

4. *Suggested Employment of the Police:*

Advantage of employing the police throughout the country as inspectors under the local authority, *Brown* 524–526——The superintendents of police might act as inspectors, *Soulby* 7252.

Proposal that the borough and county police should administer the Act and be constituted inspectors, with liberty to obtain veterinary aid; veterinary inspectors unnecessary, *Howard* 8213–8221. 8224-8227—— Value attached to the services of the police in aid of the inspection both in London and the country, *Brown* 10447, 10448.

5. *Conclusions of the Committee:*

Conclusion as to the insufficiency of the check by means of inspection at the ports, *Rep.* iv. vi.

Different views submitted to the Committee upon the question of appointment of inspectors, *Rep.* v——Opinion of the Committee that the Privy Council could not undertake the work of local inspection throughout the kingdom, and that the appointment of inspectors should rest with the local authority, subject to the supervision of the Privy Council, *ib.*

See also *Bristol. Cattle Plague. Dairies and Cowsheds. Entry upon Premises. Germany*, 3. *Harwich. Ireland and Irish Cattle*, 4. *Pleuro-pneumonia*, 2. *Privy Council.*

International Arrangements. Evidence as to the advantage of international engagement in regard to the importation of cattle, *Brown* 715–722. 743–752——Desirability of trusting to international communications to prevent disease from spreading, and at the same time of removing the existing restrictions upon import, *Swan* 1689, 1690. 1701——Recommendations as to the arrangements necessary for governing the foreign importation of cattle; advantage of extending international regulations as regards telegraphing the announcement of the outbreak of disease, *Lambert* 3917–3921.

Expediency of international arrangements with a view to immediate intelligence by telegraph when there is an outbreak of cattle plague abroad, *Rep.* iii.

See also *Cattle Plague*, 6. *Germany*, 2.

Report, 1877—*continued.*

IRELAND, AND IRISH CATTLE:

1. *Transit of Live Stock to England; Defects of the Arrangements, and Cruelties practised, greatly to the Deterioration of the Animals, and the Development of Disease.*
2. *Cattle Boats; Extent to which productive of Disease.*
3. *Scheme of Sir C. A. Wood for amended Transit Arrangements.*
4. *Inspection.*
5. *Proposed Restrictions upon Movement of Cattle in Ireland; similar Regulations desirable for Ireland and England.*
6. *Import into Ireland.*
7. *Store Cattle.*
8. *Pleuro-pneumonia.*
9. *Foot-and-Mouth Disease.*
10. *Generally, as to the Amount of Disease in Ireland.*
11. *Great Increase in the Value of Live Stock.*
12. *Question of a Dead-meat Trade with England.*
13. *Recommendations by the Committee.*

1. *Transit of Live Stock to England; Defects of the Arrangements, and Cruelties practised, greatly to the Deterioration of the Animals, and the Development of Disease:*

Considerable deterioration formerly in the condition and value of Irish oxen during the transit to England, *Sir C. A. Wood* 7344——Result of an inquiry by witness into the shipment of cattle from Cork and Waterford, that disease is largely impregnated in the hay-fields, and that waterside depôts are much required, *ib.* 7345–7347. 7446——Opinion that disease is imported less from abroad than from Ireland, on account of the bad treatment of Irish cattle in transit, *ib.* 7355.

Great cruelty towards cattle and pigs in the act of embarkation at Irish ports, and in their removal into railway trucks at the English ports, *Sir C. A. Wood* 7402–7407——Less careful conduct of the cattle trade with Ireland than with the Continent, *ib.* 7413–7419——Varying distances for which the cattle travel to the port of shipment in Ireland; practice of placing them in lay-fields at the port, *ib.* 7430–7433——Development of disease during the transit to England, *ib.* 7454–7460.

Suggestion that cattle from Ireland be rested at the port of debarkation for six hours, and be fed and watered before and after leaving the railway trucks, *Read* 9611, 9612. 9692–9695. 9731–9734——Considerable improvement in the state of the lairs in Ireland, *ib.* 9611.

Urgent want of improved arrangements in the transit of Irish cattle; development of disease by the neglect and cruelty under the present system, *Odams* 8018–8025. 8028–8030. 8114, 8115——Comparative condition in which cattle arrive from Ireland and from the Continent, *ib.* 8116–8119.

Very rude arrangements formerly in the transport of live stock from Ireland, but without any outbreak of disease; greatly improved arrangements now in force, *Robinson* 8619, 8620——Belief that diseases are not developed during the transit from Ireland, but by subsequent treatment in England; very strict checks upon the shipment of diseased animals, *ib.* 8621–8625.

2. *Cattle Boats; Extent to which productive of Disease:*

Particulars as to the crowded state of the Irish boats and the defective arrangements generally, for the care of the cattle, though some improvements have been made in the last few years; these boats are, in witness' opinion, the chief propagators of foot-and-mouth disease, *Hamilton* 4280–4298. 4318–4324. 4346–4351. 4417–4420——Tendency of the bad arrangements on board the Irish cattle ships to promote foot-and-mouth disease, *Lord Fitzhardinge* 5303, 5304——Very crowded state of the Irish cattle boats; tendency to disease thereby, whilst many animals die on the voyage, *Peters* 5375–5379. 5386–5389.

Constant introduction of foot-and-mouth disease into Wiltshire by Irish cattle, *viâ* Bristol; belief that this is chiefly owing to the infected state of the vessels in which the cattle are brought from Ireland, and that the evil may be prevented by careful disinfection, *Stratton* 6839–6845. 6855–6861.

Circumstances under which witness made some investigations in 1864 into the mode of shipment of cattle from Irish ports, as well as into the arrangements on board the cattle boats, and the treatment on the voyage; improvements then required, some of which have since been effected, *Sir C. A. Wood* 7341–7344. 7442–7445.

Evidence showing the great disadvantages of the system of bringing passengers and cattle in the same ships from Ireland; important improvement by the special construction and fitting up of vessels for cattle exclusively, *Sir C. A. Wood* 7347–7554. 7409–7422. 7468, 7469——Reference to a certain statement as showing that the cattle rates from

IRELAND, AND IRISH CATTLE—continued.

2. *Cattle Boats; Extent to which productive of Disease*—continued.

Ireland to England are comparatively high, *Sir C. A. Wood* 7352——Higher price realised by the animals if brought over in better condition in improved boats, *ib.* 7353, 7354.

Particulars relative to the vessels employed by the great Western Company in the Waterford cattle trade; facilities for cleansing them, *Sir C. A. Wood* 7427–7429. 7449–7453——Information relative to the different companies conveying cattle, sheep, and pigs between Ireland and England; doubt as to the proportion carried by railway boats, *ib.* 7481–7485.

Good accommodation in the Irish cattle boats, except that they are often overcrowded, *Luya* 7641–7646. 7670–7672. 7679. 7765–7770.

Satisfaction expressed with the accommodation and arrangements on board the cattle ships from Cork, *Robinson* 8674–8689——Inducement to the shipowners to take every care of the cattle on account of the practice of insuring them against injury or death, *ib.* 8683–8685. 8711–8714——Excellent arrangements on board the Irish cattle ships generally, *ib.* 8686.

Fairly satisfactory arrangements on board the Irish boats which come to Bristol; good condition in which some recent cargoes have arrived, whilst there was only one death on the voyage, *Brown* 9957–9959. 10112. 10132——Expediency of sufficient time for disinfection before a cattle ship from Ireland takes a return cargo of cattle, *ib.* 10222, 10223.

Return submitted by Sir Alexander Wood showing the live stock boat rates between different ports in Ireland and England, *App.* 576. 577.

3. *Scheme of Sir C. A. Wood for amended Transit Arrangements:*

Explanation relative to the improved arrangements proposed by witness by means of cattle depôts at Cork and Waterford, and at Portishead; this scheme has been submitted to the Privy Council, but nothing has been done under it, *Sir C. A. Wood* 7355–7360. 7393–7396.

Scheme submitted by Sir Alexander Wood to the Privy Council in February 1876 in reference to the import of cattle from Ireland, the transit arrangements, inspection, &c., *App.* 569, 570.

4. *Inspection:*

Steps taken by the Irish Government to inspect animals at Irish ports, *Brown* 625——Increased inspection since 1874 of animals imported from Ireland, *ib.* 1061. 1064–1067.

Great want of an efficient government inspection at places in the Severn, other than Bristol, where cattle, sheep, and pigs are landed from Irish boats; particular instances in illustration, *Lord Fitzhardinge* 5260–5276. 5294–5313. 5338, 5339. 5344——Expediency of rigid inspection at the port of landing in England as well as at the port of shipment in Ireland, *Sir C. A. Wood* 7352. 7423–7426.

Careful inspection and expensive disinfection in connection with the Irish cattle trade, but without successful results, *Robinson* 8560——Expediency of the ports or places of landing for Irish cattle being defined, so that inspection may not be evaded, *Brown* 9976–9978.

5. *Proposed Restrictions upon Movement of Cattle in Ireland; similar Regulations desirable for Ireland and England:*

Impossibility of making regulations with regard to Ireland unless the similar regulations are adopted in England, *Simonds* 1154–1157——Desirability of treating Ireland as regards movement of cattle, exactly the same as England, *Booth* 2365, 2366——Recommendation that Irish cattle should be treated in the same way as English cattle and with the same restrictions, *Rea* 3665–3667.

Expediency of treating Ireland in the same way as England instead of as a foreign country, *Wilson* 4782–4784. 4979–4982—— Importance of a strict check upon the movement of cattle in Ireland and upon the holding of fairs wherever disease exists; expediency on the other hand of due facilities for the export of store cattle to England, *ib.* 4942–4945. 5052–5059. 5103–5107——Question as to the proposed restrictions being injurious to the cottiers or small farmers; though the price of their stock will probably be reduced there will be freedom from loss by disease, *ib.* 5124–5128.

It is not proposed to stop import from Ireland, *Stratton* 6843. 6868. 6886, 6887——Opinion that Ireland should be treated as part of England, *Gamgee* 7168——Proposed slaughter of Irish fat cattle under the same restrictions as foreign cattle, *Odams* 8033, 8034. 8120–8123. 8140, 8141.

Discussion of the measures desirable as regards cattle imported from Ireland; regulations suggested by witness to be enforced there as well as in England, *Howard* 8243 *et seq.*

IRELAND, AND IRISH CATTLE—continued.

5. *Proposed Restrictions upon Movement of Cattle, &c.*—continued.

et seq.——Reasons for concluding that small farmers would not be much interfered with by the proposed restrictions, *Howard* 8342–8351.

Expediency of placing Irish cattle under the same regulations as English and Scotch cattle, *Smith* 8512–8514——Ireland should be treated as part of the United Kingdom, and not as a foreign country, *Brown* 10127, 10128, 10140, 10141.

6. *Import into Ireland:*

Proposal as to the prohibition of import of foreign cattle into Ireland, *Brown* 556, 557. 861——Large exportation of short-horns from Yorkshire to Ireland by witness and his family during the last sixty years; considerable increase in the value of Irish cattle from this exportation, *Booth* 2260, 2261. 2343, 2344——Witness would let Ireland still have power to shut her ports against English cattle, *Howard* 8298, 8299——Very rare import of foreign stock into Ireland; the disease in that country being introduced by English stock, *Brown* 10118–10121. 10242–10244.

7. *Store Cattle:*

Large increase contemplated in the import of store cattle from Ireland; that is, under improved regulations, *Sir C. A. Wood* 7382——Introduction of disease from Ireland chiefly by means of stores, which go to all parts of England, *ib.* 7436–7439.

Reasons for altogether stopping the import of store cattle from Ireland, when diseases occur there; the Irish would then take vigorous measures to stamp out disease, *Howard* 8279–8281. 8340, 8341. 8379——Suggestion that store cattle from Ireland be not allowed to go through Glasgow or other large towns, *Melvin* 8913–8919——Modified restrictions desirable as regards the movement of store cattle in Ireland, *Read* 9717–9719.

8. *Pleuro-pneumonia:*

Similar treatment of Irish cattle as of English, in regard to compulsory slaughter for pleuro-pneumonia, *Brown* 1061–1067——Importance of more stringent regulations for suppressing pleuro-pneumonia in Ireland; improvement by compensating the owner for animals killed, *Read* 9593–9597.

9. *Foot-and-Mouth Disease:*

Serious amount of foot-and-mouth disease in the cattle imported to Scotland from Ireland in the last year, *Swan* 1703–1706. 1815–1823——Greater liability of the Irish cattle to foot-and-mouth disease than the English and Scotch cattle, *ib.* 1821——Belief that foot-and-mouth disease is not generated in Ireland, *Booth* 2365, 2366—— Valuable character of certain precautions suggested at the place of export in Ireland, in reference to foot-and-mouth disease, *Wilson* 4962–4969.

Foot-and-mouth disease regularly introduced from Ireland; Irish beasts depreciated in consequence, *Howard* 8249. 8380——Belief that Ireland is now free from foot-and-mouth disease, *Read* 9633, 9634——Comparatively small number of sheep and swine imported from Ireland with foot-and-mouth disease, whilst the Irish cattle are now free from the disease, *Brown* 10133–10136.

10. *Generally as to the Amount of Disease in Ireland:*

Original contamination of Irish cattle by import from England, *Gamgee* 6961—— Much greater liability of England than of Ireland to be affected with international diseases, *ib.* 7075–7079——Healthy character of cattle in Ireland, disease being developed during the transit to England, *Sir C. A. Wood* 7454–7460. 7470.

Import of pleuro-pneumonia and foot-and-mouth disease with Irish cattle, *Luya* 7638. 7647–7649. 7756–7762——Practice of witness in purchasing Irish fat cattle in Leeds, since he has been precluded from obtaining foreign cattle from Hull; good and sound condition of the Irish animals, *Walker* 7793. 7910–7917——Absence of pleuro-pneumonia and foot-and-mouth disease in certain parts of Ireland and Scotland, where there is no import, *Howard* 8303–8305.

Very little disease now in Ireland, *Read* 9633, 9634; *Brown* 10133–10136—— Improved condition in which the Irish cattle now arrive in Norfolk, *Read* 9635–9640.

11. *Great Increase in the Value of Live Stock:*

Fourfold increase in the value of cattle in Ireland, within the last twenty-five years, *Booth* 2344.

12. *Question of a Dead-meat Trade with England:*

Loss in importing dead meat instead of live cattle from Ireland, *Hamilton* 4366–4373 ——Doubt whether dead meat can be sent profitably from the west of Ireland to London, *Gebhardt* 5658——Doubt as to a dead-meat supply being likely to come from Ireland, the quality not being sufficiently good, *Burkett* 6338, 6339. 6348–6352.

IRELAND, AND IRISH CATTLE—continued.

12. *Question of a Dead-meat Trade with England*—continued.

Steps in contemplation some years ago for establishing a dead-meat trade between Ireland and England, *Sir C. A. Wood* 7344——Belief that by the cold-air process dead meat may be safely brought from Ireland to England, *ib.* 7378–7381——Opinion that the American meat trade will probably lead to a dead-meat trade with Ireland, *ib.* 7440.

Large dead-meat trade formerly between Ireland and Liverpool; inferior quality of the meat, so that the trade came to an end, *Luya* 7546–7551——Grounds for the conclusion that a dead-meat trade cannot be successfully established in lieu of the live cattle trade with Ireland, *ib.* 7557–7561——Impracticability of a dead-meat trade with Ireland, *Walker* 7794.

13. *Recommendations by the Committee:*

Recommendation that a searching inquiry be made into the subject of the transit of cattle from Ireland to the ports of Great Britain; into the provisions made for their reception at the ports of departure and of arrival, and into their treatment during the voyage, *Rep.* ix.

Recommendation that the restrictions applicable to Great Britain should be extended to Ireland, or else that ports should be specified to which alone importation of live animals from Ireland should be lawful, the animals not being permitted to be taken inland unless examined and passed by a Privy Council inspector at the port of debarkation, *Rep.* v. viii. ix.

Isolation of Disease. See *Infected Areas. Movement of Cattle.*

K.

Knowles, Henry. (Analysis of his Evidence.)—Is a cattle and sheep salesman at Hull; has been deputed to represent the trade before the Committee, 9224, 9225——Submits that the prohition of import of live cattle from Germany and Holland into Hull has caused great inconvenience and injury not only to that port but to Sheffield, Leeds, and other large towns previously supplied with live animals from Hull, 9226 *et seq.*

Calculation that there is an extra expense or loss of about 1 *l.* on each bullock sent from Hull to Leeds or Sheffield in the form of dead meat, instead of alive, 9237–9246. 9296–9302. 9343–9347——Serious loss, to the prejudice of the lower classes, through the difficulty in the conveyance of offal to Leeds and other towns, if all foreign cattle coming to Hull must be slaughtered there, 9237. 9242–9246. 9301–9306. 9343–9347. ——Effect of compulsory slaughter in diminishing the import, 9247. 9280.

Difficulty as to the supply of dead meat from abroad to the large fleet of fishing smacks at Hull, 9248–9254——Statement that American meat will not salt, so that the sailors at Hull will not use it, 9250–9252. 9307–9311——Claim on the part of Hull to the same privileges in regard to import from Schleswig-Holstein as are allowed in the case of Deptford Market; examination hereon relative to the markets at Hull and the steps taken, or being taken, to satisfy the requirements of the Privy Council, 9255–9264. 9282. 9293. 9317–9328. 9355–9359.

Excellent condition in which some American cattle have recently arrived at Hull, 9265–9273——Public dislike of American dead meat in Hull, so that there is no demand for it, 9274–9277——Objectionable condition in which the "iced" meat, so called, frequently arrives from America, 9278. 9312–9316——Very few Dutch cows lately imported into Hull, 9783–9785.

Conclusion as to the higher freight when an animal comes as dead meat from Hamburg or Holland than when it comes alive, 9286–9290. 9329–9332——Effect of the restrictions at Hull in raising the price of middle-class meat, on account of German cattle being excluded; difficulty especially as to supplies to shipping, 9333–9342. 9348–9354.

Report, 1877—*continued.*

L.

Lairs. Reference to the lairs at foreign and home ports as fruitful sources of disease, *Wilson* 4829. 4947.

See also *Ireland, &c.*, 1-3. *Waterside Depôts.*

Lambert, Septimus, Junior. (Analysis of his Evidence.)—Is a salesman largely interested in the cattle trade in Manchester, and appears to give evidence on behalf of the Salford Markets Committee; is also a non-practising member of the Royal College of Veterinary Surgeons, 3814-3816. 3891-3893. 4035. 4130-4132.

Information in regard to the American dead-meat trade, into which witness has not embarked; opinion that in the hot weather this trade cannot be successfully carried on, 3817. 3861. 3993-4002. 4012-4034. 4046-4048——Mixed quality of the meat which has come from America into Manchester, 3832-3835.

Decided opinion that it is impracticable to move meat without deterioration after it has been subject to the influence of ice; impossibility of carrying on this trade unless the meat is sold within two days of its arrival, 3853-3855——Obstacles to the dead meat supply becoming a permanent trade and competing with the trade in live animals killed in this country, 3861.

Statement with reference to the import of foreign cattle and sheep by witness; serious effect of the slaughter of animals at the port on the Manchester trade, 3862-3873——Statistics of the number of sheep which have been imported into Manchester from Hamburg during those years when the cattle traffic was not under restrictions; numbers imported in the years when disease was prevalent on the Continent, 3869-3880.

Introduction of the dead-meat trade into Manchester consequent on the falling off in the live import; dependence of Manchester upon free import of foreign sheep, so that prices may be kept at a proper level, 3881-3890——Reasons why the importation of foreign sheep is necessary for the Salford Market; large demand for whole joints of meat by the highly-paid operatives in Lancashire, 3891-3899——Consumption of sheep in Manchester during the first six months of this year, compared with the like period of 1871; falling off of the consumption by the working classes in the present year, 3900-3906. 3986.

Necessity for very stringent regulations for the purpose of stamping out pleuro-pneumonia; belief that such restrictions if they succeeded would be a benefit to the country generally by increasing the amount of the home supply, 3908-3912. 3922-3944. 3950-3953. 4178-4180——Impossibility of stamping out foot-and-mouth disease, 3910. 3978. 4039, 4040——Great importance of removing the jurisdiction of the local authorities in regard to cattle plague, and placing it all in the hands of the central authority; expediency of the inspectors being subject alone to the authority of the Privy Council, so that uniformity of regulations may prevail, 3913-3916.

Recommendations as to the arrangements necessary for governing the foreign importation of cattle; importance of extending international regulations as regards telegraphing the announcement of the outbreak of disease, 3917-3921——Approval of the twelve hours quarantine which is at present in force in the case of foreign cattle, 3917. 3921. 3925——Advocacy of severer penalties in the case of people who do not report cases of pleuro-pneumonia, 3928-3931.

Necessity for more stringent regulations governing the inspection of dairy stock; belief that dairies in towns are the hotbeds of pleuro-pneumonia, 3932-3939——Decided opinion that inoculation should be compulsory when pleuro-pneumonia breaks out in a dairy stock, 3945-3950. 4035.

Complaint, as regards foot-and-mouth disease, that the law in regard to it is harassing and vexatious in every way; argument that the remedy of stamping it out would be worse than the disease, 3954-3984. 4008-4011. 4036-4040. 4063-4069. 4126-4129——Expediency of foot-and-mouth disease being unrestricted, with the exception of travelling on the high road and being shown at store fairs; necessity of a heavy penalty to prevent this, 3972. 3975. 4036. 4063. 4175-4177. 4181, 4182.

Conclusion that even if pleuro-pneumonia were stamped out we could not grow meat enough in this country for the wants of the people; desirability on this account of perfect free trade in cattle, especially in sheep, 3986-3990——Recent arrival of 1,500 American cattle of the best quality within seven days; comparison between the price of these cattle and American dead meat selling at the same time in the Manchester market, 4003-4007. 4070-4075——Loss of weight by live cattle coming from abroad; the loss would be less when transported a shorter distance by rail, 4049-4055. 4077-4081.

Inexpediency of stopping the importation of live cattle into England; belief that such a measure would be a great disadvantage to the country, 4059-4062——The commission upon the sale of carcases is double that for selling live stock, 4082-4085——

Lambert, Septimus, Junior. (Analysis of his Evidence)—*continued.*

Character of the sheep brought to Manchester for consumption; preference in that market for lean sheep with but little fat, 4082–4095. 4148–4159.

Further statement that the importation of American dead meat will not succeed; more rapid decomposition of this meat than English meat, 4096–4124. 4133–4140. 4163–4170 ——Admirable arrangements adopted in the Manchester public slaughter-houses; reduction of temperature in these establishments to about forty degrees, 4098. 4100. 4106. 4160–4192.

Additional suggestions as to increased stringency in the regulations with the object of eradicating pleuro-pneumonia; approval of the present restrictions if foreign Governments could be relied upon to transmit telegraphic information as to any outbreak, 4141–4147——Considerable increase of price which would result from the stoppage of the import of live cattle into Manchester, 4171——The principal supply of meat to Manchester from June to Christmas is from Ireland, 4174.

Information respecting the price of meat in Manchester during the last six months, 4183–4194——Correction of a statement made by Mr. Hall with reference to the weight of offal in relation to the rest of the carcase; the average weight of the liver and heart is eighteen pounds, 4194–4197.

Lancashire (*Hundred of Salford*). Action taken by the local authority of the county under the Cattle Plague Order of January 1877, *App.* 563.

Landing of Cattle. Great defects in the present system in regard to the want of control over the landing of cattle; absence of means for stopping the movement of vessels or persons on board vessels, *Brown* 41–43.——*See* also *Ireland, &c.*, 1, 3.

Leeds. Complaint as to the prejudicial effect of slaughtering foreign cattle on debarkation at Hull as compared with the former system of bringing the animals to Leeds for slaughter, *Walker* 7789–7792. 7795–7804. 7844. 7903——Relative cost of conveying dead meat and live animals from Hull to Leeds, *ib.* 7801–7804——Very rare instances of pleuro-pneumonia in Leeds, *ib.* 7827–7829——Limited extent to which dead meat comes from London to Leeds; belief that no live animals come from London, *ib.* 7838–7843. 7885–7887.——*See* also *American Dead Meat*, V. *Hull.*

Legislation. Expediency of a short Act of Parliament in lieu of the present Act, giving the Privy Council power to make the necessary regulations in the various districts, *Brown* 943, 944.

Summary of the conclusions and recommendations of the Committee, to which, where required, effect should be given by the Legislature, *Rep.* ix, x.

Lincolnshire. Total inability to trace the cause of the outbreak of cattle plague in Lincolnshire either by the introduction of animals or by people who had been in contact with the Hull infected district, *Brown* 244–254.

Complaint made in the county as to the closing of fairs and markets in consequence of the outbreak near Great Grimsby, *Brown* 10097. 10101, 10102.

Link, John David. (Analysis of his Evidence.)—Is an American beef agent and provision merchant; has had many years experience in the meat trade in London, 3059–3061. 3139–3141——Consignments of dead meat received by witness from America since October 1875; several cargoes of hogs also received by him from the States, 3062–3065. 3142, 3143——Increase of this trade since its commencement, 3066. 3071. 3078. 3101–3103. 3135, 3136——Mode of transporting the meat from Liverpool to London by train; specially constructed trucks for this purpose, 3067. 3083–3085. 3145.

Information respecting the shipments received from America and the generally good condition of the meat; most of the meat is purchased by butchers for consumption in the West End of London, 3069——High price at which the meat is sometimes sold in London, 3070, 3071. 3090, 3091——General concurrence in the evidence given by Mr. Gillett, 3073–3075. 3138——Strong approval of the process by which the meat is brought over from America in a cold, dry temperature, 3081, 3082.

Statement that the American meat will keep longer than English beef fresh from the slaughter-house; great importance of the meat being chilled right through before being shipped, 3086, 3087. 3092–3095. 3099, 3100. 3128–3131. 3137——Consumption of some of this beef by Her Majesty, by clubs, and other West End customers, who have expressed high approval of its quality; impossibility of distinguishing the meat from Scotch beef, 3088, 3089. 3114. 3133, 3134——The cost of freight, excluding all the machinery and appliances on board ship, is between 3 *l.* and 4 *l.* per carcase, 3098. 3104–3110.

Report, 1877—*continued.*

Link, John David. (Analysis of his Evidence)—*continued.*

Explanation that some meat condemned in the London market became bad on account of the vessel being longer out than usual, and the ice running short, 3112, 3113——Passenger ships supplied by witness with American meat for consumption on board, 3116-3119. 3132, 3133——Statement as to the quantity brought in weekly to the London market, 3121-3123.

Impossibility for any smell to come from the meat chambers on board the passenger ships, 3124-3127——Adoption of the plan of having separate chambers in the vessel, so that part of the cargo can be dealt with at a time, 3130-3132. 3137.

Linseed. Considerable variation in the price of linseed as food for cattle, *Odams* 8092-8094.

Liverpool. Witness is chief inspector of meat under the Corporation of Liverpool, there being three other inspectors, *Luya* 7488-7493. 7705. 7706——Total of about 1,500 of cattle which come into Liverpool weekly, about 1,000 being consumed in the town, *ib.* 7494-7497——Jurisdiction of the county magistrates over the Stanley Cattle Market, *ib.* 7498-7500.

Import into Liverpool of cattle from Spain, Portugal, Ireland, Scotland, and America, *Luya* 7501-7503——Examination of the cattle on arrival by the Government inspector; subsequent duty of witness, if any animals are diseased, to see to their being slaughtered, *ib.* 7507. 7524-7532. 7639, 7640. 7661-7669. 7747, 7748——Importance of the Stanley Market as a centre of supply to many towns at a distance, *ib.* 7538-7542.

Statement as to the people of Liverpool being very particular about the quality of meat, some being sent to London through not finding a demand in Liverpool, *Luya* 7543-7545. 7682-7685——Regulations as to compulsory slaughter in the case respectively of Irish cattle and Portuguese cattle, *ib.* 7756-7762.

Advantage of separate markets for store cattle and fat cattle in Liverpool, as well as in London, *Read* 9738, 9739.

See also *American Cattle*, 2. *American Dead Meat*, I. V. IX. *Foreign Cattle. Ireland, &c. Sheep.*

Local Authorities:

Suggested improvements in the existing system as regards the duties of the local authorities; these suggestions would doubtless entail a large increase in the present staff, *Brown* 154. 166-168——Opinion that in the event of a fresh outbreak of cattle plague, the Privy Council should be empowered to supersede the local authorities in all cases; though in such event the cost would be greater, it would be fully compensated for, *ib.* 984-988.

Approval of the Privy Council superseding the local authority in the event of any fresh outbreak of cattle plague, *Simonds* 1213-1215; *Rea* 3653-3655. 3796-3798——Great importance of removing the jurisdiction of the local authorities in regard to cattle plague, and placing it all in the hands of the central authority; expediency of the inspectors being subject to the authority of the Privy Council, so that uniformity of regulations may prevail, *Lambert* 3913-3916.

Representation made by the Agricultural Society after the outbreak of cattle plague at Willesden, to the effect that the local authorities should be superseded by the Privy Council, with a view to more effectual steps being taken for preventing the spread of the disease, *Wilson* 4696-4700——Unequal and inconsistent exercise of the powers of the different local authorities under the Act of 1869; illustration in Northumberland, *ib.* 4751-4753. 4755-4759. 4773, 4774——Restrictions in force in thirty-six counties and twenty-nine boroughs in reference to cattle plague, *ib.* 5129.

Entire readiness of the local authorities to submit to a system of Government inspection, *Stratton* 6791-6798——Degree of control suggested in the Privy Council over the local authorities, *Soulby* 7248-7253.

Great want of uniformity in the regulations now applied in this country; expediency of the local authorities being made to conform to the instructions of the Privy Council, *Melvin* 8803-8809—— Importance of a limitation of the number of local authorities, and of uniformity of action throughout the whole of each county, *Read* 9627-9630.

Frequent instances of negligence on the part of local authorities to carry out the necessary regulations; denial that the Privy Council is equally open to this charge, *Brown* 10152-10181. 10220, 10221——Explanation that witness does not propose to supersede the local authorities, or to deprive them of the power of appointing inspectors, *ib.* 10182-10185——Question considered as to the power of the local authorities to stop animals when being moved in contravention of the Animals Order of 1877, *ib.* 10435-10437.

Directions laid down in the Animals Order of 1875, as to the action of local authorities, *App.* 532.

Local Authorities—continued.

List of local authorities in whose districts (either wholly or in part) regulations have been made under the Cattle Plague Order of January 1877, *App.* 538.

List of authorities in whose districts regulations have been made for foot-and-mouth disease, *App.* 558, 559.

Action taken by various local authorities in prohibiting movement, closing markets, &c., *App.* 560, 561.

Conclusion of the Committee as to the unsatisfactory working of the powers committed to the local authority in reference to outbreaks of cattle plague; amendment desirable, *Rep.* iii. ix.

Grounds for the recommendation that uniform rules applicable to all districts declared infected should be enforced by the local authority, subject to the supervision of the Privy Council, *Rep.* iii. v. ix.

See also *Cattle Plague*, 13. *Hull. Inspection. Privy Council. Uniformity of Regulations. Yorkshire.*

London. See *Dairies and Cowsheds. Deptford Market. Metropolis. Metropolitan Cattle Market.*

London, Port of. Number of animals landed respectively at Deptford, Thames Haven, and Brown's Wharf, *Rudkin* 9127-9132.——*See* also *Deptford Market.*

Loss from Disease:

Opinion that the increased cost caused by the proposals of witness would be insignificant as compared with the amount of loss which is sustained by the ravages of contagious disease, *Brown* 527-529. 559-561. 857-860——Enormous losses from cattle plague in 1865-67, *Brown* 857-860. 891-895; *Simonds* 1183-1189——Information respecting the amount of losses from cattle plague in 1872, as compared with the years 1865 to 1867, *Simonds* 1183-1189. 1258-1265. 1292-1296.

Concurrence of evidence as to the great losses, directly and indirectly, caused by foot-and-mouth disease, *Booth* 2341, 2342; *Rea* 2592-3594; *Sheldon* 4532-4537; *Wilson* 4746-4750. 4785-4798. 4878-4890. 4975. 5044-5051; *Stratton* 6774-6783. 6834-6836; *Melvin* 8735-8741; *Tisdall* 9473-9476——Numerous farms unlet throughout the country owing very much to the loss of capital through cattle diseases, *Wilson* 4935, 4936.

Reference to the total amount of loss from cattle diseases, witness submitting however that foot-and-mouth disease is quite as much a native as a foreign complaint, and that animals do not die from it, *Giblett* 6719, 6720. 6727, 6728.

Calculation that from seventy to seventy-five per cent. of the total mortality of cattle in this country is due to international or foreign disease, *Gamgee* 6958-6960——By closing the ports at once more meat would be saved in twelve months than the total value of the animals excluded, *ib.* 6967.

Examination as to the data for witness' conclusion that some seventy per cent. of the cattle mortality in England was due to imported diseases; reference more especially to the very large mortality from pleuro-pneumonia, *Gamgee* 7043-7055. 7061-7074.

Grounds for the conclusion that certain statistics as to the total loss of cattle in this country from disease are quite unreliable; estimate of one-and-a-half per cent. as the total annual deaths from diseases of all kinds, *Brown* 9997-10003. 10098. 10142-10149——More fatal results from pleuro-pneumonia though foot-and-mouth disease is more prevalent, *ib.* 10085, 10086.

Direct loss of about 5,000 *l.* from cattle plague in 1872, and of about 22,000 *l.* in 1877, less the salvage for some of the carcases, *App.* 510.

Great loss not only to the farmer but to the consumer by the ravages of foot-and-mouth disease and pleuro-pneumonia, *Rep.* iv.

See also *Cattle Plague*, 10. *Compensation. Foot-and-Mouth Disease*, 3. *Pleuro-pneumonia*, 3.

Lower Classes. Advantage in importing inferior cattle in order to meet the demand of the lower classes, *Gebhardt* 5513.——*See* also *American Dead Meat. Dead Meat. Foreign Cattle. Meat Supply. Offal. Price of Meat.*

Lung Disease. Distinction between lung disease, as it formerly existed in this country, and pleuro-pneumonia; the former disease was not contagious, *Howard* 8412. 8415.——*See* also *Pluero-pneumonia.*

Luya, Thomas John. (Analysis of his Evidence.)—Is chief inspector of meat under the Corporation of Liverpool, there being three other inspectors, 7488-7493. 7705, 7706——Total of about 1,500 cattle which come into Liverpool weekly, about 1,000 being consumed in the town, 7494-7497——Jurisdiction of the county magistrates over the Stanley Cattle Market, 7498-7500——Import into Liverpool of cattle from Spain, Portugal, Ireland, Scotland, and America, 7501-7503.

Report, 1877—*continued.*

Luya, Thomas John. (Analysis of his Evidence)—*continued.*

Very healthy condition in which the Spanish and Portuguese cattle arrive; instances of foot-and-mouth disease, but not of pleuro-pneumonia, 7503-7513. 7636. 7749-7755——Examination of the cattle on arrival by the Government inspector; subsequent duty of witness, if any animals are diseased, to see to their being slaughtered, 7507. 7524-7532. 7639, 7640. 7661-7669. 7747, 7748.

Excellent condition in which the American cattle arrive; greater care taken and better accommodation in the American than in the Irish boats, 7514-7523. 7637. 7678-7681. 7741-7746——Recent origin of the American live cattle trade, 7515, 7516. 7650-7652 High prices realised by the American cattle; comparison with the dead meat prices, 7533-7537. 7653-7658. 7734-7738.

Importance of the Stanley market as a centre of supply to many towns at a distance, 7538-7542——Statement as to the people of Liverpool being very particular about the quality of meat, some being sent to London through not finding a demand in Liverpool, 7543-7545. 7682-7685——Large dead meat trade formerly between Ireland and Liverpool; inferior quality of the meat, so that the trade came to an end, 7546-7551——Greater difficulty in detecting disease in dead meat than in the live animal, 7552-7554.

Grounds for the conclusion that a dead-meat trade cannot be successfully established in lieu of the live cattle trade with Ireland, 7557-7561——Evidence in detail relative to the American dead meat trade with Liverpool, the quality of the meat, the price realised, &c.; adverse conclusions as to the success of this trade, though a large portion of the meat arrives in good condition, 7560-7615. 7659, 7660——Deterioration of meat when much handled; reference hereon to the discoloured and repulsive appearance of some American meat, 7561. 7579-7602. 7659, 7660. 7694-7699. 7710-7712.

Statement as to the American meat trade in Liverpool having greatly fallen off, though the quantity passing through the port into the country has increased, 7570-7579. 7686-7689—— Probability of improved arrangements after a time by which the meat may arrive generally in good order, 7580-7588——Effect of the cold air process, and of subsequent exposure after landing, in prejudicially affecting the taste of the meat, 7589-7594. 7602-7610.

Steps being taken in Liverpool for providing cool stores in which to keep dead meat until it is wanted for use, 7595-7607——Condemnation of some American meat in Liverpool, but not in hot weather especially, 7608-7610——Sale of the meat at prices varying from 4 *d.* to 6¼ *d.* a pound, 7613-7615——Increased price of meat in Liverpool through the cattle plague restrictions; check through the American supply, 7616-7621.

Great importance to Liverpool and the manufacturing districts of the supply of foreign sheep through the London market; advantage if the live animals were sent to Liverpool instead of carcases from Deptford, 7620-7634——Import of pleuro-pneumonia and foot-and-mouth disease with Irish cattle, 7638. 7647-7649. 7756-7762——Good accommodation in the Irish cattle boats, except that they are often overcrowded, 7641-7646. 7670-7672. 7679. 7765-7770.

Fair condition in which some cargoes of South American cattle have arrived at Liverpool; doubt as to this trade increasing, 7673-7677——Loss of some animals during the voyage from America, 7678, 7979. 7739, 7740—— Further examination upon the question whether American meat may not in time be brought over in a generally improved condition, so that the prejudice in Liverpool against the meat may be overcome, 7707-7733.

Belief that with increased experience live cattle may be brought from America in perfect safety throughout the winter, 7746——Regulations as to compulsory slaughter in the case respectively of Irish cattle and Portuguese cattle, 7756-7762——Somewhat similar arrangements in the Irish and American boats for the separation of the cattle, 7765-7770.

Lyon, Alfred. (Analysis of his Evidence.)—Is the Master of the Butchers' Company in London; has had a large experience in the wholesale meat trade, 3146-3149. 3420-3423——Decided opinion that the introduction of live cattle from abroad is absolutely material to the supply of London; argument that to shut them out would be very bad policy for this country, 3153. 3156. 3303. 3400. 3447.

Statistical information in regard to the importation of American dead meat into London during the present year; within the last week many tons of this meat were condemned as being unfit for food, 3158-3163. 3260-3263. 3382-3394——Explanation that the large quantities in some weeks are to be accounted for by the meat not being good enough for the provinces, and so that it has been sent up to London; very low prices realised for meat which was mouldy and apparently in bad condition, 3160-3163. 3266-3269. 3308-3311. 3388-3390. 3431.

Admission as to the great advantage to this country on account of the introduction of American meat; extensive sale of the meat by the butchers in London, 3164, 3165. 3229. 3306. 3336. 3339-3344. 3353-3355. 3374-3379. 3402-3406. 3433-3439——Grounds for

Lyon, Alfred. (Analysis of his Evidence)—*continued.*

the opinion that a dead meat trade with the Continent can never be adopted; difficulties as regards the supply of ice, 3166–3175. 3180–3183. 3271, 3272. 3262–3302. 3323. 3325–3335. 3358–3360. 3403–3418. 3443, 3444. 3447, 3448.

Expediency of bringing over all continental meat supplies in the shape of live animals; great importance to this country of the continental supply of live cattle, 3167–3169. 3337, 3338. 3399–3401. 3440. 3447——Low price at which the American meat can be sold in London; fluctuation in price dependent upon the character of the meat, 3172–3175. 3264, 3265——Variable character of the meat when put upon the market; large losses which have occurred through the meat becoming bad on account of delay in transit through bad weather and other causes, 3175–3179. 3245–3248. 3310.

Prejudicial effect of an outbreak of the cattle plague on the meat trade, 3184, 3185. 3445, 3446——Belief that pleuro-pneumonia is not introduced into this country from abroad, but that it is now acclimatised in England; expediency of slaughtering immediately in the case of pleuro-pneumonia, because the animals are never of any use if they live after it, 3186–3204. 3273–3291. 3305. 3320——Decided opinion as to the generally healthy state of the Schleswig-Holstein, the Danish, and the Spanish cattle; occasional instances of pleuro-pneumonia in Dutch cattle which have been fed on hot wash, 3187–3189. 3194–3196. 3287–3289.

Large and increasing importation of cattle from Spain and Portugal, 3190, 3191 —— Disapproval of any measure which will interfere unduly with the food supply of the people, 3199——Opinion that the lung disease has gained such a hold in this country that it would be nearly impossible to stamp it out; animals suffering from this disease very much affected by changes of climate, such as are common in England, 3199–3202.

Desirability of establishing a system of quarantine of from seven to fourteen days in regard to store cattle; suggestion that the quarantine station should be situated a good way down the river, somewhere on the coast of Essex, 3205–3211. 3274. 3363–3365—— Satisfactory regulations which at present exist with reference to the importation of fat animals; belief that the last introduction of cattle plague was mainly due to the neglect of the Corporation of London in not carrying out the orders for immediate slaughter of infected animals, 3212–3220—— Recommendation that animals suffering from cattle plague should be at once slaughtered and buried; expediency of slaughtering all cattle in the same herd (though not infected), and sending the meat to market, 3217, 3218. 3225–3227.

Suggestions as to future precautions to protect the ports from an introduction of cattle plague; necessity for treating as scheduled countries only those in which cattle plague exists, or where there is a probability of its breaking out, 3220–3228——Information respecting the use of offal by the poorer classes in London as an article of food; considerable loss to the poor in respect of the offal, in the event of a dead meat trade, 3230–3234. 3239–3243. 3302. 3312. 3469–3472.

Calculation by the importers of American meat that it cannot be remunerative at a lower price than 6½ *d.*; argument that the meat which has already come to London must have been a great loss, as it has realised nothing like this price, 3235–3238. 3245–3248. 3253–3256. 3369–3373—— Belief that in the week in which so large a quantity of meat was condemned, there could not have been a less loss than 20,000 *l.*; sale of some of this meat on the 1st June at the rate of 1 *s.* 8 *d.* per stone, 3245–3248. 3310, 3311. 3505–3510.

Average price at which beef is imported alive from the Continent, 3249–3252——Good class of bullocks imported from America; opinion that they are nearly equal to English, 3251——Variable character of the live animals that have come from America; occasional deterioration of the meat on account of the fatigue caused by the journey, 3257–3269. 3313–3318——Inferior condition of the American meat caused by overpacking and bringing too much, 3264——Method adopted for trimming and cleansin g themeat, which, though sound and good, is apparently in bad condition, 3266.

Unquestionable superiority of the American stock as compared with the continental; considerable pains which the Americans have taken to improve their breed by crossing them with some of our best animals, 3270. 3321, 3322——Dissent from the veterinary opinion that pleuro-pneumonia remains dormant and cannot be detected for two or three weeks, 3290, 3291——Assertion that continental meat, though fetching in the London market 8 *d.* a pound alive, would not fetch as much as 6½ *d.* a pound as dead meat, 3294–3301.

Absence of danger of an outbreak of cattle plague by the continued import of cattle from the Continent, inasmuch as the animals are only brought from countries where the disease does not and never did exist, 3303——Expediency of prohibiting the importation of cattle from Russia, where cattle plague has always existed, 3303.

Circumstances under which an animal suffering from pleuro-pneumonia may be fit for food, 3320——Price of English meat slightly reduced on account of the introduction of the American, 3345——Satisfactory regulations adopted by the Privy Council for the suppression

Report, 1877—*continued.*

Lyon, Alfred. (Analysis of his Evidence)—*continued.*

suppression of cattle plague in London; prompt action necessary, 3346-3349——Approval of putting the cowsheds and lairs in London under the control of the local authorities, 3350-3352——Doubt as to the amount of import of live stock in proportion to the total consumption, 3356. 3366-3368.

Reference to the taste of American meat when cooked; opinion that it is not quite so good as English meat when cold, 3380, 3381. 3395-3398. 3543——Instance of a cargo of meat arriving in August, in the very hottest weather, in capital condition; contention, however, that accidents will always render dead meat liable to deterioration in condition and price, 3432-3442. 3449-3454——Statement that the amount of dead meat sent from Scotland to London is nothing to what it was formerly; the consumption of meat in Scotland is much greater than it used to be, 3455-3463. 3566-3572.

Probable sale by the London butchers of American meat as British or Scotch meat; absence of knowledge of any complaint made with reference to this meat by the consumers, 3465-3467. 3544-3547——Description of the parts of a bullock which are known as offal; the value of offal in a carcase worth 20*l.* is about 15*s.* or 16*s.*, 3469-3472——Necessity for killing the continental cattle immediately upon their arrival, and selling the meat quickly, as otherwise it loses its bloom, and is depreciated in value, 3473-3475.

British beef occasionally condemned in the London markets as well as American, 3476, 3477——Decided increase necessary in the importation of dead meat into London before it would make up for the loss of live import, 3481-3483.

Examination in regard to the loss experienced by sending cattle to Deptford Market; grounds for the opinion that a great number of buyers avoid Deptford, 3485-3495. 3498-3501. 3558, 3559. 3564, 3565——Slaughter-houses in London under the control of the Metropolitan Board of Works or the Corporation of London, 3496, 3497.

Less amount of foot-and-mouth disease in foreign than in home cattle; opinion that the health of foreign cattle contrasts favourably with that of our own, 3502. 3554-3557. 3560-3563—— Increase in the price of meat which would necessarily arise from the prohibition of importation of live cattle from abroad, 3503, 3504——Additional information as to the great importance of continuing the importation of live cattle into England, and of not depending wholly upon dead meat; absolute necessity for a butcher to have live animals on his premises, so as to slaughter them as his trade requires, 3511-3536.

Further considerations as to the evil effect upon the foreign supply of live cattle by a continuous supply of dead meat from America, 3537-3542——Considerable difficulties at present in the way of bringing meat from America in a thoroughly good and sound state, 3548-3553.

M.

Manchester and Salford. Statement with reference to the import of foreign cattle and sheep by witness; serious effect of the slaughter of animals at the port on the Manchester trade, *Lambert* 3862-3873——Statistics of the number of sheep which have been imported into Manchester from Hamburg during those years when the cattle traffic was not under restrictions; numbers imported in the years when disease was prevalent on the Continent, *ib.* 3869-3880.

Introduction of the dead-meat trade into Manchester consequent on the falling off in the live import; dependence of Manchester upon free import of foreign sheep, so that prices may be kept at a proper level, *Lambert* 3881-3890——Reasons why the importation of foreign sheep is necessary for the Salford Market; large demand for whole joints of meat by the highly-paid operatives in Lancashire, *ib.* 3891-3899.

Consumption of sheep in Manchester during the first six months of this year, compared with the like period of 1871; falling off of the consumption by the working classes in the present year, *Lambert* 3900-3906. 3986——Character of the sheep brought to Manchester for consumption; preference in that market for lean sheep with but little fat, *ib.* 4082-4095. 4148-4159.

Admirable arrangements adopted in the Manchester slaughter-houses; reduction of temperature in these establishments to about forty degrees, *Lambert* 4098. 4100. 4006. 4160-4162——Considerable increase of price which would result from the stoppage of the import of live cattle into Manchester, *ib.* 4171——The principal supply of meat from June to Christmas is from Ireland, *ib.* 4174——Information respecting the price of meat during the last six months, *ib.* 4183-4194.

Report, 1877—*continued.*

Manure (*Diseased Animals*). Absolute necessity for the destruction of the manure of diseased animals; recommendation that it be rendered harmless by mixing it with its own weight of quick-lime, *Brown* 159-165——Importance further attached to disinfection of the manure of diseased animals, *ib.* 965.

Markets. See *Fairs and Markets.*

May, John William. (Analysis of his Evidence.)—Is Consul General for the Netherlands, 2010, 2011——Information as to the laws and regulations in Holland with respect to cattle plague; the legislation is founded chiefly on the law of the 20th July 1870, which corresponds with the Contagious Diseases (Animals) Act of this country, 2012-2028. 2037-2040. 2074-2079. 2093, 2094. 2109-2112. 2126——Summary of the measures adopted in case of cattle plague, 2016.

Regulations for prohibiting the importation and movement of cattle through the country; dispensatory power given to the Minister of the Interior to modify these regulations when necessary, 2017. 2116-2119——Disinfection of the railway trucks used in the conveyance of cattle entering Holland from foreign countries, 2018——Inspection of cattle before being shipped for foreign countries, 2020. 2054-2058. 2076——Closing of the markets upon the outbreak of cattle plague in Germany in 1873; 2024, 2025.

Entire prohibition of the import of cattle into Holland at the present time; military forces sent to the frontier to enforce this regulation, 2026, 2027. 2144-2152——Explanation of the course adopted in Holland with reference to pleuro-pneumonia; treatment of this disease by means of inoculation, the cost of which is borne by the State, 2028-2036. 2053-2058. 2086-2092. 2099-2105. 2119. 2121-2127.

Considerable diminution in the number of cases of pleuro-pneumonia since the adoption of the slaughter of suspected animals; strong hopes that this disease will be effectually stamped out, 2033-2036. 2048. 2138——Compensation in respect of cattle plague paid out of the Imperial Treasury; compensation in the case of suspected animals given to the full value, and in that of diseased animals half value, 2041-2045. 2080-2085——Returns of the numbers of cattle in Friesland as compared with the rest of the country, 2046-2048.

Opinion entertained in Holland that the lung disease may be propagated by mediate contagion, 2049, 2050——Objection of those interested in the cattle trade in Holland to the limited trade at Deptford as compared with the larger market at Islington, 2051, 2052——Impression that it would be extremely difficult to establish a dead-meat trade with the Netherlands, because of the extra expense to which the senders would be put, 2059-2065——Decided opinion that if the import of live stock from the Netherlands were entirely prohibited, it would tend materially to diminish the raising of stock in that country, 2065-2067. 2113, 2114.

Advantageous arrangements made between the Governments of England and Holland as to telegraphic communication on any outbreak of disease, 2068-2073——Measures applicable to foot-and-mouth disease; statement that this disease is not looked upon with the same alarm as it is in England, 2075-2079. 2095-2098. 2106-2108. 2110, 2111. 2139-2143.

Explanation in regard to the adoption of inoculation as a preventive of pleuro-pneumonia; belief that an animal which has once had this disease will not take it again, 2086-2092. 2099-2105. 2121-2124——Statement as to the markets to which cattle would be sent from the Netherlands if the exportation to England were prohibited, 2128-2130——Occasional importation into Holland of breeding bulls for the purpose of improvement of stocks, 2131.

May, Mr. Sundry decrees and other papers submitted by Mr. May explaining in detail the regulations adopted from time to time in the Netherlands in reference to pleuro-pneumonia, foot-and-mouth disease, &c., *App.* 578-601.

Meat Supply. Statistics of the consumption of cattle during years 1866, 1871, and 1876, in different large towns, *Swan* 1636-1641——Belief that the import of live stock is likely to increase, *ib.* 1809-1811——Increase of consumption of beef in this country as compared with the supply, *ib.* 1850-1852.

Disapproval of any means which will interfere unduly with the food supply of the people, *Lyon* 3199——Effect of stringent regulations which would stamp out the disease in increasing the supply of meat for consumption, inasmuch as farmers would increase their stocks, *Rea* 3602-3606. 3656——Conclusion that even if pleuro-pneumonia were stamped out we could not grow meat enough in this country for the wants of the people; desirability on this account of perfect free trade in cattle, especially in sheep, *Lambert* 3986-3990.

Impression that there is a much larger consumption of beef than mutton in London, *Gebhardt* 5458-5461——Grounds for the conclusion that continued restrictions on free trade in foreign cattle will cause foreigners to reduce their stocks, and not send them to this country, *Pool* 5820-5834. 5840-5844. 6068-6070.

Report, 1877—*continued.*

Meat Supply—continued.

Examination with reference to the probable effect upon the price by diminishing the supply, as by prohibiting the import of live cattle; question, on the other hand, whether this may not be counterbalanced by increased import of dead meat, *Burkett* 6361–6367. 6404–6439. 6445–6479——Effect of the increased price in inducing import of cattle and also of dead meat, *Giblett* 6605–6611——Benefit to the consumer as well as to the farmer br the suppression of disease, *Smith* 8460–8462. 8479.

Consideration by the Committee of the effect of compulsory slaughter at the port of debarkation upon the meat supply of the country; conclusion that the supply to large towns would not be diminished, *Rep.* vii.

See also *American Cattle. American Dead Meat. Australia. Carcases* (*Diseased Animals*). *Cattle Plague. Dead Meat. Deptford Market. Foot-and-mouth Disease. Foreign Cattle. Free Trade. Germany. Holland*, 3. *Home Supply. Loss from Disease. Offal. Price of Meat. Sheep.*

Mediate Contagion. Explanation of the term "mediate contagion"; great difficulty experienced by the authorities in preventing the extension of disease by this means in cases of cattle plague, *Brown* 14, 15. 41–48——Belief that there is no danger of mediate contagion as regards pleuro-pneumonia and foot-and-mouth disease; illustration in support of this theory, *ib.* 43–48. 913–921. 803–808. 10083, 10084.

Decided opinion that the slaughter at the place of landing has not been a sufficient protection against cattle plague, in consequence of the facility at the same time for mediate contagion, *Brown* 301, 302——Expediency of the authorities being empowered to make regulations for preventing the conveyance of disease by mediate contagion in the event of slaughter at the port of debarkation, *ib.*775, 776.

Opinion entertained in Holland that the lung disease may be propagated by mediate contagion, *May* 2049, 2050.

Melvin, James. (Analysis of his Evidence.)—Is President of the Scotch Chamber of Agriculture; is largely interested as a cattle breeder and grazier, 8717–8722——Has had considerable experience of live stock in his capacity as director of the New Zealand and Australian Land Company, 8723–8726.

Outbreak of cattle plague on a former farm of witness in 1865-66; exemption since that time, 8727–8729——Frequent losses of witness from pleuro-pneumonia previously to the cattle plague regulations; probable causes of the stoppage of the disease, 8730–8734——Serious loss of witness from foot-and-mouth disease in 1871 and 1873; average depreciation of 2 *l.* per head of cattle attacked, 8735–8741.

Views of the Scotch Chamber of Agriculture as to the expediency of the slaughter of all foreign cattle at the port of debarkation; memorials to the Privy Council to this effect, 8742–8748——Memorial also from the District Association of Mid-Calder praying for certain restrictions on the import of foreign cattle, 8749, 8750——Feeling of Scotch farmers generally that foreign cattle should be slaughtered at the port of landing, 8751.

Great diminution in the import of store stock into Scotland, it being now practically confined to milch cows from Denmark and Holland, 8752, 8753. 8858——Feeling of the Scotch farmers adverse to the continued import of foreign cows; danger thereby of the spread of pleuro-pneumonia and foot-and-mouth disease from the dairies in Edinburgh, Leith, and other towns, 8754–8776. 8846. 8859–8862. 8879–8881. 8908–8911.

Belief that if all foreign cattle were slaughtered at the port of debarkation there would be a great increase of home breeding in Scotland for dairy and other purposes, and that better cattle would be bred but for the risk of the disease, 8758, 8759. 8855, 8856. 8863, 8864, 8882–8905. 8923–8927——Much less amount of pleuro-pneumonia in the dairies in Glasgow than in Edinburgh and Leith, the former being supplied chiefly from home districts whilst in the latter there are many Dutch cows, 8762–8774. 8845.

Conclusion as to pleuro-pneumonia and foot-and-mouth disease coming entirely from abroad, 8777——Very little pleuro-pneumonia in Scotland save in the towns, 8778, 8779——Belief that by stringent regulations and by restrictions upon import, cattle diseases in Scotland may be exterminated; experience of Australia adverted to hereon, 8780. 8783–8795. 8812–8829——Grounds for the opinion that contagious diseases are not engendered on board ship, 8781, 8782.

Successful conduct of a dead meat trade by sea between Sydney and Melbourne several years ago, 8796–8802——Great want of uniformity in the regulations now applied in this country; expediency of the local authorities being made to conform to the instructions of the Privy Council, 8803–8809——Suggested appointment of travelling inspectors for the supervision of the local arrangements, 8809–8811——Contemplated appointment of the local inspectors by the local authorities, 8811.

Report, 1877—*continued.*

Melvin, James. (Analysis of his Evidence)—*continued.*

Opinion that in cases of pleuro-pneumonia movement should be prohibited for three months out of the infected locality, 8812-8817——Suggested prohibition of movement for one month out of any area in which foot-and-mouth disease has occurred, 8818, 8819——Expediency of a considerable increase of penalties, 8820——Further statement as to the willingness of the farmers in Scotland to conform to very stringent regulations at home in conjunction with a system of slaughtering of foreign cattle at the port of debarkation, 8821-8829.

Very large number of live stock in Australasia, there being 70,000,000 sheep and 7,000,000 cattle, 8830, 8831——Attempts made and being made to import dead meat from Australia; good prospect of success, 8832-8836——Prohibition in Australia upon the import of live cattle from England through fear of disease; importance on this score of freedom from disease at home, as causing improved breeds to be sent to Australia, whence improved and enlarged supplies may be returned to this country, 8837-8843. 8865-8867——Very stringent regulations in New Zealand as to the admission of live stock from England, 8841-8843.

Hardship in abolishing town dairies; expediency rather of placing them under stringent regulations, 8847-8849. 8876-8878. 8906, 8907——Inconvenience if all cattle dealers and drovers in Scotland were obliged to be licensed, 8850-8852——Inferior character as a rule of the lean stock imported into Scotland, 8853, 8854——Impracticability of an effective system of quarantine, 8857.

Further expression of the opinion that neither from America, Spain, Denmark, nor any other country should cattle be admitted for circulation in England, but should be slaughtered at the port of landing, 8868-8875——Inferiority of the Danish cows to the Dutch cows; relative prices of these and of English and Scotch cows, 8879. 8908. 8920-8922.

Diminished extent to which cows are now kept by farm labourers in Scotland; prejudicial effect of this change, 8896-8903——Advocacy of free trade, but not of free trade in cattle disease, 8904, 8905——Belief as to the impracticability of guarding against the import of disease with Dutch cows, 8909, 8910.

Advantage of separate markets for fat stock and lean stock; reference more especially to lean stock from Ireland, 8911-8916——Expediency of uniform regulations for England, Scotland, and Ireland, 8913——Suggestion that cattle from Ireland be not allowed to go through Glasgow or other large towns, 8913. 8919——Healthy character of Highland cattle, 8917, 8918.

METROPOLIS:

Injurious effect of a cordon round London beyond which cattle could not be sent out of London; enhanced price of meat outside the cordon, *Gebhardt* 5500-5507——Exception taken to the view that there are worse hot beds of disease in London than in the country, *Pool* 5896-5899——Very inadequate protection by means of the cordon round London, it being frequently violated, *Odams* 7939, 7940.

Opinion that in the metropolis the Privy Council should supersede all local authorities and should exercise sole jurisdiction, *Rudkin* 9003-9005. 9188——Authority exercised respectively by the Metropolitan Board of Works and the Corporation of London, in respect of cattle, witness further submitting that they should both be superseded by the Privy Council, *ib*, 9123-9126. 9188-9190——Expediency of the cordon round London being regulated by the Privy Council, *ib.* 9188.

Importance attached to the cordon round London; question as to the relaxations desirable, *Brown* 10064-10066. 10107-10110——Contemplated maintenance of the cordon round London till the end of 1877; approval of the cordon being permanently continued if cattle from Germany be allowed to come in, *ib.* 10441-10444——Practical difficulty in keeping up the cordon; modification suggested, *ib.* 10445, 10446.

Recent prohibition of movement from the north of the metropolis to any places south of the Thames, *Brown* 10325, 10326——Frequent evasion under the regulations as to movement of cows in the metropolis under license, *ib.* 10391. 10397. 10453.

Orders of Council in January 1877, applying certain restrictions upon movement within the metropolis, *App.* 544.

Orders of Council of 18th and 19th July 1877, imposing restrictions upon movement in the metropolis, in view of the further outbreak of cattle plague, *App.* 604, 605.

See also *American Dead Meat. Cattle Plague. Cows. Dairies and Cowsheds. Dead Meat. Deptford Market. Metropolitan Cattle Market.*

METROPOLITAN CATTLE MARKET:

Considerable falling off in the supply of foreign meat to the Metropolitan Market, *Brown* 779-784—— Statistics of the relative number of English and foreign cattle sold in the market, *Gebhardt* 5215, 5216. 5224. 5404-5413.

METROPOLITAN CATTLE MARKET—continued.

Frequency of foot-and-mouth disease spreading through means of the lairs in the Islington Market, *Gebhardt* 5444——Suggestion that the market be limited to fat cattle, and that no animals be moved thence into the country save under a killing license, *ib.* 5444-5450. 5521, 5522. 5659——Very rare purchases of store cattle in the market, *ib.* 5447. 5521. 5659.

Estimate that about half the supply of foreign beasts and sheep sold at Islington go into the country, *Gebhardt* 5496. 5499——Practice of selling on Monday the beasts which arrive on Saturday, or in good time on Monday, *ib.* 5498.

Explanation in further reference to the proposal that Islington Market be used only for fat animals, and that all animals moved thence into the country should go under a killing license, *Gebhardt* 5602-5608——Concurrence in Mr. Gebhardt's suggestion that all animals moved from Islington Market into the country be marked for slaughter, *Pool* 5896-5905; *Giblett* 6581-6584. 6589, 6590.

Total number of foreign cattle and foreign sheep in the Islington Market in the first six months of 1876 and of 1877, *Rudkin* 8936, 8937——Decided conviction of witness that the market is largely supplied with diseased animals, and that it is essential to confine the market to fat stock, which should not be allowed to leave the metropolis alive, *ib.* 8983-8992. 9140-9142. 9191-9193. 9198-9201.

Objection to animals sold in the London market being allowed to go alive into the country if marked for slaughter, *Rudkin* 8991, 8992——Opinion that one market, where all animals should be slaughtered, would suffice for London, *ib.* 8993, 8994.

Grounds for the opinion that if there were a cordon round the metropolis (as recommended by witness in 1865), foreign cattle might be allowed to come to Copenhagen Market without insisting upon slaughter at Deptford; preference for the latter alternation, *Rudkin* 9092-9099. 9139-9148——Due attention paid to the cleansing of Copenhagen Market, *ib.* 9191, 9192——Absence of hardship to English farmers by requiring all animals sent to the Metropolitan Market to be slaughtered within the metropolis, *ib.* 9220-9223.

Importance of a provision that no animal shall be moved from Islington Market into the country unless it is marked for slaughter, *Read* 9533-9543. 9738, 9739——Recent instance of a very badly diseased animal in the market, *ib.* 9548, 9549.

Difficulty in insuring the subsequent slaughter of animals sold at Islington, although they might be branded for slaughter, *Brown* 10007-10009.

Grounds for the recommendation that stock exposed in Islington Market should not be allowed to leave the metropolitan district alive, *Rep.* viii, ix.

See also *Deptford Market.*

Middlemen and Jobbers. Belief as to the frequent conveyance of disease through the purchases made by middlemen and jobbers, *Gebhardt* 5659.

Milk. Absence of any scarcity of milk, notwithstanding the prevalence of fatal diseases among dairy cows, *Brown* 906-912——Evidence in favour of London and other large towns being supplied with milk from the country exclusively, *Swan* 1693-1696. 1723-1725; *Wilson* 4840-4852. 4893-4898. 5019-5023. 5067, 5068; *Gebhardt* 5441-5443. 5627-5629; *Gamgee* 7012-7014; *Rudkin* 8995, 8996.

Prospect of milk being produced more largely than cheese when refrigeration is more valued, *Wilson* 4847. 5122, 5123——Advantage, on sanitary grounds, in London and other large towns being supplied entirely with country milk, *ib.* 4893-4898——Belief that the quality of milk is not injured by refrigeration, *ib.* 4938-4940.

Conclusion as to the better quality of country milk than of London milk, *Gebhardt* 5630-5632——Reduced supply and increased price of milk in towns (as in Dublin) since the introduction of disease, *Gamgee* 7014-7016.

Considerable increase in the price of milk owing to the increased cost of cows and the risk from disease, *Tisdall* 9413-9415——Facility of dispensing with the import of foreign cows into London without increasing the price of milk, *ib.* 9483-9485.

Great improvement by supplying London and other large towns with milk from the country exclusively, as upon the plan adopted by the Aylesbury Dairy Company, *Read* 9698-9702.

Mortality from Disease. See *Cattle Plague.* *Foot-and-Mouth Disease.* *Loss from Disease.* *Pleuro-pneumonia.*

Report, 1877—*continued.*

Movement of Cattle:

The movement of animals from any centre where foot-and-mouth disease or pleuro-pneumonia is discovered should be strictly prohibited, *Brown* 310——Necessity, in the case of pleuro-pneumonia and foot and-mouth disease, of accompanying the prohibition of importation of foreign stock with stringent regulations at home; as long as free movement in this country continues it will be impossible to get rid of these diseases, *ib.* 513-516. 545-548. 558——Necessity for severe measures if it be determined to eradicate the diseases in question, *ib.* 820-826.

Belief that it would be impossible to stamp out contagious diseases in England, as the English people would not tolerate the measures necessary for that purpose, *Müller* 1593-1597.

Desirability for perfect free trade as regards cattle between one part of England and another, 2265. 2364——Disapproval of permitting in all cases the movement of animals from an infected district with a pass from a qualified inspector; discretion necessary in the local authority, *ib.* 2299-2302.

Concurrence in Professor Brown's suggestion for dividing the country into districts, and for preventing movement out of any centre in which pleuro-pneumonia or foot-and-mouth disease exists, *Wilson* 4764-4781——Contemplated removal of cattle from Ireland to England, and from one place to another in England, subject to a license or certificate as to local exemption from disease, *Stratton* 6868-6875. 6886, 6887.

Disapproval of severe restrictions upon inland movement of cattle as not necessary in regard to foot-and-mouth disease if foreign cattle be excluded, *Gamgee* 6993-6996——Expediency of a minimum of interference with the home trade generally, *ib.* 6994. 7024.

Conclusion that the restrictions and regulations hitherto have been unsuccessful only because they have not been properly applied, and that additional precautions are essential, not only as regards foreign import but home movement, &c., *Read* 9621-9626——Suggestions as to the restrictions upon inland transit and upon fairs and markets which should be adopted concurrently with the slaughter of all foreign cattle at the port of debarkation, so as to exterminate foot-and-mouth disease, *ib.* 9671-9679——Contemplated localisation of the restrictions upon movement in the case of foot-and-mouth disease, *ib.* 9754.

Explanation that witness does not propose slaughtering at the port of debarkation, in reference to foot-and-mouth disease, unless stringent measures be also enforced as regards movement of cattle at home and the holding of fairs and markets, *Brown* 10056-10058. 10080. 10101, 10102. 10248, 10249——Restrictions further proposed as regards movement when disense is detected in any district, *ib.* 10056, 10057. 10101, 10102——Proposed limitation of home restrictions to those localities in which disease exists; if disease were general the restrictions should be applied to the whole country at the same time, *ib.* 10270-10274.

Form of movement license prescribed by the Animals Order of 1875 in reference to foot-and-mouth disease, *App.* 533.

Orders of Council in January 1877, and subsequently, placing various restrictions upon the movement of cattle, and upon the holding of fairs and markets, *App.* 544 *et seq.*

Action taken by various local authorities in prohibiting movement into their districts, *App.* 560.

Conclusion of the Committee as to the absolute necessity of stringent regulations at home, if restrictions be placed on the foreign trade; recommendations as to the restrictions upon movement, *Rep.* iv. ix, x.

Müller, Professor Charles. (Analysis of his Evidence).—Is Professor of Anatomy in the Berlin Veterinary College, and is one of the six ordinary members of the Prussian Veterinary Department; does not appear before the Committee in an official capacity, 1337-1340——Information as to the composition of the veterinary staff in Germany; the most trustworthy of this staff are employed upon the eastern frontier from Memel on the Baltic to Upper Silesia, in consequence of that frontier being the most liable to the outbreak of cattle plague, 1341-1348.

Regulations now in force in Prussia with reference to the prevention of the introduction of cattle plague; prohibition by the German authorities of any treatment for cattle plague on account of the belief that no measure answers except stamping out, 1349-1370. 1477, 1478. 1492-1498. 1509, 1510. 1536-1538. 1620-1624——Statement that the outbreak in Germany in the year 1872 was caused by smuggling diseased animals over the frontier to Breslau; considerable risk of this smuggling in Upper Silesia, 1350-1354. 1371-1377. 1605-1611. 1623-1628.

Total prohibition of importation of cattle from Russia into Germany; prohibition also of grey or steppe cattle from Austria, 1351-1354——Increased vigilance on the part of the

Müller, Professor Charles. (Analysis of his Evidence)—*continued.*

the German authorities after the outbreak of 1872; appointment thereupon of veterinary inspectors and armed policemen, 1358——Establishment in Germany of a census of cattle throughout the districts; the restriction as to movement of cattle, with reference to this census, is confined only to cases of cattle plague, 1358-1360. 1581-1587——Special permit required for the transmission of cattle by railway from certain border stations to the interior, 1365-1368.

Export of cattle from all markets in Germany stopped when the central authority has been informed of a case of cattle plague in the border districts; opinion as to the efficacy of this arrangement, 1368, 1369——Absence of restrictions upon the movement of store cattle throughout Germany, 1370——Means adopted for the suppression of cattle plague when discovered; slaughter of all diseased animals and of those which have come in contact with them, 1378-1389. 1392, 1393.

Compensation paid by the German Government to the full value of all the cattle slaughtered on account of cattle plague; less amount paid as compensation in the case of animals affected with pleuro-pneumonia, 1379-1385. 1390, 1391. 1433-1438. 1511-1516——Cost of carrying out the regulations in regard to the suppression of cattle plague borne wholly by the Imperial Government, 1379. 1395——Diseased animals when slaughtered, buried to the depth of two metres, 1386. 1388, 1389——Military cordon drawn round the Polish or Austrian frontiers when cattle plague exists in these districts, 1392, 1393.

Great difficulty experienced in discovering the first cases of disease in the markets; opinion that it is more easily discovered in the living animal than in the dead carcase, 1396-1399. 1612-1616——Intention of the German authorities to construct slaughtering establishments on the frontier, and there to permit the slaughter of Austrian cattle under veterinary inspection, 1401, 1402——Explanation of the delay in transmitting from Germany to England information in regard to the late outbreak of cattle plague; in future the Prussian Government will telegraph to England by means of every local authority, and not by the central authority only, 1403-1409. 1421.

Estimate of the expenses borne by the German Government on account of the last outbreak of cattle plague; inclusion in this estimate of all cost of destruction of buildings and cost of burying, 1410-1418——Possibility of cattle plague being conveyed by means of sheep; infrequency of sheep being attacked with the disease, 1419, 1420. 1520-1523. 1549, 1550——Grounds for the belief that the exportation of live cattle from Germany to this country may be continued without great peril for slaughtering purposes, 1421-1425. 1543-1548. 1617, 1618——Absence of danger in regard to exportation of cattle from Schleswig-Holstein on account of the immunity from cattle plague in that country; strictness of the regulations in Schleswig in regard to drawing a cordon round the infected places, 1421-1425. 1464, 1465. 1503-1508. 1544, 1545.

Information respecting the diseased cattle which were brought to England in the "Castor;" superficial examination made by the veterinary inspector in Germany, for which he has since been severely punished, 1421, 1422. 1469-1476. 1525-1534. 1556-1562——Pleuro-pneumonia dealt with in Prussia in the same way as cattle plague; prohibition of importation of cattle from the Netherlands, where this disease is rife, 1426-1432. 1439-1444. 1499-1501——Unfavourable opinion of witness as to inoculation as a preventative of pleuro-pneumonia, notwithstanding that many men of high standing approve of the system, 1441, 1442.

Absence of stringent regulations for stamping out foot-and-mouth disease in Germany, inasmuch as the means for stamping it out would entail a greater loss than the disease itself; regulations now in force as to this disease, 1445-1450. 1502. 1517-1519——Compensation in the case of horses slaughtered for glanders, paid by the local authority to the amount of half the value, 1451-1454——Dissent from some of the statements made by Professor Brown, in connection with cattle plague and its introduction into England from Germany, 1454-1463——Severity of the last outbreak of cattle plague in Germany, 1466-1468——Existence at the present time of cattle plague in Poland; certainty of its existing in Roumania, because it follows the Russian army, 1479-1491.

Largest exports to England from Schleswig-Holstein, Oldenburg and Madgeburg, in Saxony, 1489——Admission permitted to the Berlin market of all cattle, though none are allowed to be moved away alive, 1497, 1498. 1564——Rinderpest unknown in Prussia except when introduced by foreign cattle, 1524——Prohibition of importation of cattle to England from Germany at the present time; destination of the German cattle which would otherwise be sent to England, 1539-1542——Considerable export of sheep from Germany to France, 1542.

Expediency of placing Germany in the same state as regards export of cattle to England, as she was before the outbreak of cattle plague, 1543-1548——Infrequency of cattle plague being carried by mediate contagion; possibility of carrying it by means of manure adhering to the feet, 1551-1555. 1566-1578——Expediency of slaughtering German cattle at Deptford upon their arrival, 1551-1555. 1570-1578.

Müller, Professor Charles. (Analysis of his Evidence)—*continued.*

Belief that if Germany were unscheduled the import of sheep to England would be very much increased, 1563——Explanation of the danger which exists in Germany in regard to the great markets for slaughtering, 1565——Belief that arrangements for bringing dead meat to England from a great distance would fail on account of the difficulty of selling the offal to advantage, 1579, 1580——Statement that the veterinary department at Hamburg is not under the control of the veterinary department at Berlin; regulations in Hamburg precisely the same as those in Prussia, 1588–1590.

Opinion that contagious diseases of cattle are never originated spontaneously in western Europe, but that they are spread by contagion, 1591——Belief that it would be impossible to stamp out contagious diseases in England, as the English people would not tolerate the measures necessary for that purpose, 1593–1597——Statement that dairies near the large towns in Germany are hotbeds of pleuro-pneumonia, 1599–1601.

Further information as to the inspectors acting under regulations from the central department in Germany; in cases of pleuro-pneumonia they act under the authority of their own State and not under the laws of the Empire, 1602–1604——Frequent instances in Germany of the cattle-plague being communicated by means of dead meat, 1613–1616.

N.

Netherlands. See *Holland.*

New Zealand. Very stringent regulations in New Zealand as to the admission of live stock from England, *Melvin* 8841–8843.

Newcastle. Excessive disease engendered in the dairy-sheds or byres in Newcastle, *Wilson* 4834. 4851. 4983.

Belief as to the facility for slaughtering at the Port of Newcastle, and for carrying on a dead meat trade with the adjacent districts, *Brown* 10206–10217.

Memorial from the Borough of Newcastle, submitting the facilities provided in the borough for the foreign cattle trade, and urging that no undue restrictions should be imposed upon the import of foreign cattle, *App.* 602, 603.

Norfolk. Introduction of foot-and-mouth disease from the Islington Market into Norfolk on several occasions, *Read* 9540–9543. 9735–9737——Successful results of the system of isolation and slaughter in Norfolk in reference to pleuro-pneumonia; steady diminution in the disease in the country, *ib.* 9580–9582. 9639——Reduced amount of salvage paid in Norfolk on account of the value for food of the animals killed; wholesome character of the meat, *ib.* 9582–9587.

Statement as to Norfolk being now free from foot-and-mouth disease, *Read* 9598–9600——Very large number of Irish store cattle brought into Norfolk, *ib.* 9615——Increase of foot-and-mouth disease in Norfolk at the time when there is most transit of Irish cattle, *ib.* 9705, 9706.

Norway. See *Sweden and Norway.*

Notice (*Prohibition of Import, &c.*) Fairness in at least giving due notice to the foreigner before prohibiting import, *Gebhardt* 5677. 5769, 5770——Suggestions as to the notice to be given before applying a system of compulsory slaughter at the ports, *Rudkin* 9205, 9206; *Brown* 10020, 10021. 10040, 10041; *Rep.* vii.

O.

Odams, James. (Analysis of his Evidence.)—Has been deputed to represent the Central Chamber of Agriculture; gave evidence before the Select Committee of 1873; 7932, 7933—— Recommended in 1873, and still considers, that all foreign fat cattle coming in the holds of vessels should be slaughtered at the port of debarkation; that is, on the score chiefly of the proved failure of inspection, 7934–7946. 8006–8017. 8026, 8027, 8040–8043. 8052–8055. 8071–8074. 8137.

Belief as to the constant development of disease in the holds of vessels, 7937. 7946. 8030——Reference to the case of the "Castor" as illustrating the inefficacy of inspection, 7938. 8071–8074——Very little faith of witness in the restrictions imposed in Germany, 7939. 7941——Very inadequate protection by means of the cordon round London, it being frequently violated, 7939, 7940——Statement as to foot-and-mouth disease having been detected in some Danish cattle landed at Newcastle after they had passed the first inspection, 7941–7943. 8078–8082.

Considerable decrease in the amount of stock in this country, owing very much to the apprehension of disease, 7947–7956——Entire willingness of farmers to submit to almost any restrictions in order that losses from disease may be prevented; good grounds of witness for this statement, 7957–7964. 8058–8066.

Odams, James. (Analysis of his Evidence)—*continued.*

Doubt as to there being much difference between the prices at Deptford Market and at the Metropolitan Market; disadvantage of the former in not having direct railway communication, 7965–7970. 7973, 7974. 8033. 8095–8102——Regularity of supply and increase of competition at Deptford if there were improved accommodation and if all foreign cattle were slaughtered on landing, 7967–7970. 8016——Increased dead meat trade from Deptford to the provinces if there were direct railway communication, 7971–7974. 8000. 8102.

Advantage of a dead-meat over a live-cattle trade on the score of cost of transit, 7975, 7976——Belief that commercial enterprise and science will soon develop a dead-meat trade throughout the country, 7977, 7978. 7982, 7983. 8056, 8057——Conclusion as to the deterioration of live cattle on board steamers, 7979–7981——Reference to the use made of offal in America, 7984, 7985——Statement showing that offal may be conveyed a considerable distance in perfectly good condition, 7986–7992. 7995.

Facility of establishing cool stores or chambers in connection with a largely extended dead-meat trade, 7993–8000——Successful experiments in the conveyance of refrigerated dead meat from South America and from Australia on board the "Frigorific" and "Northam," 8000–8004——Stringent regulations desirable as regards the London cowsheds, 8005–8008——Increase of breeding at home but for the fear of imported disease, 8009, 8010.

Grounds for the opinion that live cattle from America and Canada should be slaughtered at the port of landing, 8013–8015. 8040——Urgent want of improved arrangements in the transit of Irish cattle; development of disease by the neglect and cruelty under the present system, 8018–8025. 8028. 8030. 8114, 8115——Great cruelty more especially in conveyance by railway; outrage upon humanity now involved, 8020–8022——Prevalence of pleuro-pneumonia in Holland, 8029——Expediency of foreign store cattle being transported on deck, 8030, 8031. 8138, 8139.

Proposed slaughter of Irish fat cattle under the same restrictions as foreign cattle, 8033, 8034. 8120–8123. 8140, 8141——Conclusions as to the diminished stock of sheep being partly attributable to fear of disease, 8035–8039——Belief that three-fourths of the disease in this country might be prevented by proper treatment, 8044, 8045.

Probable increase in the price of meat in other countries as well as under the legislation in force in England, 8046–8051——Careful restrictions under which dairy cows might be imported, 8054——Doubt as to the expediency of admitting grazing cattle, 8055——Way in which cattle plague was probably introduced by means of the "Castor," 8074——Improved arrangements as regards disinfection of cattle ships, 8075——Improved practice also in stamping out cattle plague, 8076, 8077.

Progressive increase expected in the stock of cattle in England, but for the risk of disease, 8083–8091——Considerable variation in the price of linseed, as food for cattle, 8092–8094——Further evidence as to the want of improved arrangements in connection with Deptford Market, 8095–8102——Comment upon the heavy rent charged by the Corporation for the Market, and upon the charge of 5 *d.* for each bullock landed, 8103–8108.

Relative charges of salesmen for the sale of foreign and of English bullocks, 8109, 8110——Opinion as to pleuro-pneumonia in this country not being necessarily introduced by foreign cattle, 8111–8113——Comparative condition in which cattle arrive from Ireland and from the Continent, 8116–8119.

Approval of the continued sale of Scotch cattle in the Metropolitan Market, 8123——Instance of a badly diseased cargo of cattle from Oporto, 8125–8129——Improved regulations for the cleansing of railway trucks; great neglect, however, in other respects, 8130–8135——Statement as to water not being provided at many stations, 8134, 8135. 8142–8144.

OFFAL:

1. *Objections to a Dead Meat Trade on account of the Difficulty and Loss on the Score of Offal.*
2. *Evidence at variance with the foregoing Conclusions.*
3. *Other Details generally.*

1. *Objections to a Dead Meat Trade on account of the Difficulty and Loss on the Score of Offal:*

Belief that arrangements for bringing dead meat to England from a great distance would fail on account of the difficulty of selling the offal to advantage, as well as on other grounds, *Müller* 1579, 1580; *Pool* 5980–6000——Decided opinion that to send offal from Germany to England fit for food would be impracticable, *Baron von Behr* 2475–2477.

Evidence respecting the advantage of live animals in providing offal for the use of the poor; belief that offal can never be brought to this country from abroad and sold for consumption, *Hall* 2885–2888. 2891–2895. 2973–2977. 2988——Information respecting the use of offal by the poorer classes in London as an article of food; considerable loss to the poor in respect of the offal if a dead-meat trade were established, *Lyon* 3230–3234. 3239–3243. 3302. 3312. 3469–3472.

Offal—continued.

Grounds for the conclusion that it is impracticable to establish a trade in the import of offal as well as of dead meat, *Gebhardt* 5241–5247——Statement to the effect that offal cannot be sent from London into the country in hot weather, *ib.* 5517. 5518——Difficulty through the inability to dispose of the offal at the port of export, such as Tonning, *ib.* 5618, 5619. 5721–5725.

Consideration of the difficulties in the disposal of offal in connection with import from the Continent, *Pool* 5988-6000 —— Difficulty in the disposal of offal at Deptford, *Giblett* 6636, 6637——Great importance of supplies of offal for the poorer classes, whereas offal cannot be imported in good condition, *ib.* 6748–6751.

Difficulty as regards offal for the lower classes in Leeds if live animals were not killed on the spot, *Walker* 7795-7800——Serious loss to the prejudice of the lower classes through the difficulty in the conveyance of offal from Hull to Leeds and other towns if all foreign cattle coming to Hull must be slaughtered there, *Knowles* 9237. 9242–9246. 9301–9306. 9343–9347.

2. *Evidence at variance with the foregoing Conclusions:*

Examination to the effect that the poor would not suffer from any loss of offal through the cattle being slaughtered at the port of debarkation or at the port of shipment; belief as to the practicability of conveying the offal without its being spoiled, *Brown* 1032–1036. 1094–1100. 1103, 1104——Opinion that the offal could be sent from abroad as well as the meat, *Sheldon* 4633, 4634 —— Good condition in which offal may be brought from the Continent as well as from America, *Burkett* 6393–6397.

Perfectly sound state in which the offal may be imported. *Gamgee* 7118 ——Statement showing that offal may be conveyed a considerable distance in perfectly good condition, *Adams* 7986–7992. 7995.

Considerable quantities of offal formerly imported in good condition, *Robinson* 8628–8631. 8642—— Statement showing that offal can be, and is, conveyed from Deptford for considerable distances without difficulty, *ib.* 8632–8642.

Room for much improvement in the treatment of the offals whereby they may safely be sent long distances; excellent arrangements in Paris in this respect, *Rudkin* 8976–8980. 9134. 9149, 9150. 9187——Way in which the offal is now disposed of from Deptford without difficulty, *ib.* 9154–9156.

Transmission of offal from Norfolk to London without loss, *Read* 9561. 9563. 9565 ——Further grounds for the conclusion that offal may be imported from the Continent in good condition, *Brown* 1029–1033.

Conclusion of the Committee that offal, as well as dead meat, may be supplied in good condition to country towns, *Rep.* vii.

3. *Other Details generally:*

Manner of disposing in America of the offal of the cattle sent as dead meat to England; hearts and livers only sold for food, *Giblett* 2631. 2665–2667. 2745–2750——Sale of the offal in New York at an average price of 6 *s.* per bullock, *ib.* 2761–2765.

Description of the parts of the bullock which are known as offal; the value of offal in a carcase worth 20 *l.* is about 15 *s.* or 16 *s.*, *Lyon* 3469–3472 ——Explanation as to the weight of offal in relation to the rest of the carcase, *Lambert* 4194–4197 ——Much lower price at which the lower classes can buy offal than American meat, *Gebhardt* 5668, 5669——Reference to the use made of offal in America, *Adams* 7984, 7985.

Doubt as to the expediency of preventing the import of offal and hides, and dead meat, on account of the risk of import of disease thereby, *Gamgee* 7158–7165. 7223–7226.

Oporto (*Export of Cattle to England*). See *Spain and Portugal.*

Orders of Council. See *Privy Council.*

Origin and Spread of Disease. See *Cattle Plague. Foot-and-Mouth Disease. Pleuro-pneumonia.*

Oxfordshire. Action taken by the local authority of the county under the Cattle Plague Order of January 1877, *App.* 564, 565.

P.

Payne, William. (Analysis of his Evidence.)—Is a cattle salesman at Romford; deals largely in the supply of cows to the London dairy sheds, 10464, 10465 ——Submits particulars in connection with the dairy shed in Bethnal Green, in which cattle plague has recently appeared; supplied two cows to this shed, but they were perfectly healthy, and he cannot account for the origin of the outbreak, 10466-10488. 10499-10522. 10534-10541.

Report, 1877—*continued.*

Payne, William. (Analysis of his Evidence)—*continued.*

Constant shifting of the cows in the London dairies; practice in some cases of supplying cows without payment on delivery, though witness never adopts this plan, 10482–10495. 10530–10533——Approval of an inspection of the dairies, in conjunction with strict regulations as to movement, 10496–10498——Large number of cows which pass through witness' hands; he never buys Dutch cows unless they have been in the country for a year or two, 10523–10530.

Peel, Charles Lennox. (Analysis of his Evidence.)—Is Clerk of the Privy Council; submits the orders and regulations having reference to the outbreak of cattle plague in the present year, 2604–2611——Important order limiting the number of ports at which cattle can be landed, 2612.

[Second Examination.]—Orders of Council which have been passed since the Committee of 1873, handed in by witness; these orders represent a complete history of the action of the Privy Council in regard to cattle plague, 3809-3813.

[Third Examination.]—Explanation of the recent action of the Privy Council, and of the orders now in force in the country and in the metropolis, in reference to cattle plague, &c.; cordon still maintained round the metropolis pending the re-stocking of the infected dairies, 9865-9870.

Witness submits the regulations now in force in Sweden and Norway, 9870–9872.

Penalties. Desirability of enforcing obedience to the proposed regulations by means of severe penalties, *Brown* 538, 539——Advocacy of severer penalties in the case of those who do not fail to report cases of pleuro-pneumonia, *Lambert* 3928–3931——Expediency of a considerable increase of penalties, *Melvin* 8820.

Prohibition by the Privy Council of the acceptance of their inspectors of any portion of the fines on conviction, *Brown* 9984, 9985——Difficulty in enforcing penalties for concealment of facts; amendment desirable in this respect, *ib.* 10424–10426. 10458–10461.

Peterborough. Action taken by the local authority of the Liberty of Peterborough in February 1877, with reference to the prohibition of movement in the Liberty of Peterborough, *App.* 564.

Peters, James. (Analysis of his Evidence.)—Is Land Agent of Lord Fitzhardinge, 5345——Recent landing of a large quantity of cattle, sheep, and pigs at Bristol, the latter having been affected with foot-and-mouth disease, and all having been driven away together, 5346–5358. 5363-5381——Presence of two Government inspectors on the foregoing occasion; statement as to these having merely the power of reporting to the local authorities, 5353, 5354. 5366-5370. 5380, 5381. 5390–5403.

Circumstance of a cargo of Irish cattle having been landed at Sharpness Point, twenty miles above Bristol, and afterwards driven to Bristol for sale, 5359-5362. 5371-5374. 5384, 5385——Very crowded state of the Irish cattle boats; tendency to disease thereby, whilst many animals die on the voyage, 5375-5379. 5386-5389——Recent landing of sheep at Bristol suffering severely from foot-and-mouth disease, 5381–5383.

Pigs. Occasional failure of detection of foot-and-mouth disease in the case of swine, inasmuch as they do not show the disease so markedly as other animals, and are more difficult to examine, *Brown* 49, 50——Reluctance of Gloucestershire farmers to buy pigs for fattening through fear of foot-and-mouth disease, *Lord Fitzhardinge* 5281–5284——Pigs introduce disease more commonly than cattle, *Brown* 10017.

Number of pigs bred by witness and exported to the Continent and Ireland, in order to improve the breeds for the London market, *Howard* 8313.

Pleuro-Pneumonia:

1. *Origin of the Disease in this Country; Weight of Evidence as to its Introduction from Abroad.*
2. *Long Period of Incubation.*
3. *Prevalence of the Disease; Losses entailed.*
4. *Suggestions as to the Restrictions to be enforced.*
5. *Regulations of the Privy Council.*
6. *Conclusions of the Committee.*

1. *Origin of the Disease in this Country; Weight of Evidence as to its Introduction from Abroad:*

Inference as to pleuro-pneumonia having been imported; existence, however, of the disease in England previously to foreign import, *Brown* 290, 291——Pleuro-pneumonia more frequently introduced than foot-and-mouth disease, on account of the impossibility of the disease being detected in the stage of incubation, *ib.* 517–522.

Belief that foreign importation has not materially increased pleuro-pneumonia, *Simonds* 1110–1128. 1227. 1314–1318——Possible introduction of pleuro-pneumonia in the first instance by means of Dutch cows *viâ* Ireland, *ib.* 1120–1121——Belief that the disease may be generated in this country, *Swan* 1773–1776.

Report, 1877—continued.

PLEURO-PNEUMONIA—continued.

1. *Origin of the Disease in this Country, &c.*—continued.

Belief that pleuro-pneumonia and foot-and-mouth disease are foreign diseases, notwithstanding that they may to a certain extent have become acclimatised in England, *Booth* 2381-2385. 2420; *Lyon* 3186 *et seq.*; *Sheldon* 4541-4563——Import of pleuro-pneumonia into this country for the first time in 1840 or 1841, through some Dutch cows which came to Ireland, *Sheldon* 4557-4562. 4610-4612 —— Doubt as to pleuro-pneumonia originating otherwise than by contagion, *Wilson* 4984-4989.

Practical experience upon which witness concludes that pleuro-pneumonia arises spontaneously and cannot be stamped out by restrictions, *Gebhardt* 5172-5178. 5674. 5677. 5713-5715——Reported outbreak of pleuro-pneumonia in Cornwall, said to have come from Ireland, *ib.* 5178-5181.

Liability to the import of pleuro-pneumonia by means of the cows brought over from Holland for dairy purposes, *Pool* 5905-5914; *Robinson* 8610-8617; *Read* 9501-9503 ——Belief that pleuro-pneumonia is not contagious; practical experience on which witness grounds this conclusion, *Pool* 5914. 5916-5950. 6035. 6040.

Conclusion as to pleuro-pneumonia coming entirely from abroad, *Gamgee* 7169-7173. 7204, 7205; *Howard* 8191-8196. 8411-8413; *Melvin* 8777——The real invasion of this country by the disease dates from 1842, *Gamgee* 7171——Opinion as to pleuro-pneumonia in this country not being necessarily introduced by foreign cattle, *Odams* 8111-8113.

Belief that the disease can only be communicated by the direct contact of one living animal with another, *Read* 9585 — Grounds for the conclusion that pleuro-pneumonia and foot-and-mouth disease originally came into England from abroad, *ib.* 9616-9620.

2. *Long Period of Incubation:*

Impossibility, by any system of quarantine or inspection, to guard against pleuro-pneumonia, on account of the long period which elapses before development, *Brown* 52-54. 517-522——Difficulty in stamping out pleuro-pneumonia on account of the impossibility of detecting it in its earliest stages, *ib.* 666-670.

Dissent from the veterinary opinion that pleuro-pneumonia remains dormant and cannot be detected for two or three weeks, *Lyon* 3290, 3291 ——Enhanced danger in the case of pleuro-pneumonia, on account of the lengthened time taken in the development of the disease, *Wilson* 4716-4718. 4835-4837; *Soulby* 7311-7316——Illustration of the insidious character of pleuro-pneumonia, and of the long period of incubation, *Wilson* 4835-4837.

3. *Prevalence of the Disease; Losses entailed:*

Concurrence of evidence as to the prevalence of pleuro pneumonia in the dairies and cowsheds in London and other large towns, *Brown* 549-553; *Swan* 1693-1696; *Lambert* 3932-3939; *Wilson* 4833-4835. 4851, 4852; *Gebhardt* 5438-5440; *Gamgee* 6945.

Evidence as to the excessive mortality from the disease in towns; annual loss of fifty-four and a-half per cent, of the cows in town dairies when witness made inquiries on the subject, *Gamgee* 7043-7055. 7065-7074——Frequent losses of witness from pleuro-pneumonia previously to the cattle plague regulations; probable causes of the stoppage of the disease, *Melvin* 8730-8734——Relative prevalence of pleuro-pneumonia and of foot-and-mouth disease in May 1877, *Brown* 10274, 10275. 10281.

4. *Suggestions as to the Restrictions to be enforced:*

Evidence in detail as to the means to be adopted for stamping out both pleuro-pneumonia and foot-and-mouth disease; necessity for giving larger and more elastic powers to the Privy Council, *Brown* 303-313. 335-344. 513-516. 523-526. 530-548. 552-555. 650. 785-791——Approval of slaughtering without hesitation all animals that show any evidence of pleuro-pneumonia, *ib.* 554——Opinion that the time during which the pleuro-pneumonia rules should be applied to premises in which the disease has been discovered should be extended from thirty days to two months; necessity for an Act of Parliament to make this change, *ib.* 589-593.

Argument that pleuro-pneumonia should come under the same regulations as foot-and-mouth disease or cattle plague, *Booth* 2409, 2410. 2414-2417——Conclusion as to the expediency of slaughtering immediately in the case of pleuro-pneumonia; the animals are never of any use if they live after the disease, *Lyon* 3186-3204. 3273-3291. 3305. 3320——Opinion that the lung disease has gained such a hold in this country that it would be nearly impossible to stamp it out; animals suffering from the disease are very much affected by changes of climate, such as are common in England, *ib.* 3199-3202.

Belief that in 1865-66 pleuro-pneumonia and foot-and-mouth disease were for a time entirely stamped out; opinion that it would be quite feasible to stamp those diseases out in

Report, 1877—*continued.*

PLEURO-PNEUMONIA—continued.

4. *Suggestions as to the Restrictions to be enforced*—continued.

in the future, *Rea* 3595-3598. 3600, 3601. 3726-3730——Necessity for very stringent regulations for the purpose of stamping out pleuro-pneumonia; belief that such restrictions, if they succeeded, would be a benefit to the country generally, by increasing the amount of the home supply, *Lambert* 3908-3912. 3922-3944. 3950-3953. 4178-4180——Further suggestions as to the increased stringency required in the regulations with the object of eradicating pleuro-pneumonia; approval of the present restrictions if foreign governments could be relied upon to transmit telegraphic information as to any outbreak, *ib.* 4141-4147.

Importance of accurate scientific knowledge in dealing with cases of pleuro-pnemonia, *Wilson* 4804—— Objection to the prohibition of import from any country on the score of pleuro-pneumonia, *Giblett* 6571-6576. 6615.

Positive and definite character of the restrictions required as regards pleuro-pneumonia, the stoppage of import being essential, *Gamgee* 6971-6975——Necessity of isolation and other preventive home measures for pleuro-pneumonia, but only for a time, if foreign import be stopped, *ib.* 7056, 7057——Conclusion that in a very limited period of time, such as six months, pleuro-pneumonia might be stamped out, *ib.* 7174-7176.

Improved regulations desirable as regards slaughter and isolation in the case of pleuro-pneumonia, *Soulby* 7273-7275. 7282-7284——Opinion that in cases of pleuro-pneumonia movement should be prohibited for three months out of the infected locality, *Melvin* 8812-8817.

Extent to which the recommendations of the Select Committee of 1873 in reference to pleuro-pneumonia have been carried out, *Read* 9501——Contemplated extension of the period of isolation for pleuro-pneumonia from twenty-eight days to two months, *ib.* 9509-9514. 9720-9723. 9771-9773——Facility of extirpating pleuro-pneumonia by proper restrictions, witness contending that this disease never arises spontaneously, *ib.* 9603. 9619, 9620. 9661-9664.

Doubt as to any practicable means of extirpating pleuro-pneumonia in six months, *Brown* 9897. 9901, 9902——Statement to the effect that pleuro-pneumonia has not been diminished by the restrictions in force in reference to cattle plague, *ib.* 9895, 9896——Summary of the home restrictions desirable in reference to pleuro-pneumonia, in conjunction with a system of slaughtering at the ports, *ib.* 10067-10069. 10101, 10102——Necessary lapse of some years before the country could be pronounced free from pleuro-pneumonia; experience of Holland to this effect, *ib.* 10093. 10267-10271.

5. *Regulations of the Privy Council:*

Regulations laid down in the various Orders of Council since August 1873, with reference to pleuro-pneumonia, *App.* 512 *et seq.*

6. *Conclusions of the Committee:*

Great risk of the import of pleuro-pneumonia on account of the long period for which it lies dormant, *Rep.* iv——Conclusion as to the home restrictions necessary in reference to the disease; suggestion that absolute prohibition of movement be enforced against infected farms for two months, *ib.* v, ix, x——Summary of the regulations and restrictions proposed, *ib.* ix, x.

Police. See *Inspection,* 4.

Pool, Marcus. (Analysis of his Evidence.)—Is a cattle salesman, doing business both in the Islington and Deptford markets, 5786-5788——Explanation that Mr. Swan, of Edinburgh, is interested much more largely in the home than foreign trade, 5788, 5789——Considerable falling off in the supply of foreign animals at the Deptford Market, the present supply from Holland and France being very small, 5790-5813——Very few buyers, and very little competition, at Deptford, the retail butchers not having slaughter-houses there; prejudicial effect as regards the supply from abroad, 5791. 5796-5805. 6072 6077.

Examination as to the effect of compulsory slaughter at Deptford in tending to reduce the foreign supply and to increase the price in this country, and as to the effect, on the other hand, of the American dead-meat supply in keeping down the price, 5814-5826——Grounds for the conclusion that continued restrictions on free trade in foreign cattle will cause foreigners to reduce their stocks, and not to send them to this country, 5820-5834. 5840-5844. 6068-6070.

Less dependence on foreign supplies if farmers in England had increased their stocks instead of growing so much corn and other produce, 5835-5838——Belief that cattle

Report, 1877—*continued.*

Pool, Marcus. (Analysis of his Evidence)—*continued.*

epidemics cannot be prevented by stopping foreign import, 5837——Opinion that foreign import should be entirely stopped from all countries which cannot show a clean bill of health, 5838. 6001, 6002——Expediency on the other hand of complete free trade with all healthy countries, the cattle being allowed to go to a public market instead of being slaughtered at Deptford, 5838, 5839. 6003-6009. 6039-6044. 6072-6081.

Evidence in support of the conclusion that the price of dead meat from America will increase, and that this supply cannot be depended upon in lieu of a live cattle supply from the continent, 5839-5895. 5960-5979. 6010-6034. 6082-6104——Unsatisfactory results of witness' experience as regards the condition in which several consignments of American meat have arrived; question considered whether the difficulties on this score may not be overcome in time, 5847-5869. 5960-5970. 6033, 6034. 6057-6066. 6096-6099.

Average of about 4¾*d.* per pound realised by the American meat sold by witness; examination hereon to the effect that witness does not believe the trade is a remunerative one, notwithstanding its immense increase, 5857-5860. 5870-5880. 6010-6032. 6095——Opinion that a dead-meat trade exclusively would not suit the wants of the retail butchers; reference hereon to the extent of purchases in the Metropolitan Dead Meat Market, 5884-5895.

Concurrence in a suggestion by Mr. Gebhardt that animals sold at the Islington market should only go into the country for slaughter, 5896-5905——Exception taken to the view that there are worse hotbeds of disease in London than in the country, 5896-5899——Consideration of the extent to which cows with pleuro-pneumonia are imported from Holland into the London dairy sheds, 5905-5914.

Belief that pleuro-pneumonia is not contagious; practical experience on which witness grounds this conclusion, 5914. 5916-5950. 6035. 6040——Approval of inspection before an animal is removed from a dairy shed, 5915, 5916——Conviction of witness that foot-and-mouth disease is atmospheric, 5951, 5952. 6041——Interest of witness in the import of live cattle, though he would not allow them to come if there were real danger of disease thereby, 5953-5959.

Examination as to the relative loss or deterioration in the case of dead meat cargoes and of live cattle cargoes, 5960-5970. 6022. 6045-6049——Tendency to a rise in the price of cattle in America; reference hereon to the margin of profit between the price of dead meat in New York and in London, 5971-5979. 6010-6020——Evidence as to the difficulty on the score of supplies of ice and disposal of offal which are likely to prevent a Continental dead meat trade, 5980-6000.

Further statement that there should be free trade and an open market, except for cattle from countries where there is contagious disease; question hereon as to the diseases which are contagious, 6001-6009. 6035-6044. 6078, 6079——Conclusion that Deptford Market should be abolished altogether, 6008, 6009. 6072-6077.

Tendency to reduction of price in France if foreign cattle be excluded from England; question whether this might not induce foreign producers to send dead meat to this country, 6050-6056——Probable gluts in the market if supplied entirely by foreign dead meat; impracticability of regulating the supply, 6080, 6081. 6100-6104.

Ports (*Landing of Foreign Cattle*). Precautions taken at landing places as to separating the defined from the undefined parts of the port; unfavourable opinion as to the arrangements at some of the ports, *Brown* 36-40——Explanation with regard to the limitation of parts where foreign animals are allowed to be landed, as recommended by the Select Committee of 1873, *ib.* 753-762——Enumeration of the ports which have been closed and those which have been left open for the debarkation of cattle, *ib.* 1053-1056.

Important Order of Council limiting the number of ports at which cattle can be landed, *Peel* 2612.

There should be certain defined ports, *Rudkin* 8959——Limitation desirable as regards the number of ports of debarkation, *Read* 9687-9690——Limitation desirable to be placed on the number of ports, unless proper slaughtering arrangements be made, *Brown* 10233, 10234.

List of ports at which foreign cattle might be landed under the Animals Order of 1875, *App.* 529, 530.

Alterations by the Privy Council from time to time in reference to the ports of entry at which foreign cattle may be landed, *App.* 539 *et seq.*

Proposed definition of the ports of debarkation at which foreign cattle may be landed for slaughter, *Rep.* vi.

See also *Deptford Market.* *Foreign Cattle.* *Quarantine.*

Portugal. See *Spain and Portugal.*

Post-mortem Examinations. Statement that a post-mortem examination is not always infallible in determining the existence of disease; difference of opinion between witness and Mr. Duguid upon this point, *Brown* 233–236.

PRICE OF MEAT:

1. *As to Past and Present Prices, and the Causes of Increase.*
2. *As to the Effect of a Prohibition upon Import, and of Compulsory Slaughter at the Home or Foreign Port.*

1. *As to Past and Present Prices, and the Causes of Increase:*

Statement that the present severe restrictions as regards foreign cattle considerably enhance the price of meat; large increase in the price in the last ten or fifteen years, *Booth* 2256. 2308. 2315, 2316. 2320, 2321. 2327–2331 —— Explanation as to the relative prices of meat sold wholesale and retail, *Hall* 3043–3048——Average price at which beef is imported alive from the Continent, *Lyon* 3249–3252 —— Price of English meat slightly reduced on account of the introduction of the American, *ib.* 3345.

Opinion that the outbreak of cattle plague in 1865–66 had a very great tendency to raise the price of meat; belief that this increase has continued ever since, *Rea* 3584–3586——Tendency of the outbreak of cattle plague in the present year to increase prices, *ib.* 3643–3645. 3669.

Lower price by 1 *d.* or 1½ *d.* per pound of dead meat than of live cattle at Glasgow, *Hamilton* 4368–4372. 4387–4396. 4407–4416—— Statistics to the effect that the price of meat is now 1⅛ *d.* dearer per pound than it was in the two years before the outbreak of the cattle plague in 1865, *Wilson* 4742–4745——Other causes besides the cattle plague of 1865 to which the subsequent increase in the price of meat may be attributable, *ib.* 4899–4901. 5087–5094.

Much higher price of meat but for the import from America, *Gebhardt* 5252, 5253 ——Effect of the restriction upon import of live stock in raising the price of common or contractors' meat, *Burkett* 6254–6260.

Considerable and continuous rise in the price of meat, the increase of population and of demand being one cause, and the restriction upon import of live stock another cause, *Giblett* 6596–6604. 6694. 6721 ——Uncertain profit realised by cattle from the Continent, *ib.* 6657–6660—— Effect of the losses from rinderpest and other diseases in limiting the supply of cattle and in enhancing the price, *ib.* 6695–6697.

Effect of the charges of salesmen, middlemen, and others, in adding to the price of meat, *Giblett* 6729–6732——Good price obtained by the English farmer, notwithstanding the effect of the American meat supply, *ib.* 6675–6678——Depression in the prices of live cattle when dead meat comes in very large quantities, *ib.* 6745, 6746.

Increased price of meat in Liverpool through the cattle plague restrictions; check through the American supply, *Luya* 7616–7621—— Considerable increase in the price of meat at Leeds during the last thirty years, the consumption having greatly increased; doubt as to the losses from cattle plague having influenced the price, *Walker* 7830–7837. 7845–7850. 7881–7884. 7930, 7931——Probable increase in the price of meat in other countries as well as under the legislation in force in England, *Odams* 8046–8051—— Effect of the cattle plague in increasing generally the price of meat, *Rudkin* 9197.

2. *As to the Effect of a Prohibition upon Import, and of Compulsory Slaughter at the Home or Foreign Port:*

Grounds for the opinion that dead meat could not be sent to England from the continent at the same low price as from America, *Brown* 365–371——Probable increase in the price of meat which would result from the stoppage of the importation of live stock, *ib.* 896, 897——Probable effect of the prohibition of foreign cattle upon the price, *Simonds* 1227–1231. 1275–1277——Advantageous effect upon the price by the total prohibition of live cattle from infected countries, *Booth* 2449–2454.

Increase in the price of meat which would necessarily arise from the prohibition of importation of live cattle from abroad, *Lyon* 3503, 3504——Dissent from the opinion that restrictions would have the effect of increasing the price of meat; belief that beef will be lower in price if the dead meat trade is followed out, *Rea* 3746–3751. 3801, 3802——Opinion that the closing of foreign ports would not have the immediate effect of raising the price, *ib.* 3676–3769.

Tendency to a reduction rather than an increase of price by stopping the import of foreign cattle; that is, through the increased import of dead meat and the increase of breeding, *Wilson* 4902, 4903. 4918–4920. 4990.

Belief that the price in London and all over England would be raised if all live cattle from the Continent were excluded, *Gebhardt* 5473, 5474——Slight difference in price which would divert foreign sheep and cattle to Paris instead of to London, *ib.* 5475–5479——Considerable margin at present for a reduction of prices, as by an increased

Report, 1877—*continued.*

PRICE OF MEAT—continued.

2. *As to the Effect of a Prohibition upon Import, &c.*—continued.

import of American meat, *Gebhardt* 5508, 5509——Tendency of slaughter at the port to increase the price in England and to reduce it in France and Germany, *ib.* 5562–5564. 5570–5580. 5590–5596——Effect of slaughtering at Deptford in making meat dearer in the country, and for a time cheaper in London, *ib.* 5573–5576. 5581–5589. 5689–5692. 5754. 5773.

Examination upon the question whether the price in Birmingham and other provincial towns has really been enhanced through the necessity of slaughtering foreign cattle at Deptford; tendency of the American supply to check increased prices, *Gebhardt* 5633–5647. 5696–5700——Probable reduction for a time in the price of meat by an increased import from America concurrently with the import of live stock, *ib.* 5782–5785.

Examination as to the effect of compulsory slaughter at Deptford in tending to reduce the foreign supply and to increase the price in this country, and as to the effect on the other hand of the American dead meat supply in keeping down the price, *Pool* 5814–5826.

Tendency to reduction of price by stopping the import of live cattle if dead meat came in increased quantities from the Continent and from America, and if there be increased breeding of English cattle, *Burkett* 6273–6276. 6333, 6334. 6449–6459——Increase in the price of meat if the import of live cattle be prohibited unless dead meat should be substituted for the live supply; difficulty as to such substitution permanently in the case of the Continent but not of America, *ib.* 6361–6367. 6404–6439. 6445–6479.

Belief that the total exclusion of foreign cattle would make meat fabulously dear, *Giblett* 6612 6614. 6752——Statement as to the price of meat not having risen upon the stoppage of import of German and Dutch cattle, *Stratton* 6805–6808. 6880. 6893–6901.

Belief that the price of meat would not be affected to the extent of one farthing a pound by at once excluding foreign cattle, *Gamgee* 7099, 7100. 7112–7115——Expectation that prices will in time be much lower by the adoption of witness' proposals, *ib.* 7124. 7136.

Reduction of price, to the great benefit of the community, if increased quantities of meat be imported from America, *Howard* 8307–8309——Dissent from the view that slaughtering at Deptford would make meat dear in the country and cheap in London, *Rudkin* 9157, 9158.

Belief that the price of meat is never likely to fall to 5 *d.* or 6 *d.* per pound as a result of the entire exclusion of foreign cattle, *Brown* 10034–10036——Effect of the total prohibition of the import of live stock in increasing the price; that is, until arrangements were made for a dead-meat trade in conjunction with slaughtering at the ports, *ib.* 10034. 10037–10040——Opinion that in course of time the price would be diminished rather than increased by a prohibition upon the import of live stock, 10218, 10219. 10228——Probability of a better class of animals being sent from abroad if slaughter on arrival be compulsory; effect upon the price of meat to the lower classes, *ib.* 10235–10241. 10245–10247.

Grounds upon which the Committee conclude that compulsory slaughter at the port of debarkation would not result in any increase generally in the price of meat, *Rep.* vi, vii.

See also *American Cattle.* *American Dead Meat*, VII. *Dead Meat.* *Home Supply.* *Offal.*

PRIVY COUNCIL:

Summary of the measures adopted by the Veterinary Department relative to the cattle plague since the last outbreaks in 1865, 1866, and 1867; reference especially to the Contagious Diseases (Animals) Act passed in 1869, *Brown* 2–8——Evidence in support of the conclusion that in cases of cattle plague the Privy Council should entirely supersede the local authorities, *ib.* 154. 166–168. 984–988——Conclusion as regards the measures necessary for dealing with pleuro-pneumonia and foot-and-mouth disease, that larger and more elastic powers should be given to the Privy Council, *ib.* 523 *et seq.*; 785–791.

Desirability of vesting all the responsibility and all the power in the Privy Council, and taking it away from the local authority; that is, in cases of cattle plague, *Simonds* 1213–1215; *Rea* 3653–3655. 3788, 3789. 3796–3798; *Lambert* 3913–3916——Importance of the regulations in this country being entirely under the control of the Privy Council, instead of their being enforced by local authorities, *Gebhardt* 2155–2161. 2171.

Conclusion as to the necessity of central and uniform action for the enforcement of regulations and restrictions, *Lambert* 3913–3916; *Wilson* 4696–4700. 4756–4760. 5101, 5102; *Melvin* 8803–8809——Objection to farmers being free to deal with foot-and-mouth disease without control by a central department, *Wilson* 4949–4953.

Expediency

Report, 1877—*continued.*

PRIVY COUNCIL—continued.

Expediency of all regulations and restrictions resting with the Privy Council, *Giblett* 6579, 6580——Approval of very full powers in the Privy Council for dealing with cases of cattle plague, *Stratton* 6809.

Suggestion that the Privy Council should issue all the orders to be carried out, and should so far supersede the local authorities, but that the latter should see to the carrying out of the orders by their own officers, *Soulby* 7248–7253——Advisability of uniformity in local regulations, and of Privy Council Orders being imperative, *Howard* 8212. 8222, 8223. 8226–8228. 8238. 8287–8290. 8297——Proposal that the Privy Council should issue uniform regulations and that a central board should appoint its own officers to carry them out, *Smith* 8472–8476.

Importance generally of immediate and compulsory action on the part of the Privy Council, irrespectively of the local authorities, *Read* 9491–9493. 9498, 9499——Expediency of strengthening the regulations of the Privy Council as to compensation, &c., and of extending them to Ireland, *ib.* 9588–9593——Independent powers to be exercised by the Privy Council in the event of a fresh outbreak of cattle plague, *ib.* 9753–9755.

Importance of the regulations of the Privy Council being applicable to the United Kingdom so that Ireland and Scotland as well as England may be bound by them, *Brown* 9978–9983——Expediency of the Privy Council having full powers through their inspectors to act at once in requiring the slaughter of animals without referring the matter to the local authority or the local inspectors; case in point, *ib.* 9991–9996.

Examination in further support of the proposal that the central authority should have power to require their regulations being carried out by the local authorities, *Brown* 10150–10184——Statement as to the Privy Council not having attempted to enforce the powers of their inspectors as regards interference with the local authority; expediency of means being provided for the enforcement of such powers by the central department, *ib.* 10276–10280.

Order of Council in August 1873 with reference to the steps to be taken in cases of pleuro-pneumonia and of foot-and-mouth disease respectively, *App.* 512–514.

Subsequent Orders, dated 13th November 1873, 27th February 1874, 3rd June 1874, 7th August 1874, and 5th June 1875, *App.* 514–518——List of Orders revoked by the Order of 5th June 1875, *ib.* 519.

Further Orders of Council from time to time, together with the regulations laid down, *App.* 521–565. 604, 605.

Letter from Mr. Wilmot, dated 11th November 1876, submitting the views of the Lord President in reference to the measures advocated in memorial from the Central Chamber of Agriculture and the Farmers' Club, *App.* 566, 567.

Orders of Council of 18th and 19th July 1877, imposing restrictions upon movement in the metropolis in view of the further outbreak of cattle plague, *App.* 604, 605.

Grounds for the recommendation by the Committee that uniform rules, applicable to all districts declared infected, should be enforced by the local authority, subject to the supervision of the Privy Council, *Rep.* iii. v. ix.

Recommendation that the Privy Council be empowered to deal directly with the cattle plague whenever it appears in this country, and that for this purpose it should receive from the local authority immediate notice of every outbreak, *Rep.* iii. ix.

Power proposed to be reserved to the Privy Council to forbid importation from countries other than those made the subject of legislation, *Rep.* ix.

See also *Cattle Plague. Foot-and-Mouth Disease. Foreign Cattle. Inspection. Local Authorities. Movement of Cattle. Pleuro-Pneumonia.*

Prohibition of Import. See *Foreign Cattle.*

Prussia. See *Germany.*

Q.

QUARANTINE:

Impossibility of establishing a practical system of quarantine, *Brown* 792–797——Doubtful expediency of establishing a system of quarantine in regard to store stock coming to this country from countries which are now unscheduled, *Simonds* 1133, 1134. 1239–1244.

Desirability of establishing a system of quarantine of from seven to fourteen days in regard to store cattle; suggestion that the quarantine station should be situated a good way down the river, somewhere on the coast of Essex, *Lyon* 3205–3211. 3274. 3363–3365——Approval of the twelve hours' quarantine which is at present in force in the case of foreign cattle, *Lambert* 3917. 3921. 3925.

Suggestions by the Central Chamber of Agriculture for the establishment of quarantine grounds, *Stratton* 6788——Advantage of quarantine stations at certain ports, to be used as regards foot-and-mouth disease and pleuro-pneumonia, *ib.* 6831–6833. 6854.

Report, 1877—*continued.*

QUARANTINE—continued.

Reluctant approval of a system of quarantine for store cattle; very stringent regulations desirable in connection therewith, *Gamgee* 7006–7011——Consideration of the question of quarantine as applicable to store cattle and milch cows, witness submitting that a quarantine of two months might be enforced, *Howard* 8256–8272. 8294–8296. 8314. 8373–8377.

Difficulty in carrying out a two months' quarantine, *Robinson* 8693–8695——Impracticability of an effective system of quarantine, *Melvin* 8857.

Quarantine of fourteen days recommended by the Metropolitan Dairymen's Society, *Tisdall* 9363, 9364——Question considered as to a quarantine of fourteen days being sufficient as regards pleuro-pneumonia, *ib.* 9365–9368. 9389–9394. 9473, 9474——Beneficial operation of a system of quarantine, notwithstanding the cost involved; conclusion that such cost should be borne in the first instance by the vendor, *ib.* 9442–9444. 9453–9469. 9482.

Suggestion for applying a fourteen days' quarantine to cows from Holland, and to store cattle generally, *Read* 9506–9508——Advantage of quarantine stations at Harwich, Southampton, and other places, *ib.* 9689. 9729, 9730——Objection to quarantine being extended to fat cattle, *ib.* 9740–9743.

Increased security by a longer detention of animals before they are landed, *Brown* 9932, 9933——Conclusion as to the serious interference with trade by a system of quarantine of Dutch cows, *ib.* 10075–10079. 10198.

Recommendation by the Committee as regards store and dairy animals, that they remain in quarantine for fourteen days, and afterwards be placed under inspection for two months, *Rep.* vi. ix.

R.

Railways. Great cruelty under the present system of conveyance of cattle by railway; outrage upon humanity now involved, *Odams* 8020–8022——Improved regulations for the cleansing of railway trucks; great neglect, however, in other respects, *ib.* 8130–8135——Statement as to water not being provided at many stations, *ib.* 8134, 8135. 8142–8144.

Amended system of inspection desirable as regards railway-borne cattle from Scotland, *Brown* 10120–10122——Information as to the action of the Privy Council in reference to the cleansing of cattle-trucks by the railway companies; obstacles thereto, *ib.* 10186–10195.

Regulations prescribed by the Animals Order of 1875 as to the arrangements in connection with transit by railway, *App.* 527, 528.

List of railway stations at which water is to be provided for animals according to the Order of Council of June 1875, *App.* 534–538.

See also *American Dead Meat*, VI. *Dead Meat.* *Transit of Cattle.*

Rea, George. (Analysis of his Evidence.)—Is a farmer in the north of England holding a very large acreage; has been largely occupied for several years as a cattle breeder, 3573–3578. 3613–3617——Information as to the number of sheep and cattle possessed by witness; his operations are almost wholly confined to breeding cattle to sell to others to fatten, 3579–3583. 3587.

Opinion that the outbreak of cattle plague in 1865–66 had a very great tendency to raise the price of meat; belief that this increase has continued ever since, 3584–3586——Tendency of the fear of disease to keep down the stock, and consequently the supply of meat to the country, 3588. 3591.

Absence of pleuro-pneumonia on witness' farm on account of his keeping away from the markets when that disease was prevalent, 3589–3591——Serious losses experienced from foot-and-mouth disease; approval of more stringent restrictions in the case of this disease, 3592–3594. 3630–3636. 3646–3655——Belief that in 1865–66 pleuro-pneumonia and foot-and-mouth disease were for a time entirely stamped out; opinion that it would be quite feasible to stamp those disease out in the future, 3595–3598. 3600, 3601. 3726–3730.

Opinion that the farmers throughout the country would be quite willing to submit to any restrictions having the object of stamping out disease effectually; readiness to submit even to such stringent regulations as were in force in regard to the cattle plague, 3599–3601. 3637–3642. 3686, 3687. 3716–3724. 3731. 3745. 3789——Effect of stringent regulations, which should stamp out disease, in increasing the supply of meat for consumption, because farmers would increase their stocks, 3602–3606. 3656.

Expediency

Report, 1877—*continued.*

Rea, George. (Analysis of his Evidence)—*continued.*

Expediency of prohibiting the import of cattle from abroad in conjunctiou with severe restrictions at home; legitimate complaint which the farmers would have if severe restrictions were imposed at home, without dealing with the fountain head of the disease, which is importation from the Continent, 3607-3612. 3660-3664. 3669. 3675-3679. 3704-3715. 3734-3736. 3764. 3770-3782. 3790-3796——Effect of the cattle plague of 1865 upon witness' occupation as a breeder of cattle; in the absence of proper steps to protect the farming interest from cattle plague, witness will stock more with sheep than with cattle, 3613-3629.

Tendency of the outbreak of cattle plague in the present year to increase the price of meat, 3643-3645. 3669——Opinion that where foot-and-mouth disease is prevalent in any district the fairs and markets should be closed; approval of compulsory orders from the Privy Council on this subject throughout the kingdom, 3650-3654. 3662, 3663. 3798——Desirability of vesting all the responsibility and all the power in the Privy Council, and taking it away from the local authority, 3653-3655. 3788, 3789. 3796-3798.

Argument that the outbreak of cattle plague has affected the supply of cattle in the future as well as at the present time, on account of the loss of breeding cows, 3656-3659——Recommendation that Irish cattle should be treated in the same way as English cattle, and with the same restrictions, 3665-3667——Very little cattle plague in England since the great outbreak of 1865; 3674——Improbability of introducing disease by means of importation of dead meat, 3680-3682. 3738-3744——Introduction of the first outbreak of cattle plague from abroad, 3683-3685.

Belief that if the importation of live cattle from the Continent were stopped a sufficient supply of dead meat would come in its place, 3689-3698——Opinion that cattle plague is more to be dreaded by the farmers than pleuro-pneumonia, 3699-3703——Disapproval of establishing a system of English inspectors at foreign ports; arbitrary regulations in America in regard to the cattle plague, 3741, 3742.

Dissent from the opinion that restrictions would have the effect of increasing the price of meat; belief that beef will be lower in price if the dead-meat trade is followed out, 3746-3751. 3801, 3802——Further observations to the effect that a successful dead-meat trade is quite possible with the Continent and America, 3752-3758.

Additional advocacy of prohibiting the import of foreign live stock; assertion that if this import is stopped it will be quite possible to supply the deficiency by home produce, 3759-3763. 3799, 3800——Opinion that the closing of foreign ports would not have the immediate effect of raising the price of meat, 3766-3769.

Further statement that the fear of the cattle plague has induced witness, during the last ten years, to breed less cattle than he otherwise would have done, 3783-3787——Decided opinion that the prohibition of the importation of foreign cattle would be a benefit and not a loss to the country, 3803-3805——Additional explanation that a large diminution in the breeding of cattle resulted from the outbreak of cattle plague in 1865; 3806-3808.

Read, Clare Sewell (Member of the House). (Analysis of his Evidence.)—Long and practical experience of witness as a farmer; independent footing on which he is prepared to give evidence, he not being a member of the Committee, and not appearing in any representative capacity, 9486-9488.

Recapitulation of the circumstances connected with the recent introduction of cattle plague by means of the cargo of the "Castor"; undue delay on the part of the Privy Council in exercising their powers under the Act of 1869; 9489-9493——Delay in the disinfection of the "Castor"; belief that the disease did not break out from Deptford Market, but was conveyed by the ship to Limehouse, 9489. 9524-9525. 9727.

Importance generally of immediate and compulsory action on the part of the Privy Council, irrespectively of the local authorities, 9491-9493. 9498, 9499——Suggestions for the payment of compensation out of the Consolidated Fund in respect of animals slaughtered for cattle plague, 9493. 9499, 9500——Little, if any, reliance to be placed upon inspection, whether local or central, as a means of guarding against the import of disease, 9495-9497.

Extent to which the recommendations of the Select Committee of 1873 in reference to pleuro-pneumonia have been carried out, 9501——Liability to the import of pleuro-pneumonia by means of the cows brought over from Holland for dairy purposes, 9501-9503——Expediency of restricting rather than prohibiting the import of Dutch cows, 9504, 9505. 9513——Suggestion for applying a fourteen days' quarantine to cows from Holland, and to store cattle generally, 9506-9508. 9517. 9643-9646. 9696, 9697. 9729, 9730. 9770, 9771——Contemplated extension of the period of isolation for pleura-pneumonia from twenty-eight days to two months, 9509-9514. 9720-9723. 9771-9773.

Opinion that a dead-meat trade is the safest and best, and that such trade will gradually increase so as to eventually supersede the import of live cattle, 9515, 9516——

Report, 1877—*continued.*

Read, Clare Sewell (*Member of the House*). (Analysis of his Evidence)—*continued.*

Strong advocacy of the slaughtering of all foreign fat cattle at the port of debarkation, as recommended by the Cattle Plague Commission in February 1866; 9517, 9518. 9521. 9641, 9642. 9647, 9648. 9724-9727. 9759-9764——Expediency of including sheep and pigs in the regulations as to slaughter at the port, 9519-9521.

Advantage of a separate market at Deptford for all foreign stock, 9522-9524. 9530-9532——Inconvenience in the Deptford market being held on the same day as the Islington market, 9523——Uncertainty of the supply at Deptford; a very large business is however transacted, and more slaughter-houses are being built, 9523, 9524——Comment on the action of the local authorities in Hull in reference to precautions against the spread of disease, 9525-9529.

Importance of a provision that no animal shall be moved from Islington market into the country unless it is marked for slaughter, 9533-9543. 9738, 9739——Recent instance of a very badly diseased animal in the market, 9548, 9549——Introduction of foot-and-mouth disease from the market into Norfolk on several occasions, 9540-9543. 9735-9737.

Excellent condition in which cargoes of American meat have arrived, even in hot weather; bad condition, on the other hand, of some cargoes through imperfection in the process adopted, or from other causes which are remediable, 9544-9555——Bad appearance of the American meat, owing very much to the mode of slaughtering, 9546, 9547——Importance of cool stores in which to keep the meat on arrival; steps being taken to provide these on a large scale, 9550-9553——Room for much improvement in the system of butchering in this country, 9553, 9554.

Expected permanence of the American meat trade, 9556——Probability of some live cattle being still imported from America, concurrently with dead meat, 9556-9558——Comment upon the exclusion, till lately, of American dead meat from Government contracts, 9558-9560——Successful transmission of large quantities of dead meat from Norfolk to London in hot as well as cold weather, 9561-9566——Transmission also of offal from Norfolk to London without loss, 9561. 9563. 9565.

Evidence in support of the conclusion that an improved system of inspection and increased restrictions generally on the part of Germany and other foreign countries cannot be relied upon as sufficient precaution against the export of diseased animals to England, 9567-9576. 9682, 9683. 9761-9763—— Import of many animals from Belgium and Holland with foot-and-mouth disease, in 1875, without any official intimation from those countries, 9574-9576. 9668-9670. 9761——Illustration of the laxity of inspection at Hamburg, 9570, 9571——Explanation that witness would entirely prohibit import from all countries where there is any chance of cattle plague, including not only Germany but Belgium, 9577-9579. 9649-9659. 9724-9727. 9759.

Successful results of the system of isolation and slaughter in Norfolk in reference to pleuro-pneumonia; steady diminution in the disease in the county, 9580-9582. 9639——Reduced amount of salvage paid in Norfolk on account of the value for food of the animals killed; wholesome character of the meat, 9582-9587——Comment upon the practice in Ireland of not using for food the carcases of animals attacked with pleuro-pneumonia, 9582. 9584.

Expediency of strengthening the regulations of the Privy Council as to compensation, &c., and of extending them to Ireland, 9588-9593——Importance of more stringent regulations for suppressing pleuro-pneumonia in Ireland; improvement by compensating the owner for animals killed, 9593-9597——Statement as to Norfolk being now free from foot-and-mouth-disease, 9598-9600——Tendency of this disease to die out after a time; belief that if not re-imported it could be very easily suppressed throughout the country, 9600-9603. 9660-9667——Facility also of extirpating pleuro-pneumonia by proper restrictions, witness contending that this disease never arises spontaneously, 9603. 9619, 9620. 9661-9664.

Result of witness' experience that the farmers of England would readily conform to the restrictions necessary for stamping out disease, 9604-9607. 9626. 9679—— Improved regulations enforced by the Privy Council in reference to the inland transit of cattle, 9608, 9609——Advantage of travelling or Government inspectors for seeing that the local authorities do their duty, 9609-9611. 9613-9614. 9631, 9632. 9752——Objection to the local inspectors being appointed by the Privy Council, 9610. 9631, 9632. 9752.

Considerable improvement in the state of the lairs in Ireland, 9611——Suggestion that cattle from Ireland be rested at the port of debarkation for six hours, and be fed and watered before and after leaving the railway trucks, 9611, 9612. 9692-9695. 9731-9734——Unreliability of agricultural statistics as regards the number of animals in the country, 9615——Very large number of Irish store cattle brought into Norfolk, *ib.*——Grounds for the conclusion that pleuro-pneumonia and foot-and-mouth disease originally came into England from abroad, 9616. 9620.

Conclusion that the restrictions and regulations hitherto have been unsuccessful only because they have not been properly applied, and that additional precautions are essential not

Report, 1877—*continued.*

Read, Clare Sewell (*Member of the House*). (Analysis of his Evidence)—*continued.*

not only as regards foreign import, but home movement, &c., 9621-9626——Importance of a limitation of the number of local authorities, and of uniformity of action throughout the whole of each county, 9627-9630.

Belief that Ireland is now free from foot-and-mouth disease, 9633. 9634——Improved condition in which the Irish cattle now arrive in Norfolk, 9635-9640——Opinion that dead meat may be safely imported from countries where there is cattle plague, 9651, 9652—— Suggestions as to the restrictions upon inland transit and upon fairs and markets which should be adopted concurrently with the slaughter of all foreign cattle at the port of debarkation, so as to exterminate foot-and-mouth disease, 9671-9679—— Approval of the continued import of German and Belgian sheep if slaughtered at the port of debarkation, 9680, 9681.

Restriction upon the spread of disease if there were an increase of slaughter-houses throughout the country, 9684-9686——Limitation desirable as regards the number of ports of debarkation, 9687-9690——Advantage of quarantine stations at Harwich, Southampton, and other places, 9689. 9729, 9730——Great improvement by supplying London and other large towns with milk from the country, exclusively, as upon the plan adopted by the Aylesbury Dairy Company, 9698-9702.

Impression as to foot-and-mouth disease being communicable to human beings, 9703, 9704——Increase of this disease in Norfolk at the time when there is most transit of Irish cattle, 9705, 9706——Expediency of cattle being rested, and fed and watered before they are embarked, 9707-9711——Doubt as to the necessity of slaughtering or quarantining cattle sent from the Channel Islands to Southampton; advantage of inspection before shipment, 9712-9716. 9748, 9749.

Modified restrictions desirable as regards the movement of store cattle in Ireland, 9717-9719——Conclusion as to dairy cows coming under the definition of store stock, 9228——Advantage of separate markets for store cattle and fat cattle in Liverpool, as well as in London, 9738, 9739——Objection to quarantine being extended to fat cattle, 9740-9743——Advantage if fat cattle were not moved into the country save in the form of dead meat, 9743-9747.

Great loss caused more especially by foot-and-mouth disease, so that effectual measures should be adopted for its isolation and suppression, 9750-9752——Independent powers to be exercised by the Privy Council in the event of a fresh outbreak of cattle plague, 9753-9755——Contemplated localisation of the restrictions upon movement in the case of foot-and-mouth disease, 9754.

Grounds for the conclusion that a much larger number of cattle would be bred in England if there were security against the import of disease, 9756, 9757——Improvement if cattle drovers were licensed; this should apply also to cattle salesmen and cattle dealers, 9758——More effectual system lately adopted in Holland for suppressing pleuro-pneumonia, 9765-9769——Non-adoption in Belgium of any special restrictions in reference to pleuro-pneumonia, 9769——Very unsatisfactory experience of witness as regards Dutch store cattle; very few of these now in Norfolk, 9774, 9775.

Refrigeration. Great importance of refrigeration in the case of milk, as well as of meat, *Wilson* 4842-4847. 4868-4870—— Room for great improvement in this country in the mode of treating meat, refrigeration being unduly neglected, *ib.* 4868-4870.

See also *American Dead Meat*, III. *Ash, Mr.* *Dead Meat*, 3.

Robinson, Anthony George. (Analysis of his Evidence.)—Considerable experience of witness, as a Steamship Agent, in the import of foreign cattle, 8542-8547——Different periods of the year at which cattle are imported from Denmark, Germany, Holland, and other countries, 8548-8553—— Great diminished supply from France since the late war, 8549, 8550—— Use of ships for cattle, exclusively, from some countries, whilst from others cattle come with other cargoes, 8554——Opinion that the arrangements in the boats for cattle, exclusively, are not any better than in the cargo boats, 8555-8558.

Evidence purporting to show the entire inadequacy of inspection as a protection against the import of cattle with foot-and-mouth disease, 8559-8562——Careful inspection and expensive disinfection in connection with the Irish cattle trade, but without successful results, 8560——Complaint also as to the uncertain and unequal character of the inspection at different ports; laxity at Harwich, 8560-8566.

Undue stringency by requiring the slaughter of foreign animals at the port of embarkation, 8567. 8575. 8647, 8648. 8655—— Particulars as to the dead meat trade from Holland during the restrictions upon import of live stock in 1866; much smaller import of dead meat than of live animals when the latter were not prohibited, 8567-8578——Conclusion that cattle from all foreign countries should be slaughtered at Deptford; objection to any exception in favour of Denmark or any other country comparatively free from disease, 8579-8601. 8656-8660.

Report, 1877—*continued.*

Robinson, Anthony George. (Analysis of his Evidence)—*continued.*

Regular and ample supply at Deptford if there were compulsory slaughter of all foreign animals landed in the port of London; disadvantages of the present uncertainty of supply in the market, 8579. 8586–8590. 8604–8606. 8626, 8627. 8649–8654. 8715, 8716—— Dissent from certain statements as to the loss incurred by sending cattle to Deptford to be slaughtered, 8585. 8604. 8639——Increase of slaughter-houses at Deptford, and increasing practice of butchers to buy dead meat instead of slaughtering at home, 8588, 8589. 8652–8654.

Facility in the transmission of dead meat from Deptford to the provinces, 8602–8604 —— Import of from 8,000 to 10,000 cows yearly mainly from Holland, this being practically the only import of store cattle, 8607–8609——Liability to the import of pleuro-pneumonia and foot-and-mouth disease by means of Dutch cows; very strict quarantine required, 8610–8617.

Very rude arrangements formerly in the transport of live stock from Ireland, but without any outbreak of disease; greatly improved arrangements now in force, 8619, 8620——Belief that diseases are not developed during the transit from Ireland, but by subsequent treatment in England; very strict checks upon the shipment of diseased animals, 8621–8625——Considerable quantities of offal formerly imported in good condition, 8628–8931. 8642——Statement showing that offal can be and is conveyed from Deptford for considerable distances without difficulty, 8632–8642.

Very large increase anticipated in the dead-meat trade from America, 8643–8646—— Calculation to the effect that American meat will bring a profit at any price over 4½ *d.* a pound, 8644. 8697, 8698——Excellent condition in which the meat may be brought under proper arrangements, 8644——Considerable losses incurred in the live cattle trade from America, so that it is likely to be superseded by the dead-meat trade, 8644–8646.

Consideration and approval of the detailed arrangements at the Port of Cork up to the point of shipment of live stock for England, 8661–8673——Satisfaction expressed also with the accommodation and arrangements on board the cattle ships from Cork, 8674–8689——Inducement to the shipowners to take every care of the cattle on account of the practice of insuring them against injury or death, 8683–8685. 8711–8714—— Excellent arrangements on board the Irish cattle ships generally, 8686.

Occasional deterioration in the dead meat formerly brought from Holland; no ice was then used, 8690–8692—— Difficulty in carrying out a two months' quarantine, 8693–8695—— Saving in the freight of dead meat, as compared with live cattle, from Holland, 8696—— Improvement much required in the mode of carting dead meat from Deptford, 8699.

Stationary character of the cattle trade with Portugal, 8700, 8701——Very good condition in which live cattle arrive from New York; opinion, nevertheless, that this import should be prohibited, 8702–8706——Obstacles to the successful conduct of a large dead-meat trade from the Continent throughout the year, 8707–8710.

Royal Agricultural Society. Resolution passed by the Council of the Society in March last in favour of the total prohibition of the import of live stock from European ports, this resolution having led to the present inquiry, *Wilson* 4692–4695—— Representations made by the Society to the Privy Council to the effect that as regards cattle the local authorities should be superseded by the latter, *ib.* 4696–4700.

Rudkin, Thomas. (Analysis of his Evidence).—Is a Member of the Common Council of the City of London; has been a member of the Markets Committee for nearly twenty years, 8928–8930.

Statement of the number of cattle, calves, sheep, and pigs that have come to Deptford Market in the first six months of 1877; large decrease of cattle, owing to the restrictions upon import from Germany, whilst there has been an enormous increase of sheep, 8931–8935——Total number of foreign cattle and foreign sheep in the Islington Market in the first six months of 1876, and of 1877; 8936, 8937——Considerable decrease since 1865 in the number of English cattle and sheep sent to London, whilst the foreign supply has largely increased, 8937–8941.

Excellent sanitary condition of Deptford Market, though the smell from carbolic acid used in disinfection is exceedingly offensive, 8942–8946——Particulars as to the course pursued at Deptford in getting rid of thirty-nine carcases of deceased animals in the present year; prompt action taken whilst disinfection was carefully carried out, 8947–8974——Impossibility of disposing of the carcasses by burying them under the market; advantage if there were an available space for the purpose outside the market, 8950, 8951.

Great detriment to trade, and to the usefulness of Deptford Market, by the uncertainty of the regulations as to the import and slaughtering of foreign cattle, 8955–8957. 9085–9091——Conclusion, reluctantly arrived at, that all foreign cattle should be necessarily slaughtered at the port of landing, there being defined ports for the purpose, 8958, 8959.

Report, 1877—*continued.*

Rudkin, Thomas. (Analysis of his Evidence)—*continued.*

8981. 9085, 9086. 9140–9148. 9163, 9164. 9219——Stability of trade at Deptford, and abundance of competition, if there were a permanent and compulsory system of slaughtering at the port, 8959, 8960. 8967, 8968. 9086–9091. 9146–9148. 9210.

Inaccuracy of certain evidence as to the prices at Deptford being much lower than at Islington, 8960–8969. 9030——Belief that the establishment of a dead-meat supply would be an immense boon to the public, 8968——Great advantage of animals being slaughtered where they are fed; superiority of country-killed meat to that killed in London, whilst under the former plan there is a saving of some five per cent. in absolute weight, 8968–8971. 9046–9049. 9036. 9175, 9176. 9186.

Facility in carrying on a large dead meat trade between Deptford and the country; very large number of sheep carcases sent from Deptford to Wales, and other distant parts, some of which come back again to London, 8972–8975. 9133–9135. 9138, 9139. 9158. 9162——Room for much improvement in the treatment of the offals, whereby they may safely be sent long distances; excellent arrangements in Paris in this respect, 8976–8980. 9134. 9149, 9150. 9187——Approval of absolute prohibition of import from any country where there is cattle plague, 8982.

Decided conviction of witness that the Islington Market is largely supplied with diseased animals, and that it is essential to confine the market to fat stock, which should not be allowed to leave the metropolis alive, 8983–8992. 9140–9142. 9191–9193. 9198–9201——Objection to animals sold in London being allowed to go alive into the country if marked for slaughter, 8991, 8992——Opinion that one market, where all animals should be slaughtered, would suffice for London, 8993, 8994.

Statement as to the London cow-sheds having long been a fruitful source of disease, 8995——Supply by the London dairies of only fifteen per cent. of the milk used in the metropolis, witness submitting that the whole supply could be much better obtained from the country, and that the London cow-sheds should be closed altogether, 8995, 8996——Practice of witness to quarantine any new cows on his farm for at least three weeks; he has had an immunity from disease, 8995–9000——Expediency of a thorough inspection of all cow-sheds in London and elsewhere, 9001, 9002.

Opinion that in the metropolis the Privy Council should supersede all local authorities, and should exercise sole jurisdiction, 9003–9005. 9188.

Excellent condition in which some American meat has recently come to London, *viâ* Liverpool; very fine quality of this meat, which realised seven pence per pound, 9006–9011——Condemnation of about forty-nine tons of American meat by the City authorities in the first six months of 1877; 9012–9015——Belief that the bad condition in which the meat sometimes arrives is due to bad packing, and to the slaughter of the animals in America before they have cooled down after their journey from the interior; facility of correcting these defects, 9016–9021. 9117, 9118. 9194–9196——Very bad treatment of the meat on arrival, 9021.

Prospect of very large supplies from America in good condition, whilst the quality is excellent; great improbability, however, of the Continental live-meat supply being superseded, 9022. 9115, 9116. 9207——Statement showing that American meat will take salt perfectly, 9022, 9023——Sale of American beef to the public as Scotch beef; large profits thereby to the butchers 9024. 9109–9113——Great boon to the public if the American supply came over in such quantity as to supersede the live cattle supply from the Continent, and to reduce the price of meat, 9025–9030.

Opinion that there should be free-trade alike in dead meat and live cattle, but not in the import of disease, 9031. 9037–9039. 9099, 9100. 9163. 9204.

Gradual diminution of the live cattle supply to London, and gradual increase of the dead meat supply, 9031–9035. 9119–9122. 9159–9161——Average of from sixty to seventy tons of dead meat sent from Scotland to London throughout the hot months, 9032, 9033. 9159, 9160——Large supplies of dead meat received also from the West of England and Ireland, even in the hottest weather, 9033, 9034. 9180–9182——Facility of providing direct railway accommodation with Deptford Market, 9040–9042. 9106–9108. 9136.

Gradual increase since 1871 in the number of animals sent to Deptford, 9050–9054——Explanation relative to the much higher charges of the Corporation for each bullock, sheep, and calf in Deptford Market than at Islington, 9055–9074. 9080–9083——Statement showing that the importer has to pay quite as much to get his beast to Islington Market as to Deptford, 9068. 9075–9079.

Opinion that if there were a cordon round the metropolis (as recommended by witness in 1865) foreign cattle might be allowed to come to Copenhagen Market without insisting upon slaughter at Deptford; preference, however, for the latter alternative, 9092–9099. 9139–9148——Objection to an absolute prohibition of the import of live animals into London; probable effect for some time in raising the price of meat, 9099–9103. 9205, 9206——Interested motives by which cattle salesmen are actuated in opposing restrictions upon the import of live stock, 9104, 9105——Comment upon the opposition,

Report, 1877—*continued.*

Rudkin, Thomas. (Analysis of his Evidence)—*continued.*

at first, of the London butchers to the consumption of American meat; they now buy it very readily, 9114. 9185.

Authority exercised, respectively, by the Metropolitan Board of Works and the Corporation of London in respect of cattle; witness further submitting that they should both be superseded by the Privy Council, 9123-9126. 9188-9190——Number of animals landed respectively at Deptford, Thames Haven, and Brown's Wharf, 9127 9132——Increased supply of slaughter-houses at Deptford if slaughtering of all foreign cattle were compulsory, 9137-9165.

Belief that compulsory slaughter at Deptford would not have the effect of discouraging the import of live animals from abroad, 9144-9148——Statement that the Corporation of London is actuated solely by public considerations in advocating slaughter at Deptford, 9151-9153——Way in which the offal is now disposed of from Deptford without difficulty, 9154-9156.

Dissent from the view that slaughtering at Deptford would make meat dear in the country and cheap in London, 9157, 9158——Prevelance of foot-and-mouth disease among Spanish cattle; grounds for this statement, 9164. 9213-9218——Advantage in an increased use of slaughter-houses at Deptford by retail butchers throughout London; decided tendency in this direction, 9165-9168. 9177-9179.

Quarantine necessary for foreign milch cows if allowed to be imported, 9170-9172. 9211, 9212——Sufficient supplies of good milch cows at home without any import, 9173, 9174. 9212——Further statement as to the facilities and advantages of an extensive dead meat trade, 9177-9185——Long period for which American meat will keep, if it arrives in good condition, 9183, 9184.

Expediency of the cordon round London being regulated by the Privy Council, 9188——Due attention paid to the cleansing of Copenhagen Market, 9191, 9192——Effect of the cattle plague in increasing generally the price of meat, 9197——Approval of a cordon round other large towns as well as London, so that foreign cattle might be admitted within the cordon for slaughter, 9202, 9203.

Long notice necessary before applying a system of compulsory slaughter of foreign animals, 9205, 9206——Doubt as to any English cattle going to Deptford, 9208, 9209——Absence of hardship to English farmers by requiring all animals sent to the Metropolitan Market to be slaughtered within the metropolis, 9220-9223.

Russia. Prohibibition of the importation of cattle from Russia before the outbreak at Hull, in consequence of information as to the existence of cattle plague in that country, *Brown* 20-23——Remarkable fact that the cattle plague does not affect Russian cattle in the same serious way that it affects English cattle, *ib.* 649.

Undoubted introduction of cattle plague from Russia, *Simonds* 1122, 1123——Large amount of cattle disease which results from the movement of the Russian army; in Russia, however, the disease is not so fatal as elsewhere, on account of the hardiness of the cattle, *ib.* 1139-1144. 1203-1207——Absence of necessity for any further stringency in the regulations, except in regard to the greater danger to which we are exposed from the increased facilities given for the movement of cattle from Russia into Germany, *ib.* 1192-1194.

Regulations in Germany with reference to the dangerous boundaries of Russia, *Baron von Behr* 2484-2490. 2560.

Restrictions imposed by the Animals Order of 1875 in reference to the import of cattle and goods from Russia, *App.* 531.

Recommended prohibition of import from Russia, *Rep.* vi. ix.

Salford. See *American Meat. Manchester and Salford.*

Scheduled Countries. Enumeration in the Contagious Diseases Act of countries termed "scheduled countries," from which animals could only be imported for the purpose of slaughter; certain countries included in the schedule under the Act, *Brown* 3-8. 25-32.

Prejudicial effect upon trade by the system of scheduling different foreign countries at different times, *Gamgee* 7168.

See also *Foreign Cattle,* II.

Schelswig-

Schleswig-Holstein. Grounds for the withdrawal of Schleswig-Holstein from the schedule in 1872; this arrangement made on account of the introduction of cattle plague from Germany into England, by means of Russian cattle, *Brown* 8–12. 27–32——Explanation that witness contemplates the landing of cattle from Schleswig-Holstein at Hull for slaughter, *ib.* 1096, 1100——Conclusion as to the expediency of admitting cattle from Schleswig-Holstein without any limitation whatever, *Simonds* 1171–1182. 1195–1197. 1278–1286. 1326–1336.

Absence of danger in regard to exportation of cattle from Schleswig-Holstein on account of the immunity from cattle plague in that country; strictness of the regulations in Schleswig-Holstein in regard to drawing a cordon round the infected places, *Müller* 1421–1425. 1464, 1465. 1503–1508. 1544, 1545.

Export from Schleswig-Holstein of 70,000 head of cattle annually, *Thomsen* 2156–2161——Impossibility of bringing dead meat to England from Schleswig-Holstein; reason for this conclusion, *ib.* 2161–2169. 2209–2213——Injurious effect upon the trade of Schleswig, if the export of live cattle to England were prohibited, *ib.* 2162, 2163. 2210.

Statement that the cattle plague has not been in Schleswig-Holstein during the present century, *Thomsen* 2175, 2176——Information as to the ports used for the exportation of cattle, *ib.* 2177–2185. 2203–2205. 2216, 2217——Insignificant character of the outbreak of pleuro-pneumonia in Schleswig; only one instance of an attack, which was immediately stamped out, *ib.* 2186–2190. 2192–2194——Compensation paid by the Government for slaughter, to the extent of three-fourths of the value, *ib.* 2191.

Existence in the country of foot-and-mouth disease some years ago, which was effectually stamped out by the Government restrictions, *Thomsen* 2195–2200. 2215——General freedom from cattle diseases for many years, *ib.* 2201, 2202——Explanation as to the character of the occupations carried on by the farmers previous to the exportation of their cattle to England, *ib.* 2218–2226——Information respecting the prices realised for cattle sent to England, *ib.* 2227–2233.

Frequent import of disease from Schleswig-Holstein, which should be treated as part of Germany, *Wilson* 4978——Good size of the home-bred beasts obtained from Schleswig-Holstein, whilst the Jutland store beasts are small, *Gebhardt* 5467——Expected import of cattle chiefly from Schleswig-Holstein in the summer months, *ib.* 5732. 5741.

Prevalence of cattle diseases in Schleswig-Holstein at different periods, *Gamgee* 7028–7032——Statement as to the liability of cattle from Schleswig-Holstein to disease, witness submitting that they should be slaughtered at the port of landing, *Robinson* 8594–8599.

Regulations prescribed by the Animals Order of 1875, in reference to cattle from Schleswig and Holstein, *App.* 531. 538.

See also *Denmark.* *Germany.*

Scotland:

Probable effect upon the cattle trade if compulsory slaughter at the ports in Scotland be adopted, *Swan* 1645–1647——Demand in Scotland supplied from other places, on account of the import from Germany having been stopped, *ib.* 1648, 1649. 1726–1729. 1780, 1781——Assertion that the country was never more free from disease than it is at the present time; grounds for this opinion, *ib.* 1691–1700. 1754——Absence of restrictions of any kind as to the movement of cattle in Scotland, *ib.* 1733.

Statement that the amount of dead meat sent from Scotland to London is nothing to what it was formerly; the consumption in Scotland is much greater than it used to be, *Lyon* 3455–3463. 3566–3572——Approval of the continued sale of Scotch cattle in the Metropolitan Market, *Adams* 8123.

Diminution, loss, and deterioration of cattle and sheep in the Lothians, owing to disease; greater effect upon breeding cattle than upon ordinary feeding stock, *Smith* 8443–8456. 8521, 8522——Belief that under proper regulations disease might be stamped out, and that Lothian farmers would willingly accept restrictions to that end, *ib.* 8458–8460. 8472–8474——Partial dependence of cattle in the Lothians upon the turnip and straw crops; decrease of stock not affected thereby, *ib.* 8505–8511. 8537–8541——The number of cattle in the Lothans is not affected by the price of hay, *ib.* 8515–8519.

Information relative to the Scotch dairy farmers; fewer cattle bred, because cows are kept half fat to bring to market directly disease breaks out, *Smith* 8523–8527——Small proportion of foreign cattle imported which comes to Scotland, *ib.* 8525, 8526.

Outbreak of cattle plague on a former farm of witness in 1865–66; exemption since that time, *Melvin* 8727–8729——Views of the Scotch Chamber of Agriculture as to the expediency of the slaughter of all foreign cattle at the port of debarkation; memorials to the Privy Council to this effect, *ib.* 8742–8748——Memorial also from the district

Report, 1877—*continued.*

SCOTLAND—continued.

association of Mid-Calder praying for certain restrictions on the import of foreign cattle, *Melvin* 8749, 8750.

Feeling of Scotch farmers generally that foreign cattle should be slaughtered at the port of landing, *Melvin* 8751——Great diminution in the import of store stock into Scotland, it being now practically confined to milch cows from Denmark and Holland, *ib.* 8752, 8753. 8858——Feeling of the Scotch farmers adverse to the continued import of foreign cows; danger thereby of the spread of pleuro-pneumonia and foot-and-mouth disease from the dairies in Edinburgh, Leith, and other towns, *ib.* 8754–8776. 8846. 8859–8862. 8879–8881. 8908–8911.

Belief that if all foreign cattle were slaughtered at the port of debarkation, there would be a great increase of home breeding in Scotland for dairy and other purposes, and that better cattle would be bred but for the risk of disease, *Melvin* 8758, 8759. 8855, 8856. 8863, 8864. 8882–8905. 8923–8927——Much less amount of pleuro-pneumonia in the dairies in Glasgow than in Edinburgh and Leith; the former being supplied chiefly from home districts, whilst in the latter there are many Dutch cows, *ib.* 8792–8774. 8845.

Belief that by stringent regulations and by restrictions upon import cattle disease in Scotland may be exterminated; experience of Australia adverted to hereon, *Melvin* 8780. 8783–8795. 8812–8829——Diminished extent to which cows are now kept by farm labourers in Scotland; prejudicial effect of this change, *ib.* 8896–8903——Healthy character of Highland cattle, *ib.* 8917, 8918.

See also *Aberdeen. Edinburgh. Glasgow.*

Select Committee of 1873. Recommendations made by the Committee of 1873, and extent to which carried out; non-adoption of the recommendation that the regulations in Great Britain and in Ireland should be similar, *Brown* 569–573. 581–595. 616–628——Certain recommendations of the Committee which could only have been carried out by means of an Act of Parliament, *ib.* 571–573——Revocation of the Orders made in furtherance of the recommendation of the Committee if 1873 in regard to foot-and-mouth disease, *ib.* 629.

Further consideration of the recommendations made by the Committee of 1873; those which required legislation referred principally to cattle plague and pleuro-pneumonia, *Brown* 1040–1060.

SHEEP:

Statement that the danger of introducing cattle plague by means of sheep is so slight it is not necessary to insist upon their slaughter at the landing-places, *Brown* 26——Extensive attacks of the cattle plague disease in sheep in England; remarkable fact that it has never been introduced into this country by sheep, *ib.* 277, 278.

Statement that it is quite possible for sheep to introduce the cattle plague into England; argument that the absolute prohibition merely of cattle would not be a safeguard against the introduction of the disease, *Simonds* 1129–1132. 1322–1325——Possibility of cattle plague being conveyed by means of sheep; infrequency, however, of sheep being attacked with the disease, *Müller* 1419, 1420. 1520–1523. 1549, 1550——Modified restrictions contemplated as regards sheep, the danger of disease being much less in the case of sheep than of cattle, *Wilson* 4726–4733. 4937.

Statement showing that in the five months, July to November 1876, there were 73,940 more foreign sheep than English sheep sold in the London market, *Gebhardt* 5214–5223. 5404–5409——Very large import of foreign sheep in the first six months of 1877, *ib.* 5223——Considerable diminution in the export of sheep to England since France has opened her frontier; better price obtainable in Paris than at Deptford Market, *ib.* 5225–5234——Great demand for foreigh sheep throughout the Provinces; lower price by 1½*d.* or 2*d.* per pound realised by foreign than by English sheep, *ib.* 5228——Strong objection to the restriction as to the slaughter of foreign sheep at Deptford, *ib.* 5230. 5235, 5236.

Sale of 489,600 English as against 353,150 foreign sheep at Islington Market in the first six months of the year, *Gebhardt* 5410, 5411——Total of about 800,000 English and 750,000 foreign sheep sold in eleven months in 1876, *ib.* 5412.

Necessity of the continued import of sheep; obstacle to the import of mutton in good condition, *Burkett* 6250–6253. 6368–6371——Approval of the exclusion of live sheep, as being liable to communicate foot-and-mouth disease, *Gamgee* 7166——Facility in the transport of sheep in the form of dead meat; practical experience of witness to this effect, *ib.* 7167——Instance of the great loss incurred from foot-and-mouth disease in sheep, *Soulby* 7317–7319.

Great importance to Liverpool and the manufacturing districts of the supply of foreign sheep through the London Market: advantage if the live animals were sent to Liverpool instead of carcases from Deptford, *Luya* 7620–7634——Conclusion as to the diminished stock of sheep in England being partly attributable o fear of disease, *Odams* 8035–8039

Preference

SHEEP—continued.

——Preference of English farmers for the production of wool and mutton, as compared with cattle; 10,000,000 or 11,000,000 home-produced sheep slaughtered in 1876, *Howard* 8181-8183——Far less risk with sheep than cattle, *Smith* 8495.

Expediency of including sheep and pigs in the regulations as to slaughtering at the port, *Read* 9519-9521——Approval of the continued import of German and Belgian sheep if slaughtered at the port of debarkation, *ib.* 9680, 9681.

See also *Bristol.* *Germany.* *Manchester and Salford.*

Sheep-pox. Non-introduction of sheep-pox till 1847; final extirpation of the disease about 1852 by means of compulsory slaughter, this course having also been successfully adopted on subsequent occasions, *Brown* 293-300.

Sheldon, John Prince. (Analysis of his Evidence.)—Is a farmer in Staffordshire; has passed some time in the United States, and has collected some statistics in reference to the American meat trade, 4432-4439——Information relative to the total number of cattle, of sheep, and of pigs in the States, and the number of each class available annually for slaughter; conclusion as to the very large surplus which may be spared for the supply of England, 4440-4444. 4591, 4592. 4601-4609——Calculations as to the cost of rearing and feeding a bullock in the States, the cost up to the time of shipment to this country in the form of dead meat, and the cost of freight; aggregate of about 18 *l.*, 4445-4466.

Practice of preparing the carcases on shore before shipment, there being sometimes an interval of two or three days; small cost of the process, 4450-4455——Estimate of about 30 *s.* per carcase as the cost of ocean transit, 4456-4461——Cost of about 7 *l.* for the freight of a live animal, and of 1 *l.* 12 *s.* for attendance and food on board, 4467-4471——Large margin of profit in sending dead meat instead of live cattle, 4472.

Inspection by witness of the "dry air" process used in the conveyance of some of the meat cargoes from America; testimony to the perfect condition on arrival at Liverpool of the meat subjected to this process, 4473-4485——Practical trial given by witness to some beef brought over in the "Celtic" in March last; excellence of the quality, both hot and cold, whilst it was kept for several days before it was cooked, 4486-4494.

Prospect of a very large increase in the import of American meat, the present prices being remunerative, 4493-4506——Accidental defects, owing to which some cargoes have arrived in bad condition; belief that these defects can be effectually provided against, 4499-4502——Established rather than experimental character of the trade; statistics hereon as to its gradual increase since its commencement in October 1875; 4504-4509——Belief that the meat can come just as well in hot weather as in cold, 4510-4513.

Opinion that the importation of live cattle from the Continent should be entirely prohibited as a security against cattle plague chiefly, and as a protection also against pleuro-pneumonia and foot-and-mouth disease, 4514-4522. 4563-4573. 4579-4581——Contemplated import of dead meat from the Continent, as well as from America, in lieu of live stock, and in aid of the home supply; belief that a dead meat supply from the Continent would speedily be forthcoming, and would be a profitable trade, 4523-4531. 4675-4679.

Serious loss to farmers when their beasts are attacked with foot-and-mouth disease; average of more than 2 *l.* per head, and of 4 *l.* in some cases, 4532-4537——Readiness of farmers to submit to stringent restrictions, if thereby foot-and-mouth disease can be permanently stamped out, 4538-4540. 4613, 4614.

Belief that not only cattle plague but pleuro-pneumonia and foot-and-mouth disease came originally into this country from abroad, though the latter two diseases may since have become indigenous, 4541-4563——Import of pleuro-pneumonia into this country for the first time in 1840 or 1841, through some Dutch cows which came to Ireland, 4557-4562. 4610-4612. 4645-4659——Explanation that witness would not exclude animals from any country distinctly proved to be absolutely free from disease, 4569-4572——Ample supplies of dead meat to be had from America in lieu of the foreign cattle supply, 4574-4578. 4588-4592. 4601-4609.

Belief that the proposed restrictions upon the import of foreign cattle would eventuate in a permanent dead-meat trade, and in a reduction of price to the consumer, 4579-4588. 4615, 4616——Profitable character of the present prices in the American trade; improbability of any material increase of price, 4593-4600——Examination in further support of the conclusion that it would be more profitable to foreign exporters to send dead meat than live stock to this country, 4617-4644.

Further considerations as to the severe restrictions desirable in order to exterminate foot-and-mouth disease, 4662-4674——Difficulty in applying sufficient precautions for preventing the import of foot-and-mouth disease and pleuro-pneumonia, short of absolute prohibition of all import of live cattle, 4680-4684.

Report, 1877—*continued.*

Shipment of Cattle. Advantage in the animals being allowed time for rest before shipment, *Wilson* 4828, 4829. 4948.——*See* also *Ireland, &c.*, 1–3.

Simonds, Professor James Beart. (Analysis of his Evidence.)—Connection of witness with the Privy Council Department from 1865 to 1872; since the latter year he has been Principal of the Royal Veterinary College, 1106–1109 —Considerations as to the effect of importation upon the introduction of cattle diseases into England, 1110 *et seq.*—— Belief that foreign importation has not materially increased pleuro-pneumonia, 1110–1128. 1227. 1314–1318——Possibility of the foot-and-mouth disease having been originally introduced by means of surplus ships' stores; conclusion that it was not spontaneously generated in this country, 1116–1119.

Possible introduction of pleuro-pneumonia in the first instance by means of Dutch cows *viâ* Ireland, 1120, 1121——Cattle plague undoubtedly introduced into England from Russia, 1122, 1123——Grounds for the belief that it would be exceedingly difficult under any circumstances to protect this country from the introduction of cattle plague, 1124–1129.

Statement that it is quite possible for sheep to introduce the cattle plague into England; argument that the absolute prohibition of cattle would not be a safeguard against the introduction of the disease, 1129–1132. 1322–1325——Doubtful expediency of establishing a system of quarantine in regard to store stock coming to this country from countries which are now unscheduled, 1133, 1134. 1239–1244.

Necessity for excluding German cattle from England, unless international arrangements can be made with Germany that her frontier will be closed against the introduction of Russian cattle; desirability of obtaining information as to the approach of the disease towards the German frontier, 1135–1139. 1145–1147——Large amount of cattle disease which results from the movement of the Russian army; in Russia the disease is not so fatal as elsewhere on account of the hardiness of the cattle, 1139–1144. 1203–1207.

Belief that calves born from a mother that had cattle plague during pregnancy are insusceptible of disease; scientific explanation of this immunity, 1143. 1199–1202. 1205, 1206——Concurrence with Professor Brown's opinion that if it be desired to effectually stamp out cattle plague in England, the importation from Germany and Belgium must be absolutely prohibited, 1147. 1190, 1191. 1217——Important, though small, importation of store stock from the Continent; large importation of fat calves from Holland on account of the demand for veal, 1148–1153.

Impossibility of making regulations with regard to Ireland, unless similar regulations are adopted in England, 1154–1157——Stringent regulations absolutely necessary if cattle diseases are to be extirpated in England; belief that such regulations would not be submitted to by the people of this country, 1158, 1159. 1216, 1217. 1252–1257. 1266–1274. 1297–1299.

Difficulties in the way of extending the trade in dead meat, especially during the summer months, 1160–1166——Decided opinion that in the event of the importation of live cattle from Germany and Belgium being prohibited it would not be possible for a dead-meat trade to take the place of the live import; grounds for their conclusion, 1167–1170. 1245–1251. 1304–1313.

Suggestions as to the means to be adopted for dealing with cattle diseases in England; expediency of admitting cattle from Schleswig-Holstein without any limitation whatever, 1171–1182. 1195–1197. 1278–1286. 1326–1336——Information in regard to the great losses suffered by the country on account of cattle plague between the years 1865 and 1867; the loss in 1872 was very much less, 1183–1189. 1192——Absence of necessity for any further stringency in the regulations, except in regard to the greater danger to which we are exposed from the increased facilities given for the movement of cattle from Russia into Germany, 1192–1194.

Doubt whether the importation of dead meat need be prohibited from countries from which the importation of live animals is stopped, 1195–1198——Opinion that slaughter at the port of debarcation would not be a sufficient protection against the cattle plague, 1197. 1208——Entire failure of inoculation for the prevention of cattle plague, 1200——Inexpediency of prohibiting the importation of cattle from any single place, 1208–1210——Approval of the Privy Council superseding the local authority in the event of an outbreak of cattle plague, 1213–1215.

Suggestions as to the countries which should be scheduled in regard to importation of cattle, 1218–1223. 1268–1274. 1278–1291——Probable effect of the prohibition of foreign cattle upon the price of meat, 1227–1231. 1275–1277——Disapproval of killing the animals at the port of embarkation; belief that such a system would not give much security, as it is quite possible for cattle plague to be introduced by dead meat, 1235–1238. 1319–1325.

Further information respecting the amount of losses from cattle plague in 1872, as compared with the years 1865 to 1867; 1258–1265. 1292–1296——Inefficiency of vaccination as a means of prevention of cattle diseases, 1300–1303.

Report, 1877—*continued.*

Slaughter (*Diseased Animals*). Regulations laid down in the various Orders of Council since August 1873 on the subject of slaughter of animals diseased or suspected of disease, *App.* 512 *et seq.*

Necessity of the power to order the slaughter of animals suspected of cattle plague extending to animals on premises adjoining those actually infected; recommendation by the Committee to this effect, *Rep.* iii. ix.

See also *Cattle Plague*, 12. *Compensation. Foot-and-Mouth Disease*, 4. *Pleuro-pneumonia*, 4.

Slaughter at Port of Debarkation. See *Cattle Plague*, 12. *Dead Meat. Denmark*, 3. *Foot-and-Mouth Disease*, 4. *Foreign Cattle*, II. IV. *Germany. Hull. Leeds. Offal. Pleuro-pneumonia*, 4. *Price of Meat*, 2. *Scotland. Sheep. Spain and Portugal.*

Slaughter at Port of Embarkation. See *American Dead Meat. Dead Meat. Denmark*, 4. *Deptford Market*, 2. 4. *Holland*, 3. *Hull. Offal. Price of Meat*, 2.

Slaughter-houses. Control of the Metropolitan Board of Works or the Corporation of London over the slaughter-houses in London, *Lyon* 3496, 3497——Tendency to a reduction in the number of small slaughter-houses in London, *Wilson* 5024——Sanitary advantage if the small slaughter-houses in London were done away with, *Robinson* 8589.

Great advantage by the establishment of slaughter-houses in the agricultural districts, *Rudkin* 9036——Restriction upon the spread of disease if there were an increase of slaughter-houses throughout the country, *Read* 9684-9686.

See also *Deptford*, 5.

Slaughtering (*Generally*). Advantage in giving some rest and food to foreign cattle on arrival before slaughtering them, *Hamilton* 4359-4362——Advantage in animals being fasted for a short time before they are killed, *Wilson* 4954–4959.

Smith, Adam. (Analysis of his Evidence.)—Represents the Highland Agricultural Association, 8426, 8427——Recent resolutions passed by the Association in favour of increased restrictions on the import of cattle, 8428–8431——Advantage of dead meat being imported rather than live stock, 8432–8435. 8459. 8463–8471——Evidence to the effect that the importation of store stock should be prohibited, and that all foreign cattle should be slaughtered at the port of debarcation, but not sheep, 8432–8441. 8480–8488. 8490–8495.

Diminution, loss, and deterioration of cattle and sheep in the Lothians, lately; breeding cattle affected by disease more than ordinary feeding stock, 8442–8456. 8521, 8522——Disease attributed to foreign import, 8457——Belief that under proper regulations disease might be stamped out, and that Lothian farmers would willingly accept restrictions to this end, 8458–8460. 8472–8474.

Benefit to the community if the source of introduction of disease into this country were stopped, 8460–8462. 8479——Proposal that the Privy Council should issue uniform regulations, and that a central board should appoint its own officers to carry them out, 8472–8476——Suggestion that the Imperial Government should defray the cost of inspection, 8477–8479.

Far more risk with cattle than sheep, 8495——Explanation that witness is a practical farmer, and has farmed largely for years, but does not breed now, having suffered losses from diseases, 8496–8504. 8520, 8521——Partial dependence of cattle in the Lothians upon the turnip and straw crops; decrease of stock not affected thereby, 8505-8511 8537–8541——Expediency of placing Irish cattle under the same regulations as English and Scotch cattle, 8512-8514.

Number of cattle kept in the Lothians not influenced by the price of hay, though possibly it may be in England, 8515–8519——Information in reference to the Scotch dairy farms; fewer cattle bred in Scotland, because cows are kept half fat to bring to market directly disease breaks out, 8523–8527——Doubt as to the character of the crops grown upon the land formerly used as pasturage for sheep and cattle, 8528-8534——Small proportion (only about six or seven per cent.) of foreign animals imported which come to Scotland, 8535, 8536.

Smuggling (*Import of Foreign Cattle*). Possibility of smuggling being resorted to in the event of specially severe restrictions; belief that there is no practical danger on this score, *Howard* 8367–8372.

Soulby, John. (Analysis of his Evidence.)—Is secretary to the North Riding of Yorkshire Chamber of Agriculture, 7239, 7240——Particulars relative to the restrictions imposed in the East Riding by the Privy Council and in the North Riding by the local authorities upon the movement of cattle and upon fairs and markets; complaint in the North Riding as to the great inconvenience of these restrictions, 7241–7251. 7332–7337——Suggestion

Soulby, John. (Analysis of his Evidence)—*continued.*

that the Privy Council should issue all the orders to be carried out, and should so far supersede the local authorities, but that the latter should see to the carrying out of the orders by their own officers, 7248–7253.

Great injury to trade in the North Riding on account of the cattle plague and the restrictions enforced in consequence, 7256, 7257. 7290–7292——Opinion that the import of cattle should be stopped from any country where cattle plague has been known to exist, 7258–7260. 7265. 7268, 7269——Approval of import from Denmark, Spain, and any other countries, if it can be proved that no risks are incurred thereby, 7261–7267. 7332——Readiness of farmers in Yorkshire to submit to severe restrictions for the stamping out of cattle plague, 7270–7272.

Improved regulations desirable as regards slaughter and isolation in the case of pleuro-pneumonia, 7273–7275. 7282–7284——Opinion that in Yorkshire the farmers would object to a general prohibition upon movement or to the stoppage of fairs and markets for a year as a means towards the suppression of pleuro-pneumonia, 7276–7284. 7293. 7320, 7321——Opinion that three-fourths of the value should be given as compensation when an animal is slaughtered for cattle plague, as for pleuro-pneumonia, 7285–7288.

Suggestions for an improved system of isolation in cases of foot-and-mouth disease; objection of the farmers to a stoppage of any general movement, or of markets, on account of the disease, 7289–7302. 7320, 7321. 7336, 7337——Very little foot-and-mouth disease in Yorkshire in the last few years, 7302–7308——Prevalence of pleuro-pneumonia in the county, 7309, 7310——Difficulty in the suppression of this disease on account of the long period of incubation, 7311–7316.

Instance of the great loss incurred from foot-and-mouth disease in sheep, 7317–7319——Opinion that if live cattle were excluded from all countries where there is a liability to disease, there would be a considerable increase of breeding in Yorkshire, 7323–7329——Different restrictions enforced in the West Riding by the County Sessions, and by the boroughs; disadvantage at which the small towns were placed, 7330.

South America. Steps taken in the establishment of a tinned meat trade from South America, as well as from Australia, *Gamgee* 7138–7140——Fair condition in which some cargoes of South American cattle have arrived at Liverpool; doubt as to this trade increasing, *Luya* 7673–7677——Successful experiment in the conveyance of refrigerated dead meat from South America on board the "Frigorific," *Odams* 8000–8004.

Southampton. Order of Council of 5th June 1875, with reference to the landing of foreign cattle at the port of Southampton, *App.* 539, 540.

Spain and Portugal. Approval of dealing with fat stock from Spain, Portugal, and Denmark in the same manner as with animals in this country, *Brown* 732–735——Large and increasing importation of cattle from Spain and Portugal, *Lyon* 3190, 3191.

Large import of live cattle from Spain and Oporto; particulars as to the very superior and healthy quality of these cattle, and as to the good prices realised, *Giblett* 6498–6504. 6564, 6565——Grievance in the compulsory slaughter of Spanish and Portuguese cargoes at Deptford when one or two animals are reported as suffering from foot-and-mouth disease, *ib.* 6505–6509. 6621–6623. 6725, 6726——Great obstacles to a profitable trade in dead meat from Spain and Portugal, *ib.* 6558–6563. 6666——Excellent arrangements for bringing cattle from Oporto, *ib.* 6640–6642——Value of the cattle from Spain and Portugal for the supply of army contracts, *ib.* 6664–6670.

Expediency of stopping import, from Spain and Portugal, though the cattle are naturally healthy, *Gamgee* 7037–7039. 7141–7144.

Very good condition in which the animals arrive from Spain and Portugal, *Sir C. A. Wood* 7417–7419——Very healthy condition in which the Spanish and Portuguese cattle arrive at Liverpool; instances of foot-and-mouth disease, but not of pleuro-pneumonia, *Luya* 7503–7513. 7636. 7749–7755——Instance of a badly diseased cargo of cattle from Oporto, *Odams* 8125–8129.

Statement showing that Spain and Portugal are not free from disease, so that animals from those countries should be slaughtered at the port of landing, *Robinson* 8591–8594——Stationary character of the cattle trade with Portugal, *ib.* 8700, 8701——Obstacles to a dead meat trade from Spain and Portugal in the summer months, *ib.* 8708.

Prevalence of foot-and-mouth disease among Spanish cattle; grounds for this statement, *Rudkin* 9164. 9213–9218——Objection to import from Spain unless the cattle be slaughtered on arrival, *Brown* 10259.

Statistics. Unreliability of agricultural statistics as regard the number of animals in the country, *Read* 9615.——*See* also *Foot-and-Mouth Disease,* 3. *Foreign Cattle,* I., 3. *Loss from Disease.*

Storage of Meat. See *American Dead Meat,* VII.

Report, 1877—*continued.*

Store Cattle. Conviction that foreign store stock with very few exceptions, are not required in England at all; considerable restrictions necessary upon the admission of dairy or other store stock, *Brown* 540-544. 747-751——Important, though small, importation of store stock from the Continent; large importation of fat calves from Holland on account of the demand for veal, *Simonds* 1148-1153.

Objection to any exemption in favour of store cattle, under a system of slaughtering at the port of arrival, *Wilson* 5039-5043——Sufficient supply of store cattle at home without import from abroad, *ib.* 5043. 5118-5121.

Grounds for the proposal that store cattle be excluded from Islington market, and that no cattle be moved thence save under a killing license, *Gebhardt* 5444-5450. 5521, 5522. 5659——Objection to the import of store cattle from suspected countries, even if quarantine were applied, *Soulby* 7266-7269.

Import of some foreign store cattle, chiefly in calves, into the West Riding, *Walker* 7924-7929——Doubt as to the expediency of admitting grazing cattle, *Odams* 8055——Inferior character as a rule of the lean stock imported into Scotland, *Melvin* 8853, 8854.

Explanation that whilst advocating compulsory slaughter at the port, witness would admit store cattle from countries where no disease exists, provided such cattle be subjected to careful restrictions, *Brown* 10230-10232. 10256, 10257.

Recommendation by the Committee as regards store and dairy animals, that they remain in quarantine for fourteen days, and afterwards be placed under inspection for two months, *Rep.* vi. ix.

See also *Calves. Cows. Dairies, &c. Ireland, &c.*, 7. *Quarantine.*

Stratton, William. (Analysis of his Evidence.) Representations in detail as to the exceedingly heavy losses incurred by farmers in Wiltshire from foot-and-mouth disease among cattle, sheep, and pigs; statistics hereon for the years 1872 and 1875; 6774-6783—— Much greater loss by depreciation in value than by death; average of not less than 2 *l.* per head, whilst the loss on milch cows in summer is as much as 5 *l.* per head, 6778, 6779. 6834-6836.

Much less loss in Wiltshire from pleuro-pneumonia than from foot-and-mouth disease, 6784-6786——Complaint in the county that the local authorities cannot apply rules sufficiently stringent, 6787——Recommendations made by the Central Chamber of Agriculture to the Privy Council, with reference to foreign import, slaughter at the port of debarkation, quarantine, home restrictions, &c., 6788.

Grounds for the conclusion that there is a very general unanimity among farmers in favour of more stringent regulations as regards the home trade, 6789, 6790. 6810, 6811. 6823-6825. 6911-6916. 6933, 6934——Entire readiness of the local authorities to submit to a system of Government inspection; consideration as to the source of payment of the increased staff reqired, 6791-6798. 6867.

Excellent condition in which meat arrives from America in hot weather, so that this supply would increase if live cattle were excluded, 6799. 6805——Very large increase anticipated in the home supply in substitution for the foreign supply; great scope for such increase, 6799-6804. 6808. 6837, 6838——Statement as to the price of meat not having risen upon the stoppage of import of German and Dutch cattle, 6805-6808. 6880. 6893-6901.

Approval of very full powers in the Privy Council for dealing with cases of cattle plague, 6809——Statement showing the beneficial effect of the cattle plague restrictions in stamping out foot-and-mouth disease, 6812-6815. 6935-6937——Conviction of witness that this disease can only be conveyed by contagion, and that it was first introduced into England from abroad, 6816-6819. 6845-6849. 6862-6864. 6927-6932.

Effect of the pravalence of contagious diseases in this country in preventing export of English stock, though much wanted abroad for improving the breed of foreign stock, 6820-6822. 6829-6833——Expediency of the proposed continuance of restrictions, with a view to stamping out foot-and-mouth disease and pleuro-pneumonia, 6826-6833. 6845-6849——Advantage of quarantine stations at certain ports, to be used as regards the foregoing diseases, 6831-6833. 6854.

Constant introduction of foot-and-mouth disease into Wiltshire by Irish cattle, *viâ* Bristol; belief that this is chiefly owing to the infected state of the vessels in which the cattle are brought from Ireland, and that the evil may be prevented by careful disinfection, 6839-6845. 6855-6861——It is not proposed to stop import from Ireland, 6843. 6868. 6886, 6887——Opinion that all foreign cattle should be sent to Deptford, 6853——Excessive prevalence of foot-and-mouth disease in other counties as well as in Wiltshire, 6865, 6866.

Contemplated removal of cattle from Ireland to England, and from one place to another in England, subject to a license or certificate as to local exemption from disease, 6868-6875. 6886, 6887——Explanation that the Central Chamber of Agriculture would

Report, 1877—*continued.*

Stratton, William. (Analysis of his Evidence)—*continued.*

prefer slaughter at the port of embarkation, though asking only for slaughter on landing in England, 6876–6879. 6902–6910——Belief that there would be a large and immediete dead-meat trade with the Continent if live cattle were excluded, 6881–6885.

Arbitrary and unequal restrictions enforced when the cattle plague first appeared, so that the farmers naturally complained, 6888–6892——Expediency of the compulsory slaughter of all animals affected with foot-and-mouth disease; satisfaction to be given to farmers thereby, 6917-6920——Decreased production of cattle and sheep in Wiltshire within the last ten years, 6922–6926.

Surplus Ship's Stores. Expediency of restricting the landing of ship's stores, as was recommended by the Select Committee of 1873, *Brown* 530–533.

Regulations laid down by the Privy Council in June 1875, in reference to surplus ship's stores, *App.* 532.

Surrey. Prohibition on 29th March 1877, of the movement of cattle from Middlesex into Surrey, *App.* 565.

Swan, Thomas. (Analysis of his Evidence.)—Large experience of witness as a live-stock agent in Edinburgh; extent and character of the business carried on by him, 1629-1635 —— Statistics of the consumption of cattle during the years 1866, 1871, and 1876; 1636–1641——Material increase in the import from Denmark into Edinburgh during the same period, 1642——Increase of prices concurrently with the introduction of a larger supply of cattle, 1643, 1644.

Statement as to the effect upon the cattle trade of compulsory slaughter at the ports, 1645–1647——Demand in Scotland supplied from other places, on account of the import from Germany having been stopped, 1648, 1649. 1726–1729. 1780, 1781—— Disapproval of slaughter at the port of debarkation as regards protection to the health of the stock in this country; argument that there should be no restriction as to cattle from countries where the plague does not exist, 1650, 1651.

Information respecting the trade in dead meat from America to Glasgow; opinion that this source of supply is not one upon which we can rely, 1652–1668. 1702. 1707–1722. 1782–1800. 1845–1849. 1859–1875—— Considerable variation in the condition of the meat which arrives in hot weather; belief that in hot weather the trade will inevitably decline, 1659–1662. 1664, 1665. 1708. 1782–1784——Grounds for the opinion that the importation of dead meat from the Continent will be impracticable; the principal difficulty in adopting this plan on the Continent will be that of obtaining ice for the purpose of refrigeration, 1666–1668. 1749–1753.

Insignificant amount of depreciation in the value of live stock in transit from America; absence of any depreciation in value or weight in cattle coming from the Continent, 1669, 1770. 1772—— Comparison of value between shipments of live stock and shipments of carcases; larger price given by the butchers for live animals than for meat which is killed on the other side, 1670–1672. 1737. 1755–1769. 1812–1814. 1824. 1845. 1853–1858—— Statement of the proportion of store cattle imported into England from Denmark, Sweden, and Norway; large number of cattle introduced from Denmark for dairy purposes, 1673–1682. 1740–1747.

Further observations as to the expediency of admitting cattle without restriction from countries free from disease, and absolutely prohibiting their import alive in the event of cattle plague breaking out, 1683–1690. 1730–1732——Desirability of trusting to international communications to prevent disease from spreading, and, at the same time, of removing the existing restrictions, 1689, 1690. 1701.

Assertion that the country was never more free from disease than it is at the present time; grouds for this opinion, 1691–1700. 1754——Constant presence of pleuro-pneumonia among dairy cattle; expediency of prohibiting dairies in large towns, 1693–1696. 1699. 1723–1725——Serious amount of foot-and-mouth disease in the cattle imported to Scotland from Ireland in the last year, 1703–1706. 1815–1823—— Absence of restrictions of any kind as to the movement of cattle in Scotland, 1733.

Larger profit obtained by the salesman from the sale of imported dead meat than from the sale of imported live stock, 1734–1739—— General freedom from disease in regard to the cattle imported from Denmark, 1748——Preference for the live animal to the importation of dead meat, because the former can be moved about from market to market, 1763–1768.

Opinion that cattle plague is an imported disease, but that pleuro-pneumonia and foot-and-mouth disease can be generated in this country without either contagion or infection from abroad, 1773–1776——Belief that foot-and-mouth disease is atmospherical, 1777–1779——Decided opinion that the supply of dead meat in England will not continue, 1796–1798——Information relative to the fittings of the ships in which live stock are imported, 1801–1808.

Belief

Report, 1877—*continued.*

Swan, Thomas. (Analysis of his Evidence)—*continued.*

Belief that the import of live stock is likely to increase, 1809–1811——Greater liability of the Irish cattle to foot-and-mouth disease than the English or Scotch cattle, 1821——Increase of consumption of beef in this country as compared with the supply, 1850–1852——Statement that home meat would keep better than imported dead meat, 1873–1875.

Swan, Mr. Explanation that Mr. Swan, of Edinburgh, is interested much more largely in the home than foreign trade, *Pool* 5788, 5789.

Sweden and Norway. Regulations for importation and export of cattle with reference to contagious diseases, *App.* 586–589.

Royal Decree of 19th April 1875 concerning infectious diseases among home stock, *App.* 589, 590.

Extract from publication by the Royal Board of Health conveying advice and instruction for commercial authorities and others, *App.* 590, 591.

Special information relative to live stock in Norway, the export and import of stock, and the regulations for the suppression of disease, *App.* 591–593.

Number of live stock in Norway at the expiration of 1875, *App.* 591——Number of live stock imported into Norway in each of the years 1871–75; particulars hereon, *ib.* 591. 594, 595——Particulars of exportation in each of the years 1871–75, *ib.* 595.

Regulations under Acts of 27th February 1866 and 26th May 1877 for the suppression of virulent contagious diseases among domestic animals, *App.* 596–600.

Regulations for the suppression of scab amongst sheep and goats, *App.* 600, 601.

T.

Tallerman, Mr. Immense trade carried on at Tallerman's stores, chiefly in American meat, the price to the public having been fixed for three months certain; loss at times through the necessity of falling back on Scotch meat, *Burkett* 6195–6202. 6316–6319.

Texas. Belief that the Texan cattle disease could not be imported by means of dead meat, *Brown* 995–998——Opinion that the small risk of introducing the Texan cattle disease into England would not be sufficient reason for stopping the importation of live cattle from America, *ib.* 1080–1083.

Thomsen, G. A. (Analysis of his Evidence.)—Is a practical farmer and grazier in Schleswig-Holstein, 2153–2155——Export from Schleswig-Holstein of 70,000 head of cattle annually, 2156–2161——Injurious effect upon the trade of Schleswig if the export of live cattle to England were prohibited, 2162, 2163. 2210——Impossibility of bringing dead meat to England from Schleswig-Holstein; reasons for this conclusion, 2161–2169. 2209–2213.

Belief that if the cattle imported to Deptford had to be slaughtered at the port of debarkation the production would greatly diminish, 2170–2174——Statement that the cattle plague has not been in Schleswig-Holstein during the present century, 2175, 2176——Information as to the ports used for the exportation of cattle, 2177–2185. 2203–2205. 2216, 2217——Insignificant character of the outbreak of pleuro-pneumonia in Schleswig; only one instance of an attack in 1874, which was immediately stamped out, 2186–2190. 2192–2194.

Compensation paid by the Government for slaughter to the extent of three-fourths of the value, 2191——Existence in the country of foot-and-mouth disease some years ago, which was effectually stamped out by the Government restrictions, 2195–2200. 2215——General freedom from cattle diseases in Schleswig-Holstein for many years, 2201, 2202——Explanation as to the character of the occupations carried on by the farmers previous to the exportation of their cattle to England, 2218–2226——Information respecting the prices realised for cattle sent to England, 2227–2233.

Tisdall, Edmund Charles. (Analysis of his Evidence.)—Is Chairman of the Committee of the Metropolitan Draymen's Society, 9360–9362——Meeting held by the society in March last, at which it was recommended that all live store stock and milch cows from abroad should undergo a quarantine of fourteen days, 9363, 9364——Question considered as to a quarantine of fourteen days being sufficient as regards pleuro-pneumonia, 9365–9368. 9389–9394. 9473, 9474.

Extensive experience of witness as a breeder of dairy cattle, 9369–9375. 9441——Existence of pleuro-pneumonia and foot-and-mouth disease amongst his cows, though only to a limited extent, since he has given up buying in the London market; reference hereon to the modes of introduction of these diseases, 9376–9388——Decided preference

Report, 1877—*continued.*

Tisdall, Edmund Charles. (Analysis of his Evidence)—*continued.*

of witness for the English shorthorn as compared with the Dutch cow; conclusion as to the former being the better milkers, 9390–9395. 9445–9452. 9470–9472.

Entire readiness of dairymen and farmers to submit to stringent regulations as regards inspection and movement of cattle, so that they may be secured against disease, 9396–9400. 9406. 9424–9426——Approval of increased facilities for the entry of inspectors into dairy yards, 9400–9403——Expediency of a district separation between store markets and fat stock markets, 9404, 9405.

Personal opinion of witness that the advantage as regards price in the purchase of Dutch cows does not compensate for the risk of disease, 9407–9412. 9477–9481——Considerable increase in the price of milk owing to the increased cost of cows and the risk from disease, 9413–9415——Increase of home breeding and probable reduction of price if foreign cows were excluded, 9416–9418.

Expediency of uniform regulations under a central authority, 9419, 9420. 9427, 9428——Opinion that the appointment of inspectors should rest with the central authority, 9421–9423——Very large number of cases of foot and-mouth disease detected at the ports, these cases being dealt with in a variety of ways instead of under a uniform system, 9427, 9428.

Evidence as to the advantage of well-conducted cowsheds or dairies in London on account of the facility thereby for supplying milk in a fresher and sweeter condition for the use of nurseries than when the milk has to come from the country, 9428–9438——Probable supply of one-third or one-fourth of the milk used in London from town dairies, 9439, 9440——Beneficial operation of a system of quarantine, nothwithstanding the cost involved; conclusion that such cost should be borne in the first instance by the vendor, 9442–9444. 9453–9469. 9482.

Statement as to foot-and-mouth disease being far more infectious and destructive than pleuro-pneumonia, 9473–9476——Comparatively small import of store cattle into London, so that the supply could be dispensed with without increasing the price of milk, 9483–9485.

Towns. Spread of disease mainly from the large towns, *Gamgee* 7079——Very little pleuro-pneumonia in Scotland save in the towns, *Melvin* 8778, 8779.

See also *Dairies and Cowsheds.*

Trade. Expediency of permitting the introduction of certain animal products, on account of the exigencies of important trades in this country, *Brown* 346, 347.

Transit of Cattle. Unavoidable deterioration and injury in conveying fat cattle by ship and railway instead of dead meat, *Sir C. A. Wood* 7440, 7441. 7464, 7465. 7467–7480——Improved regulations enforced by the Privy Council in reference to the inland transit of cattle, *Read* 9608, 9609.

Want of increased powers in the Privy Council for dealing with inclosed spaces or railway pens, where animals are placed before removal by rail; that is, on the score more especially of disinfection, and of watering the animals, *Brown* 9968–9975. 10113–10117.

Regulations laid down by the Animals Order of 1875, in regard to the transit of animals by sea and by railway respectively, *App.* 527, 528.

See also *Cattle Drovers. Cattle Ships. Dead Meat,* 8. *Ireland, &c.,* 1–3. *Railways.*

Treatment of Disease. Belief that three-fourths of the disease in this country might be prevented by humane and proper treatment, *Odams* 8044, 8045.

See also *Inoculation. Movement of Cattle.*

U.

Uniformity of Regulations. Great disadvantage that the regulations with regard to the stoppage of disease are varying or permissive, *Brown* 616, 617. 984–988——Concurrence of evidence in favour of uniformity of regulations under a central authority, *Lambert* 3913–3916; *Wilson* 4696–4700. 4750–4760; *Melvin* 8803–8809; *Tisdall* 9419, 9420. 9427, 9428——Expediency of uniform regulations for England, Scotland, and Ireland, *Melvin* 8913; *Read* 9588–9593; *Brown* 9978–9983——Expediency of uniformity of action throughout each county, *Read* 9627–9630.

Conclusion of the Committee as to the necessity of uniform rules applicable to all districts declared infected, *Rep.* v. ix.

See also *Local Authorities. Privy Council.*

United States. See *American Cattle. American Dead Meat. Texas.*

V.

Vaccination. Inefficacy of vaccination as a means of prevention of cattle diseases, *Simonds* 1300–1303.

Veterinary Department (*Privy Council*). See *Inspection. Privy Council.*

W.

Walker, William. (Analysis of his Evidence.)—Representation by witness of the Leeds Butchers' Association, 7771–7773——Great falling off in the import of foreign cattle into the port of Hull since the restrictions imposed in January 1877, witness and other Leeds' butchers no longer obtaining supplies from the Hull market, 7774–7788. 7896–7902——Diversion of trade from Hull to Newcastle, 7781. 7843——Complaint as to the prejudicial effect of slaughtering foreign cattle on debarkation at Hull, as compared with the former system of bringing the animals to Leeds for slaughter, 7789–7792. 7795–7804. 7844. 7903.

Practice of witness in purchasing Irish fat cattle in Leeds since he has been precluded from obtaining foreign cattle from Hull; good and sound condition of the Irish animals, 7793. 7910–7917——Impracticability of a dead-meat trade with Ireland, 7794——Difficulty as regards offal for the lower classes in Leeds, if live animals were not killed on the spot, 7795–7800——Relative cost of conveying dead meat and live animals from Hull to Leeds, 7801–7804.

Particulars relative to the American meat supplies to Leeds; very indifferent condition in which the meat has arrived, whilst the demand has greatly fallen off, witness believing that the trade cannot be maintained at a profit, 7805–7817. 7821–7824. 7861–7879——Expediency of foreign cattle being freely imported from all countries, save where there is cattle plague, without any restriction as to slaughtering at the port, 7825, 7826. 7908, 7909.

Very rare instances of pleuro-pneumonia in Leeds, 7827–7829——Considerable increase in the price of meat during the last thirty years, the consumption having greatly increased; doubt as to the losses from cattle plague having influenced the price, 7830–7837. 7845–7856. 7881–7884. 7930, 7931——Limited extent to which dead meat comes from London to Leeds; belief that no live animals come from London, 7838–7843. 7885–7887.

Inferior condition of American meat on arrival at Leeds, as compared with meat from Scotland, 7875–7880——Depressed state of the butchers' trade; less profit on American meat than on foreign cattle slaughtered at home, 7888–7895——Very good condition in which some American cattle have been landed at Hull, 7904–7907——Tendency to an increase of home stocks in the districts round Leeds, 7918–7922——Import of some foreign store cattle, chiefly in calves, into the West Riding, 7924–7929.

Waterford. Want of improved arrangements at Waterford for the accommodation of cattle before shipment, *Sir C. A. Wood* 7400, 7401. 7445.

Watering of Cattle. Non-provision of watering arrangements at many railway stations, *Adams* 8134, 8135. 8140–8142——Expediency of cattle being rested, and fed and watered before they embarked, *Read* 9707–9711.

List of railway stations at which water is to be provided for animals according to the Order of Council of June 1875, *App.* 534–538.

See also *Ireland, &c.*, 1–3.

Waterside Depôts. Importance of cattle being rested before shipment in waterside depôts properly cleansed and disinfected, *Sir C. A. Wood* 7409. 7421, 7422. 7446.

See also *Ireland and Irish Cattle*, 1–3. *Transit of Cattle.*

Whitwill, Mark (Analysis of his Evidence.)—Is managing owner of some steamers trading between Bristol and New York, 1876——Information as to the means adopted on these steamers for carrying dead meat from America; opinion that the meat, if properly cared for as regards temperature, may be kept sound for an indefinite period, 1877–1885. 1913–1926. 1989–1991.

Description of the manner in which the meat chambers on the steamers are kept at an even temperature; great importance of maintaining the required temperature without fluctuation, 1882–1885. 1947–1950. 1965–1969. 1986–1988——Regular consignments of dead meat received from America since last April; belief that every cargo might arrive

Report, 1877—*continued.*

Whitwill, Mark. (Analysis of his Evidence)—*continued.*

in good condition if thorough care were taken, 1886–1905. 1925, 1926. 1953–1964. 1992–1995. 2006, 2007——Decided opinion that this trade in dead meat will continue to develope; argument that there is no limit to the amount which America can provide, 1901, 1902. 1971–1973.

Information in regard to the price at which this meat has been put upon the market; absence of fluctuation in price for good meat, 1906–1912. 1927–1931. 1975–1986. 1996, 1997——Examination respecting the cost of freight and transit generally from America to this country, 1933–1938. 1945, 1946——Impossibility of comparing the cost of transit of live animals with the cost of conveying dead meat, Bristol being a prohibited port for the importation of live animals, 1939–1942——Difficulty in bringing a whole cargo of dead meat on account of the ship not being low enough in the water, 1949, 1950.

Considerable distance which cattle have to travel in America before being slaughtered at the abattoirs in New York, 1998–2002——Possibility of bringing this meat in hot weather as well as in cold proved by the experience of last summer; expense of transit not greater in hot than in cold weather, 2003, 2004——Rise in price in America on account of the increased demand in England, 2004–2007.

Further description of the manner in which the temperature of the meat chamber on board ship is reduced, 2004——Continuation of the consignments made by witness' ships at the present time, 2006, 2007——Additional observations in regard to the price and amount of profit received by the shipper, 2008, 2009.

Wilson, Jacob. (Analysis of his Evidence.)—Is a tenant farmer at Morpeth, and is secretary to the Northumberland Agricultural Society; is also a member of the council of the Royal Agricultural Society of England, by which body he has been deputed to give evidence before the Committee, 4686–4691.

Resolution passed by the council of the society in March last in favour of the total prohibition of the import of live stock from European ports, this resolution having led to the present inquiry, 4692–4695——Representation made by the society, after the outbreak at Willesden, to the effect that the local authorities should be superseded by the Privy Council with a view to more effectual steps being taken for preventing the spread of the disease, 4696–4700.

Insufficiency of inspection and slaughter at the port of debarkation as a means of preventing the spread of cattle plague, so that the Agricultural Society were constrained to recommend total prohibition of import, 4701. 4704——Large number of cargoes landed in the last three years which have been affected with foot-and-mouth disease, 4701——Liability to the import of cattle plague by Germany from Russia, and by England from Germany, in spite of the increased restrictions and precautions adopted or proposed to be adopted by the latter country, 4701–4715——Admission as to the decreased danger through the more telegraphic information promised from Germany, 4708–4714.

Enhanced danger in the case of pleuro-pneumonia, on account of the lengthened time taken in the development of the disease, 4716–4718, 4835–4837——Alternative proposition that prohibition of import be confined to those countries in which disease is known to exist, or into which diseased animals are introduced, and that import be allowed from other countries, provided the cattle be slaughtered at the port of debarkation, 4719–4725. 5083–5086——Modified restrictions contemplated as regards sheep, the danger of disease being much less in the case of sheep than of cattle, 4726–4733. 4937.

Explanation that witness looks to a dead-meat supply as fully meeting the wants of the country, the import of live stock being prohibited, 4733–4735——Belief that the indirect loss to the country by the cattle plague in 1865 was double the direct loss, the latter being estimated at 5,000,000 *l*; 4736–4738——Calculation that there are a million less cattle in the country than before the outbreak of 1865; 4738–4741. 4970, 4971.

Statistics to the effect that the price of meat is now 1½ *d.* dearer per pound than it was in the two years before the outbreak of 1865; 4742–4745——Severe losses from foot-and-mouth disease subsequently to the removal of the cattle plague restrictions in 1865–66; comment hereon upon the action of Government at the time in ceasing to furnish returns of the losses from disease, 4746–4750. 4754. 5095–5098——Unequal and inconsistent exercise of the powers of the different local authorities under the Act of 1869; illustration in Northumberland, 4751–4753. 4755–4759. 4773, 4774.

Conclusion as to the necessity of central and uniform action for the enforcement of regulations and restrictions, 4756–4760. 5101, 5102——Belief as to the willingness of the local authorities to concur in the appointment of inspectors by the central authority, 4761–4763. 4941.——Concurrence in Professor Brown's suggestion for dividing the country into districts and for preventing movement out of any centre in which pleuro-pneumonia or foot-and mouth disease exists, 4764–4781.

Expected

Wilson, Jacob. (Analysis of his Evidence)—*continued.*

Expected willingness of farmers to conform to the proposed restrictions upon movement, if these are enforced through the Privy Council, 4772-4781——Doubt as to the necessity of so long a period as six years for stamping out foot-and-mouth disease, 4775-4778. 5077——Expediency of the same restrictions being applied to Ireland as to England, 4782-4784.

Particulars as to the serious losses of witness from foot-and-mouth disease and pleuro-pneumonia, those animals suffering most from the latter which had previously suffered from the former, 4785-4798——Considerable loss of witness through an outbreak of foot-and-mouth disease among his ewes before lambing, 4798——Very prejudicial effect of the risk of disease in preventing or checking the breeding of stock in the country; illustration on this point, 4799-4803. 4933-4936——Importance of accurate scientific knowledge in dealing with cases of pleuro-pneumonia, 4804.

Grounds for the conclusion that the full value should be paid as compensation for diseased animals, or animals in contact with diseased animals, slaughtered upon information given by the owner; certificate to be given in each case by the local inspector, 4805-4818——Allowance to be made, in awarding compensation, for the value of the carcase as food, 4814-4817——Opinion that compensation should be defrayed from Imperial rather than from local sources, 4819-4821.

Suggestion that cattle ships be specially fitted and ventilated, be licensed to carry only a certain number, and be used for cattle exclusively, 4822-4825. 4947——Doubt as to the value of inspection before the vessel comes into port, 4826——Limited risk of the spread of disease if the animals be slaughtered on landing, 4827, 4828——Advantage in the animals being allowed time for rest before shipment, 4828, 4829. 4948——Reference to the lairs at foreign and home ports as fruitful sources of disease, 4829. 4947——Decided objection to an English inspector at the foreign port, 4830-4832.

Statement as regards dairies in towns to the effect that they are hotbeds of infection, more especially as regards pleuro-pneumonia, 4833-4835. 4851, 4852. 4983——Great want of further restrictions upon the movement of cows in and out of town dairies, 4834. 4838-4840——Illustration of the insidious character of pleuro-pneumonia, and of the long period of incubation, 4835-4837——Conclusion that dairies should be removed from towns altogether; particulars hereon as to the extensive operations of the Aylesbury Dairy Company, and the successful system of refrigeration adopted by the Company, 4840-4852. 4893-4898. 5019-5023. 5036. 5067, 5068——Prospect of milk being produced more largely than cheese when refrigeration is more valued, 4847. 5122, 5123.

Opinion as to the good quality of the American dead meat sent to this country, and as to the excellent condition in which it arrives, 4853-4857——Authority for the conclusion that as a result of the refrigerating process the meat from America is perfectly capable of resisting heat and atmospheric changes, 4858-4867. 4870. 4908——Great importance attached to the dead-meat trade, in the interests of the public, 4868. 4873-4876.

Room for great improvement in this country in the mode of treating meat, refrigeration being unduly neglected, 4868-4870——Prospect of an increased development of the dead-meat trade, in substitution of live animals for daily slaughter, 4871-4876. 4906-4912. 4921, 4922——Illustration of the great loss to the country as well as to owners when cattle are attacked with foot-and-mouth disease, 4878-4885——Greater loss from foot-and-mouth disease than from pleuro-pneumonia or cattle plague, 4886-4890. 4975.

Less severe restrictions required as to slaughter in the case of pleuro-pneumonia than of cattle plague, 4890-4892——Advantage on sanitary grounds in London and other large towns being supplied entirely with country milk, 4893-4898——Other causes besides the cattle plague of 1865 to which the subsequent increase in the price of meat may be attributable, 4899-4901. 5087-5094.

Further evidence in support of the conclusion that dead meat can be imported in full substitution for the live cattle import, the import required being only about seven per cent. of the whole consumption, 4902-4917. 4921, 4922——Tendency to a reduction rather than an increase of price by stopping the import of foreign cattle; that is, through the increased import of dead meat and the increase of breeding, 4902, 4903. 4918-4920. 4990.

Respects in which the farmer, as well as the nation, will be much better off for the stoppage of foreign import and the avoidance of disease; tendency to a large increase of breeding and of store cattle, 4918-4920. 4925-4930. 4960, 4961——Prospect of a dead meat supply from the Continent as well as from America, 4921, 4922——Facility in settling the amount of compensation for cattle slaughtered by order of the Privy Council, 4923, 4924——Numerous farms unlet throughout the country owing very much to the loss of capital through cattle diseases, 4935, 4936——Belief that the quality of milk is not injured by refrigeration, 4938-4940.

Importance of a strict check upon the movement of cattle in Ireland and upon the holding of fairs, wherever disease exists; expediency on the other hand of due facilities for the export of store cattle to England, 4942-4945. 5052-5059. 5103-5107——Ob-

Report, 1877—*continued.*

Wilson, Jacob. (Analysis of his Evidence)—*continued.*

jection to farmers being free to deal with foot-and-mouth disease, without control by a central department, 4949–4953——Advantage in animals being fasted for a short time before they are killed, 4954-4959.

Valuable character of certain precautions suggested at the place of export in Ireland in reference to foot-and-mouth disease, 4962–4969——Degree of loss to the consumer further adverted to; that is, through the decreased supply of cattle in the country, 4970–4974——Preference for total prohibition of import in view of the liability of Germany to cattle plague from Russia, 4976.

Proposed exception in the case of Denmark as regards prohibition with reference to pleuro-pneumonia and foot-and-mouth disease, 4977. 5086——Frequent import of disease from Schleswig-Holstein, which should be treated as part of Germany, 4978——Expediency of treating Ireland in the same way as England instead of as a foreign country, 4979-4982.

Doubt as to pleuro-pneumonia or foot-and-mouth disease originating otherwise than by contagion, 4984-4989——Improbability of disease being imported by means of dead meat, 4991, 4992——Further statement in favour of prohibiting import from Germany and Schleswig-Holstein in view of the existence of disease in those countries, 4993–4997. 5007–5009—— Less cost in the transmission of dead meat than of live stock; objection however to free trade in the matter, 4998-5001——Willingness of witness to be confined to a dead-meat trade if it were necessary in his case for preventing the spread of disease, as in the case of foreign import, 5002–5012.

Very fine cattle imported from America; explanation hereon that witness does not propose to prohibit American import, but only to apply careful restrictions, 5013 5018. 5035. 5080–5082. 5108–5115——Tendency to a reduction in the number of small slaughter-houses in London, 5024——Admission as to the virtual prohibition upon the import of live cattle from America if the vessels were not allowed to carry any other freight; witness proposes the latter restriction only as regards the Continent, 5027–5035.

Facility of artificially producing ice in sufficient quantities for refrigeration of meat as well as of milk; limited expense involved, 5036–5038. 5061–5068. 5074——Objection to any exemption in favour of store cattle, under a system of slaughtering at the port of arrival, 5039–5043——Sufficient supply of store cattle at home without import from abroad, 5043. 5118–5121——Reference to certain calculations as to the enormous annual loss when foot-and-mouth disease is rife in comparison with the value of the total annual import of cattle, 5044–5051——About equal cost in bringing a live animal from Hamburg and a carcase from America, 5069–5073.

Comparatively small increase of charge for inspection in order to apply more efficient precautions, 5075, 5076—— Readiness of witness to face the competition of a dead-meat import if it will free him from the risk of disease, 5078, 5079——Dissent from the conclusions of the Select Committee of 1873 as to the modified restrictions desirable in the case of foot-and-mouth disease, 5099, 5100.

Necessity of stringent regulations at home concurrently with prohibitory regulations as to foreign import, 5116, 5117——Means of dispensing with the import of Dutch cows for dairy purposes, 5120–5123——Question as to the proposed restrictions being injurious to the cottiers or small farmers in Ireland by reducing the price of their stock; benefit on the other hand by the exemption from disease, 5124–5128——Total of thirty-six counties and twenty-nine boroughs in which there are restrictions in force as regards cattle plague, 5129.

Wiltshire. Details as to the heavy losses incurred by farmers in the county from foot-and-mouth disease in 1872 and 1875, *Stratton* 6774–6783. 6834–6836——Much less loss in Wiltshire from pleuro-pneumonia than from foot-and-mouth disease, *ib.* 6784–6786.

Complaint in the county that the local authorities cannot apply rules sufficiently stringent, *Stratton* 6787——Decreased production of cattle and sheep in Wiltshire within the last ten years, *ib.* 6922–6926.

Wood, Sir Charles Alexander. (Analysis of his Evidence.)—Has been for several years deputy chairman of the Great Western Railway; was formerly an Emigration Commissioner, 7338–7340——Circumstances under which witness made some investigations in 1864 into the mode of shipment of cattle from Irish ports, as well as into the arrangements on board the cattle boats, and the treatment on the voyage; improvements then required, some of which have since been effected, 7341–7344. 7442–7445.

Considerable deterioration formerly in the condition and value of Irish oxen during the transit to England, 7344——Steps in contemplation some years ago for establishing a dead-meat trade between Ireland and England, *ib.*——Result of an inquiry by witness into the shipment of cattle from Cork and Waterford that disease is largely impregnated in the lay fields, and that waterside depôts are much required, 7345–7347. 7446.

Report, 1877—*continued.*

Wood, Sir Charles Alexander. (Analysis of his Evidence)—*continued.*

Evidence showing the great disadvantages of the system of bringing passengers and cattle in the same ships from Ireland; important improvement by the special construction and fitting up of vessels for cattle exclusively, 7347-7354. 7468, 7469——Importance of cattle being rested before shipment in waterside depôts, properly cleansed and disinfected, 7350, 7351. 7409. 7421, 7422. 7426——Expediency of rigid inspection at the port of landing in England as well as at the port of shipment in Ireland, 7352. 7423-7426.

Reference to a certain statement as showing that the cattle rates from Ireland to England are comparatively high, 7352——Higher price realised by the animals if brought over in better condition in improved boats, 7353, 7354——Explanation relative to the improved arrangements proposed by witness by means of cattle depôts at Cork and Waterford, and at Portishead; this scheme has been submitted to the Privy Council, but nothing has been done under it, 7355-7360. 7393-7396.

Result of witness' experience that arrangements may readily be made for the successful conveyance of dead meat in very large quantities by railway from the country to London and other towns, or *vice versâ;* considerable quantity now conveyed over the Great Western Railway, 7360-7381. 7383-7392——Belief that Mr. Ash, manager of the Piston Freezing Company, is the inventor of the cold-air process as applied to dead meat; great value of this invention, 7363. 7366.

Special dead-meat vans being constructed for use on the Great Western line; good prospect of their success in the hottest weather, 7363-7368. 7376-7378—— Belief that by the cold-air process dead meat may be safely brought from Ireland to England, 7378-7381——Large increase contemplated in the import of store cattle from Ireland; that is, under improved regulations, 7382.

Information relative to the large fish trade from Kinsale over the Great Western Railway; conclusion that dead meat may be carried with equal success, 7383-7392——Very good cattle depôt at Cork, belonging to the Cork Steamship Company, 7397-7399——Want of improved arrangements at Waterford, 7400, 7401. 7445——Considerable improvement in the cattle arrangements in Dublin, 7400. 7445.

Great cruelty towards cattle and pigs in the act of embarkation at Irish ports, and in their removal into railway trucks at the English ports, 7402-7407——Decided improvement if all cattle drovers were licensed, 7407, 7408. 7447, 7448——Importance of improved arrangements on board the Irish cattle ships, in conjunction with proper waterside depôts; liability otherwise to continued import of foot-and-mouth disease from Ireland, 7409-7422. 7433. 7460-7463.

Prevalence of much foot-and-mouth disease in Breconshire, introduced by Irish cattle, 7412. 7474-7476——Advantage of markets specially for Irish stock after arrival in England, 7426. 7472, 7473——Particulars relative to the vessels employed by the Great Western Company in the Waterford cattle trade; facilities for cleansing them, 7427-7429. 7449-7453——Varying distances for which the cattle travel to the port of shipment in Ireland; practice of placing them in lay fields at the port, 7430-7433.

Great convenience in the distribution of dead meat from Deptford Market if the railway were extended directly into the market, 7434, 7435——Introduction of disease from Ireland chiefly by means of store cattle, which go to all parts of England, 7436-7439——Belief that the American meat trade will probably lead to a dead-meat trade with Ireland, 7440.

Unavoidable deterioration and injury in conveying fat cattle by ship and railway, instead of dead meat, 7440, 7441. 7464, 7465. 7477-7480——Healthy character of cattle in Ireland, disease being developed during the transit to England, 7454-7460. 7470——Better rates for the conveyance of dead meat than live stock, 7471.

Information relative to the different companies conveying cattle, sheep, and pigs between Ireland and England; doubt as to the proportion carried by railway boats, 7481-7485——Increasing dead-meat trade from the West of England to London, 7486——Preference of butchers for a live cattle trade, the "fifth quarter" never being accounted for, 7487.

Worcestershire. Action taken by the local authority of the county under the Cattle Plague Order of January 1877, *App.* 561, 562.

Y.

Yorkshire. Very great losses of witness in Yorkshire from foot-and-mouth disease; his herd was reduced more than one-half by this disease, *Booth* 2243-2249. 2267-2271. 2313. 2332-2334. 2341, 2342——Information respecting the restrictions at present existing with regard to the movement of cattle in Yorkshire; undoubted opinion that the advantages of stringent restrictions far outweigh the disadvantages, *ib.* 2250-2261. 2266. 2272-2289. 2296-2300. 2303-2322. 2337——Great loss to breeders and also to consumers

Yorkshire—continued.

sumers on account of the prohibition of foreign exportation; stoppage also of the Irish trade at the present time, *Booth* 2257–2261. 2272. 2274. 2284.

Particulars relative to the restrictions imposed in the East Riding by the Privy Council, and in the North Riding by the local authorities, upon the movement of cattle and upon fairs and markets; complaint in the North Riding as to the great inconvenience of these restrictions, *Soulby* 7241–7251. 7332–7337—Great injury to trade in the North Riding on account of the cattle plague, and the restrictions enforced in consequence, *ib.* 7256, 7257. 7290–7292.

Very little foot-and-mouth disease in Yorkshire in the last few years, *Soulby* 7302–7308—Prevalence of pleuro-pneumonia in the county, *ib.* 7309, 7310.

Opinion that if live cattle were excluded from all countries where there is a liability to disease, there would be a considerable increase of breeding in Yorkshire, *Soulby* 7323–7329—Different restrictions enforced in the West Riding by the County Sessions and by the boroughs; disadvantage at which the small towns were placed, *ib.* 7330.
